FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947; 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the thirty-sixth of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered July 1, 1966, to December 31, 1966, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

OPINION NO. 496

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. CP62-243, CP61-339, CP63-99; TRUNKLINE GAS COMPANY, CP66-171; MISSISSIPPI RIVER TRANSMISSION CORPORATION, G-863, CP62-242, CP63-100, CP61-339

OPINION AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 1, 1966)

Syllabus

1. Proposals of Mississippi, Natural and Trunkline constitute in essence a joint proposal to serve St. Louis area. P. 2.
2. While projects do not ideally satisfy criteria of *Opinion No. 474*, they are sufficiently well-founded to justify certification—applicants have met conventional requirements of public convenience and necessity with respect to markets, gas supply, facilities, financing, rates and economic feasibility. P. 3.
3. Industrial customers are part of the public Commission is charged to protect. P. 4.
4. Authorizations granted here will not preclude future grant of other authorizations to provide competitive service for St. Louis area. P. 5.
5. Recommendations for issuance of limited certificates denied—limited development of need for and consequences of such action does not provide adequate record for Commission to consider practicability, desirability and lawfulness thereof. P. 7.
6. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity.

Chairman White *not participating.*

Commissioner Black *concurring.*

William W. Bedwell, James H. Wuller, John H. Hendren, Charles V. Shannon and *Louis Flax* for Mississippi River Transmission Corporation.

Raymond N. Shibley, Leland Cadenhead and *Robert P. Paterson, Jr.*, for Trunkline Gas Company.

Charles C. McDugald, William H. Brackett and *Paul Goldstein* for Natural Gas Pipeline Company of America.

J. David Mann, Jr. and *Frederick Morning* for Laclede Gas Company and Missouri Natural Gas Company.

Robert S. Hunt for Illinois Power Company.

Carl J. Babin for United Gas Pipe Line Company.

Willard W. Gatchell for Granite City Steel Company.

Dwight H. Morehead and *George J. Meiburger* for Owens-Illinois Glass Company.

Robert E. Lee Hall for the National Coal Association.

Charles W. Stadell for Mid-West Coal Producers Institute, Inc.

Welly K. Hopkins for the United Mine Workers of America.

John A. McGrath and *Jerome J. McGrath* for Fuels Research Council, Inc.;

National Coal Association; United Mine Workers of America; and Mid-West Coal Producers Institute, Inc.

Wayne W. Waldo for Missouri Public Service Commission.

Patrick J. Smith and *John H. Pratt* for City of Indianapolis, Indiana.

Albert J. Feigen for the Towns of Bourbon, Cuba, Pacific, St. Clair, Steelville, Sullivan, Washington and Waynesville, Missouri.

George P. Lewnes for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This is a certificate case, arising under Section 7(c) of the Natural Gas Act (Act), and coming before the Commission pursuant to its order issued May 3, 1966, 35 FPC 675, omitting the intermediate decision procedure. This case is a sequel to the Commission's Opinion No. 474 and accompanying order issued September 9, 1965, 34 FPC 771, by which we, among other things, denied certain requested pipeline authorizations for natural gas service to St. Louis, Missouri, and environs because of the defects in the proposals specified in the said opinion. By that opinion we also provided for a further hearing to afford certain applicants opportunity to substantiate further their proposals, in conformity with the criteria prescribed in the said opinion.

At the further hearing, Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois) and Panhandle Eastern Pipe Line Company (Panhandle), the two parties whose applications gave rise to the "mutually exclusive" issues[1] in this case, did not participate. There remain three primary applicants: Mississippi River Transmission Corporation (Mississippi), the present wholesale pipeline supplier of the St. Louis area; and Natural Gas Pipeline Company of America (Natural), and Trunkline Gas Company (Trunkline), interstate pipelines which propose to deliver gas to Mississippi.

The proposals of Mississippi, Natural and Trunkline constitute in essence a joint project to serve St. Louis and environs. These proposals were virtually uncontested; therefore, a short, four-day hearing was possible, at which, pursuant to agreement, only staff cross-examined. All parties agree that the three applicants should be certificated, but the Commission's staff recommends limiting Natural's and Trunkline's certificates to five-year terms.

We conclude, for the reasons set forth hereinbelow, that certificates should issue to Mississippi, Natural and Trunkline in accordance with their applications as amended, and that staff's recommendation for five-year terms should be rejected.

SUMMARY OF APPLICANTS' PROPOSALS

Since all agree that the basic authorizations sought by applicants should be granted, it is unnecessary to describe the proposals in detail. To summarize, Mississippi by its amended application seeks to increase its existing gas supply by approximately 100,000 Mcf a day, to supply all its customers, both utility and industrial, the additional volumes of gas they have requested for the 1966-67 winter heating season. Mississippi, which is the present wholesale supplier of the St. Louis area, would not have to construct any new facilities for the service it proposes and seeks Commission authority only for the transportation and sale of such volumes. Mississippi would purchase 65,000 Mcf per day of this additional supply from Natural, and 35,000 Mcf a day from Trunkline, effective November 1, 1966. Of these volumes, approximately 35,000 Mcf a day have already been made available to Mississippi from Natural since 1962 under temporary authorization. Certain incidental requests of Mississippi include certificate amendments authorizing the use of interconnection facilities, and the authorization of the transportation and delivery of firm gas in lieu of interruptible to a direct customer, Mississippi Lime Company.

---

[1] *Cf., Ashbacker Broadcasting Corp.* v. *F.C.C.,* 326 U.S. 327.

Natural by its amended application proposes to construct and operate facilities to increase its design day capacity by 65,000 Mcf and to sell Mississippi a daily contract quantity of some 65,000 Mcf of gas. Such volumes would be delivered into Mississippi's facilities through previously authorized emergency interconnections at a point in Illinois about 57 miles east of the Mississippi River, where Mississippi's so-called East Line intersects Natural's main north-south line. Natural's proposed facilities include approximately 60.20 miles of 36-inch loop line at various locations along its existing Gulf Coast supply line, and some 18,250 additional compressor horsepower at its compressor stations Nos. 303, 309 and 310. The total estimated cost of these and appurtenant facilities is approximately $13,000,000.

Trunkline by its application seeks permission to transport and to sell to Mississippi the said 35,000 Mcf per day, increasing its presently certificated deliveries from 76,000 Mcf a day to 111,000 Mcf a day. Such additional volumes would be delivered into Mississippi's facilities at a point about 75 miles east of St. Louis in Illinois, where Mississippi's East Line intersects Trunkline's main north-south line. Trunkline's proposed facilities include approximately 31.6 miles of 36-inch loop line at various locations along its existing main line between Longville, Louisiana, and Tuscola, Illinois, and 4050 additional compressor horsepower at main line compressor stations Nos. 48 and 84. The total estimated cost of these and appurtenant facilities is approximately $6,500,000.

THE COMMISSION'S DETERMINATIONS

In presenting their cases, Mississippi, Natural and Trunkline undertook to satisfy the criteria for serving the St. Louis area referred to in Opinion No. 474, particularly at pp. 787, 788, which include the requirements of public convenience and necessity prescribed by Section 7(c) of the Act. Applicants' efforts were not ideally successful. Their projects would not, for example, have a "potent competitive effect" in the St. Louis area as other possible projects might, which was one of the desiderata referred to in Opinion No. 474, at pp. 785, 786.

Nevertheless, we conclude that applicants' projects are sufficiently well-founded to justify their certification. All parties, including staff, agree that they meet the conventional requirements of public convenience and necessity with respect to markets, gas supply, facilities, financing, rates, and economic feasibility, and the facts of record support a finding to this effect. Also, they sufficiently satisfy the other criteria in Opinion No. 474, to the extent presently practicable.

In this opinion we shall consider the applicants' project separately, reviewing the facts which establish that they satisfy the conventional requirements of public convenience and necessity, and, where applicable, the criteria of Opinion No. 474. Also, we shall discuss certain criticisms advanced by staff. Then we shall deal with staff's recommendation for five-year terms for Natural's and Trunkline's certificates, which presents the principal contested issue in this case.

Mississippi.—Mississippi's presentation was considerably simplified by the fact that it is not proposing to construct any new facilities but only to transport and sell gas through its existing facilities.

There is without doubt a market that needs and will purchase the 100,000 Mcf a day Mississippi proposes to sell in the St. Louis area. Indeed, the purpose of this proceeding, which has been in progress since 1962, is to remedy the chronic uncertainty in supply and shortage of gas in the St. Louis area. In this case, following the directions contained in Opinion No. 474, Mississippi has undertaken to meet fully the requirements of all its customers—utilities for resale, firm industrials, and interruptible industrials alike. Cooperating closely with such customer companies, Mississippi has prepared and placed in the record data showing its historical annual and peak day sales and estimated requirements through 1968. In entering into gas sales contracts, Mississippi allowed such customers complete freedom to nominate the volumes they desired without any limitation.[2]

For example, Laclede Gas Company (Laclede), which is the major utility supplying the St. Louis area and which delivers some 60 percent of the volumes sold to resale customers in that area, has signed a 20-year contract with Mississippi covering Laclede's increased level of purchases. Likewise, such major industrial customers as Owens-Illinois, Inc. and the Granite City Group have signed industrial contracts with Mississippi for firm service to meet their present processing fuel requirements, which contracts generally run for a period of seven years from April 1, 1965.

Thus it would seem that, for the first time in many years, Mississippi's customers in the St. Louis area will as the result of this proceeding obtain the volumes of gas they desire. Moreover, it is worthy of note that Mississippi's project and the projects of its two suppliers, Natural and Trunkline, have received unanimous support from both the resale and direct customers of Mississippi, which urge immediate certification of the projects before us. In addition, the State Commissions of Missouri, Illinois, and Arkansas intervened in support of Mississippi's project, and the City of St. Louis, which also intervened, vigorously expressed its support of the project on the record.

However, staff in its brief says that Mississippi's gas requirements problem is dubious and that the present proposal is ill-adapted to solve it. Staff contends that Mississippi's purchase of 100,000 Mcf a day proposed in this case is basically an attempt to augment its *peaking* service through the year 1968 and that Mississippi does not have any problem of meeting system requirements on an annual basis. Notwithstanding this fact, says staff, Mississippi's increased service will be largely for its firm *industrial* customers, as distinguished from utility resale customers, to the extent of 40,000 Mcf a day on an average basis. In sum, says staff, Mississippi in this case is seeking basically to prevent its anticipated 1968 firm industrial load of 40,000 Mcf a day from being interrupted a few times a year. Staff questions whether the Commission should authorize the present proposals for such a purpose.

We are unable to accept this argument. The record indicates that Mississippi's supply problem is a winter season problem. It is questionable whether it can be solved by reference to annual requirements. Further, for several years in the earlier stage of this proceeding, Mississippi was subject to severe criticism for its failure to supply sufficient gas to its firm industrial customers. See Opinion No. 474, pp. 784, 785. These customers too are part of the public we are charged to protect. Evidence was adduced in this record showing that large industrial customers of Mississippi need the increased volumes proposed to operate their plants properly and efficiently. The proposals before us are the only ones that can, with a reasonable degree of certainty, be depended on to meet those requirements and to relieve the gas supply problem in the foreseeable future. Staff does not recommend denial of, and it would be unwarranted to deny, the authorizations sought, on the basis of the record in this case. However, in future proceedings on a fuller record, the matters raised by staff above may well deserve further consideration.

---

[2] The contract demand increases of Mississippi's resale customers covered by precedent agreements aggregate some 33,051 Mcf, and the increased firm requirements of the industrial customer aggregate some 26,000 Mcf. Company-used gas is in addition to these volumes. Since 35,000 Mcf a day of the 100,000 Mcf of gas a day Mississippi is seeking in this proceeding is already being delivered under temporary authorization issued to Natural, Mississippi can undertake additional service obligations in this case of only 65,000 Mcf.

The requirement that there be a gas supply adequate to provide Mississippi with 100,000 Mcf of gas a day is clearly met by the evidence, which shows that Natural and Trunkline will supply Mississippi 65,000 Mcf a day and 35,000 Mcf a day, respectively. Further, Mr. Franklin M. Cantrell, Jr., a Vice President and Director of Mississippi, on the record pledged the company to take all reasonable steps consistent with the public interest to meet the increased natural gas requirements of the company's markets. The fact that Mississippi could obtain its system gas supply from sources other than Natural and Trunkline, including United Gas Pipe Line Company (United) and company-produced gas, and the further fact that Mississippi's facilities lie in close proximity to other potential pipeline suppliers of natural gas, place Mississippi in a very advantageous position from the standpoint of future gas supply.

Moreover, the proximity of other possible pipeline suppliers will enable us to certificate a competing supplier into the area if future conditions warrant. We desire to make it clear that the grant of the authorizations herein requested will not preclude the future grant of other authorizations to provide the area with competitive service.

Staff argues, however, that Mississippi's gas requirements could be met at a savings in gas purchase costs of some $2.7 million a year by Mississippi's purchasing the additional volumes it needs to the extent of 75,000 Mcf a day on a daily average basis from United Gas Pipe Line Company (United), its present major supplier in Louisiana, whose rates are lower than either Natural's or Trunkline's rates.

This argument, too, we must reject. As indicated above, Mississippi's supply problem is a winter season problem, and its main line facilities north from Perryville, Louisiana, some 450 miles south of St. Louis, where United's deliveries are made, are used at full capacity during the entire winter season. It may be that, as staff indicates, there is capacity available south of Mississippi's Crossett Compressor Station, but it appears that, north of Crossett, Mississippi's facilities could provide only a relatively small interruptible service which would not seem adequate to meet the needs for firm gas indicated in this case. Thus, even if, as staff contends, Mississippi's mainline facilities could deliver additional gas from United by operating at 100 percent load factor, there remains a question on this record whether such facilities could render the service needed and desired by Mississippi's customers in this proceeding on the basis of the increased deliveries from United suggested by staff. At any rate, staff does not recommend denial of applicants' proposals on this basis, and we think that this matter, too, may well deserve consideration in future proceedings on a fuller record.

The record shows, and no party questions, that Mississippi's facilities are adequate from an engineering standpoint for the service it proposes. It is worth noting that the utilization of the excess capacity on Mississippi's system will minimize costs and result in savings to the consumer, as Opinion No. 474 points out at p. 783, and is, accordingly, a factor supporting the present proposals.

No financing is called for by Mississippi, since it will receive deliveries from Natural and Trunkline into its existing East Line and will render its proposed service through its present facilities.

Mississippi's rates, which are not challenged by any party, are acceptable for purposes of this certificate proceeding. They resulted from a settlement approved by Commission order issued August 7, 1964, 32 FPC 547 at which time Mississippi agreed to a moratorium on rate increases until July 1, 1966. Mississippi has agreed to extend the moratorium on its firm resale rates to July 1, 1968. Mississippi's rates for the increased firm service to direct customers, as agreed to in their contracts for terms of up to seven years, were voluntarily reduced by the company approximately a year ago from the levels initially proposed in this proceeding. Such rates appear to be relatively low and competitive with industrial rates available in other major midwestern markets.

Finally, it is evident that the requirement of economic feasibility with respect to Mississippi has been met. Mississippi adduced in evidence a detailed statement of revenues, expenses and income which shows the feasibility of the company's operations with the purchase of gas from Natural and Trunkline proposed in this proceeding (Exh. 253).

Natural.—Natural too has shown that its project meets all the applicable requirements. As described previously, the company would increase the design day capacity of its transmission system to sell and deliver to Mississippi an average daily contract quantity of 65,000 Mcf of gas. Mississippi and its customers need and can use these additional volumes.

Natural's gas supply showing likewise is adequate. On the basis of Natural's estimated 1968 requirements and its estimate of recoverable reserves, which are uncontested, Natural shows a reserve life index of around 19 years. Commencing with January 1, 1966, Natural's deliverability would, on the basis of its evidence, be at least twelve years.

Natural's proposed facilities, described above and more fully in the record and the company's application, appear adequate in design, and their estimated $13,000,000 cost appears reasonable.

However, staff points out that Natural's new capacity is proposed exclusively on its Gulf Coast line and suggests that since Natural's major market is the northern Illinois area, the peak requirements of which are met largely by storage facilities in that area, the drain-off of 65,000 Mcf a day upstream from storage could have adverse implications for Natural's costs and operational efficiency. Staff evidently believes that if Natural would construct additional facilities on its Gulf Coast line north of the Mississippi delivery point, it could increase the capacity of the storage by some 65,000 Mcf a day. Natural replies that it is not the availability of pipeline capacity which limits its use of storage but inability of the reservoirs to receive increased injections of gas. We conclude that the record does not justify any specific finding or the imposition of any specific requirement on Natural in regard to this criticism by staff.

Natural put forward a satisfactory financing plan (Exhs. 267 and 268), and no party questions the company's ability to finance the proposed facilities.

Natural's rates, which were not challenged by any party, are acceptable for purposes of this certificate proceeding. They are, in fact, significantly lower than those of Trunkline, and those proposed by Oklahoma Illinois in the first stage of this proceeding, see Opinion No. 474, p. 781.

The economic feasibility of Natural's project was sufficiently demonstrated by the company's evidence and is not questioned by any party. Natural's incremental studies indicate that its project will tend to strengthen the system's economic position in the next few years.

Trunkline.—Trunkline also has shown that its project meets all the applicable requirements. Mississippi and its customers unquestionably need and can use the increased 35,000 Mcf of gas a day proposed.

Trunkline's gas supply showing is adequate. Trunkline projects a reserve life index of 16.2 years, including contract additions as of January 1, 1966, and taking into account withdrawals during 1965. Also, Trunkline shows a deliverability life of total system supplies of approximately 11 years. Although staff points out that anticipated takes from the Kelsey Area in Texas are subject to the Texas proration laws and argues this might result in reductions in the volumes available for delivery, staff does not consider this to be a fatal infirmity in the company's project. We do not either.

Trunkline's proposed facilities, described briefly above and more fully in the record and the company's application, appear adequate in design, and their estimated $6,500,000 cost appears reasonable.

Trunkline proposes to finance its project initially by short-term bank loans and internally-generated funds, with permanent financing through bonds as may be determined subsequently. The record supports the conclusion that the financing can be successfully consummated.

Trunkline's rates, which are not challenged by any party, are acceptable for purposes of this certificate proceeding.

The economic feasibility of Trunkline's project is sufficiently demonstrated by the company's evidence and is not questioned by any party. Trunkline's incremental studies indicate that, as in the case of Natural, its project will tend to strengthen the system's economic position in the next few years.

STAFF'S RECOMMENDATION FOR FIVE-YEAR CERTIFICATES

The main contested issue in this case is whether, as staff urges, the certificates of Natural and Trunkline should be limited to five-year terms. Staff contends that these parties' present proposals are not ideally suited to meeting the gas needs of the St. Louis area on a permanent basis. In this connection, staff relies in part on its arguments discussed previously, that Mississippi basically seeks to augment its peaking ability to prevent occasional interruptions of its firm industrial service and that Mississippi could save some $2.7 million in gas purchase costs by purchasing 75,000 Mcf a day of its additional needed volumes from United (*supra*, pp. 4, 5). Staff says that if Natural's and Trunkline's certificates are limited to five-year terms, at the end of that time proposals more appropriate to the St. Louis area's needs could be formulated and presented to the Commission, and Natural's and Trunkline's presently proposed facilities could be used to serve their expanding markets.

Staff's recommendation for limiting the certificates issued Natural and Trunkline to terms of five years is opposed by all other parties in this case. The opponents contest our legal authority to so limit a permanent certificate and allege that the issuance of such certificates would have an adverse financial impact on the pipelines. Staff suggests that the unusual circumstances of this case demand a unique solution to protect the public interest.

We conclude that Staff's recommendations should be denied. Staff's limited development of the need for and consequences of such action does not provide an adequate record for us to consider the practicability, desirability and lawfulness of issuing limited-term certificates.

The Commission further finds:

(1) Mississippi, Natural and Trunkline (applicants) are "natural-gas companies" within the meaning of the Natural Gas Act, as the Commission has heretofore found.

(2) The facilities hereinabove described, as more fully described in applicants' applications and the record in this proceeding, are to be used for the transporta-

tion and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing to do the acts and perform the services proposed and conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the facilities and the transportation, sale and delivery of natural gas proposed by applicants are required by the public convenience and necessity and certificates therefor should be issued, as hereinafter ordered and conditioned.

(5) The public convenience and necessity require that the certificates hereinafter issued and the rights granted thereunder be conditioned upon applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued authorizing Mississippi River Transmission Corporation, Natural Gas Pipeline Company of America and Trunkline Gas Company to construct and operate the facilities proposed and to transport, sell and deliver natural gas as hereinabove described and as more fully described in their applications in this case and the record in this proceeding, upon the terms and conditions of this order.

(B) The certificates granted Mississippi, Natural and Trunkline are subject to the condition that these parties comply with all applicable provisions of the Commission's Regulations under the Natural Gas Act and more specifically, with paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations, to the extent applicable. The time within which the facilities shall be completed and in actual operation shall be 12 months from the date of issuance of this opinion.

Chairman White *not participating.*

Commissioner Black *concurring.*

BLACK, *Commissioner, concurring:*

I concur in today's action solely because at this point, and largely as a result of our own mistake, we have no other practical alternative.

I still adhere, however, to the views expressed in my dissent to the Commission's order of February 24, 1966, 35 FPC 251 at p. 254, in which I urged that we proceed in a manner which would permit consideration of competitive pipeline service directly into the St. Louis area—a market peculiarly in need of competition. The Commission, however, by its action four months ago effectively precluded any such result and is now forced to accept the joint decision of Panhandle, Mississippi and Natural to divide up the market. This agreement effectively deprives the St. Louis consumer of the benefits of a second pipeline supply, disregards the Commission's Opinion No. 474, issued last fall, and recants the solemn offer of both Panhandle Eastern and Natural to provide competitive service.

In our order of February 24, the Commission majority asserted that the agreement of the parties did not constitute a final determination on the merits and that as a result of the further proceedings we could still consider "alternative means of satisfying the needs of the St. Louis market which may be in the public interest." The order also recited that, "we will require a showing, in this case, whether a grant of the subject applications would prejudice or preclude the provision of such [competitive] service." Of course, none of this evidence materialized. The parties simply used the hearing room to tie down their earlier agreement and have presented it to us for the second time as an accomplished fact. Staff's efforts to limit the effects of the arrangement were too little and too late.

Hopefully, we are a little wiser, as a result of this experience.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SINCLAIR OIL & GAS COMPANY, ET AL., DOCKET NO. G-16760, ET AL.

ORDER PERMITTING FILING OF FACT STATEMENTS AND BRIEFS

(Issued July 1, 1966)

Pursuant to Opinion No. 476 in this proceeding, issued September 22, 1965, modified by Opinion No. 476-A, November 22, 1965, 34 FPC 930, 1357, certificates of public convenience and necessity under Section 7 of the Natural Gas Act were issued to more than thirty producers for sale of natural gas in Texas Railroad Commission District No. 2. Ordering paragraph (I) of Opinion No. 476, as amended by ordering paragraph (C) of Opinion No. 476-A, deferred for subsequent determination the issue whether refunds should be ordered, and the amounts of such refunds, where producers operating under temporary certificates collected rates in excess of the prices later determined to be the proper initial prices.

The producers affected should be allowed the opportunity to set forth any equities which they may contend would militate against ordering refunds of any or all excess amounts collected under their temporary authorizations. Accordingly, the producers listed in the Appendix hereto may within 30 days file briefs on this question, together with statements of the relevant facts which they may wish to prove in any hearing which may be ordered, together with a statement of the evidence which it is proposed to introduce in support of such facts. We urge the producers not to reiterate general arguments which have been repeatedly presented and rejected by the Commission, and to confine their briefs and statements to matters which may be relevant in the light of the determinations of this Commission in *Skelly Oil Company, et al.*, Opinion No. 492, 35 FPC 849.

The Commission orders:

(A) Each certificate holder listed in the Appendix hereto may file within 30 days of the effective date of this order a statement of any facts which the certificate holder contends would render unjust or inequitable the refund of any or all amounts collected in excess of the price certificated in each docket, together with a statement of the evidence the certificate holder will introduce to prove such facts in the event a hearing is ordered, together with a brief upon the propriety of ordering refunds under the circumstances.

(B) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants.

(C) Any participant shall have 20 days to respond to any statement or brief filed pursuant to ordering paragraph (A) hereof.

HIGH PLAINS NATURAL GAS COMPANY, DOCKET NO. CP65-401 AND WARREN PETROLEUM CORPORATION (OPERATOR), DOCKET NO. CI64-1466 (G-4165) AND DOCKET NO. RI64-602

ORDER RELEASING REFUNDS

(Issued July 5, 1966)

The Commission by order issued January 17, 1966, 35 FPC 84, in the above dockets approved, *inter alia*, the settlement proposed by Warren Petroleum Corporation (Warren) in Docket No. RI64-602. Warren was directed to submit a report to the Commission setting out the amount refundable to High Plains Natural Gas Company (High Plains), and to retain the money until further order of the Commission. High Plains was directed to file its report of proposed disposition of the amount refundable by Warren. That report filed on March 8, 1966, states that High Plains will flow-through to the City of Perryton $1,852.03 and that the balance of the refund (approximately $5,946.72) is applicable to sales by High Plains which are not subject to the jurisdiction of this Commission.

The Commission finds:

(1) High Plains' report of disposition of the refund to be received from Warren is satisfactory and should be accepted.

(2) Warren should be directed to reduce the amounts refundable to High Plains.

The Commission orders:

(A) High Plains' report filed March 8, 1966, setting forth its proposed disposition of the amounts to be refunded by Warren hereby is accepted.

(B) Warren is directed to release and pay to High Plains within 30 days the amount of $7,798.75, shown in Warren's report filed on February 11, 1966, together with applicable interest at 4.5 percent from March 1, 1966 to the date of payment.

(C) Warren, within 60 days from the date of this order, shall submit its report to the Commission showing the amount refunded hereunder together with a release from High Plains, and upon acceptance thereof, the notification referred to in paragraph (K) of the order of January 17, 1966, will be issued.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

HOLYOKE WATER POWER COMPANY, PROJECT NO. 2004

ORDER APPROVING REVISED PROJECT EXHIBIT L DRAWINGS

(Issued July 5, 1966)

On April 19, 1965, Holyoke Water Power Company filed for Commission approval revised Exhibit L drawings for its constructed Project No. 2004 located on the Connecticut River between Holyoke and South Hadley Falls, Massachusetts.

The drawings show changes in the project structures undertaken by the licensee as emergency measures necessitated by the failure in March of 1964 of a gate and gate seat, and following subsequent inspection which showed that the gate structure for the canal intake had reached the end of its serviceable life and required prompt reconstruction. The reconstruction was accomplished between August 1964 and May 1965 after the licensee had informed the Commission of its intentions in compliance with Articles 4 and 6 of the license. The plans showing the reconstruction have been reviewed and found to be adequate.

The Corps of Engineers has approved the tracings of the revised Exhibit L drawings insofar as the interests of navigation are concerned, pursuant to Section 4(e) of the Federal Power Act.

The Commission finds:

The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the Exhibit L drawings mentioned herein as being superseded should be eliminated from the license:

Revised Exhibit	Title	FPC No.	FPC No. Superseded
L Sheet 2	General Plan of Area at Holyoke Dam	2004-50	2004-31
L Sheet 3	Plans and Sections Westerly End of Holyoke Dam.	2004-51	2004-32

The Commission orders:

The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2004, and the Exhibit L drawings mentioned in the same finding as being superseded are hereby eliminated from the license.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.

ORDER PERMITTING FILING OF FACT STATEMENTS AND BRIEFS

(Issued July 5, 1966)*

Pursuant to Opinion No. 436 in this proceeding, issued July 23, 1964, modified by Opinion No. 436-A, October 8, 1964, 32 FPC 254, 952, certificates of public convenience and necessity under Section 7 of the Natural Gas Act were issued to a large number of producers for sale of natural gas in southern Louisiana and the adjacent Federal domain offshore. Ordering paragraph (C) of Opinion No. 436 deferred for subsequent determination the issue whether refunds should be ordered, and the amounts of such refunds, where producers operating under temporary certificates collected rates in excess of the "in-line" prices later determined—20 cents per Mcf in the case of gas produced within the domain of Louisiana, and 18.5 cents per Mcf for gas produced offshore outside the domain of Louisiana.

The producers affected should be allowed the opportunity to set forth any equities which they may contend would militate against ordering refunds of any or all excess amounts collected under their temporary authorizations. Accordingly, the producers listed in the Appendix hereto may within 30 days file briefs on this question, together with statements of the relevant facts which they may wish to prove in any hearing which may be ordered, together with a statement of the evidence which it is proposed to introduce in support of such facts. We urge the producers not to reiterate general arguments which have been repeatedly presented and rejected by the Commission, and to confine their briefs and statements to matters which may be relevant in the light of the determinations of this Commission in *Skelly Oil Company, et al.*, Opinion No. 492, 35 FPC 849.

The Commission orders:

(A) Each certificate holder listed in the Appendix hereto may file within 30 days of the effective date of this order a statement of any facts which the certificate holder contends would render unjust or inequitable the refund of any or all amounts collected in excess of the price certificated in each docket, together with a statement of the evidence the certificate holder will introduce to prove such facts in the event a hearing is ordered, together with a brief upon the propriety of ordering refunds under the circumstances.

(B) Each participant who wishes to be served with copies of the statements and briefs permitted by ordering paragraph (A) shall give notice to the Secretary of the Commission in writing filed not later than ten days from the

---

*See orders issued July 21, 1966, *infra*, p. 147 and August 11, 1966 denying reconsideration and rehearing, etc., 36 FPC 418.

date of this order. The Secretary shall transmit, to each certificate holder listed in the Appendix and to each participant filing notice pursuant to this paragraph, a list of the participants filing such notice.

(C) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants who have filed timely notice pursuant to ordering paragraph (B) hereof.

(D) Any participant shall have 20 days to respond to any statement or brief filed pursuant to ordering paragraph (A) hereof.

CENTRAL ILLINOIS ELECTRIC AND GAS COMPANY, PROJECT NO. 2418

ORDER ISSUING LICENSE (MINOR)

(Issued July 6, 1966)

Application was filed on October 8, 1963 by Central Illinois Electric and Gas Company (Applicant) of Rockford, Illinois, for a license under the Federal Power Act (Act) for constructed Project No. 2418, known as the Fordam Dam Project, located on Rock River, in the City of Rockford, Winnebago County, Illinois. No lands of the United States are affected by the project.

The project dam was originally constructed in 1852, but its deterioration required one of its sections to be replaced in 1904 and the other section to be reconstructed in 1910 with the same crest elevation as the original dam. Applicant acquired the project works on April 1, 1963.

The Secretary of the Army and the Chief of Engineers have recommended the terms and conditions in the interest of navigation contained in Form L-3 (32 FPC 1114). However, since Form L-3 is not applicable to minor projects we are including as part of the license herein granted the terms and conditions set forth in attached Form L-9 (32 FPC 577) which contains terms and conditions in the interest of navigation similar to those contained in Form L-3. The Department also advised that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of the Interior, in reporting on the application, advised that any license for the project should contain the terms and conditions set forth in Form L-3 in the interests of fish, wildlife and recreation. We are including as a part of the license herein granted the terms and conditions set forth in attached Form L–9 which contains terms and conditions in the interests of the Department substantially similar to those contained in Form L–3, and special conditions designated herein as Articles 12 and 13.

The Department of Health, Education, and Welfare has reported that there are no apparent water supply, water quality or vector control problems connected with the project and none is anticipated.

In its order of August 10, 1964 (32 FPC 575, 576), issuing a license for Project No. 2346, the Commission found that the Rock River from its mouth to at least Janesville (mile 181) is a navigable waterway of the United States. Fordam Dam Project No. 2418 is located at mile 136.7 on the Rock River. For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.* (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of these sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) Fordam Dam Project No. 2418 is located upon navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Illinois, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefore, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,600 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Sections 4(b), except the second sentence thereof: 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary

of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Central Illinois Electric and Gas Company (Licensee) of Rockford, Illinois, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2418, located on Rock River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Fordam Dam Project No. 2418 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined; and

(ii) 1. a 635-foot long reinforced concrete dam 12 feet high to elevation 698.93 feet with 2.5-foot flashboards to elevation 701.43 feet and a 19-foot fish ladder; 2. a reservoir to elevation 701.66 feet at mean normal water, about 400–600 feet wide and about eight miles long; 3. a 280-foot long head race about 54 feet wide; 4. a powerhouse of concrete and brick about 33x70 feet containing two 600-kw generating units totalling 1,200 kw; and 5. appurtenant electrical and transmission facilities.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendations of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 13. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of recreational facilities including modifications thereto, as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 14. The Licensee shall pay to the United States the following annual charge effective April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, an annual charge of $80.00.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

CITY OF CLEWISTON, FLORIDA v. FLORIDA POWER & LIGHT COMPANY, DOCKET NO. E-7243

ORDER TERMINATING PROCEEDING

(Issued July 6, 1966)

This order grants a motion to dismiss the above-entitled proceeding which was filed on June 3, 1966, by the City of Clewiston, Florida (Clewiston). The proceeding was initiated by Clewiston's Application for Interconnection and Complaint Against Unlawful Actions filed September 7, 1965, requesting the Commission to order a direct interconnection between Florida Power & Light Company (FPL) and Clewiston and to require the rendition of wholesale electric service by FPL to Clewiston. The motion to dismiss reflects a settlement agreement reached among representatives of Clewiston, Glades Electric Cooperative, Inc., Moore Haven, Florida (Glades), and the United States Sugar Corporation (Sugar Corporation).

At the time of filing its Application and Complaint, Clewiston received its power and energy supplies pursuant to a contractual arrangement with Sugar Corporation. Glades, a cooperatively-owned electric system, then sold power and energy to Sugar Corporation for resale to Clewiston. Glades' deliveries supplemented industrial generation of Sugar Corporation. Under the settlement proposal Glades will sell electric power and energy at wholesale for resale to Clewiston, billing the City directly. Sugar Corporation will continue to buy, sell, and exchange electric power and energy with Glades. The Cooperative operates some of its own generating capacity but purchases the major portion of its electric utility system's needs at wholesale from FPL.

The time for filing objections to Clewiston's motion has expired, and no objections thereto have been received. On June 15, 1966, the Presiding Examiner certified this matter to the Commission for our consideration.

By order issued November 30, 1965, 34 FPC 1395, the Commission provided for an investigation and hearing with respect to the matters presented in Clewiston's Application for Interconnection and Complaint, and FPL's Answer thereto. A field investigation was conducted by the Commission staff in December, 1965; and on January 18, 1966, a prehearing conference was held. Thereafter a number of continuances were granted to facilitate settlement negotiations among the principals concerned. The current three-party agreement dated June 1, 1966, among Glades, Sugar Corporation and Clewiston reflects the settlement reached in those conferences.

Under the settlement proposal Clewiston will pay an average charge of approximately 1.168¢ per kwh, a reduction of its wholesale power costs of approximately

$144,000 annually based upon average projected demand and energy requirements of the City covering the seven-year period of the three-party settlement contract (June, 1966 through June, 1973). Glades' wholesale rates and charges to Sugar Corporation for resale to Clewiston averaged 1.69¢ per kwh; based upon total energy deliveries of 14,814,000 kwh to Clewiston during the 12-month period ending December 31, 1964.[1] Under the settlement contract Glades' rates and charges for industrial service to Sugar Corporation are the same as the Cooperative's rates and charges to Clewiston.

In support of its request, Clewiston advises that the settlement proposal effects substantially the objectives which it sought through its Application for Interconnection and Complaint, and hence that no useful purpose of the City would be served by its continuing to press its arguments in the present proceeding. As indicated above, the other parties to this proceeding and Commission staff do not oppose Clewiston's motion.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act and the Commission's Rules of Practice and Procedure, and good cause has been shown to grant the City of Clewiston's motion to dismiss its Application for Interconnection and Complaint, and to terminate this proceeding.

The Commission orders:

The City of Clewiston's Application for Interconnection and Complaint filed September 7, 1965, is hereby dismissed, and the above-entitled proceeding is terminated.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GULF STATES UTILITIES COMPANY, PROJECT NO. 2504

ORDER APPROVING PROJECT EXHIBIT M

(Issued July 6, 1966)

On May 12, 1966, Gulf States Utilities Company, licensee for minor-part transmission line Project No. 2504, filed for Commission approval Exhibit M showing the general description and specifications of project transmission equipment. The exhibit was required to be filed by Article 18 of the license for the project which is located in Jasper and Tyler Counties, Texas, and affects lands of the United States within the Angelina National Forest and lands of the United States within the Sam Rayburn development.

The Commission finds:

Exhibit M in one typewritten sheet entitled "Exhibit M-Project No. 2504," received in the Commission on May 12, 1966, conforms with the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

The Exhibit M described in the above finding is hereby approved as part of the license for Project No. 2504.

---

[1] Sugar Corporation's charges to Clewiston involved no mark-up from the rates which the Company paid to Glades.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP66-337

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 7, 1966)

On April 25, 1966, Arkansas Louisiana Gas Company (Applicant), filed in Docket No. CP66-337 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation of natural gas all as more fully set forth in the application.

Applicant seeks authorization to construct and operate a market lateral pipeline from its existing transmission facilities to a new plant constructed by a new industrial customer Arkla Chemical Corporation (Arkla), near Gurdon, Clark County, Arkansas, consisting of approximately 4,000 feet of 3-inch pipeline and appurtenant metering and regulating facilities.

Applicant states that Arkla's annual and peak day natural gas requirements will be approximately 765,000 Mcf and 3,900 Mcf, respectively. The proposed facilities will not increase the capacity of Applicant's main transmission system or modify the total volumes handled by such system on a maximum day. Deliveries of natural gas to Arkla will be made on an interruptible basis pursuant to an agreement dated April 6, 1966.

The total estimated cost of Applicant's proposed construction is $21,290, which will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G-252 (3 FPC 910).

(2) The proposed construction and operation of facilities and transportation and delivery of natural gas as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities, transportation and delivery are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act,

and particularly the general terms and conditions set forth in paragraphs (a) (b), (c)(1) (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and transportation and delivery of up to 3,900 Mcf daily of natural gas as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, and transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) The certificate issued by paragraph (A) above is granted on the express condition that (1) the facilities authorized shall not be used to transport more than 3,900 Mcf daily of interruptible gas to the Arkla Chemical Corporation, (2) the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers, and (3) Applicant shall file with the Commission copies of the contract with Arkla as required by Section 155.1 of the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. G-2268 AND CHATTANOOGA GAS COMPANY v. EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. IN-984

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND GRANTING WITHDRAWAL OF INFORMAL COMPLAINT AND ANSWER IN OPPOSITION

(Issued July 7, 1966)

On March 23, 1966, East Tennessee Natural Gas Company (Petitioner) filed in Docket No. G-2268 a petition to amend, as supplemented on May 9, 1966, the Commission's order issued February 19, 1954, 13 FPC 829, in said docket by authorizing Petitioner to transport and deliver to Bowaters Southern Paper Corporation (Bowaters) up to 26,500 Mcf of natural gas per day, on an interruptible basis, in lieu of 9,000 Mcf per day heretofore authorized, all as more full set forth in the petition to amend in this proceeding.

The order of February 19, 1954, authorized Petitioner to construct and operate certain facilities and to transport and deliver to Bowaters at Calhoun, Tennessee, up to 9,000 Mcf of natural gas per day on an interruptible basis. Applicant states that in 1957, it commenced interruptible deliveries to Bowaters in excess of the authorized volumes and that its records do not indicate why it did not attempt to obtain a change in its certificate authorization. Further, Petitioner states that its failure to file for appropriate certificate authorization appears to have been simply an oversight. The actual deliveries made to Bowaters by Petitioner have been accurately reflected in all certificate and rate proceedings concerning Petitioner before the Commission. Petitioner became a subsidiary of Tennessee Gas Transmission Company in November 1959 and the petition indicates that there is no member of East Tennessee's present management who was a member of its management in 1957 when the excess deliveries commenced.

Accordingly, Petitioner requests the order of February 19, 1954, be amended to authorize the increased deliveries. No additional facilities are required.

On January 19, 1966, Chattanooga Gas Company (Chattanooga) telegraphed to the Commission requesting that Petitioner be ordered, among other things, to cease and desist delivering interruptible volumes to Bowaters in excess of 9,000 Mcf per day. Said telegram was considered an informal complaint and assigned Docket No. IN–984. On March 30, 1966, Chattanooga filed in Docket No. G–2268 an answer in opposition to the subject petition to amend. On May 5, 1966, Petitioner and Chattanooga entered into a stipulation and agreement which resulted in the latter agreeing to withdraw its informal complaint and its answer in opposition. Chattanooga authorized Petitioner to file the stipulation and agreement with the Commission, and Petitioner, on May 9, 1966, filed the same as an exhibit to its supplement to the subject petition to amend. On May 2, 1966, Bowaters filed a petition to intervene in support of the subject petition to amend.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 12, 1966 (31 F.R. 5670). No other protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Withdrawal of Chattanooga's answer in opposition in Docket No. G–2268 and its informal complaint in Docket No. IN–984 should be granted.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 19, 1954, in Docket No. G–2268 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 19, 1954, in Docket No. G–2268 is amended by authorizing Petitioner to transport and deliver to Bowaters up to 26,500 Mcf of natural gas per day, on an interruptible basis, in lieu of the 9,000 Mcf per day heretofore authorized in this docket, all as hereinbefore described and as set forth in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

(C) Withdrawal of Chattanooga's answer in opposition in Docket No. G–2268 and its informal complaint in Docket No. IN–984 is granted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GARKANE POWER ASSOCIATION, INC., PROJECT NO. 2219

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued July 7, 1966)

Garkane Power Association, Inc., licensee for Project No. 2219, has applied for amendment of its license for the project, located on East and West Forks of Boulder Creek, a tributary of the Escalante River, in Garfield County, Utah, and affecting lands of the United States within the Dixie National Forest and other lands of the United States.

The filings comprising the amendment sought were received in the Commission on February 10, 1960, June 22, 1960, August 15, 1960, August 29, 1962, and October 12, 1964, and seek: (1) Commission approval of an Exhibit F tracing and Exhibit K maps; and (2) Commission approval of the completed enlargement of the tailrace re-regulating pool. Our approval of the filings will enable us, for the first time, to establish the area of lands of the United States occupied by the project works, exclusive of transmission lines, and to fix the annual charges for such occupancy.

The aforementioned filings are more specifically described as follows:

(1) *Filing of February 10, 1960, as revised and refiled on August 29, 1962:*[1] (1) an Exhibit K, Sheet 1 (FPC No. 2219–13) entitled "Boulder Creek Hydroelectric Development—Project Plan", showing the location and surveys for the pipe line, tailrace and Behunin—Lyman irrigation, ditch as follows: the length of the pipe line right-of-way is 4.216 miles, of which 3.919 miles occupies 7.60 acres of National Forest lands; the tailrace right-of-way, 2.041 miles long, occupies 19.80 acres (corrected by license Exhibit K (FPC No. 2219–35) to be 16.59 acres) of National Forest lands; and the Behunin—Lyman ditch right-of-way, 3,000 feet long, occupies 3.12 acres of National Forest lands; (2) an Exhibit K, Sheet 2 (FPC No. 2219–14) entitled "Boulder Creek Hydroelectric Development—Vicinity of Dam", showing the plan of diversion dam and diversion works, typical cross-section of the dam, spillway and tailrace cross-sections and detail of the pipe line crossing the tailrace, all of which works occupying 18.15 acres of lands owned by the licensee; and (3) an Exhibit K, Sheet 3 (FPC No. 2219–15) entitled "Boulder Creek Hydroelectric Development—Powerhouse Vicinity", showing that part of the project area in which are located the power plant, switchyard, operators house, parking area, enlarged re-regulating pool, a portion of the access road, and other appurtenances, involving the occupancy of 16.22 acres of National Forest lands. The exhibit also shows 1.61 acres of National Forest lands as being occupied by the access road from the powerhouse area to the Boulder Mountain—Torrey road.

(2) *Filing of June 22, 1960:* an Exhibit F tracing (FPC No. 2219–34) entitled "Access Road to West Fork Diversion Dam and Pipe Line Location Plan", showing: (a) the access road and East-West pipe line to the forebay reservoir on the East Fork of Boulder Creek as occupying a right-of-way on lands of the United States which Commission staff estimates as being 50 feet wide and comprising 12.63 acres; and (b) the access road plotted on a grid background of quarter sections made from a U.S. Public Land Survey, and also showing the occupancy by the West Fork forebay reservoir of approximately 5 acres of lands of the United States in the SE¼SW¼, section 5, T. 32 S., R. 4 E., Salt Lake Meridian.

(3) *Filing of August 15, 1960:* an amended application covering the construction of diversion dam on the West Fork of Boulder Creek and the aforementioned pipe line to the forebay reservoir on the East Fork of Boulder Creek.

(4) *Filing of August 12, 1964:* an application for amendment of the license to extend the project boundaries and enlarge the tailrace re-regulating pond, in order to facilitate proper regulation and control of the water delivered to irrigation users. Filed with the application was a bluelined print Exhibit K, Sheet 1, entitled "Boulder Hydro Regulating Pool" (undated and uncertified), apparently intended to supersede the aforementioned Exhibit K (FPC No. 2219–15),

---

[1] Filed pursuant to Article 29 of the license for the project.

filed August 29, 1962, insofar as the project area boundary and dimensions of the re-regulating tailrace pool are concerned. Information on the filing was sufficient for a computation of the project area as being an increase of 1.32 acres of land of the United States which is included in the 16.22 acres mentioned in subparagraph (1) on page 22 above. In the circumstances, we are not approving Exhibit K (FPC No. 2219-15) but are by Article 35 herein requiring the licensee to file for Commission approval a tracing of above mentioned Exhibit K, Sheet 1, showing the final construction of the enlarged tailrace re-regulating pool.

Based upon the information shown on the aforementioned filings and upon Commission staff computations involving other information available to the staff, it appears that as presently constructed, the project occupies a total of 62.77 acres of land of the United States, of which 61.45 acres were occupied from May 1, 1957, the effective date of the license, through December 31, 1964, after which an additional 1.32 acres of such lands were occupied by the project.

The Commission finds:

(1) The following described exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent herein indicated:

Exhibit F (FPC No. 2219-34) "Access Road to West Fork Diversion Dam and Pipe Line Location Plan", filed June 22, 1960.

Exhibit K (FPC No. 2219-13) "Boulder Creek Hydroelectric Development-Project Plan" filed August 29, 1962, except for the tailrace re-regulation pool return ditch survey to the West Fork of Boulder Creek.

Exhibit K (FPC No. 2219-14) "Boulder Creek Hydroelectric Development-Vicinity of Dam" (East Fork) filed, August 29, 1962.

(2) The amount of annual charges under the license for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands by the project, exclusive of those occupied by transmission lines, is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2219 to the extent therein indicated.

(B) The license for Project No. 2219 is hereby further amended, effective as of July 1, 1966, to authorize and include therein as a part of the project works the constructed and enlarged tailrace re-regulation pond, as applied for in the aforementioned application for amendment filed October 12, 1964.

(C) Subparagraph (2) of Article 30 of the license is hereby amended to read:

> (2) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands, exclusive of those used for transmission line purposes, the sum of $147.48 per annum effective May 1, 1957, through December 31, 1964, and the sum of $150.65 per annum thereafter.

(D) The license is hereby also amended to include the following additional article:

Article 35. The Licensee shall, within 90 days from the effective date of this order, file for Commission approval a tracing of the bluelined print Exhibit K Sheet 1, entitled "Boulder Hydro Regulating Pool", filed as part of the aforementioned October 12, 1964 application for amendment of license, showing the final construction of the enlarged tailrace re-regulating pool.

(E) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

TENNESSEE NATURAL GAS LINES, INC., DOCKET NO. CP66-312

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 7, 1966)

On April 1, 1966, Tennessee Natural Gas Lines, Inc. (Applicant) filed in Docket No. CP66-312 an application and a supplement thereto on April 11, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application and supplement.

Applicant obtains its entire supply of natural gas from Tennessee Gas Pipeline Company (Tennessee) and delivers and sells natural gas to Nashville Gas Company, for resale in Nashville and several other nearby communities and to three industrial customers for their own use. Applicant states that during periods of heavy demand it operates its system at the pressure available from Tennessee and that this past January it was unable to maintain the necessary pressure at the points of delivery to Nashville Gas Company.

Applicant has filed the instant application requesting authorization for the construction and operation of a 16-inch pipeline looping its existing system from the point of connection with Tennessee's Delta-Portland line to the junction of a lateral extension to Old Hickory, Tennessee, a distance of approximately 5.6 miles, all in Davidson County, Tennessee, in order to alleviate the above described situation.

The total estimated cost of Applicant's proposed construction is $299,315, which cost will be financed initially through the use of bank credit. The bank loan will be repaid from funds generated internally, by the issuance of first mortgage bonds, or by a combination of the two.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding, all evidence, including the application, supplement and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Natural Gas Lines, Inc., a Tennessee corporation having its principal place of business in Nashville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-575 (4 FPC 1127).

(2) The proposed construction and operation of facilities as hereinbefore described, and as more fully described in the application, supplement and exhibits

in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the proposed construction and operation of facilities as described hereinbefore and as more fully described in the application, supplement and exhibits in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations by November 1, 1966.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-150

ORDER DENYING MOTION FOR OMISSION OF INTERMEDIATE DECISION AND APPLICATION FOR TEMPORARY CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 7, 1966)

On June 7, 1966, Transcontinental Gas Pipe Line Corporation (Transco) filed a motion pursuant to Section 1.30 of the Commission's Rules of Practice and Procedure for omission of the intermediate decision of the Examiner, or in the alternative, pursuant to Section 7(c) of the Natural Gas Act, and Section 157.17 of the Commission's Rules for a temporary certificate authorizing the construction and operation of certain mainline facilities, as well as 28-miles of 16-inch pipeline (herein referred to as the "Tryon lateral") together with certain sales meter and regulator stations.

On May 26, 1966, the Commission granted temporary authority to Transco in Docket Nos. CP65-181 and CP66-233 for the construction of the mainline capacity sufficient to render the 1966-1967 service specified in the motion to Public Service Company of North Carolina, Inc., and Piedmont Natural Gas Company, Inc.

Transco states that the purpose of the lateral line facilities applied for is: (1) to establish two new delivery points for Piedmont Natural Gas Company, Inc. (Piedmont) at or near the communities of Inman and Landrum, South Carolina, which communities presently do not have natural gas service; and (2) to establish a new delivery point for Public Service Company of North Carolina, Inc. (Public Service) at Tryon, North Carolina, for the service of increased requirements of Public Service's existing markets in its Western Division and to enable Public Service to provide natural gas service to certain new communities in said Western Division.

The hearing on Transco's application herein has been completed. Final briefs were filed on May 16, 1966, and the case is now before the Examiner for his initial decision. The reason alleged by Transco for the request to omit the intermediate decision is that "it would appear to be impossible to secure a final decision of the Commission in time" to render the necessary service for the winter season 1966–1967.

Statements and responses in support of the applicant's motion for omission of the Examiner's decision or for a temporary certificate were filed by the North Carolina Natural Gas Corporation, and Piedmont Natural Gas Company, Inc., The Fuels Research Counsel, Inc., National Coal Association and United Mine Workers of America filed a joint answer urging denial of the application for a temporary certificate to construct the Tryon lateral, and also objecting to the omission of the intermediate decision. The coal interests contend that the Tryon lateral is not needed either to meet an emergency situation or to assure maintenance of adequate service to existing customers during 1966–1967.

A response by Transco to the answer of the coal interests was filed on June 27, 1966, pointing out that Piedmont is an existing customer and that the franchise in the town of Inman which was originally granted in 1958 has been extended on at least three occasions, and Piedmont is now required to begin service in 1966 or the franchise will terminate. Transco further argues that without the construction of the Tryon lateral Public Service cannot serve the 1966–1967 requirements of its existing market in its Western Division.

Staff counsel has neither joined or concurred in the request for omission of the intermediate decision, nor objected thereto.

It appears from the arguments submitted with respect to the motion to omit that (a) there is a question as to whether the Tryon lateral is needed by the 1966–1967 winter season in order to take care of the requirements of existing customers; (b) a substantial question has been raised as to the proprietary of the 16-inch lateral to meet both existing and future demands, and (c) the increased requirements of existing customers for the 1966–1967 winter season may be met through existing facilities. A number of other contested factual issues have been raised in the various briefs. The question of Transco's newly adopted lateral line policy is also at issue in this proceeding. In view of the issues raised, an Examiner's decision herein appears to be most appropriate, and consideration of the extent, if any, of any temporary authorization which might be required prior to final decision can and should await a more specific showing made in the light of said Examiner's decision.

The Commission finds:

(1) It does not appear to be in the public interest to grant Transco's motion for omission of the Hearing Examiner's decision. The due and timely exercise of the Commission's functions does not imperatively require the omission of an intermediate decision.

(2) There is no showing of a clearly defined emergency which would justify grant of any temporary certificate authorizing the construction of all or part of the Tryon lateral at this time.

The Commission orders:

(A) The motion by Transco for omission of intermediate decision herein is denied.

(B) The application for a temporary certificate of public convenience and necessity to construct the Tryon lateral and the related meter stations is hereby denied without prejudice.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66–210

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 7, 1966)

On December 28, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66–210, as supplemented on March 4 and March 29, 1966, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in order to sell and deliver natural gas to International Paper Company (International) in Warren County, Mississippi, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate approximately 18 miles of 12-inch pipeline, together with a meter station and appurtenant facilities, beginning at a point on Applicant's 18-inch Sterlington to Jackson pipeline and extending northerly in Warren County, Mississippi. The estimated peak day and annual requirements for International are 27,700 Mcf and 8,000,000 Mcf, respectively.

International will utilize natural gas at its new paper and pulp plant in Warren County largely for the production of steam for processing purposes and power generation.

Applicant and International have entered into an agreement, dated November 8, 1965, providing for the proposed sale. Gas will be sold at a rate of 26 cents per Mcf.

Total estimated cost of the proposed facilities is $894,930, which cost will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 29, 1966, the Commission on its own motion received and made a part of the record in this proceeding, all evidence, including the application, supplements, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G–216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed

transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Deliveries of natural gas by Applicant to International, as hereinafter authorized, should be limited to a maximum of 27,700 Mcf per day.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) Deliveries of natural gas by Applicant to International, as authorized in paragraph (A) above, shall be limited to a maximum of 27,700 Mcf.

(E) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-280

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 7, 1966)

On February 28, 1966, United Gas Pipe Line Company (Applicant), filed in Docket No. CP66-280 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities for the sale of natural gas to St. Regis Paper Company (St. Regis), to be used in St. Regis' pulp and paper mill located near the Town of Wanilla, Lawrence County, Mississippi, pursuant to a contract between the parties dated February 7, 1966, all as more fully set forth in the application.

Applicant proposes to construct approximately 7.35 miles of 8-inch pipeline, beginning at approximately Milepost 190.7 on its 30-inch offshore to Kosciusko main line and extending in an easterly direction to a point in the Southeast ¼ of Section 26, Township 8 North, Range 21 West, Lawrence County, Mississippi.

The total estimated volumes of natural gas necessary to meet St. Regis' annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	3,920,000	9,000,000	9,000,000
Peak day (Mcf)	32,000	32,000	32,000

The total estimated cost of Applicant's proposed construction is $368,801 which cost will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The proposed construction and operation of facilities and transportation and delivery of natural gas as hereinbefore described, and as more fully described in the application, and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and transportation and delivery of up to 32,000 Mcf per day of natural gas all as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The transportation of gas authorized in paragraph (A) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

(D) The certificate issued by paragraph (A) above shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-300

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 7, 1966)

On March 22, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-300 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction in two phases and operation of certain natural gas facilities to provide additional capacity to its existing pipeline system in order to meet the anticipated requirements of Applicant's Jackson District, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate the following facilities:

Phase I—1967 Construction—two 7,500 horsepower natural gas turbine driven centrifugal compressors, together with appurtenant facilities, for the proposed new Florenville Compressor Station on Applicant's existing southeast Louisiana to Mobile 30-inch pipeline in Tammany Parish, Louisiana,

Phase II—1968 Construction—(1) approximately 19.7 miles of 30-inch pipeline loop on Applicant's existing offshore to Kosciusko 30-inch pipeline, Assumption and Ascension Parishes, Louisiana.

(2) approximately 1.4 miles of 16-inch pipeline looping the 10-inch portion of Applicant's Hollywood-Houma Field to Lirette-Napoleonville main line, Terrebonne Parish, Louisiana, and

(3) approximately 8.9 miles of 20-inch pipeline loop on Applicant's existing Turtle Bayou Junction to Kent Bayou Field 20-inch lateral, Terrebonne Parish, Louisiana.

Applicant states that the proposed facilities are necessary to meet the increased and increasing requirements of its customers in its Jackson District. Further, the declining local supplies of gas in the Jackson District make it necessary that Applicant provide additional pipeline deliveries of gas into this District.

The total estimated cost of Applicant's proposed facilities is $8,371,711.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 29, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations. The reports required by paragraphs (c)(1), (c)(3) and (c)(4) shall be made with respect to both phases of construction.

(C) The facilities authorized in Phase I and Phase II shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations, by November 1, 1967, and November 1, 1968, respectively.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-223

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued July 8, 1966)

On January 11, 1966, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-223, as supplemented on March 15, 1966, an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas compressor facilities at its Aneth Compressor Station, San Juan County, Utah, and certain compressor and field transmission facilities in the Bisti area, San Juan County, New Mexico, all as more fully set forth in the application, as supplemented, in this proceeding.

Specifically, Applicant proposes to abandon 15,600 horsepower at its Aneth Compressor Station which Station was constructed and placed in operation for the purpose of compressing casinghead gas produced in the Aneth area. Applicant states that the casinghead gas now available in the Aneth area can be compressed without utilization of a 15,600 portion of the 28,400 compressor horsepower installed at the Station. Further, Applicant states that its six Bisti Field Compressor Stations and certain field transmission pipelines were constructed and placed in operation for the purpose of compressing casinghead gas produced in the Bisti area and, thereafter, transporting such gas to Applicant's Chaco Plant. The casinghead gas now available in the Bisti area can be compressed and transported without utilization of four of the six stations and a portion of the field transmission lines. Therefore, Applicant proposes to abandon 4,580 compressor horsepower and 3.6 miles of 8-inch and 11.2 miles of 10-inch field transmission lines in the Bisti area.

Applicant proposes to abandon the subject pipeline in place and to remove, salvage and retire to inventory the compressor facilities to be abandoned. Applicant states that the transmission lines will be abandoned in place because the Bisti area is a potential source of high pressure gas production and that there may be a possible future use for the pipeline facilities in their present location. Applicant should file with the Commission for appropriate authorization for any future removal or re-use of the Bisti pipeline facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities to be abandoned in this proceeding, as hereinbefore described, are subject to the jurisdiction of the Commission, and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) The estimated original cost of salvageable pipe hereinafter authorized to be abandoned in the Bisti area, should be charged to Account 154, Plant Materials and Operating Supplies, with a corresponding credit to Account 108, Accumulated Provision for Depreciation of Gas Plant in Service.

(5) Applicant should file with the Commission for appropriate authorization for any future removal or re-use of the Bisti pipeline facilities.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of abandonment within 15 days of the date thereof.

(C) The estimated original cost of salvageable pipe, authorized in paragraph (A) above to be abandoned in the Bisti area, shall be charged to Account 154, Plant Materials and Operating Supplies, with a corresponding credit to Account 108, Accumulated Provision for Depreciation of Gas Plant in Service.

(D) Applicant shall file with the Commission for appropriate authorization for any future removal or re-use of the Bisti pipeline facilities.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

KENTUCKY GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-341

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 8, 1966)

On April 28, 1966, Kentucky Gas Transmission Corporation (Applicant), filed in Docket No. CP66-341 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 8.6-miles of 12-inch natural gas transmission pipeline in Madison County, Kentucky, all as more fully set forth in the application.

The proposed facilities will replace an 8.6-mile segment of an existing 8-inch transmission pipeline extending from the Kentucky River to a point in Estill County, Kentucky, a distance of approximately 25 miles. Applicant states that the particular 8.6-mile segment should be replaced due to the growth in the natural gas market around the city of Lexington and in Fayette County, Kentucky, and the deteriorated condition of the existing 8-inch pipeline.

The proposal is a continuation of one part of a plan described in its joint application with United Fuel Gas Company, an affiliate, filed in Docket No. CP65-324 on April 9, 1965. The plan involves the modernization of Applicant's system serving utilities on the southwestern end of its operating territory.

The estimated cost of construction of the proposed replacement segment is $362,900, which will be financed by the sale of notes and common stock to The Columbia Gas System, Inc., Applicant's parent company.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kentucky Gas Transmission Company, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a

"natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1956, in Docket No. G-9689 (16 FPC 437).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Kentucky Gas Transmission Company in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

MISSOURI POWER & LIGHT COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-304

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 8, 1966)

On March 24, 1966, Missouri Power & Light Company (Applicant) filed in Docket No. CP66-304 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 168 Mcf of natural gas per day for resale and distribution in the community of Jamestown, Moniteau County, Missouri, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 6.6 miles of 3-inch transmission pipeline extending in a northerly direction from Respondent's main transmission line together with a distribution system consisting of approximately 14,500 feet of 2-inch pipeline and appurtenant facilities.

On March 2, 1965, the City of Jamestown, Missouri, granted Applicant a franchise to construct and operate the necessary facilities and to sell gas to the public in Jamestown. The Missouri Public Service Commission granted Applicant a certificate authorizing the proposed service.

The total estimated volume of natural gas necessary to meet Applicant's annual and peak day requirements for the first three full years of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	10,121	13,942	15,974
Peak day (Mcf)	129	148	168

The total estimated cost of Applicant's proposed transmission and distribution systems is $143,400, which will be financed from treasury funds and proceeds from unsecured short term bank loans.

On March 30, 1966, Respondent was duly advised of the application filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on April 12, 1966 (31 F.R. 5672). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 168 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Respondent serve Applicant as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the City of Jamestown, Missouri, and environs, within one year from the date of issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 168 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations. Such service shall be rendered pursuant to Panhandle Eastern's currently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed, herein, within one year from the date of issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-378

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 8, 1966)

On May 18, 1966, Natural Gas Pipeline Company of America (Applicant), filed an application in Docket No. CP66-378 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional daily contract quantity of 1,500 Mcf of natural gas to Wisconsin Southern Gas Company (Wisconsin Southern), an existing customer, all as more fully set forth in the application.

Wisconsin Southern has requested an increase of 1,500 Mcf per day in its CD-1 contract demand over that authorized by the Commission in Docket No. CP66-169. On January 28, 1966, the temperature in Wisconsin Southern's service area was —14°F as compared to the —10°F previously used for requirement estimates. The additional volume of 1,500 Mcf per day will increase Wisconsin Southern's total CD-1 demand to 22,534. Wisconsin Southern will also have available to it 6,558 Mcf per day under Natural's Storage Rate Schedule S-1.

No additional facilities will be required to make the proposed sale and delivery.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Wisconsin Southern Gas Company as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the sale and delivery of natural gas to Wisconsin Southern Gas Company, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant and Wisconsin Southern Gas Company shall execute a superseding service agreement in accordance with the Commission's Regulations reflecting the increase in daily contract quantity and file the same with the Commission within 30 days after the issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-386

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 8, 1966)

On May 24, 1966, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-386 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities to permit increased flexibility in the operation of its Gulf Coast pipeline, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate approximately 22.5 miles of 30-inch loop pipeline on its Gulf Coast pipeline in Victoria and Jackson

Counties, Texas, and modification to its Compressor Station No. 341 gas turbine engines so as to increase the horsepower thereof from 5,490 SHP to 6,330 SHP.

The added flexibility to be achieved through the facilities proposed by the instant application will among other things afford it the ability to attach gas supplies to its system south of its Compressor Station No. 301 for periods of short or long duration in the event of a supply curtailment on its systems, as well as the attachment and utilization of new long term contracted supplies.

The total estimated cost of Applicant's proposed facilities is $2,832,292, which cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-391

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 8, 1966)

On May 26, 1966, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-391 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional daily contract quantity of 2,200 Mcf of natural gas to Interstate Power Company (Interstate), an existing customer of Applicant, all as more fully set forth in the application.

Interstate has requested an additional daily contract quantity of 2,200 Mcf of gas, commencing October 1, 1966, to meet the increase in firm requirements of the industrial customers which it serves in Clinton, Iowa. This is in addition to the 600 Mcf per day under Rate Schedule CD-1 allocated by Natural to Interstate Power in Docket No. CP66-169. Applicant states that its existing service agreements with Interstate, on file with the Commission, provide for peak day deliveries of 27,934 Mcf under Rate Schedule CD-1.

Applicant will not require additional facilities to make the proposed sale.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Interstate Power Company as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, authorizing the sale and delivery of natural gas to Interstate Power Company, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant and Interstate Power Company shall execute a superseding service agreement in accordance with the Commission's Regulations reflecting the increase in daily contract quantity and file the same with the Commission within 30 days after the issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, DOCKET NO. E-7241

ORDER DEFERRING REQUIREMENT TO FILE SPECIAL REPORT

(Issued July 8, 1966)

In our order issued December 30, 1965, 34 FPC 1603, approving the merger of the facilities of Paul Smith's Electric Light & Power & Railroad Company (Paul Smith) with those of Niagara Mohawk Power Corporation (Niagara Mohawk) we noted that Niagara Mohawk proposed to make its scheduled rates and charges for residential, commercial and industrial service available to the retail customers of Paul Smith inasmuch as such rates are substantially less than the rates charged by Paul Smith. However, Niagara Mohawk did not propose an immediate change in the wholesale rates of Paul Smith to two municipal systems, Lake Placid and Tupper Lake, New York, but stated it intended to review them. Paul Smith's wholesale rates to these municipalities exceeded the rate level of Niagara Mohawk's wholesale electric rates in the same general area of Lake Placid and Tupper Lake.

We provided in ordering clause (D) that Niagara Mohawk shall on or before April 1, 1966, submit a special cost of service report showing Niagara Mohawk's cost of serving all of its comparable wholesale customers, including Lake Placid and Tupper Lake, New York.

By order issued March 29, 1966 [unreported] the Commission extended the time for filing the cost of service study to June 1, 1966. Niagara Mohawk now states that it will file for service to Tupper Lake and Lake Placid, the lower rates, applicable to other wholesale customers in its Eastern Division to become effective April 1, 1967, and requests that the Commission defer action on its requirement to submit cost and revenue data requested by the Commission in its order issued December 30, 1965.

At the present time, Niagara Mohawk is serving Tupper Lake and Lake Placid, with power purchased from New York State Electric and Gas Company (NYSEG) under an agreement which NYSEG refuses to cancel in advance of its termination date of June 30, 1967. Niagara Mohawk now has under construction a 42-mile 115 kv transmission line to connect the Paul Smith system with its interconnected system. Niagara Mohawk has submitted a construction schedule for the 115 kv line showing that the construction is well under way and the projected completion date is April 1, 1967.

In view of Niagara Mohawk's representation that it will file the lower rate schedules for Lake Placid and Tupper Lake to become effective April 1, 1967, it is not unreasonable to permit deferment of further action in this proceeding prior to the filing of the reduced rates to Lake Placid and Tupper Lake.

The Commission orders:

The requirement for filing the special report of cost and revenue data as provided in ordering clause (D) of our order issued December 30, 1965 is hereby deferred pending the filing of the lower rate schedules for Lake Placid and Tupper Lake on or before April 1, 1967.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-370

FINDINGS AND ORDER AFTER STATUTORY HEARINGS PERMITTING AND APPROVING ABANDONMENT

(Issued July 8, 1966)

On May 16, 1966, Northern Natural Gas Company (Applicant), filed in Docket No. CP66-370 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities in Yoakum County, Texas, and Washington County, Minnesota, all as more fully set forth in the application.

Applicant proposes to abandon and remove its measuring station located in Section 20, Block K, Public School Land, Yoakum County, Texas, which consists of a 500B meter and appurtenances, utilized by Applicant in delivering natural gas to the Madison Corporation (Madison), formerly W. D. McBee, Jr., for resale as irrigation pump fuel. Applicant also proposes to abandon and remove its measuring station located in Section 1, Township 28N, Range 21W, Washington County, Minnesota, consisting of a 500B meter and appurtenances, used to deliver natural gas to its Peoples Natural Gas Division (Peoples) for resale to the Durox Management Company (Durox), formerly Durox of Minnesota.

Applicant has been given written notice of cancellation by Madison Corporation advising that its Yoakum County Distribution System will no longer be operated. Applicant has also been advised by Peoples that Durox is no longer operating its plant and has no plans for reopening the plant in the future.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, and as more fully described in the application in this proceeding, are granted to Applicant, Northern Natural Gas Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7295

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued July 8, 1966)

Northern States Power Company (Applicant), incorporated under the laws of the State of Minnesota and doing business in the States of Minnesota, North Dakota and South Dakota, with its principal place of business in Minneapolis, Minnesota, filed an application, on May 27, 1966, for authority, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $45,000,000, principal amount of First Mortgage Bonds, due 1996.

Applicant proposes to issue the Bonds under a Trust Indenture, dated February 1, 1937 from Applicant to Harris Trust and Savings Bank of Chicago, Trustee, as heretofore supplemented and as to be further supplemented by a proposed new Supplemental Indenture to be dated as of August 1, 1966. The new Bonds will be dated as of August 1, 1966 and will mature on August 1, 1996. The interest rate of the Bonds will be determined by competitive bidding.

The Applicant intends on or about July 19, 1966, to invite sealed, written proposals for the purchase from it of the $45,000,000 new Bonds. The Statement of Terms and Conditions Relating to Bids will contain the following principal provisions:

Each proposal, which may be made by a single bidder or by a group of bidders, must be for the purchase of all the Bonds. No bidder may submit or participate in more than one proposal. Proposals must be submitted to the Applicant at or before 10:00 A.M., CDST, on July 27, 1966, at 8th Floor Assembly Room, Harris Trust and Savings Bank, 111 West Monroe Street, Chicago, Illinois. Each proposal must be accompanied by a deposit in the amount of $450,000.

Each proposal shall specify: (a) the annual interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1%, and (b) the price (exclusive of accrued interest) to be paid to the Applicant, which price shall not be less than 99% and not more than 102¾% of principal amount thereof. Each proposal shall provide that accrued interest from August 1, 1966, to the date of payment for the

Bonds and delivery thereof will be paid by the purchaser or purchasers to the Applicant.

Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Statement of Terms and Conditions, it will accept the bid which provides for the lowest annual cost of money.

The Commission, in an order issued on May 23, 1966, Docket No. E-7284, 35 FPC 761 authorized the Applicant to issue up to $40,000,000 short-term notes to furnish a portion of the funds for the Applicant's 1966 construction program.

The net proceeds from the $45,000,000 new Bonds will be used to pay short-term notes which are estimated to total about $32,000,000 on the date of the issuance and delivery of the new Bonds, and also used to furnish a portion of the funds for the Applicant's construction program.

Applicant states that its construction program has an estimated cost $74,600,000 in 1966. Included among Applicant's principal expenditures for its 1966 construction program are approximately $29,500,000 for its Allen S. King plant in Oak Park Heights, Minnesota, $3,800,000 for construction of approximately 100 miles of 345 kv transmission line from the Red Rock Substation to Adams Substation, $484,000 for the installation of transmission line outlet facilities at the Allen S. King plant, $502,000 for construction of 23.5 miles of 345 kv transmission line from Allen S. King plant to Terminal Substation, $779,000 for the installation of Terminal facilities at the Red Rock Substation, $1,535,000 for the installation of substation and line terminal facilities for the Allen S. King plant, and approximately $17,969,000 for distribution facilities.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on June 9, 1966 (31 F.R. 8145), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before June 27, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

On June 1, 1966 Public Service Commission of North Dakota issued an order approving the issuance of the proposed first mortgage bonds.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 3, 1965, *Northern States Power Company*, Docket No. E-7202 (33 FPC 942).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204 (f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2 (h) of those Regulations relating to affiliation and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

CITY OF RIDGETOP, TENNESSEE AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-302

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 8, 1966)

On March 23, 1966, the City of Ridgetop, Tennessee (Applicant) filed in Docket No. CP66-302 an application and a supplement thereto on April 22, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 227 Mcf of natural gas daily for resale and distribution in Applicant, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct, own and operate a natural gas distribution system in the city. The distribution system will include 29,400 feet of 4.5-inch line extending from Tennessee's transmission system eastward, to and through the area to be served.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	12,975	15,775	18,250
Peak day (Mcf)	156	193	227

The total estimated cost of Applicant's proposed distribution system is $115,000, which cost will be financed by the sale of revenue bonds.

Applicant is a municipality organized under the laws of Tennessee and is legally authorized to construct and operate gas distribution facilities.

On May 2, 1966, Respondent filed an answer to the application in the proceeding stating it does not oppose the granting of the application and can render the requested service through utilization of a portion of its existing unallocated capacity.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on April 7, 1966 (31 F.R. 5530). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, City of Ridgetop, Tennessee, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 227 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application and supplement in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in the City of Ridgetop, Tennessee and environs, within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company, Respondent, is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 227 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Tennessee's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

TENNESSEE GAS PIPELINE COMPANY, A DIVISION OF TENNECO INC., DOCKET NO. CP66-353

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 8, 1966)

On May 5, 1966, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Applicant) filed in Docket No. CP66-353 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of certain natural gas facilities necessary to take into its certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing transmission system, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of such facilities is not to exceed a maximum of $2,500,000, with no single project to exceed a cost of $500,000, which cost Applicant proposes to finance from general funds or from revolving credit.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Pipeline Company, a Division of Tenneco Inc., a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with

Subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Tennessee Gas Pipeline Company, a Division of Tenneco Inc., to construct during the calendar year 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

CHUGACH ELECTRIC ASSOCIATION, INC., PROJECT NO. 2170

ORDER FURTHER AMENDING LICENSE (MAJOR) AND APPROVING PROJECT EXHIBITS

(Issued July 11, 1966)

Chugach Electric Association, Inc., licensee for Project No. 2170, known as Cooper Lake Project, situated on Cooper Lake, Cooper Creek and Kenai Lake, Alaska, filed: on June 18, 1962 revised tracings designated as Exhibit L (FPC Nos. 2170–19 through –23) showing certain project works as constructed; on August 10, 1962 an application for amendment of license to reflect such changes in the license; on January 24, 1963 and April 24, 1963 revised Exhibits M showing the effects of such changes on the capacity of the project; on January 24, 1963 a supplement to Exhibit K entitled "Production Plant Lease Areas"; on August 9, 1963 Exhibit K map, drawing 240Y–1 (FPC No. 2170–24); and on

July 29, 1965 revised Exhibit K (FPC No. 2170–24) entitled "General Plan Production Plant", which was subsequently revised by our staff pursuant to the licensee's authorization by letter dated January 4, 1966.

The revised exhibits and application for amendment reflect such "as constructed" changes as: the addition of 10 feet to the height of Cooper Lake dam and to the elevation of the spillway crest with resultant increase in the normal elevation of the reservoir from elevation 1,200 to 1,210 feet; change in the nameplate rating of the two generators from 9,375 kva at 0.8 power factor to 8,333 kva at 0.9 power factor, the kilowatt rating of 7,500 for each generator remaining the same; and other changes of a minor nature resulting from detailed design and construction methods, such as an increase in the diameter of the tunnel from 7 to 11 feet.

The cost of constructing the dam 10 feet higher, as reported by licensee, was $187,000. The raising of the normal pool elevation by 10 feet added 30,000 acre-feet to the usable storage (from 82,000 acre-feet 33 feet of drawdown to 112,000 acre-feet for 44 feet of drawdown) and the licensee advises that this additional head and storage increases the annual power output by 600,000 kwh. The licensee's economic feasibility study showed that the value of power at the plant was about 10.5 mills per kilowatt-hour. Based upon this value, the increase in the annual value of the power output is about $6,300. Amortizing $187,000 at 2 percent cost of money over 50 years, through REA financing, results in an annual cost of approximately $6,000. Thus, the estimated annual value exceeds annual costs by $300.

Commission approval of the aforementioned application for amendment and the filings of August 10 and June 18, 1962, and April 24, 1963 will necessitate redescribing in the license the project structures as constructed. Commission approval of the above-mentioned "Supplement to Exhibit K" filed January 24, 1963, and revised Exhibit K filed July 29, 1965 will, among other things, establish the location, boundaries and areas of the project for the first time and permit the fixing of annual charges for the occupancy of such project works on the lands of the United States involved within the Chugach National Forest (1012.9 acres), with the exception of the lands occupied by the Stetson Creek Diversion and the project transmission lines which have not as yet been determined.

The Commission finds:

(1) Project No. 2170 affects lands of the United States.

(2) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit L (FPC No. 2170–9, –10, –11, –12, and –16) which has been superseded, should be eliminated from the license:

Exhibit L, (FPC No. 2170–19) entitled "Cooper Lake Dam," superseding (FPC No. 2170–9);

(FPC No. 2170–20) entitled "Intake, Tunnel & Penstock" superseding (FPC No. 2170–10);

(FPC No. 2170–21) entitled "Surge Tank & Penstock Valve House" superseding (FPC No. 2170–11);

(FPC No. 2170–22) entitled "Powerhouse Design Layout", superseding (FPC No. 2170–12);

(FPC No. 2170–23) entitled "Electrical One Line Diagram" superseding (FPC No. 2170–16); and

Exhibit M, comprising 5 typewritten sheets filed April 24, 1963; and

Exhibit K (FPC No. 2170–24) entitled, "General Plan-Production Plant," with supplement to Exhibit K, entitled "Production Plant Lease Areas" in seven typed sheets.

(3) The amount of annual charges to be paid under the license for recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used by the Stetson Creek Diversion and by the transmission lines, is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The license for Project No. 2170 is hereby further amended in the following respects:

PARAGRAPH I. Finding (1) of the license is deleted therefrom.

PARAGRAPH II. Finding (2) of the license is deleted therefrom.

PARAGRAPH III. Article 29 of the license is modified to read as follows:

Article 29. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 20,000 horsepower.

(ii) For purpose of recompensing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission line purposes, $2430.96; effective as of May 1, 1957, the effective date of the license; and

(iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission line right-of-way purposes only, an amount to be hereafter determined.

(B) Project No. 2170 consists of:

(i) all lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by a certain exhibit which formed part of the application for license or amendment thereof, and which is designated and described as follows:

Exhibit K: (FPC No. 2170–24 revised July 29, 1965) together with "Supplement to Exhibit K," filed January 24, 1963, entitled "Production Plant Lease Areas".

(ii) principal structures comprising: an earth and rock-fill dam 70 feet high across Cooper Creek at the outlet of Cooper Lake; an uncontrolled spillway channel excavated in the left abutment at the dam site; a reservoir with normal pool at elevation 1210 feet having an area of 3100 acres and a usable storage of 112,000 acre-feet; an intake structure 4 miles up the lake; a tunnel and penstock aggregating 10,042 feet extending from Cooper Lake to a powerhouse on Kenai Lake; a differential-type surge tank; powerhouse containing two turbines each rated at 10,500 horsepower and connected to two generators of 7500 kw capacity for a total installed capacity of 15,000 kilowatts; transformers; switchyard; access roads (from the Forest Service Snug Harbor-Cooper Lake Road) to powerplant area, surge tank and the lower portal of access tunnel; a 115 kv transmission line to Anchorage and a 69 kv line to the Homer substation and other appurtenant facilities, including the future diversion works for diversion of Stetson Creek into Cooper Lake, the location, nature and character of which are more specifically shown and described by a certain exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license or amendment thereof and which are designated and described as follows:

Exhibit L: (FPC No. 2170–19) Cooper Lake Dam:
(FPC No. 2170–20) Intake, Tunnel & Penstocks;
(FPC No. 2170–21) Surge Tank & Penstock Valve House;
(FPC No. 2170–22) Powerhouse Design Layout;
(FPC No. 2170–15) Stetson Creek Dam and Canal;
(FPC No. 2170–23) Electrical One Line Diagram;
Exhibit M, comprising 5 typewritten sheets filed April 24, 1963.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) The exhibits described in finding (2) above as conforming to the Commission's Rules and Regulations are hereby approved as part of the license for the project, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(D) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

GRAND VALLEY TRANSMISSION COMPANY, DOCKET NO. CP66–319

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 11, 1966)

On April 6, 1966, Grand Valley Transmission Company (Applicant) filed in Docket No. CP66–319 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 30.3 miles of 3½-inch and 2⅞-inch gathering pipelines and a 100 horsepower compressor unit and the sale of increased volumes of natural gas to El Paso Natural Gas Company (El Paso), all as more fully set forth in the application.

Applicant proposes to extend both branches of its existing Y-shaped pipeline system, which is located in eastern Utah, to connect additional production in Grant and Uintah Counties, Utah with its system. The westerly branch will be extended 10.65 miles with 3½-inch pipeline, where it will branch again with approximately 5.1 miles of 2⅞-inch pipeline, connecting to wells in the Moonridge and Segundo Canyon Units operated by Pacific Natural Gas Exploration Co. The proposed 100 horsepower compressor station will be installed to boost the pressure of the production from the Segundo Canyon wells.

The other main branch of the existing system will be extended from a point downstream from Applicant's existing Robidoux Compressor Station for approximately 14.55 miles north-northwest with 3½-inch and 2⅞-inch pipeline to connect the well operated by Tidewater Oil Company in the Horse Point Unit and the three wells operated by Texaco Inc., in the Fence Canyon Unit.

The facilities will be utilized by Applicant to increase its average daily deliveries to El Paso to approximately 12,000 Mcf pursuant to an amended gas purchase agreement. Applicant states that the extensions to its system will enable it to connect seven additional wells on acreage dedicated to it in contracts with the above-named producers.

El Paso is Applicant's sole customer. The amendments to the existing gas purchase agreement with El Paso consist primarily of an increase in average daily deliveries from 9,000 Mcf to approximately 12,000 Mcf, higher Btu guarantees, and extension of the make-up period for prepaid gas.

The estimated cost of the facilities to be constructed by Applicant is $254,789, which will be financed by bank loans.

Applicant and El Paso have agreed to certain minor modifications in their existing filed rate schedules. It is proposed to change the minimum Btu value per cubic foot from 985 to 1000, retaining the same provisions for downward adjustment of price for gas of lesser Btu content. El Paso now agrees to a 85% minimum take, on an annual basis, as compared with the present 75% provision. The contract "make-up" period for gas not taken, is extended from the present 5 years to the life of the contract.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Grand Valley Transmission Company, a Nevada corporation, having its principal place of business in Salt Lake City, Utah, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 20, 1961, in Docket No. CI60-171 (25 FPC 1178).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant in this proceeding authorizing the construction and operation of facilities and sale and delivery of natural gas as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

CONSUMERS POWER COMPANY, DOCKET NO. E-7289

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued July 12, 1966)

By order issued June 24, 1966, 35 FPC 1071, in the above-entitled matter, the Commission authorized Consumers Power Company (Applicant) to issue and sell at competitive bidding $65,000,000, principal amount of First Mortgage Bonds, due 1996, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on July 12, 1966, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Merrill Lynch, Pierce, Fenner & Smith Incorporated, White, Weld & Co., Lehman Brothers, Salomon Brothers & Hutzler, Shields & Company, to purchase the proposed issuance of $65,000,000, principal amount of Bonds, for the price of 100.32% of principal amount, with an interest rate of 5⅞%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued June 24, 1966, in the above docket, and

under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued June 24, 1966, in the above docket.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66–320

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 12, 1966)

On April 6, 1966, Northern Natural Gas Company (Applicant) filed in Docket No. CP66–320 an application and a supplement thereto on May 26, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation of natural gas in interstate commerce from a gas supply area in northwest Oklahoma, all as more fully set forth in the application.

Applicant proposes to extend its existing pipeline system in a southeasterly direction from its present terminus in Ellis County, to a point in Woodward County, Oklahoma with several branches from such extension. The length and diameter of the various pipelines proposed to be constructed and operated are described as follows: 36.32 miles of 4½-inch, 54.65 miles of 6⅝-inch, 21.0 miles of 8⅝-inch, 10.2 miles of 10¾-inch, 19.34 miles of 12¾-inch, 16.2 miles of 16-inch and 17 miles of 24-inch. Applicant proposes to construct three skid mounted measuring stations together with certain dehydration facilities.

Applicant has entered into a gas purchase contract with Pan American Petroleum Corporation (Pan Am) for the purchase of gas from a 42 Township area located in Ellis, Woodward and Dewey Counties, Oklahoma, and proposes to extend its present gas supply system in this area, as set forth above, in order to attach the reserves under contract and additional reserves assigned for the future.

The source of the gas supply sought herein is approximately 150,000 acres in Ellis, Dewey and Woodward Counties, Oklahoma. Applicant by its contract with Pan American Petroleum Corporation has obtained an estimated 337,933 MMcf of proved reserves at 14.65 psia. An additional 500,000 MMcf of reserves are claimed to be available for future contract to Applicant.

Applicant states that 115 wells have been completed in the acreage contracted to it and 94 of these wells with an estimated first year peak day capacity of 100,000 Mcf are to be connected pursuant to this application. Applicant plans to have these reserves attached to its system by the 1966–67 heating season.

The total estimated cost of the proposed facilities is $5,021,500, which cost will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibit, as supplemented, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, and exhibits, as supplemented, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant authorizing the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as herein before described and as more fully described in the application, as supplemented, and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-149 (PHASE I)

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 12, 1966)

On April 13, 1966, Texas Gas Transmission Corporation (Petitioner), filed in Docket No. CP66-149 a petition to amend the certificate of public convenience and necessity issued in said docket on April 12, 1966, 35 FPC 493 requesting authorization to increase the contract demands of thirteen of its existing customers to be effective November 1, 1966, and to construct and operate the additional facilities required to provide the capacity to serve such increased requirements, all as more fully set forth in the petition to amend.

Petitioner seeks authorization to construct and operate the following facilities:

(1) approximately 43.87 miles of 36-inch loop pipeline in Louisiana, Mississippi, and Kentucky.

(2) approximately 0.66 mile of 30-inch loop pipeline in Kentucky, and

(3) approximately 7.14 miles of 8-inch loop pipeline in Indiana and Illinois.

The petition states that thirteen of Petitioner's existing customers have requested that their contract demands for the 1966-67 winter heating season be increased effective November 1, 1966. Accordingly, by the instant filing Petitioner seeks authorization to provide additional natural gas service to the following customers in the amounts set forth below:

Customer	Authorized in Order Dated April 12, 1966, Docket No. CP66-149	Previously Authorized By Orders Other than CP66-149 Order	Requested Increase	Total Requested For 1966-67 Heating Season
Jackson Utility Division, City of Jackson, Tennessee	23,262		150	23,412
City of Dyersburg, Tennessee	9,200		800	10,000
Indiana Gas & Water Company, Inc		80,000	2,036	82,036
Southern Indiana Gas and Electric Co	72,000		15,000	87,000
Western Kentucky Gas Co. (Zone 3)		59,215	5,785	65,000
Hoosier Gas Corporation		23,300	1,700	25,000
Gas Utilities Company		12,000	1,333	13,333
Eastern Illinois Gas & Securities Co	6,500		400	6,900
Illinois Gas Company	6,350		400	6,750
Midwest Natural Gas Corporation	2,758		908	3,666
City of Morganfield, Kentucky	2,600		925	3,525
Lawrenceburg Gas Transmission Corporation		11,000	500	11,500
Western Kentucky Gas Company (Zone 4)		7,890	522	8,412
Total Increase			30,459	

Petitioner's customers seeking these increases in their respective contract demands cite as the basis thereof the addition of communities, unexpected residential growth, postponing of the installation of peak-shaving equipment, using a decreased design temperature in determining their estimated gas requirements, unanticipated industrial expansions, and additional firm industrial sales.

The total estimated cost of the facilities proposed by the instant filing is $8,207,000, which will be financed through the issuance of long-term debt securities.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 30, 1966 (31 F.R. 6554). No protest, petition to intervene or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 12, 1966, in Docket No. CP66–149 (Phase I) be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 12, 1966, in Docket No. CP66–149 (Phase I) is amended so as to (1) include authorization for the additional construction and operation of approximately 43.87 miles of 36-inch loop in Louisiana, Mississippi, and Kentucky; 0.66 mile of 30-inch loop in Kentucky, and 7.14 miles of 8-inch loop in Indiana and Illinois, and (2) increase the contract demands of 13 existing customers by an additional 30,459 Mcf/d.

(B) In all other respects said order shall remain in full force and effect.

(C) The amendment authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in paragraph (b) of Section 157.20 of such Regulations.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66–364

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued July 12, 1966)

On May 13, 1966, Texas Gas Transmission Corporation (Applicant), filed in Docket No. CP66–364 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing it to render a transportation service for Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), for a term commencing with authorization therefor and ending September 1, 1967, all as more fully set forth in the application.

Applicant proposes to render a limited term transportation service (for one year) for Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee). Applicant proposes to receive up to 26,000 Mcf/d (Volumes at 15.025 psia) on a firm basis from Tennessee at Mitchellville, Tennessee, and deliver equivalent volumes to Louisville Gas and Electric Company (Louisville) near Louisville, Kentucky, for the account of Tennessee. The further purpose of the proposal is to free at least 25,000 Mcf/d of pipeline capacity on Tennessee's system north of its Compressor Station No. 87, in order to meet the increased contract demand requirement of United Fuel Gas Company, an existing Tennessee customer.

No new facilities for the proposed project are required since the proposed transportation service will be rendered through a portion of Applicant's existing pipeline system and existing interconnections and delivery points.

On May 17, 1966, Applicant filed Rate Schedule X–34,[1] comprising Applicant's initial transportation agreement which provides for the service proposed herein. Applicant requests waiver of the notice requirements and an effective date concurrent with the date of certificate authorization. Waiver is deemed appropriate with an effective date being the date of issuance of this order.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on July 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G–855 (7 FPC 213).

(2) The proposed operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed operation of facilities, and the transportation of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (e) and (f) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that Applicant's proposed Rate Schedule X–34 filed on May 17, 1966, be accepted for filing, effective on the date of the issuance of this order, and that with respect thereto the notice requirements of Section 154.22 of the Commission's Regulations be waived.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Texas Gas Transmission Corporation, authorizing the operation of facilities and the transportation of natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (e) and (f) of Section 157.20 of such Regulations.

---

[1] Constituting Original Sheet Nos. 408 through 414 of Texas Gas FPC Tariff, Original Volume No. 2.

(C) The transportation of gas authorized in paragraph (A) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

(D) Applicant's proposed Rate Schedule X–34 (Original Sheet Nos. 408–414 FPC Gas Tariff, Original Volume No. 2), filed May 17, 1966, is accepted for filing effective on the date of issuance of this order.

(E) The notice requirements of Section 154.22 of the Commission's Regulations with respect to the rate filing of Applicant is waived.

Before Commissioners: Lee C. White, Chairman; Charles R. Ross, L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E–7293

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued July 13, 1966)

By order issued June 24, 1966, 35 FPC 1079, in the above-entitled matter, the Commission authorized Northwestern Public Service Company (Applicant), to issue and sell at competitive bidding $3,500,000 principal amount of First Mortgage Bonds, due 1966, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2 (h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on July 13, 1966, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Halsey, Stuart & Co., Inc., to purchase the proposed issuance of $3,500,000, principal amount of Bonds, for the price of 99.127% of principal amount, with an interest rate of 6¼%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued June 24, 1966, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued June 24, 1966, in the above docket.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY, DOCKET NO. E-7282

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued July 15, 1966)

Illinois Power Company (Applicant) filed an application with the Federal Power Commission on April 4, 1966 seeking an order pursuant to Section 203 of the Federal Power Act authorizing it to purchase all of the electric distribution and street lighting facilities of the Village of Sawerville, Illinois (Sawyerville).

Applicant is incorporated under the laws of the State of Illinois with its principal place of business at Decatur, Illinois and is engaged primarily in the generation, purchase and sale at wholesale, transmission and distribution of electric energy in Illinois. It provides electric service in 49 counties in the State.

Sawyerville is a municipal corporation under the laws of Illinois and is engaged in the distribution of electric energy to approximately 138 customers within its corporate limits in Macoupin County. It has no generating capacity and purchases energy to meet its requirements from the Applicant. Sawyerville is surrounded by the service area of the Applicant.

According to the application, Applicant will acquire Sawyerville's facilities for $53,500 of which $3,500 is to be paid at closing and the balance of $50,000 to be paid 25 years from such date, to the extent not previously prepaid upon demand of Sawyerville. The balance of the purchase price from time to time unpaid will bear interest payable monthly in advance at the rate of 6 percent per annum. The facilities proposed to be purchased consist of poles, cross-arms, insulators, conductors, recorders, transformers, and street lighting fixtures with related equipment, in place, constituting the entire system for the distribution of electric energy and street lighting within Sawyerville. Sawyerville has not maintained original cost records but Applicant estimates the original cost of Sawyerville's properties at $19,858 and the value of materials and supplies to be $1,104. After the transaction the Applicant proposes to put into effect in Sawyerville its standard rates in effect in nearby communities. Fifty-two of 132 residential customers will receive decreases in annual bills of $0.06 to $4.92; the other 80 residential customers will receive increases ranging from $0.04 to $32.00 per year. The six commercial customers will receive increases from $2.38 to $126.88 per year.

An ordinance authorizing the sale of the facilities was adopted by the Village Board of Trustees on February 25, 1966. On May 25, 1966, the Illinois Commerce Commission approved the proposed transaction, issued a Certificate of Public Convenience and Necessity to the Applicant and ordered it to make effective in and about Sawyerville the standard rates presently in effect in other communities in the same area. The appropriate retail rate structure of a public utility is not a matter subject to this Commission's jurisdiction.

Applicant represents that its service could be of benefit to Sawyerville's customers whose average annual consumption was 3,000 kwh in 1965, whereas Applicant's residential customers annual consumption was 4,260 kwh in the same year. Applicant proposes additional improvements to the distribution system in Sawyerville which it believes promise appreciable benefits to the community. Applicant proposes to correct the voltage condition in Sawyerville and to renovate the present street lighting system. The cost of correcting the low voltage conditions in Sawyerville which are below the standards set by the state Commission might result in increases in charges should Sawyerville retain its electric facilities. Applicant states that its larger skilled manpower forces will be available to service the electric distribution and street lighting systems thereby making more reliable the electric service to the customers in Sawyerville. Applicant also indicates that the property purchased will be placed upon the tax rolls and produce tax revenue.

Written notice of the application has been given to the Illinois Commerce Commission and to the Governor of that State. Notice was also published in the Federal Register on April 30, 1966, stating that any person desiring to be heard or to make any protest with reference to the application, should on or before April 27, 1966 file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No petitions to intervene or formal protest have been filed in this matter. By letter to the Commission dated April 15, 1966 a resident of Sawyerville expressed objection to the manner in which the Board of Trustees and the Applicant agreed to the transaction. By letter dated April 28, 1966 the Secretary of the Commission advised this individual that the validity of the agreement between the Village Board of Trustees and the Applicant is a matter governed by the laws of the State of Illinois and is not a question for the Commission's final determination.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the States of Indiana, Iowa and Missouri and consumed in the State of Illinois, all of which facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant is, therefore, a public utility within the meaning of that term as used in Section 203 of the Act.

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Sawyerville, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

OPINION NO. 497

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61-19, RP62-7 (REOPENED); KNOXVILLE UTILITIES BOARD, ET AL. v. EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP65-4

OPINION AND ORDER ON PROPER RATE TREATMENT OF AVAILABLE LIBERALIZED DEPRECIATION TAX DEDUCTIONS

(Issued July 15, 1966)*

Syllabus

1. Commission reviews holding in *Alabama-Tennessee* regarding use of liberalized depreciation in lieu of straight-line depreciation. P. 66.
2. Customers may not properly be required to bear increased tax payments resulting from managerial decisions to discontinue use of liberalized depreciation. P. 70.
3. Midwestern and Tennessee are not properly fulfilling their duties under the Natural Gas Act when they voluntarily discontinue use of liberalized depreciation. P. 70.
4. In the customers interest and their own, public utilities should be permitted to charge rates which are compensatory of full cost incurred by alert, efficient and responsible management; customers should not be required to pay more than this. P. 70.
5. Requirement to utilize all available cost savings opportunities is applicable to tax savings as well as general economies of management. P. 70.
6. Commission has no authority to conduct or supervise day-by-day operations involved in production and transportation of natural gas in interstate commerce; those functions are left to management for decision. P. 70.
7. Under the Gas Act, Commission function is to review company business judgments to assure they do not impair and are consistent with concomitant obligation of management to make needed gas supplies available at lowest reasonable rates consistent with public interest. P. 70.
8. Regulation must make sure that costs incurred in rendering service are necessary and prudent—extravagant and unnecessary costs cannot be imposed on ratepayers, no matter how convinced management may have been that costs were necessary in its own interest. PP. 70, 71.
9. Under Uniform System of Accounts, Commission has long exercised its responsibility to scrutinize recorded costs and disallow same where it bears no reasonable, functional relationship to provision of service. P. 71.

---

*Initial decision appears on p. 97. Opinion No. 497-A and order issued September 9, 1966 denying rehearing, etc., 36 FPC 599. Order issued December 22, 1966 granting stay of Opinion Nos. 497 and 497-A. 36 FPC 1099. Affirmed, *Midwestern Gas Transmission Company, et al.* v. *F.P.C.*, 388 F. 2d 444 (CA7-1968), cert. denied, 392 U.S. 928 (1968).

10. Managerial services relating to implementation of Federal tax policies differ in nature from those pertinent to general pipeline policies. P. 71.
11. Federal tax policy encourages taxpayers to use all lawful means for reducing tax liability; absent a clear declaration to contrary, consumer is entitled to share in Federal tax benefits allowed public utilities. P. 71.
12. Under accepted regulatory practices, taxes, including income taxes, are treated as necessary operating costs to be recovered in rates charged users of public utility service. PP. 71, 72.
13. As recoverable costs, tax payments necessarily come under regulatory scrutiny, and where level thereof is affected by managerial action, such payments fall within ambit of regulatory authority. P. 72.
14. Court's decision in *Alabama-Tennessee* enforces conclusion that Federal tax determination here is a proper area for Commission review and removes any remaining doubt that Commission is in any way controlled in its ratemaking authority by fact of Federally created tax option. P. 74.
15. There is no remaining validity to contention that tax benefits allowed public utilities by Congress, absent a clear declaration to the contrary, are for the exclusive benefit of stockholders—Court decisions show that utilities are under a positive obligation to share with consumers savings resulting from exercise of tax options. P. 74.
16. Commission *rejects* argument that it is required, for regulatory purposes, to accept considered judgment of company's directors in area of Federal tax options. P. 74.
17. *Distinguishing United Gas* and *Wisconsin Michigan*, Commission is persuaded on present record that companies' initial decision to use liberalized depreciation was correct and continued use thereof will result in tax savings. P. 75.
18. Since evidence supports that Midwestern and Tennessee will experience growth, their use of liberalized depreciation will result in actual savings not merely a tax deferral. P. 75.
19. While it is possible that company taking liberalized depreciation will experience tax increase at some indefinite time, considering many factors involved, Commission is not persuaded by the argument absent a positive showing of a declining plant balance in particular case under consideration. P. 75.
20. Commission *rejects* concept that consumers are guarantors of a pipeline's future earnings. P. 76.
21. Rates prescribed here are required to cover all of pipelines' reasonable jurisdictional costs and provide a fair return through ensuing few years. P. 76.
22. Even if Midwestern's plant remains static, level of sales will not be affected thereby; evidence shows excess earnings associated with declining net rate base would be available to substantially offset loss of tax deductions attributable to liberalized depreciation without impairing allowed rate of return. P. 77.
23. Commission *rejects* argument that the required use of liberalized depreciation and flow-through of resulting benefits will require higher overall rate of return to attract necessary capital—there is nothing in present record to justify reopening that issue or to cause approval of a higher rate of return for Midwestern and East Tennessee. P. 77.
24. Commission *concludes* that in reverting to straight-line depreciation, Midwestern and East Tennessee exceeded the ambit of managerial discretion and accordingly appropriate rate reductions are required. P. 82.

25. A prospective approach to use of liberalized depreciation is proper in order to afford East Tennessee opportunity to conform or reconform its depreciation practices with rate treatment ordered here and to obtain necessary consent of Internal Revenue to effect reversion. PP. 82, 83.
26. It is more equitable that use of liberalized method in computation of East Tennessee's tax costs for ratemaking purposes be required as of January 1, 1967. P. 83.
27. Since Midwestern voluntarily established effective date for results of present proceeding in its settlement agreement, and in view of expressed terms thereof, Commission *concludes* that, absent a finding agreement is contrary to public interest and unjust and unreasonable under the Act, it has no discretion but to require recomputation of rates from October 13, 1964. PP. 83, 84.
28. In a proceeding on proper rate treatment of available liberalized depreciation tax deductions, Commission *orders* pipelines to base the Federal income tax allowance in their cost-of-service on the higher depreciation deductions and lower taxes available under liberalized depreciation tax option, irrespective of actual deductions taken in Federal income tax returns.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

Introduction

The issue in this proceeding is whether the Commission, in the exercise of its ratemaking authority, may base the Federal income tax allowance in a pipeline's cost-of-service on the higher depreciation deductions and lower taxes available under the liberalized depreciation tax option provided in Section 167 of the Internal Revenue Code irrespective of the actual deductions taken by the company in its Federal income tax returns. Stated otherwise, and relating the issue to the facts in the cases now before us, the question presented is: Where a pipeline, having once decided to receive the benefits of liberalized tax depreciation, thereafter elects to revert to straight-line depreciation and pays Federal income taxes based thereon, such amount being in excess of the tax payment which would otherwise have been incurred under liberalized depreciation, is the Commission bound to accept the depreciation method so selected or may it in appropriate circumstances compute a tax depreciation allowance based on a method resulting in a lesser cost-of-service and lower rates to the pipeline's customers?

The issue above stated has not previously been ruled upon by the Commission. The present proceeding was initiated by an order issued April 21, 1965, 33 FPC 835, for further hearing on this question as remanded in Opinion No. 444,[1] for the purpose of affording Midwestern Gas Transmission Company (Midwestern) an opportunity to justify its action in 1964 in dropping liberalized depreciation and switching to the use of straight-line depreciation for its Federal income tax returns. An identical issue involving East Tennessee Natural Gas Company (East Tennessee) subsequently was severed from the rate proceedings otherwise determined in Opinion No. 488,[2] and was consolidated with the deferred issue in the *Midwestern* case. Both Midwestern and East Tennessee are now operating under rates which reflect the higher taxes payable under the straight-line method of depreciation, subject to reduction in the event that we determine that the rates should reflect the use of liberalized depreciation even though the companies use straight-line depreciation for tax purposes.[3] The issue is presented to us for decision on exceptions to (1) Examiner William C. Levy's decision of January 11, 1966, which would require Midwestern to compute its tax allowance on the basis of liberalized depreciation beginning in 1966, and (2) Examiner Seymour Wenner's decision of August 23, 1965, *supra*, at p. 546, wherein he computed the test period cost-of-service of East Tennessee as though it were continuing to take liberalized depreciation.

Midwestern and East Tennessee filed exceptions to the Examiners' recommended determinations. In the *Midwestern* case, staff, the City of Chicago and the American Public Gas Association support the required use of liberalized depreciation, disagreeing with the Examiner only as to the method to be applied in determining the amount of the reduction. The Independent Natural Gas Association of America (INGAA), an intervener, upholds the position of Midwestern and, indirectly, East Tennessee. In the *East Tennessee* case, the initial decision is supported by a number of distributor customers—Knoxville, *et al.*, Chattanooga, Roanoke and Colonial—and the staff. Pursuant to requests of the parties, oral argument was held before the full Commission on April 5, 1966.

The additional revenues required by Midwestern and East Tennessee as a result of their elections to drop liberalized depreciation in favor of straight-line depreciation have been computed in the appendices to this Opinion. As therein determined, Midwestern's decision has served to add $546,960 annually to its cost-of-service to be recovered in the rates charged its customers, while East Tennessee's cost-of-service has been increased by an average of $374,312.[4]

---

[1] *Midwestern Gas Transmission Co.*, issued October 13, 1964, 32 FPC 993.

[2] *Knoxville Utilities Board, et al. v. East Tennessee Natural Gas Co.*, issued April 19, 1966, 35 FPC 534.

[3] Opinion No. 444, Ordering Paragraph (D), 32 FPC at p. 1005, and Order Approving Proposed Settlement, issued December 30, 1964, 32 FPC 1548; Opinion No. 488, 35 FPC 534 at 539.

[4] These amounts are based on the averaging technique set out herein. All other elements of Midwestern's cost-of-service remain as previously determined in Opinion No. 444 and the December 1964 settlement based on a test year ending June 30, 1962, as adjusted. East Tennessee's cost-of-service for all elements other than the Federal income tax allowance was fixed in Opinion No. 488 on an adjusted test year ending September 30, 1964.

Tax Depreciation Practices Permitted by the Internal Revenue Code

Section 167 of the Internal Revenue Code provides that the taxpayer may determine his tax depreciation either by the straight-line method, the declining balance method, or certain other methods not pertinent herein. Straight-line depreciation is designed to produce a uniform annual depreciation deduction over the useful life of the asset. It is computed merely by dividing the cost of the asset, less salvage value, by the assumed service life. The declining balance depreciation method, sometimes called the double declining balance method, is one of the methods of liberalized depreciation authorized by Section 167 for taxable years beginning on or after January 1, 1954, for property constructed in 1954 or thereafter. Under the double declining balance method a uniform rate of twice the straight-line rate is applied to the unrecovered tax basis of the property, *i.e.*, the tax basis less the tax depreciation allowable in prior years. Absent a change in the tax rate, the use of declining balance tax depreciation rather than straight-line depreciation does not change substantially the total taxes to be paid over the life of a particular property; rather, it simply permits a greater tax deduction in the early life of a property than available if straight-line depreciation were taken, offset by a less than straight-line tax deduction in the later life of a property.

We have had occasion to examine, in detail, the impact of liberalized depreciation on the natural gas pipeline industry, generally, and on one company in particular, in our recent *Alabama-Tennessee Natural Gas Company* Opinion No. 417.[5] While, as we there found, it is axiomatic that, other tax elements remaining constant, the total taxes payable with respect to each piece of depreciable property will be the same regardless of the depreciation method used, this does not mean that the tax consequence occasioned by the use of liberalized depreciation can be measured meaningfully on the basis of specific assets or even on the basis of the total assets acquired by a company in any single year. Income taxes and the tax depreciation to be used as a deduction in computing the net tax are measured not on each individual asset but on the taxpayer's total depreciable assets. A utility's depreciable properties include assets of various vintages. Consequently, the less than straight-line depreciation available on older assets under liberalized depreciation tax accounting is counterbalanced by greater than straight-line depreciation on newer assets so long as the company continues the use of liberalized depreciation and continues to make capital additions equal to or exceeding the cost of replacements. Under these conditions liberalized depreciation will always exceed straight-line depreciation and the accumulations established under normalized rate and deferred tax accounting will continue to increase until the dollar value of gross plant stabilizes. Even if the composite plant of a company remains stable, where the dollar value of retirements equals the cost of replacements, annual liberalized depreciation will not be lower than straight-line depreciation, and the reserve established under the normalization will not decline. As the Court of Appeals stated in upholding our decision, conventional accounting fails in these instances because:

> [it] does not take into consideration the effect of applying liberalized depreciation to a utility's total assets which are, of course, subject to a continuing cycle of obsolescence and renewal. If the industry is stable or expanding, requiring the utility's continued reinvestment in plant equal to or in excess

---

[5] Issued February 3, 1964, 31 FPC 208; rehearing granted for further consideration, 31 FPC 768; rehearing and stay denied, Opinion No. 417-A, 31 FPC 928.

of plant retirement, a program of liberalized depreciation produces true tax savings because there is no reduction in the tax reserve fund.[6]

Decision in Alabama-Tennessee

The issue herein is an outgrowth of our decision in *Alabama-Tennessee Natural Gas Company*, Opinion No. 417. Briefly summarized, the following conclusions were reached in that case regarding the use of liberalized depreciation instead of straight-line depreciation.

1. The use of liberalized depreciation results in permanent reduction of Federal income taxes by pipelines which maintain either a growing or a stable gross plant, as opposed to a simple tax deferral.

2. Alabama-Tennessee, in particular, and the gas pipeline industry in general, will maintain a growing or stable gross plant in the foreseeable future.

3. In enacting Section 167 of the Internal Revenue Code, Congress did not specify the manner in which taxes computed thereunder by jurisdictional (regulated) companies should be treated for ratemaking purposes. Further, there is nothing in the Internal Revenue Code or its legislative history to show that Congress intended to prohibit flow-through to consumers of the tax savings resulting from the use of liberalized depreciation.

4. The prime purpose of permitting liberalized depreciation is to promote expansion in the capital goods industry. This result will best be served in the case of natural gas pipelines if the tax savings are reflected in lower rates, which will tend to generate higher sales, in turn requiring more capital facilities for gas transmission.

5. Where a pipeline is using liberalized depreciation and its gross plant is likely to be either growing or stable, its cost-of-service and rates should reflect the tax savings resulting from the use of liberalized depreciation. In other words, in these circumstances it must flow-through to its customers the tax savings from liberalized depreciation.

6. No return should be allowed for the future on accumulated deferred tax balances. The pipelines are permitted, however, to continue to have the use of this capital interest free.[7]

The decision in *Alabama-Tennessee* expressly was limited to companies claiming the benefits of liberalized depreciation on their tax returns. As stated in the Opinion:

> We do not have before us the question whether a utility which has not exercised its option to claim the tax benefits of liberalized depreciation should have its rates fixed on the basis of the availability of such higher depreciation deductions, and nothing in this opinion should be taken as an indication of our views on that question. (31 FPC at p. 210)

---

[6] *Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, 359 F. 2d 318, 328, (CA5–1966), footnote omitted.

[7] Prior to Opinion No. 417, the difference between the lower tax actually paid under liberalized depreciation and the higher normalized tax was accumulated in a deferred tax account (Account No. 282, Accumulated Deferred Income Taxes—Liberalized Depreciation) to be used to offset the higher tax payments contemplated in later years. The return on the monies so held, which had at one time been included in the rate base at a full rate of return, *Panhandle Eastern Pipe Line Co.*, Opinion No. 269, 13 FPC 53, aff'd *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC–1955), and later at a 1½ percent return, *Northern Natural Gas Co.*, Opinion No. 342, 25 FPC 431; *Panhandle Eastern Pipe Line Co.*, 25 FPC 550 (1961), aff'd 316 F. 2d 659 (CADC–1963), cert. denied 375 U.S. 881, was reduced to zero on the ground that these balances were henceforth to be regarded as consumer-contributed capital "collected for a specific purpose of remote and improbable occurrence."

Following our issuance on April 15, 1964, of Opinion No. 417-A denying rehearing, the decision in *Alabama-Tennessee* was appealed to the Court of Appeals for the Fifth Circuit. On March 25, 1966, the court issued its unanimous decision[8] affirming the Commission in all respects. Among its other holdings, the court rejected the argument that Opinion No. 417 conflicted with the intent of Congress as expressed in Section 167 of the Internal Revenue Code and arbitrarily deprived the company of the benefits of congressionally sanctioned liberalized depreciation, holding that the enactment of Section 167 was not intended to restrict our responsibility "to fix fair rates according to our usual ratemaking policies in favor of the consumer" nor our discretionary authority to choose between competing theories of accounting for ratemaking purposes.

The court found that our decision was supported by substantial evidence. It agreed with our finding that the use of liberalized depreciation will *always* result in tax savings rather than tax deferrals for a regulated company so long as the dollar value of the gross plant remains stable or increases. "It is true that the Commission's decision rests on a reading of the future," the court stated. "But clairvoyage is part of the daily grind of a regulatory agency. Whether flow-through or normalization is the rule, the agency must base the rule on some projection of the future. As we see it, the case for normalization requires more speculation than the case for flow-through. And it is at the expense of consumers."

It is not our purpose here to reargue the merits of *Alabama-Tennessee*. Our holdings in that case are set out in full in the Opinion, and the Opinion has received the judicial sanction of the Appellate Court. The decision will be followed by us in similar cases unless it is set aside on an appeal to the Supreme Court.[9]

Before proceeding to a detailed analysis and consideration of these cases it is worthy to note that the evidence before us in the present proceeding is similar to that relied on by the Commission and accepted by the court in the *Alabama-Tennessee* proceedings. There the intervener introduced evidence based on the historical growth pattern of Alabama-Tennessee and of the natural gas pipeline industry to show that Alabama-Tennessee was in fact a growth company whose gross plant was growing annually. In addition, evidence was offered which proved that by virtue of its growth circumstances Alabama-Tennessee would realize an actual tax savings by its use of liberalized depreciation. In the present proceedings staff and the interveners have offered similar evidence of the growth history of the parties here before us, as well as that of the natural gas pipeline industry, and have presented evidence which demonstrates that, in the circumstances, the tax consequences represent a net savings to these companies.

Depreciation Practices of Midwestern and East Tennessee

Midwestern used the declining balance depreciation method in its tax returns for the years 1959 through 1962, inclusive. The Commission's *Alabama-Tennessee* Opinion was issued February 3, 1964. This date was subsequent to the conclusion of the hearings in the then pending Section 5(a) proceeding fixing the Midwestern cost-of-service but prior to the initial decision thereon. During the test period Midwestern took full advantage of liberalized depreciation in filing its tax returns. The Examiner, relying specifically on Opinion No. 417, utilized liberalized depreciation in computing Midwestern's tax allowance.[10] His decision was issued April 29, 1964. On May 11, 1964, twelve days after the initial decision, Midwestern's board of directors adopted a resolution ordering the use of straight-line depreciation for its Federal tax returns effective as of January 1, 1963.[11] In Opinion No. 444 we determined that Midwestern should "be given an opportunity to present evidence to show why it has changed to straight-line depreciation, how the use of liberalized depreciation in computing taxes for ratemaking purpose might adversely affect its interests, the effect of its change to straight-line depreciation on the rates to be charged consumers *vis-a-vis* the Commission's determination in Opinion No. 417, [and] the method to be used in applying accumulated deferred taxes against its increased tax costs and any other relevant facts."

---

[8] *Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, 359 F. 2d 318 (CA5–1966); petition for certiorari pending.

[9] *Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, No. 286, Oct. Term 1966, petition for certiorari filed June 28, 1966.

It may be noted at this point that there is no issue herein as such as to the application of the reserve accumulated by Midwestern for deferred taxes or the deduction thereof from the rate base. Pursuant to a December 1964 settlement,[12] Midwestern has refunded to its customers the full amount of the reserve ($3,569,600) accumulated during the years it utilized liberalized depreciation.[13] Moreover, the proper treatment of these past accumulations is not at issue in this proceeding but is the subject of a pending notice of rulemaking in Docket No. R–264,[14] action on which has been deferred to this time pending judicial affirmance of our decision in *Alabama-Tennessee.*

East Tennessee's situation parallels in many ways that of Midwestern. East Tennessee had been using liberalized depreciation since 1954. In December 1964, after commencement of the proceedings in Docket No. RP65–4, its board of directors ordered the conversion to straight-line depreciation. East Tennessee filed its 1964 tax return on this basis and, like Midwestern, any future change can only be made prospectively with the approval of the Commissioner of Internal Revenue. In Opinion No. 488 we stated that we would, "for the interim, compute East Tennessee's cost-of-service tax allowance on the basis of straight-line depreciation with a condition requiring additional rate reductions in the event liberalized depreciation is found appropriate in the decision in the consolidated proceedings." [15]

---

[10] 32 FPC 1012, at p. 1062.

[11] Section 167(e)(1) of the Internal Revenue Code permits a taxpayer to change at any time from the declining balance depreciation method to the straight-line method without obtaining consent of Internal Revenue. The converse is not true; once the taxpayer elects to go from liberalized to straight-line, consent is necessary to affect a reversion. Internal Revenue has ruled that such consent cannot be granted retroactively (Exhibit R–1).

[12] 32 FPC 1548. The settlement approved all contested cost-of-service items other than the reserved depreciation issue.

[13] Midwestern's action in refunding this amount to its customers was part of the total package of considerations underlying the settlement agreement. In Opinion No. 417, 31 FPC 208 at p. 220, we sought to encourage companies that have taken liberalized depreciation in the past to pay back the accumulated reserves to their customers if they concurred in our conclusion that they would sustain no injury but did not so require; those companies wishing to maintain the fund (without any return being based thereon), as a protection against the unlikely event of increased taxes, were expressly permitted to do so. It is pertinent to note in this connection that Midwestern has at no time been required, by the settlement terms or otherwise, to reduce its rates to reflect the tax savings which it realized as a result of making the refund.

[14] 29 F.R. 9723; order denying motions, 32 FPC 803, 29 F.R. 13119. The Commission has proposed the amendment of the Uniform System of Accounts and the Annual Report forms for electric and natural gas pipeline companies so as to specify a requirement for actual tax expense accounting. The proposal also provides that accumulated deferred tax balances may be maintained intact in the present account if it is retained by the regulated company in order to offset possible future increases in actual tax liabilities stemming from the use of liberalized depreciation in earlier years. The accounts previously established for the normalization of such tax benefits would continue in the proposed accounting system for the use of such companies who can show that their gross plant investment is neither growing nor stable and would thus be authorized to continue the use of such accounts.

Arguments by Midwestern and East Tennessee Favoring Changeover

Midwestern contends basically that its decision to change its depreciation practice from liberalized to straight-line depreciation was reasonable in the considered judgment of its directors and that the Commission is required to accept that judgment for regulatory purposes. It further contends that the Examiner erred in holding that its action "frustrates the policy of Alabama-Tennessee", which case, it points out, was limited solely to the situation of a company taking liberalized depreciation at the time of our final decision. It also argues that the claims of the parties favoring liberalized depreciation and the Examiner's decision conflict with the holdings of the *Wisconsin Michigan* and *United Gas Pipe Line* cases,[16] as well as certain state regulatory decisions.

Both in its briefs and in the oral argument Midwestern has pointed out a variety of alleged substantial adverse effects it would suffer from a requirement of flow-through. These include the potential future tax increase argument (*i.e.*, that use of liberalized depreciation results only in a deferral, not a savings of taxes); the fact that it is in close competition with other systems having significantly lower rates and that no substantial increase in sales is projected; that its past sales growth has been entirely in the area of normal build-up following certification and cannot be taken as indicative of its future sales growth or of its need for new plant additions; that the tax depreciation deduction used in the Examiner's initial decision in April 1964 substantially exceeds the comparable straight-line depreciation deduction available to it, with the result that the continued use of liberalized depreciation would have required rate increases of approximately $1,000,000 in 1965 and $270,000 each year thereafter in order to offset the annual increase in taxes resulting from the decreasing depreciation tax deductions; that the reduction in the tax component of the cost-of-service is more than offset by other recent cost increases (gas purchase costs, wages, materials, etc.); that its past and expected future plant growth rate are small, differing substantially from the industry average while, because of the newness of its plant and the consequent greater rate of annual decline in tax depreciation than for plants of older vintage, its rate of plant additions would have to be above the industry average to maintain the same annual liberalized depreciation tax deductions; and that its bond coverages would be reduced with flow-through, impairing its ability to issue new securities.

Finally, Midwestern claims that the "assumed minimal future average" plant additions of 1.5 percent per year for the years 1966–1970 projected by the Examiner in calculating the amount of the allowed liberalized depreciation tax deduction cannot be used since they are uncertain and speculative.

East Tennessee in its exceptions reiterates Midwestern's arguments that there is no evidence to support the claim that its management's decision was unreasonable, that our holdings in the *United* and *Wisconsin Michigan* cases and the State decisions are valid precedent for permitting it to utilize straight-line depreciation, and that there is no absolutely clear showing that it will have sufficient continuing growth in the future to offset the potential increased tax liability resulting from the use of liberalized depreciation on its entire plant. Except as otherwise necessary we shall consider these objections as they relate primarily to Midwestern, discussing East Tennessee directly only insofar as factual distinctions dictate a separate consideration.

---

[15] Footnote 2, *supra*, p. 64.

[16] *United Gas Pipe Line Co.*, Opinion No. 428, 31 FPC 1180 (1964); *Wisconsin Michigan Power Co.*, Opinion No. 432, 31 FPC 1445 (1964).

Obligation to Reflect Available Cost Savings

As noted by Examiner Wenner in his initial decision in *East Tennessee*, we are not here deciding how Midwestern and East Tennessee shall compute their Federal income taxes. The companies are, of course, free to elect their own method for such filings but, realistically, we would not expect the companies to continue the use of straight-line depreciation. The issue is whether the increased tax payments resulting from the decision to discontinue use of liberalized depreciation is a reasonable and prudent business expense which the customers may properly be required to bear. Paraphrased, the issue is whether Midwestern and East Tennessee are fulfilling their duties under the Natural Gas Act when they voluntarily take an action of the character here involved, which will necessarily have the effect of substantially raising their costs and rates. For the reasons advanced in this proceeding, we hold that they are not.

An elementary proposition of utility law and utility regulation, universally recognized, is that public utilities, in the interest of their customers as well as in their own interest, should be permitted to charge rates which are compensatory of the full cost incurred by alert, efficient, and responsible management. It is equally elementary that customers should not be required to pay more than this cost. As stated by the Supreme Court:

> The contention is made that the amount to be expended for these purposes is purely a question of managerial judgment. But this overlooks the consideration that the charge is for a public service, and regulation cannot be frustrated by a requirement that the rate be made to compensate extravagant or unnecessary costs for these or any purposes. *Acker* v. *United States*, 298 U.S. 426, 430–431 (1935).

This requirement to utilize all available cost saving opportunities is applicable to tax savings as well as general economies of management, *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567, 573 (CA5–1960), cert. denied 366 U.S. 912.

It is neither our purpose nor our desire to dictate every phase of the operating practices of the natural gas companies coming within our jurisdiction. The Commission has no authority either to conduct or supervise the day-by-day operations involved in the production and transportation of natural gas in interstate commerce. Those functions are left to management for decision and the managers exercise a broad area of discretion in the conduct of their business affairs. In the exercise of the authority conferred upon us by the Natural Gas Act, our function is to review those business judgments to assure they do not impair and are consistent with the concomitant obligation of management to make available the natural gas supplies needed by the consuming public at the lowest reasonable rates consistent with the public interest.[17]

Managements of unregulated business subject to the free interplay of competitive forces have no alternative to efficiency. If they are to remain competitive, they must constantly be on the lookout for cost economies and cost savings. Public utility management, on the other hand, does not have quite the same incentive. Regulation must make sure that the costs incurred in the rendition of the service requested are necessary and prudent. Basically, unless an abuse of discretion is shown, expenses incurred in the rendition of the service are primarily a matter of managerial judgment. This does not mean, however, that extravagant and unnecessary costs can be imposed on the ratepayers, no matter how convinced management may have been that those costs were necessary in its own interest. *Acker* v. *U.S., supra.*

---

[17] Natural Gas Act, Section 1, 15 U.S.C. Sec. 717(a); *Hope Natural Gas Co.* v. *F.P.C.*, 320 U.S. 591 (1944); *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954).

Since the reviewing of rates charged by jurisdictional companies, and their adjustment when necessary, is one of our primary responsibilities, and since rates, under our original cost-rate base mode of regulation, are based on costs, it was necessary, early in the life of the Commission, to set up what has come to be known as the Uniform System of Accounts for companies subject to the provisions of the Natural Gas Act. Under this system the Commission has long exercised its responsibility to scrutinize the costs recorded by the companies and, where a cost claimed bears no reasonable, functional relationship to the provision of the service for which the rate is to be charged, to disallow the cost.

INGAA and the pipeline companies argue that the exercise of regulatory authority over operating costs amounts to a confusion of regulation with management or, as variously described, an invasion of "management prerogatives", "managerial discretion", and "management responsibilities". Managerial decisions relating to the implementation of Federal tax policies differ in nature from those pertinent to general pipeline operations. The Federal tax policy clearly encourages taxpayers to avail themselves of all lawful means for reducing their Federal tax liability and, absent a clear declaration to the contrary, the consumer is entitled to share in the Federal tax benefits allowed public utilities. In these circumstances our expertise necessarily encompasses evaluation of managerial decisions relating to the use of Federal tax benefits available for reducing the utilities' general Federal tax liability.

Just as there are areas where regulation should not interfere, so are there areas where the Commission must apply its judgment in the performance of its obligation to protect the public interest.[18] It is here that regulation must appraise and be prepared to guide and restrain management's judgment—in the same sense that competition in the free market area guides and restrains managerial judgments in business not subject to regulation.

A wholly valid argument is made that regulation must not engage in a reconsideration of every operating decision made by management and that the substitution of the regulatory agency's judgment for that of management on every disputed operating item can only stultify the normal performance of the management function. We agree. Regulation must act with restraint in seeking to substitute the regulator's views for that of management on matters of operational policy. But regulation is reduced to an exercise in futility if it is barred or bars itself from a review of management claims for the recovery of costs running into millions of dollars solely because "management has exercised its judgment." [19]

Tax Benefits as Cost Savings

Under accepted regulatory practice, taxes, including income taxes, are treated as necessary operating costs to be recovered in the rates charged the users of the public utility service. *Galveston Electric Co.* v. *Galveston*, 258 U.S. 388. In this regard the utility company serves as little more than a tax-collecting conduit between the users of the service and the taxing authority. As recoverable costs, tax payments necessarily come under regulatory scrutiny and, where the level of those payments is affected by managerial action, they necessarily fall within the ambit of regulatory authority.

---

[18] *Atlantic Refining Co.* v. *F.P.C.*, 360 U.S. 378 (1956).

[19] The Statistics for Interstate Natural Gas Pipeline Companies reveal that $47,850,000 in deferred tax monies was accrued by all Class A and B pipelines in the year 1963. This amount, if flowed-through to the consumers in 1963, would have resulted in an industry-wide rate reduction of approximately $100 million. The accumulations for 1961 and 1962 were $50.7 million and $53 million, respectively. More recent compilations show further gross accumulations of $38 million in 1964 and $35.6 million in 1965. Thus, the accumulation of these deferred taxes by the pipelines has resulted in the collection of more than $450 million of additional revenues in the years 1961–1965.

Midwestern has stated that it knows of no case which indicates that a regulatory commission may depart for ratemaking purposes from the tax deduction shown in a company's Federal income tax return.[20] It concludes that the Examiner erred, therefore, in holding that it must justify its reversion to straight-line depreciation. Midwestern recognizes that cases dealing with situations where commissions have disregarded a company's actual debt ratio and the tax deductions claimed in its tax return for interest expense are particularly apt. It cites the case of *Re Diamond State Tel. Co.*, 48 Del. 317, 350, 103 A. 2d 304, 324 (1954), for its thesis that a commission is bound by the judgment of a company's management on these matters and can impute hypothetical tax deductions only upon a showing of a gross abuse of discretion. As noted by staff, Midwestern fails to recognize that *Diamond State* and the other cases on which it relies[21] represent a view which has been squarely repudiated by the decisions of many State courts wherein they have allowed income taxes and the costs of capital to be fixed on an ideal debt-to-equity ratio as determined proper by the Commission over the companies' objections that managerial discretion was being unlawfully invaded.[22]

In *C. & P. Tel. Co.* v. *Maryland Public Service Commission*, 97 PUR (n.s.) 50, 93 A. 2d 249 (1952), the State commission disregarded the actual interest expense shown on the company's tax return and imputed to it the higher tax deductions it would have enjoyed if it had the same capital structure as the Bell System, taken as a whole. In rejecting the company's claim that the Commission's action unlawfully invaded its management responsibilities, the court stated:

> The company says that the adjustment invaded the prerogative of a sound, honest, and competent management and that the commission could properly make the adjustment only on a finding of abuse of discretion, bad faith, or wastefulness. It says the commission is deciding what only the directors of the company could decide—the proper corporate structure.
>
> We think the commission was justified in its action. The owner and manager of the company have the right to determine what its debt-equity ratio

---

Co.*, 4 PUR 3d 33, 270 P. 2d 685 (1954); *Riverton Consolidated Water Co.* v. *Pennsylvania Public Utilities Commission*, 24 PUR 3d 9, 16–17, 140 A. 2d 114 (1958); *Re New England Telephone & Telegraph Co.*, 90 PUR (n.s.) 414, 430–431, 80 A. 2d 671 (1951).

> should be, but they may not always make the rate-payers foot the bill resulting from the choice. There was no legal need for the company to pay more than its proportionate share of the joint tax liability. It has not shown any reason or necessity for its assumption of a tax liability greater than it owed or any particular consideration passing to it from A.T. & T., its sole owner, for contributing a gift to that owner.

Whatever may be the prevailing view of the States, the precedent of this Commission is clear. In the *Safe Harbor* case, in setting the rate of return, we rejected the company's actual cost of capital on the basis that the company could have substantially reduced its interest expenses by refinancing. As we there said:

> [W]here, as here, management is laggard in taking advantage of the prevailing low money rates, we have no recourse but to use proper current interest rates, rather than the excessive rate actually paid by the company. Any other treatment would be a premium on inefficiency.[23]

In the same case we also assumed an appropriate capital structure differing from the company's actual debt-ratio in our rate of return considerations. In upholding the Commission's action the Court of Appeals for the Third Circuit held that this involved considerations peculiarly within the administrative capacity of the Commission which were supported by substantial evidence, but, that "[W]ere we reviewing the matter *de novo* we would reach the same conclusions as those expressed by the Commission." [24]

Midwestern cites *City of Pittsburgh* v. *Pennsylvania Public Utility Commission*, 25 PUR 3d 273, 144 A. 2d 648 (1958), where the Pennsylvania Superior Court affirmed a State commission ruling that the choice under the tax laws between liberalized and straight-line depreciation belongs exclusively to the company and could not be overthrown by the regulatory agency. However, unlike the conclusions reached by this Commission in Opinion 417, the Pennsylvania Commission had not made any finding to the effect that the use of liberalized depreciation by a growing utility results in a permanent tax reduction. It was in this context that the Pennsylvania courts held that where a utility has the option by law to take or not to take liberalized depreciation, the exercise of that option cannot constitute an abuse of discretion.

In *Alabama-Tennessee* we rejected a related argument advanced by the Tennessee Valley Municipal Gas Association. It contended it would be an abuse of our discretion to allow anything more than the dollar total of taxes actually paid by Alabama-Tennessee in the test year. In denying this argument we stated:

> * * * These parties have erred in equating current taxes paid during the test year with the taxes properly allowable for rate-making purposes. Income tax allowances have never been mechanically geared to test year tax expenses. On the contrary, past tax expenses are significant only insofar as they constitute a guide to recurring tax obligations. Deferred taxes are merely one example of rate adjustments designed to normalize the actual taxes of the test year.

---

[23] *Safe Harbor Water Power Corporation*, 5 FPC 221, 260.

[24] *Safe Harbor Water Power Corporation* v. *F.P.C.*, 179 F. 2d 179 at 200–201 (CA3–1949), cert. denied 339 U.S. 957 (1950). The Commission also used an assumed capital structure it considered appropriate without respect to the actual capital structure of the company in its rate of return evaluation in *South Carolina Generating Co.*, 16 FPC 52, remanded 249 F. 2d 755; 19 FPC 855, remanded on other grounds 261 F. 2d 915. We have also required the submission of amended financing plans when the plan proposed has included too thin an equity base. *Houston Texas Gas & Oil Corp.*, Opinion No. 301, 16 FPC 118, 140–141; *Permian Basin Pipeline Co., et al.*, Opinion No. 249, 12 FPC 85, 93.

> The assertion that this Commission as a matter of law can recognize only currently payable taxes regardless of the factual circumstances runs afoul of the relevant Court decisions which establish that the rate treatment of liberalized depreciation is a matter of administrative discretion.

In our opinion, the same reasoning applies equally in the determination whether, in the converse situation, we may recognize a tax allowance based on hypothetical liberalized depreciation where a company is actually taking straight-line depreciation. The court's decision upholding our *Alabama-Tennessee* ruling both enforces our conclusion that this is a proper area for Commission review and removes any remaining doubt that we are in any way controlled in our ratemaking authority by the fact of the Federally created tax option.

In *El Paso, supra*, the court rejected El Paso's argument that the requirement for flowing through optional tax benefits under the liberalized depreciation provisions of the Internal Revenue Code was inconsistent with the intent of Congress, holding:

> The requirement that the Commission determine a just and reasonable rate is not modified by reading into the statute an exception to the extent that the prices charged may be sufficient to afford a just and reasonable rate plus an amount representing a saving in taxes granted to the gas industry * * *. We think, in short, that there is no statutory authority for the Commission to treat actual savings in taxes to which natural gas companies are entitled any differently than savings in any other cost-of-service. (281 F. 2d at p. 573)

At this juncture, and with the background of the court decisions in the *El Paso*, *Panhandle Eastern*, *Cities of Lexington*,[25] and *Alabama-Tennessee* cases, there is no remaining validity to the contention that the tax benefits allowed public utilities by Congress, absent a clear declaration to the contrary,[26] are for the exclusive benefit of their stockholders. Rather, the decisions show that the utilities are under a positive obligation to share with their consumers the savings resulting from the exercise of the tax options.

Validity of Claims Opposing Required Use of Liberalized Depreciation

Midwestern's arguments to the effect that we are required, for regulatory purposes, to accept the "considered judgment of its directors" in this area has already been referred to and is rejected. As we have stated, the scope of managerial discretion is wide; however, under regulation it is not plenary. We cannot overlook the fact that amounts charged in the cost-of-service as Federal income taxes are being collected from the ratepayers and that the ratepayers have a right to expect this Commission to allow, as an expense, only the amounts reasonably necessary for this and any other purpose.

In *United Gas Pipe Line Company*, Opinion No. 428, and *Wisconsin Michigan Power Company*, Opinion No. 432, both decided after our decision in *Alabama-Tennessee*, we declined the requests of certain interveners to compute the tax allowance on the basis of an assumed use of liberalized depreciation when the companies had always used straight-line depreciation. Midwestern and East Tennessee argue that our decision in those cases establish a precedent on our part that the Federal income tax allowance must reflect the actual taxes paid and that it would be inconsistent to allow anything less than their tax expense as determined by them under any of the several Section 167 tax options. Our holdings there were based on the failure of the proponent of compulsory flow-through to make a persuasive showing that mandatory use of liberalized depreciation methods would result in a net tax savings to those companies. In the present record we are persuaded that the initial decision of Midwestern and East Tennessee to utilize liberalized depreciation was correct and that the continued use thereof will result in tax savings to these companies.

---

[25] *Cities of Lexington, et al.* v. *F.P.C.*, 295 F. 2d 109 (CA5–1961).

[26] Compare the treatment accorded to investment tax credit in the 1964 Revenue Act where Congress expressly provided that regulatory agencies were not to use the credits generated under Section 38 to reduce the tax component. P.L. 88–272, Section 203(e), 78 Stat. 35.

The argument that the use of liberalized depreciation results in a tax deferral rather than a tax saving was, of course, the basic issue in the *Alabama-Tennessee* proceeding. It has been adequately answered with respect to growing or stable pipeline companies in our Opinion in that proceeding and in the court's unanimous decision upholding our position, as well as in our earlier discussion herein. The real issue, as to Midwestern and East Tennessee, is whether or not they will experience growth, stability, or a decline in their gross plants. As discussed below we find that the evidence fully supports that Midwestern will, for the future, experience minimum average plant additions of 1.5 percent per year. East Tennessee's growth prospects, averaging in excess of 4 percent per year as we here find, are not open to serious dispute. In these circumstances, as we found in our *Alabama-Tennessee* Opinion, there can be no question but that, insofar as Midwestern and East Tennessee are concerned, their use of liberalized depreciation will result in actual savings, not merely a tax deferral.

While it is at least possible that a company taking liberalized depreciation will experience a tax increase at some indefinite time in the future, this can occur only if the dollar additions to its gross plant do not keep pace with gross plant retirements. Considering the many factors involved, including the significant increase in facility costs over the past years, we are not persuaded by the argument in the absence of a positive showing of a declining plant balance in the particular case under consideration. In the words of the Fifth Circuit in its decision in *Alabama-Tennessee*, "* * * the case for normalization requires more speculation than the case for flow-through. And it is at the expense of the consumers."

Midwestern notes that it is in close competition with other pipelines having significantly cheaper rates, particularly with respect to its ability to secure additional sales on its Southern System. Thus, it argues that realistically it could not seek a future rate increase to offset future increases in tax liability resulting from its flow-through of the benefits of liberalized depreciation in the event our predictions as to its plant growth are inaccurate.

By changing over to straight-line depreciation, Midwestern incurred a larger tax expense than would have been the case under continued liberalized depreciation. It took this action despite the competition in the Chicago area which it is currently experiencing. Seemingly it was not bothered by the additional expense at this time. We question, then, Midwestern's concern over its competitive circumstance at some future date when, theoretically, it will be serving customers acquired in today's market under long-term gas supply contracts.

Further, as we will discuss in detail later, the evidence in the present proceeding provides no support for Midwestern's contention that it is in a declining plant circumstance. Assuming *arguendo* that Midwestern is correct, the City of Chicago evidence clearly shows that even with zero plant additions, without replacements, savings will be realized by the setting of rates on the basis of liberalized depreciation with flow-through for the period through

1972.[27] Under this assumption, as argued by the City of Chicago, Midwestern might then be allowed to revert its entire plant to straight-line depreciation at the beginning of 1973 if such is advantageous to it.[28] This change-over would be postponed, however, if sufficient plant additions or replacements were made in the interim to show a continuing benefit from liberalized depreciation.

Midwestern assumes that the present consumers should be obligated to underwrite higher expenses to insure Midwestern's stockholders against the uncertain contingencies of adverse competitive situations in the future. We reject the concept that consumers are guarantors of a pipeline's future earnings. We have, of course, recognized Midwestern's highly competitive situation in our rate design in Opinion No. 477.[29] For example, its Southern System commodity rates, when the higher Btu content of Midwestern's gas is considered, are equal to the commodity rates of its principal competitor, Natural Gas Pipeline Company of America. Of course, as discussed below, its basic thesis that it is not a growth company is inaccurate. In these circumstances the use of liberalized depreciation to lower Midwestern's rates will in fact be advantageous to its competitive situation. Despite the assertions regarding the minor amount of reductions in rates to be occasioned by an order requiring liberalized depreciation, we find nothing in the arguments made by the pipelines and INGAA to lead us to doubt the correctness of our conclusion, which has been so recently affirmed by the court in the *Alabama-Tennessee* proceeding.

Finally Midwestern also assumes that the proper tax allowance and the reduction in the future revenue requirements attributable thereto which we find appropriate in these proceedings are fixed and immutable for all time. The rates which we herein prescribe are those required, in our opinion, by Midwestern and East Tennessee to cover all their reasonable jurisdictional costs and to provide a fair rate of return from their operations through the ensuing few years. Whether these same rates or, for that matter, the same ratemaking treatment of the companies' tax depreciation practices, will remain in effect following our next rate review will be determined by the findings and conclusions reached at that time on the facts as then presented.

Midwestern also contends that the use of flow-through of liberalized depreciation will necessitate a rate increase to compensate for the loss of deductions in its tax computation, since it is not a growth company. It further argues that any reduction in the tax component of its cost-of-service attributable to liberalized depreciation is more than offset by other recent cost increases. In *Midwestern*, as in *East Tennessee*, the issue of the tax allowance was reserved in the rate cases fixing, for the interim, the approved cost-of-service and the parties were on notice that additional rate reductions might be required depending on the outcome of this proceeding. Whether Midwestern or East Tennessee will in fact need a rate increase for the future for expenses other than the reserved tax issue can properly be established only in the context of a new proceeding under Section 4 or 5 of the Act. Midwestern contends that a rate increase will be necessary to offset its loss of deductions in tax computations since its net rate base has been falling. Specifically, Midwestern notes that Examiner Zwerdling's decision in April 1964, 32 FPC 1012, recommended the flow-through of $2,050,051 per year based on the test year experience. Midwestern is understandably concerned if its rates are set on the flow-through of the high level of tax savings experienced in the test year. But, as Examiner Levy made clear, this problem can be avoided by computing the tax savings attributable to liberalized depreciation by using the future five-year average impact of the 1.5 percent annual growth rate which the evidence establishes is appropriate. Over the period for which the rates will be applicable the net amount of the liberalized depreciation flow-through will not exceed, in our opinion, Midwestern's experienced savings. The Midwestern exhibit offered to support its contention assumes a static plant, which as noted, is contrary to the average of their historic experience, and is contrary to our findings as to its future experience. Finally, even if Midwestern's predictions are true and the plant remains static, this will not affect their level of sales. As staff's and the City of Chicago's evidence shows, the excess earnings associated with the declining net rate base would be available to substantially offset the loss of tax deductions attributable to liberalized depreciation without impairment to their allowed rate of return.

---

[27] The Chicago exhibit showed savings through 1972, but a portion of these savings are attributable to a lowered return in the later years of the period due to the assumed declining rate base.

[28] This assumes a change-over from liberalized to straight-line depreciation must occur at a single point in time for the entire plant. This is contrary to sound business practices for companies, such as gas pipelines, with assets of varying vintage and is not required under the tax laws. The law permits selective change-over with respect to individual items, groups, classifications or composite accounts at any time such change-over is advantageous to the taxpayer. It is customary for taxpayers taking liberalized depreciation to revert to straight-line depreciation as tax items age, generally at one-year past the halfway mark on the item's estimated service life. This permits the realization of the full benefits of liberalized depreciation in the early years of the asset and minimizes the rapid decline in depreciation benefits in the asset's later life. It also prevents any sudden increase in taxes when a company reverts to straight-line depreciation as tax items age.

[29] Issued September 28, 1965, 34 FPC 973.

The Examiner's discussion with regard to bond interest coverage, credit standing and continued financial integrity of Midwestern adequately disposes of the arguments related thereto, and is adopted here. It should be noted that the Commission, in approving a 6.5 percent rate of return for Midwestern at the time of its determination of the cost-of-service issues in 1964, adopted the Examiner's decision which made clear that the Commission would not be restricted in its ratemaking authority by the nature of Midwestern's bond coverage requirements.[30] As therein found, purchasers of Midwestern's bonds knew that there would be relatively low coverages at any projected rate of return which the Commission could reasonably have been expected to authorize, and the bonds carried both high interest rates and warrants for the purchase of Midwestern stock, as a consequence. Further, Midwestern's earnings circumstances have never permitted it to fully comply with these restrictive coverage requirements[31] and, as staff points out, the use of flow-through in lieu of deferral has only a limited impact on Midwestern's ability to meet these coverage requirements.

Midwestern and East Tennessee argue that if required to adopt the use of liberalized depreciation, and flow-through the benefits resulting therefrom, they will require a higher overall rate of return in order to attract all necessary capital. In Opinion Nos. 444 and 488 we set 6.5 percent as the appropriate overall rate of return for these companies. We find nothing in the present record which would justify our reopening that issue, or cause us to approve a higher rate of return for these companies.

Staff excepted to the Examiner's failure to find that Midwestern's gross plant will grow at an annual rate of seven percent, consistent with the industry average in the ten-year period from 1954 to 1963. In its brief opposing staff's exception, INGAA argues that the record data does not establish an industry growth rate of seven percent and also alleges that an analysis of the same data reveals a drastic down-trend in the growth rate of the pipelines in recent years. Thus, it states, "While the compound growth rate for the 40-company group for the 10-year period 1954–1963 is 7.1%, the sample growth from 1960 forward has trended downward from 10.9% to 4% in 1963. Moreover, the growth rate on gross plant in 1964 was reduced to a mere 2.3%."

---

[30] *Midwestern Gas Transmission Co.*, Opinion No. 444, 32 FPC 993, 998–1001, 1006. For examiner's decision, see 32 FPC 1012 at pp. 1052–1053.

[31] Staff's reply brief, appendix 2, shows that Midwestern has never succeeded in meeting the first and second coverage requirements. The third coverage requirement has been met only twice, in 1962 and 1964, when the company had excessive earnings.

Although our primary concern, for the purpose of this Opinion, is with the anticipated growth of Midwestern and East Tennessee, rather, than the industry as a whole, it should be noted that the 2.3 percent growth rate developed by INGAA does not provide a true picture. This is so for the reason that among the companies included in the sample is The Ohio Fuel Gas Company which in 1964 divested itself of $187,144,000 in distribution plant facilities. Reflecting this amount in the plant figures shows a growth of 5.2 percent over the previous year, which is an increase over the 1963 rate.

Prospects for Growth

As noted, the central thesis underlying Midwestern's objections to the flow-through of the benefits of liberalized depreciation is its contention that it is not a growth company. East Tennessee similarly contends that their anticipated level of growth is not adequate to justify the flow-through of the benefits of liberalized depreciation in establishing their rates. In the *Alabama-Tennessee* proceeding we held to the effect that liberalized depreciation results in permanent tax savings for stable or growing companies and that before requiring a company using liberalized depreciation to reflect such tax savings in its rates, a finding was required that the company or companies concerned would maintain a growing or stable plant for the foreseeable future. In upholding our finding, the court noted that it is sufficient if the decision "is based on substantial evidence of present conditions * * * If the Commission is wrong, the pipeline will still have paid only actual taxes; these will be recouped in full as part of the cost of service." The court went on to note that should the future support the Commission's evaluation "and should normalization be allowed, consumers will have made enormous contributions to the pipelines' capital funds at no costs to the pipelines." Accordingly, it is necessary to estimate reasonably the growth potentialities of Midwestern and East Tennessee in order to determine both if they will realize permanent tax savings from the taking of liberalized depreciation and to fix the amount of the tax allowance to be included in the cost-of-service.

Midwestern relies on the fact that its past plant growth was only .28 percent between 1962 and 1964. We note, however, in 1966 Midwestern has committed itself to an investment of $8 million in new plant and that its historical average annual rate of growth was 2.075 percent from 1961 through 1966. This comports largely with admissions by a Midwestern witness during the hearing. For example, for the year 1966, the witness testified that gross plant additions would be made in an amount of $22,573,343.[32] Midwestern, in its initial brief to the Examiner, described this witness' testimony as supporting an estimated average annual growth of 1.5 percent per year over the 5-year period beginning October 1, 1965.[33] Despite this modest rate of growth in net plant, as staff evidence shows, Midwestern has experienced a consistent increase in its annual and peak day sales. Thus, the deliveries on Midwestern's Southern System in 1960, the first full year of operation, were 94,201,000 Mcf. By 1964 the yearly volume had risen to 139,667,000 Mcf, an average annual increase of 12.03 percent. Northern System deliveries have gone from 49,138,000 Mcf in 1961, the first year, to 73,365,000 Mcf in 1964, an average annual growth in sales of 6.89 percent. Peak day sales for both systems increased from 572,762 Mcf in 1961 to 631,701 Mcf in 1964, an average yearly increase of 3.43 percent.

---

[32] Since time filings have been made with the Commission seeking authorization for these facilities. See Docket Nos. CP66–119 and CP63–80. As discussed hereafter, we do not rely on the $14 million of facilities in Docket No. CP66–119 for the purposes of our decision herein.

[33] Midwestern's brief to the Examiner, RP61–19, *et al.*, pages 35 and 36.

The argument is made by Midwestern that its past sales growth constitutes a normal buildup following certification and is not a valid indication of its future sales growth or of its need for new plant additions. It is correct that both of Midwestern's systems have been in their developmental phase. Consequently there has been little increase over the gross plant initially constructed in 1959 and 1960. But, as the Examiner properly notes, this past history is of little value since Midwestern, when constructed, had substantial excess capacity and is only now reaching the limits of its physical plant capacity. Thus, assuming that its future rate of growth in sales increases only at the same rate as in the past Midwestern would be required to increase the capacity of its present plant by at least 3.4 percent each year.

An analysis of Midwestern's Form 2 filings for the years 1960 through 1965 reveals that the Southern System sales have in fact grown substantially over the years. The markets which formed the basis for the certification of the system in 1959 (Opinion No. 320, 21 FPC 653) consisted of Northern Illinois Gas Co., where the contract demand was for 60,000 Mcf per day for the term of the contract, a maximum of 100,000 Mcf per day to Peoples Gas Light and Coke Co., and a maximum of 200,000 Mcf per day to Northern Indiana Public Service Co. (NIPSCO).[34] In 1963, the contract demand of Northern Illinois was raised to 100,000 Mcf per day. Further, Midwestern sells additional volumes of gas to these customers under other rate schedules. Finally, the Form 2's show that Midwestern has picked up new customers since 1960, at least six of whom were added in its Southern System since 1963. For these reasons we cannot agree with the argument that Midwestern's past sales growth is solely the "natural buildup following certification."

Furthermore, Midwestern services the Southern and Western segments of the Great Lakes megalopolis which has and will continue to express a significant growth in population, general economy and energy requirements. Recognizing the rich potential of these markets staff's assumptions are modest. Of course, we cannot accept staff's reliance on uncertificated facilities pending before us in competitive proceedings but we agree that the pendency of such applications is valid evidence of Midwestern's growth potential. Thus, while we believe that the staff prediction of a future plant growth rate of 7 percent is not unrealistic, we shall, for the purpose of our decision, use the much more conservative growth rate for Midwestern of 1.5 percent on an average annual basis.

The Examiner, in ruling that Midwestern should use liberalized depreciation in computing its tax expense for ratemaking purposes beginning January 1, 1966, based his tax saving on the average of what he concluded Midwestern will experience in plant growth and depreciation deductions for the five-year period 1966–1970 following the resumption of liberalized depreciation. The five-year average was predicated, in turn, on Midwestern's recently certificated additional sales authorizations and certain pending applications[35] and an assumed minimal future average annual growth rate of 1.5 percent. We shall here adjust the level of plant additions used by the Examiner for 1966 to eliminate consideration of the $14 million of facilities pending before us in the *Great Lakes* competitive proceeding, Docket No. CP66–110, *et al.*, as well as the non-depreciable share of its underground storage project.[36]

---

[34] Opinion No. 320, 21 FPC 657. The Opinion states that the sales were to be made at a load factor of 83⅓ percent.

All in all there is little, if any, support for Midwestern's forecast of a no-growth situation. Considering the particular circumstances of this case, we believe that the Examiner's estimate of Midwestern's future plant growth, while low, is within the bounds of reasonableness and should be used by us in our decision herein. As hereafter indicated, some additional adjustment is required in his computations to reflect a change in the five-year future period.

Our disposal of Midwestern's contentions similarly dictates our action with respect to East Tennessee. East Tennessee does not seriously contest its growth status or its potential for future growth. In these circumstances our ruling in the *Alabama-Tennessee* proceeding is clearly controlling.

East Tennessee has had gross plant additions in each of the past ten years.[37] The company has stated that the requirements of its existing customers are increasing at an average of about 5 percent per year. In 1964 it spent $6,668,182 for construction of its Virginia extension;[38] an additional $1,397,793, including $378,818 for completion of the extension was booked in 1965.[39] During the five-year period 1961–1965, East Tennessee's average annual growth rate was 6.37 percent. For the 15-year period 1951–1965, the average growth was 4.96 percent. Recently, by Opinion No. 493,[40] East Tennessee was denied authorization to construct an estimated $4,160,000 worth of facilities intended to increase its peak day capacity by 22,141 Mcf per day. On May 17, 1966, East Tennessee filed a new application for authority to construct approximately $1,700,000 in pipeline facilities to increase its daily design capacity to 235,338 Mcf and its sales capacity by 47,224 Mcf per day. In addition to growth in gross plant, volumetric deliveries on the East Tennessee system have grown consistently. The deliveries on the East Tennessee system in 1956, the first full year of operation, were 17,371,000 Mcf. By 1965 the yearly volume had risen to 34,242,444, an average yearly increase of approximately 10 percent. Peak day sales on the system increased from 80,483 Mcf in 1956 to 166,106 Mcf in 1965, an average yearly increase of 10.6 percent.

In our opinion East Tennessee will experience a growth in its gross plant of not less than 4 percent per annum for the foreseeable future. While this growth rate is conservative compared to the growth history, we believe this figure may properly be used for present purposes.

---

[35] Docket No. CP66–172, application filed 12/2/65, additional 25,000 Mcf/d interruptible on Northern System, certificate issued 3/25/66, 35 FPC 416; Docket No. CP63–149, certificate issued 7/27/64, 32 FPC 369, additional 25,000 Mcf/d contract demand on Southern System; Docket No. CP66–15, certificate issued 11/29/65, 34 FPC 1379, additional 20,000 Mcf/d temporary winter service on Southern System. No additional facilities were added for these expansions.

[36] Midwestern's witness testified that the depreciable portion of these additions would amount to $3,887,000.

[37] See Examiner's decision, *supra*, p. 556.

[38] *East Tennessee Natural Gas Co.*, Opinion No. 435, 32 FPC 158.

[39] 1965 Annual Report, FPC Form No. 2. Part of the $1,397,793 is attributed in the Annual Report to "land and land rights." To the extent land is involved, it would not constitute a depreciable asset. Our inclusion of the total figure is more than offset by the general conservativeness of our computations with regard to East Tennessee as to both the anticipated future growth and the minimal adjustment effected for 1954–1963 plant additions (Appendix C).

[40] *Transcontinental Gas Pipe Line Corp., et al.*, Docket No. CP64–270, *et al.*, issued June 8, 1966, 35 FPC 917.

CONCLUSION

Midwestern and East Tennessee argue that their managerial decision to revert to straight-line depreciation was a bona fide evaluation of the impact of our decision in the *Alabama-Tennessee* proceeding. They contend that their original election to use liberalized depreciation was made in reliance on the Commission's normalization policy then in effect and that the wholly changed conditions resulting from the flow-through requirements imposed by the *Alabama-Tennessee* proceeding adversely threatened the company's financial integrity. In our *Alabama-Tennessee* decision, we took full cognizance of each company's right to reevaluate their decision to utilize liberalized depreciation in the light of our holdings. Indeed that decision was, by its terms, applicable only to the Alabama-Tennessee company. It constituted merely a "proposed decision" with respect to those other pipeline companies wherein the Commission had reserved the question of the proper treatment of liberalized depreciation in the company's allowance for Federal income taxes in the cost-of-service used for prescribing future rates. Of course, a substantial impact of the decision upon the other regulated companies subject to the Commission's jurisdiction was recognized and taken into consideration. We made clear that we would not impose a flow-through requirement in those circumstances wherein refusal to normalize tax deferrals might well compel future customers to subsidize present ones, or shift to jurisdictional customers a tax burden properly charged to nonjurisdictional customers. Both Midwestern and East Tennessee, rather than presenting evidence to this Commission defending their entitlement to utilize liberalized depreciation with normalization rather than flow-through for ratemaking purposes, reverted to straight-line depreciation. This was the one method certain to result in a maximum Federal tax cost to themselves and maximum rates to their customers.

The primary argument by Midwestern and East Tennessee in support of their decision against the continued use of liberalized depreciation to reduce their tax liabilities is that their standing will be injured if the tax reductions available to them are taken without any protection from the possibility of an increased tax liability should their future investment outlays decline below the present levels.[41] It is to guard them against this future possibility that, they say, their present consumers should pay increased taxes, *i.e.*, higher rates.

As we have seen, there is little likelihood that either Midwestern or East Tennessee will reach a situation in the proximate future where the amount owed the Federal government under liberalized depreciation tax accounting will exceed the amount due under straight-line depreciation. Though the possibility exists, it is, at best, remote. The increased rates attributable to their decisions to drop, or not to use, liberalized depreciation, however, are not remote; they are a fact. The rates being collected today are higher than they would be under liberalized depreciation. For Midwestern and East Tennessee to argue that their present customers should be required to pay higher rates than would be required under liberalized depreciation in order that they, the companies, will be relieved of the *uncertain* burden that might develop from the unlikely occurrence that the dollar value of their gross gas plant will not at least remain stable is strikingly unconvincing. The chance that the investment in utility property will decline in the years ahead, either for the industry as a whole or for Midwestern and East Tennessee alone, can be rated, realistically, as not more than a minimum contingency.

---

[41] East Tennessee has an accumulated balance of $234,000 in Account No. 282, which is being held pending disposition of the Docket No. R–264 rulemaking proceeding. (See footnote 14). As observed earlier (footnote 13), Midwestern's accumulated reserve was refunded in 1964 under its settlement.

In its exceptions to the Examiner's findings regarding the facts underlying its reasons for changing to straight-line depreciation, Midwestern makes the point that it was influenced in its decision by its conclusion that liberalized depreciation with flow-through would impose a heavy financial burden on its future customers "for the reason that flow-through would borrow tax deductions from the future to lower today's rates." We find the argument lacks merit primarily for the reason that it evidences a concern for customers who will be burdened only if the most adverse possibilities are realized, rather than for the present users who, if the policy not to use liberalized depreciation is validated, are now being forced to bear the burden of management's decision—a burden which, under the law, it is not at all certain that any customer, present or future, will be called upon to bear. "The Commission must, of course, concern itself with the possibility of having misread the future. * * * But we should expect agency policy to be sufficiently flexible to attempt to change with changing times. Sufficient unto the day is the evil thereof." [43]

In our opinion, staff's estimate of a growth rate approximating 7 percent annually for Midwestern is not wholly unrealistic. However, for our purposes we have assumed a conservative growth of only 1.5 percent per year. Although Midwestern's witness recanted this estimate, we believe the prediction is reasonable. Evidence submitted by staff shows that while Midwestern may experience some few years of increased taxes over the normal plant life cycle, the net effect will be of a substantial tax reduction. Furthermore, if Midwestern or East Tennessee really felt that the companies would be harmed by flow-through, they had the option at all times of coming to the Commission, proving their impairment, and requesting permission for continued normalization. The fact that they did not do so and, instead, chose to drop liberalized depreciation, indicates an uncertainty in their ability to sustain the necessary burden of proof.

The directors of Midwestern and East Tennessee reached a decision that liberalized depreciation with flow-through as required by our Opinion No. 417 was not in the best interest of their companies. Whether sufficient consideration was given to the effects of the changeover, particularly in Midwestern's case where the decision came less than two weeks after the *Alabama-Tennessee* decision, need not concern us here. The pipelines and INGAA argue that the companies' actions do not constitute an abuse of discretion. For the reasons stated in this decision, and recognizing again the broad scope of managerial discretion which should be allowed the companies in the conduct of their affairs, we conclude that the actions of Midwestern and East Tennessee do, in fact, exceed the ambit of managerial discretion. Accordingly, appropriate rate reductions will be ordered consistent with this Opinion, as reflected in the attached appendices.

The City of Chicago contends that the tax savings which Midwestern would have realized from the use of liberalized depreciation should be reflected in the company's rates effective as of the date of our Opinion No. 444 and order, *i.e.*, October 13, 1964. We agree with the Examiner that, with regard to East Tennessee, a prospective approach is proper in order to afford the company appropriate opportunity to conform, or reconform, its depreciation practice with the rate treatment here ordered and to obtain the necessary consent from the Commissioner of Internal Revenue to effect the reversion. Since the Internal Revenue Service has ruled that permission cannot be granted retroactively, and, therefore, the reversion can take effect only with the start of the 1967 tax year, and since the issue in this proceeding has not previously been decided by us, we believe it is more equitable that the use of the liberalized method in the computation of East Tennessee's tax costs for ratemaking purposes should likewise be required as of January 1, 1967. Although the issue was reserved in the original rate case, the prospective application of our decision is consistent with the general nature of rate reductions ordered under Section 5(a) of the Act.

---

[43] *Alabama-Tennessee Natural Gas Co. v. F.P.C., supra,* 359 F. 2d at p. 339.

However, as the City of Chicago points out, Midwestern has voluntarily established the effective date for the results of the present proceeding in its settlement agreement resolving the various issues in Opinion No. 444. The history of the settlement negotiations illustrates that the setting of the effective date of the present proceedings was the essential *quid pro quo* demanded by Chicago and accepted by Midwestern, the Commission staff and other parties as Chicago's condition for acceptance of the terms of the settlement proposal.

The settlement itself is unusual in that it specifically amends Commission Opinion No. 444. Midwestern submitted its proposal on November 12, 1964, together with its petition for rehearing of Opinion No. 444. Basically, Midwestern proposed to accept the ratemaking principles of Opinion No. 444 in return for the dismissal of any further proceedings on the reserved issue regarding the appropriate rate treatment of liberalized depreciation. It was the subject of intensive discussions by the staff, Midwestern and Midwestern's customers. On December 14, 1964, Midwestern and staff arrived at a modified settlement agreement. The principal difference between Midwestern's original proposal and the modification was an agreement by Midwestern to flow-through all refunds and rate reductions received from TGT. Staff and all customers with the exception of Chicago agreed. On December 19 Chicago filed a telegraphic response indicating that:

> City of Chicago will consent to settlement proposal as modified except for the proposal to dismiss further proceedings concerning liberalized depreciation provided by ordering paragraph D of Opinion Number 444 and determination of refund to customers accruing from flow-back of accumulated deferred taxes—resolution of the issue of whether or not Midwestern may arbitrarily increase its tax expenses by refusing to take advantage of all tax deductions to which it is legally entitled is of cardinal importance to City of Chicago—A Commission determination on this issue in accordance with position of City would result in a substantial annual reduction in cost of gas to Midwestern's customers—

Thereafter, a conference was held among representatives of the City of Chicago, Midwestern and the Commission staff, at which the terms of settlement of the proceedings were agreed to. Subparagraph (6) of the settlement agreement provides as follows:

> (6) The question remanded to the examiner for hearing by ordering paragraph (D) of Opinion No. 444 shall proceed to hearing in accordance with the procedures to be prescribed either by the Commission or the Presiding Examiner. The adjustment, if any, to Midwestern's rates to reflect the Commission's final disposition of this issue, as referred to in said paragraph (D), *shall be effective as of October 13, 1964*. All parties reserve whatever rights they may have to seek review of any final Commission order on this issue. (32 FPC 1549, emphasis added)

Significantly, paragraph (8) of the settlement agreement expressly declares the intent of the terms of the agreement to modify Opinion No. 444: "Except as modified in the above seven paragraphs, Opinion No. 444 remains final and binding."

On its face there can be little dispute but that the settlement agreement approved by the Commission expressly modified the provisions of Opinion No. 444 which had provided that the resolution of the liberalized depreciation issue should have prospective effect only. It is interesting to note that Midwestern's counsel originally so interpreted it.

In the course of the hearings in the present proceeding, staff and the City of Chicago, on July 13, 1965, moved to postpone the hearings on the deferred issue until an appropriate date subsequent to final affirmance of the Commission's Opinion No. 417 in the *Alabama-Tennessee* proceeding. At pages 24 and 25 of the record certified to the Commission by the Examiner relating to staff and the City's motion, Counsel for Midwestern advised the Examiner as follows:

> As was mentioned earlier under the provisions of the Commission's order of December 3 [sic—30], 1964, in this proceeding, the adjustments, if any, in Midwestern's rates to reflect the Commission's final disposition of the reserved issue in this hearing shall become effective as of October 13, 1964, which is, of course, last October. So that we are talking about a retroactive rate effect, if any is to be given on this issue, and not one that would be prospective only.

In view of the expressed terms of the settlement agreement, which agreement was expressly accepted and approved by this Commission, we conclude that, absent a finding that the agreement is contrary to the public interest and unjust and unreasonable under the Natural Gas Act, that the Commission has no discretion but to require Midwestern to recompute its rates from October 13, 1964.[43] Accordingly, Midwestern, within 60 days from the issuance of this Opinion and order, shall file with the Commission a report reflecting the savings attributable to the use of liberalized depreciation in conformity with our findings herein. Specifically, the cost-of-service approved in Opinion No. 444, as modified and amended, shall be adjusted to reflect the benefits attributable to liberalized depreciation on an averaged basis of the benefits resulting from its actual gross plant additions for 1964, 1965 and 1966, and an assumed 1.5 percent annual gross plant growth for the years 1967 and 1968. The resulting differences shall be held in escrow by Midwestern pending further order of this Commission as to its equitable distribution.

The Commission further finds:

(1) Midwestern and East Tennessee are each a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this Opinion and order are sales of natural gas in interstate commerce and are subject to the jurisdiction of this Commission.

(2) The use of liberalized depreciation, under Section 167 of the Internal Revenue Code, results in a permanent reduction of taxes payable to the Treasury Department by natural-gas pipelines which maintain either a growing or stable plant.

(3) In enacting the Internal Revenue Act of 1954, as amended, Congress did not attempt to prescribe the manner in which this Commission should reflect such tax benefits in rates established under the Natural Gas Act.

(4) Rate flow-through of the tax savings occasioned by the use of liberalized depreciation will effectively and substantially promote expanded plant investment by regulated companies, including Midwestern and East Tennessee, and

---

[43] *Texas Eastern Transmission Corporation* v. *Federal Power Commission,* 306 F. 2d 345.

will best implement the fundamental objective of Section 167 of the Internal Revenue Code, to benefit the national economy by stimulating plant modernization and expansion.

(5) There is no present factual justification for basing the Federal income tax allowances for natural gas companies which maintain either a growing or stable plant on straight-line depreciation tax deductions when liberalized depreciation tax savings are available to such companies, without any genuine detriment or material risk.

(6) Midwestern will maintain a growing plant for the foreseeable future in an amount approximately equal to that projected in Appendix A.

(7) The proper tax depreciation deduction to be used in determining Midwestern's just and reasonable rates in Docket Nos. RP61-19 and RP62-7 (reopened) is $3,864,510.

(8) Midwestern should be required to file substitute tariff sheets, subject to the approval of the Commission, reflecting a reduction in its cost-of-service of $546,960 and containing the rates herein found to be just and reasonable as set forth in Appendix B; such rates to be effective beginning January 1, 1967, and to continue in effect until changed by further order of the Commission. Pursuant to its express settlement obligation Midwestern should also be required to make refunds reflecting the appropriate liberalized depreciation tax deductions for the period from October 13, 1964 to January 1, 1967.

(9) Except as otherwise decided in this Opinion, the rates set out in Appendix B should continue to be subject to all the applicable terms and conditions contained in Opinion Nos. 444 and 477, and the Order Approving Proposed Settlement issued December 30, 1964, 32 FPC 1548.

(10) East Tennessee will maintain a growing plant for the foreseeable future in an amount approximately equal to that projected in Appendix C.

(11) East Tennessee should be required to file substitute tariff sheets, subject to the approval of the Commission, reflecting a reduction in its cost-of-service of $264,185 and containing the rates herein found to be just and reasonable as set forth in Appendix D; such rates to be effective beginning January 1, 1967, and to continue in effect until changed by further order of the Commission.

(12) Except as otherwise decided in this Opinion, the rates set out in Appendix D should continue to be subject to all the applicable terms and conditions contained in Opinion No. 488.

(13) The exceptions to the Examiners' decisions, except as granted herein, should be denied.

(14) The Examiners' decisions, to the extent consistent herewith, should be adopted as part of this Opinion and order.

The Commission orders:

(A) Within 45 days from the date of issuance of this Opinion and order, Midwestern and East Tennessee shall file substitute tariff sheets, effective as of January 1, 1967, and satisfactory to the Commission, containing the rates herein found to be just and reasonable as set forth in Appendices B and D, respectively, attached hereto.

(B) Midwestern shall, within 60 days from the date of issuance of this Opinion and order, file a report showing the refunds due its jurisdictional customers which are attributable to liberalized depreciation tax savings during the period from October 13, 1964 to January 1, 1967. Copies of the report shall be sent by Midwestern to all its jurisdictional customers. Midwestern shall take no action to effectuate making the refunds pending the further order of the Commission.

(C) Except as herein granted, the exceptions to the Examiners' decisions are hereby denied.

(D) The Examiners' decisions, to the extent consistent herewith, are hereby adopted as part of this Opinion and order.

Commissioners O'Connor and Bagge *dissenting*.

O'CONNOR, *Commissioner, dissenting:*

While joining in Commissioner Bagge's dissent, I also wish to reemphasize the views expressed in my dissent in *Alabama-Tennessee*[1] and add these comments.

The majority states candidly that it does not want to reargue the merits of *Alabama-Tennessee* in the present proceeding. Their position is readily understandable. However, the present case must be considered in context as the second in a line of judicious decisions, of which *Alabama-Tennessee* is the first.

In *Alabama-Tennessee* the majority made mandatory the flow-through of benefits as a result of liberalized depreciation and thereby reversed the Commission's past policy. Prior to that decision companies were encouraged to voluntarily choose liberalized depreciation for tax purposes and the benefits were shared by the ratepayers, and, to a lesser extent by the stockholders.[2] It is important to note, however, that under our Uniform System of Accounts the differences in tax accumulations between liberalized depreciation and straight-line depreciation were fully recorded in the accounts under our control so that the financial integrity of the company would be maintained and companies were precluded from making any distributions of dividends from these reserves.

Thus, as is the situation in the instant case, where a company's management finds the continued use of liberalized depreciation under the revised rules prescribed by the Commission in *Alabama-Tennessee* inimical to the company's financial integrity and endeavors to revert to straight-line depreciation, the majority will now preclude the exercise of what heretofore has been a managerial right. The next case which will inevitably follow as the third in this line of decisions will be a reconsideration of whether a company utilizing straight-line depreciation can be forced to institute liberalized depreciation. Heretofore, the Commission has answered this question in the negative[3] but I submit that the impetus of today's decision in combination with *Alabama-Tennessee* will lead to reconsideration and a resultant affirmative answer, thereby forcing liberalized depreciation on companies which have heretofore remained on straight-line. To prevent this and other inequities, it is imperative that *Alabama-Tennessee, Midwestern* and *East Tennessee* be reviewed in context of the unjudicious positions they represent and reversed.

---

[1] *Alabama-Tennessee Natural Gas Company*, Opinion No. 417, issued February 3, 1964, 31 FPC 208; rehearing granted for further consideration 31 FPC 768; rehearing and stay denied, Opinion 417-A, 31 FPC 928.

[2] *Panhandle Eastern Pipe Line Company*, Opinion No. 269, 13 FPC 53, affirmed in *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC-1955).

[3] *United Gas Pipe Line Company*, Opinion No. 428, 31 FPC 1180. *Wisconsin Michigan Power Company*, Opinion No. 432, 31 FPC 1445.

It is anomalous that the majority not only denies management the privilege of tax deferral but bars it the alternative of non-use of liberalized depreciation. This denial is inconsistent with the views of another Government agency also having broad jurisdiction over accounting matters, namely, the Securities and Exchange Commission which, except where regulatory directive is present, would require tax deferral accounting for the tax effects of liberalized depreciation. Furthermore, the American Institute of Certified Public Accountants (AICPA), responsible for ethical and professional standards in the accounting profession, has opposed the accounting for the tax effects of liberalized depreciation which the majority is presently forcing on utilities as not being in accordance with good accounting practice and permitted only where prescribed by regulatory commissions.[4]

A possible disadvantage of mandatory liberalized depreciation could be the forced distribution of what are frequently referred to as "tax free" dividends. By forcing a company to use liberalized depreciation for tax purposes, and allowing it to continue with straight-line depreciation for book purposes, differences between the two will necessarily result. Since book earnings are usually larger than tax earnings and since corporate dividends are ordinarily paid from book corporate surplus, dividends may exceed the accumulated undistributed earnings for income tax purposes. Consequently, dividends from corporate surplus may be in excess of the "tax surplus." Thus, for tax purposes, such dividends would not be a distribution of earnings but a return of capital, hence not subject to tax. To be sure, the effect would be greater on a young company than on one with a large accumulated surplus, and granted if projected over a long period of time, say 15 to 30 years, a leveling effect will take place to the extent pay back increases toward the end of the depreciation life of the property, but this will not effect the large investor who is not so interested in dividends as in capital gains which will have already accrued.

Furthermore, whether the reserves presently accumulated because of the difference between liberalized depreciation for tax purposes and straight-line depreciation for book purposes will ever be used for the purposes envisioned by the majority, may depend upon whether Congress elects to change the tax laws or tax rates in the future. The majority fails to take this into consideration.

When all elements of this problem are put properly into focus, it is evident that the surest way to prevent discrimination among various ratepayers, present and future, and to ensure the continuing financial integrity of all elements in the industry where a company chooses, or is forced by the regulatory authorities, to utilize liberalized depreciation for tax purposes is to follow the present procedures directed by our Uniform System of Accounts and provide for normalization of the tax expense over the lives of the property involved and the accumulation of the difference between taxes paid and taxes accrued in a deferred tax reserve upon which no rate of return would be allowed.[5] Such a procedure would be eminently more flexible than flow-through since the stockholders would not receive any extra gains and the ratepayers would pay according to the rates prescribed by the Code as being commensurate with services rendered.[6] Thus, the ratepayer would pay for what he received, not for what his forebearers received or his heirs might receive. Furthermore, it is quite likely that the improved financial integrity of the company under this procedure could lead to reduced rates for future capital requirements and, therefore, bring about lower utility rates to all ratepayers.

---

[4] Accounting Research Bulletin No. 44 (Revised July 7, 1958, Committee on Accounting Procedure, AICPA. Also Accounting Service Release No. 85, SEC, F. 29 1960).

[5] In *Alabama-Tennessee* I endorsed a 1½% return on deferred tax reserves based upon the *Panhandle* philosophy (*Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 316 F. 2d 659 [CADC–1963] of encouraging companies to use liberalized depreciation. However, in view of subsequent events, I am now convinced that no rate of return should be allowed on these reserves.

---

[6] Likewise such a procedure would not result in the inequities that have fallen the lot of Midwestern by forcing them to flow through the "benefits" of liberalized depreciation retroactively without recourse, and the administrative problem, which is now the Commission's, of having to determine when flow-through should be effective would be obviated.

[1] *Alabama-Tennessee Natural Gas Company*, Opinion No. 417, issued February 3, 1964,

BAGGE, *Commissioner, dissenting:*

This decision is wrong. It is bad law. It is far worse policy. It is a dangerous precedent. Specifically, it is wrong for each of the following reasons:

(1) The decision is totally inconsistent with other decisions of this Commission following *Alabama-Tennessee;*[1]

(2) The decision violates a basic principle of public utility law governing the scope of managerial discretion;

(3) The decision contravenes national economic policy as it is reflected in tax policy;

(4) The decision does violence to fundamental concepts of fairness and equity;

(5) The decision contravenes existing regulatory policy of virtually all of the states which have dealt with the issue; and, finally,

(6) In addition to all of the foregoing considerations, when viewed simply as a matter of regulatory policy, the decision contravenes the public interest.

This decision strikes at the very heart of the regulatory confrontation with management expertise. In effectively and decisively carving out of the scope of managerial discretion this vital function of management, the majority in essence holds that a management which has the temerity to disagree with the Commission on the practical application of an abstract principle of corporate finance is to be adjudged guilty of an abuse of management discretion. This decision increases the scope of the uncertainties already existing in the natural gas industry. It concerns not only Midwestern and East Tennessee, but is of profound significance to the entire natural gas and electric power industries subject to the jurisdiction of this Commission. Indeed, its impact will be felt, albeit indirectly, by all of the Nation's utilities.

The Nation requires strong utilities. This is a legitimate objective of regulation. Regulatory policy should, as a consequence, be directed toward the achievement of this goal. The methodology employed in depreciating the Nation's vast utility assets is so vital to the financial integrity of its utilities and is so inherently a part of management expertise that I cannot, on the basis of speculation as to what the future holds, preempt this function.

My colleagues have stated, and I agree, that "it is not our purpose to re-argue the merits of *Alabama-Tennessee* for, in this proceeding, we consider, for the first time, an issue which was reserved in *Alabama-Tennessee* and which the Court of Appeals for the Fifth Circuit did not decide.[2]

---

31 FPC 208; rehearing granted for further consideration 31 FPC 768; rehearing and stay denied, Opinion No. 417-A, 31 FPC 928.

[2] *Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, No. 21610, 359 F. 2d 318, (CA5) Petition for Cert. filed June 23, 1966, No. 286, Oct. term 1966.

In *Alabama-Tennessee*, the Commission stated:

> We do not have before us the question whether a utility which has not exercised its option to claim the tax benefits of liberalized depreciation should have its rates fixed on the basis of the availability of such higher depreciation deductions, and nothing in this opinion should be taken as an indication of our views on that question. (31 FPC at p. 210).

On appeal, the Fifth Circuit stated:

> Since the Commission has not yet ruled on Petitioner's (Alabama-Tennessee) application for conversion to straight-line tax depreciation, the effect of the proposed conversion is not a proper subject for review in this case. (p. 340).

In this Section 5(a) proceeding, the majority, having experienced the "industry-regulator impasse" called to the Commission's attention *by Commissioner O'Connor in his dissent in Alabama-Tennessee,*[3] orders Midwestern and East Tennessee to use liberalized depreciation for regulatory purposes although the companies have elected to exercise their statutory option to change to straight-line depreciation in the compilation of their Federal income tax. The majority is really finding that, to be effective, both liberalized depreciation and flow-through must be mandatory. Significantly, although the majority does not decide "* * * at least directly, how Midwestern and East Tennessee shall pay their income taxes * * *" leaving "* * * the companies free to choose their own method for filing their tax returns," the freedom is illusory because this decision effectively negates the element of management choice which has been expressly provided by the Congress.

Section 167 of the Internal Revenue Code provides that taxpayers have the statutory option to elect to use or not to use the liberalized depreciation provision for the purpose of computing Federal income taxes. The election determines a cost component in the cost of service, and the cost of service serves to determine the rate to be charged. Section 167(e)(1) of the Internal Revenue Code permits a taxpayer to change at any time from liberalized depreciation to the straight-line method. The converse is not true; once the taxpayer elects to go from liberalized to straight-line, government consent is necessary before the taxpayer may revert. Since the Internal Revenue Code grants management this option, I conclude that management has both the prerogative and the correlative responsibility of exercising that option in the best interests of the business and its customers.

Such a decision cannot lawfully be overturned by a regulatory agency absent an abuse of management discretion. The election to adopt liberalized or straight-line depreciation involves risks and uncertainties which are best known to those with an intimate knowledge of a particular company. These are individual management decisions to be made on the basis of the circumstances of each individual case. I cannot, on the basis of mere disagreement, hand to consumers a short range benefit[4] at the expense of creating great uncertainty within the regulated industries. This is especially true in light of the fact that this will be still another regulatory about-face similar to the one for which the Commission was so severely chastised by the Fifth Circuit in *Alabama-Tennessee.*

Subsequent to *Alabama-Tennessee*, the setting of rates based on hypothetical liberalized depreciation was expressly rejected by this Commission in *United*

---

[3] At page 237.

[4] It is undisputed that the benefits of flow-through are only going to the consumer for a short period, usually from seven to twelve years. After that, consumers will get no net return benefit from flow-through.

Gas Pipe Line Company,[5] and *Wisconsin Michigan Power Company*.[6] In *Wisconsin Michigan*, the Commission found that its acceptance of the company's use of straight-line depreciation was not inconsistent with the obligations of a regulated company to operate with all reasonable economies. There the Commission stated:

> We have heretofore taken the position that, if a utility chooses to utilize a liberalized depreciation option permitted by the tax laws, the benefits thereof must be flowed through to ratepayers within the operating year. Intervenors would have us go one step further and set the rates of a regulated utility as if it voluntarily used liberalized depreciation (as well as guideline service lives), even though the utility in fact chose to employ straight-line depreciation, as *Wis-Mich* has done. Intervenors' position proceeds from the proposition that public utilities are obligated to operate with all reasonable economies, including the lowest reasonable tax burden, and to pass these economies along to the ratepayer.
>
> While there can be no dispute with the principle that utilities should operate with maximum efficiency, we do not believe this rule leads to the conclusion urged by the intervenors. On this record it is clear that this company has never used liberalized depreciation and has chosen to apply straight-line depreciation to its property as a matter of business judgment. Its officers firmly believe this to be the wisest course in the long-range interests of the company and its customers. The case that has been made for requiring the company to use (or for assuming it has used) guideline service lives is not persuasive, either on the facts of this case or as a general principle, and we could not accept the intervenors' position in this regard. As to liberalized depreciation, the tax laws give management the option not to take liberalized depreciation and we do not believe that on this record we should in effect deprive the company of its option under the tax law.

In so holding, the Commission made it abundantly clear that the election to use, or not to use, liberalized depreciation is a matter of business judgment to be left to the discretion of management in each individual case. There is no rational justification either in logic or in law for establishing different criteria to a management decision to discontinue its use.

Midwestern and East Tennessee had originally elected to use liberalized depreciation in reliance on the Commission's normalization policy. When that policy was reversed in *Alabama-Tennessee*, the companies' managements elected to use straight-line depreciation. In each case management concluded that the continued use of liberalized depreciation under the wholly changed conditions would be unsound financial and business policy because of the substantial adverse impact on the company's financial integrity. Viewing the change in policy enunciated in *Alabama-Tennessee* in connection with the policy set forth in *United* and *Wisconsin Michigan* precludes a finding that Midwestern and East Tennessee abused their discretion in reverting to a straight-line method of tax depreciation for elemental fairness requires that the companies be entitled to re-evaluate their tax depreciation methods in the light of changes in regulatory policy.

Significantly, in the Midwestern case there is no issue regarding the treatment of the accumulated reserve for deferred taxes. In its December, 1964 rate order,[7] the Commission approved an actual tax treatment of liberalized depreciation and directed Midwestern to refund to its customers the accumulated reserve for deferred taxes of $3,569,600. This action precluded the application of these deferrals to offset higher future taxes for which the deferrals had been earmarked. This action was an open invitation for Midwestern to adopt straight-line depreciation for the remaining undepreciated tax base. Under these circumstances, Midwestern's adoption of straight-line depreciation could be viewed as a logical managerial response to protect the best interests of the company and its customers. The question of whether liberalized depreciation is suitable or necessary for all utilities has never been conclusively answered. Congress, however, gave the option to the taxpayer (management) to choose the method best suited to his particular circumstances.

[7] 32 FPC 1548.

The various state courts and virtually all of the state commissions who have considered this issue have concluded that the decision to use, or not to use, liberalized depreciation for tax purposes lies securely within the discretion of management. For example, the California and New York Commissions, who have adopted flow-through, have not attempted to compel any utility to take liberalized depreciation against the better judgment of its management.

Re: Tax Treatment of Accelerated Depreciation, 33 P.U.R. 3d 209, 215 (Cal. P.U.C. 1960).

> As a general proposition, it is a matter to be determined in the first instance by the management of a public utility as to whether or not liberalized depreciation will be availed of or whether straight-line depreciation will be used.

Re: *Niagara Mohawk Power Corp.*, 28 P.U.R. 3d 17, 194 (N.Y. P.S.C. 1959).

> * * * We think that the selection of the method of depreciation for tax reporting purposes is peculiarly a managerial determination * * *

In the following cases, utilities which had been employing accelerated depreciation reverted to straight-line depreciation after state commissions adopted the flow-through method. In each of these cases, the higher straight-line taxes were allowed in subsequent rate cases on the ground that the election was a matter of managerial discretion: *City of Pittsburgh v. Pennsylvania Pub. Util. Comm'n.*, 144 A. 2d 648, 25 P.U.R. 3d 273 (1958); Re: *Southern Cal. Water Co.*, 57 Cal. P.U.C. 677 (1960); Re: *Southern Cal. Gas Co.*, 35 P.U.R. 3d 300 (1960); Re: *Southern Counties Gas Co.*, 58 Cal. P.U.C. 27 (1960); Re: *San Diego Gas & Elec. Co.*, 39 P.U.R. 3d 417 (1961); Re: *Pacific Lighting Gas Supply Co.*, 59 Cal. P.U.C. 610 (1962); Re: *Housatonic Pub. Ser. Co.*, 22 P.U.R. 3d 1 (1958); Re: *Raytown Water Co.*, 22 P.U.R. 3d 556 (1958); Re: *Piedmont Natural Gas Co.*, 34 P.U.R. 3d 1 (1960); *Pennsylvania Pub. Serv. Comm'n. v. Pennsylvania Power Co.*, 33 P.U.R. 3d 177 (1960); Re: *Cumberland & Allegheny Gas Co.*, 28 P.U.R. 3d 93 (1959).

In the following cases management's right to elect not to adopt accelerated depreciation was sustained against attacks by advocates of mandatory flow-through: Re: *New England Tel. & Tel. Co.*, 23 P.U.R. 3d 510 (1958); Re: *The Mountain States Tel. & Tel. Co.*, 31 P.U.R. 3d 417 (1960); Re: *New England Tel. & Tel. Co.*, 21 P.U.R. 3d 195 (1957); *Pennsylvania Pub. Util. Comm'n. v. Pennsylvania Gas Co.*, CCH Util. L. Rep.—State para. 17, 554 (1957); *Pennsylvania Pub. Util. Comm'n. v. Peoples Natural Gas Co.*, 31 P.U.R. 3d 283 (1959).

All of these decisions are consistent with the general rule of utility law enjoining commission interference with managerial discretion as stated in *State of Missouri, ex rel. Southwestern Bell Tel. Co. v. Public Service Commission of Missouri*, 262 U.S. 276, 289 (1923):

> * * * It must never be forgotten that while the state may regulate with a view to enforcing reasonable rates and charges, it is not the owner of the property of public utility companies and is not clothed with the general power of management incident to ownership. The applicable general rule is well

> expressed in *State Public Utilities Commission, ex rel. Springfield v. Springfield Gas and Electric Company*, 291 Ill. 209, 234. "The Commission is not the financial manager of the corporation and it is not empowered to substitute its judgment for that of the directors of the corporation; nor can it ignore items charged by the utility as operating expenses unless there is an abuse of discretion in that regard by the corporate officers."

The majority, relying on *Acker v. United States*, 298 U.S. 426 (1935) state:

> An elementary proposition of utility law and utility regulation universally recognized, is that public utilities, in the interest of their customers as well as in their own interest, should be permitted to charge rates which are compensatory of the full cost incurred by alert, efficient, and responsible management. It is equally elementary that customers should not be required to pay more than this cost.

While no one can disagree with this, I do not see how such a statement can preclude the position I am taking here. Furthermore, the majority's reliance on *Acker* is misplaced. The problem to which the Court's attention is directed in *Acker* relates to the reasonableness of business expenditures. It does not relate to taxes computed in accordance with unqualified rights provided by the Congress. Therefore, *Southwestern Bell* is still the law of the land and must be followed by this Commission.

Although I have disavowed any intention to re-argue the merits of *Alabama-Tennessee*, I am compelled to point out another unwarranted hypothesis of the majority which is arguably within the ambit of that case. If the majority theory is to be validated, it must be assumed, for the purposes of this case, that the companies will have a significantly rising and continuous growth in their property accounts. The concept here of stabilization or continued growth requires projections for 60 years or more by an absolute prediction of a 30-year life and 100% replacement for existing facilities. These projections are in conflict with the companies' projections of the limited growth associated with the specific areas served. For a pipeline system, dependent on continuous availability of low cost natural gas, projection of such low cost gas supply beyond thirty years is extremely tenuous. This elementary fact is reflected in the realities of the financial market. Debt capital is generally available in this industry for terms not exceeding 20 years. While there are no doubt many factors which combine to dictate this 20-year limitation, certainly one important factor is that the interstate transmission segment of the natural gas industry is based upon a wasting asset. Another factor is that this is an area in which conditions could be drastically changed due to technological advances either within the gas industry or within competing forms of energy.

There are a number of factors which could affect the rate of future property additions. Among these are the degree of saturation of the gas market, economic conditions of the area served, available gas reserves, technological changes, the availability of competitive sources of energy, increases or decreases in the price level, changes in the structure of the energy market, and opportunities to expand into new and undeveloped markets. The question here is whether this Commission has a sufficient basis to make the assumption which have been used by the majority to justify mandatory flow-through of liberalized depreciation. I am forced to conclude that the conjecture of continuous growth in the property accounts of the companies involved for the period of time involved is so speculative that it does not provide a rational basis for the regulatory policy advanced herein.

In an effort to justify their opinion, the majority seizes upon the alleged competitive advantages accruing from mandatory flow-through. As I see it, there are none. In the first place, if all utilities were subject to mandatory flow-through, there would be no competitive advantage to anyone of them with respect to the others. In the second place, the argument assumes that utility rates are not otherwise affected by competitive forces. This is contrary to fact. Competitive forces do operate in the utility field. Natural gas competes with electricity, coal and oil. Gas and electric companies are competing as they never have before for markets, including industrial processing, air conditioning, and space heating. Coal has already displaced sales of interruptible boiler fuel gas in some areas. Competition exists within the natural gas industry between interstate pipeline companies in most of the major metropolitan areas of the Nation. These forces, and not mandatory flow-through are serving to promote and will continue to promote competition within the industries which we regulate.

The majority assumes that if they have guessed wrong by ordering mandatory flow-through, a remedy will always exist in the form of future rate increases. But it is the existence of these very competitive forces operative within the energy market, which the majority refuses to acknowledge exist, which may well frustrate the effectuation of such a remedy. Hence, it is the grossest error to assume that if regulation permits increased rates to provide for additional Federal income taxes in future years that such increased charges will unquestionably be collected from the consumers. It is one thing to authorize a rate calculated to recover costs. It is another thing to guarantee that the revenues will be forthcoming. It simply cannot be assumed that, irrespective of the state of the economy or of technology, rates can always be raised to produce additional revenues at any time in the future when such revenues are needed. Regulation in this regard is impotent. Only the impersonal forces of the market will determine whether a higher rate will generate additional revenue.

The history of public utility regulation is replete with examples of why the majority's theory is both unrealistic and impractical. It is precisely at the point when a company's growth pattern differs from that of its industry, or competing industries, that the forces of competition will not permit an upward rate adjustment even though it may be permissible under regulation. In our own generation we have witnessed two private utility industries virtually eliminated and many of the companies therein forced into bankruptcy, namely, the inter-urban transit industry and the urban transit industry. Witness the recent plight of the railroad industry, where the existence of competing modes of transportation has often meant that rate increases merely resulted in further loss of tonnage and revenue. Only a few decades ago, the prospects of the manufactured gas industry were bleak. It was saved only by the introduction of low-priced natural gas. In each case the obsolescence factor which caught up with the industry, and which had not been recognized in the then current depreciation practices, produced such financial degradation to many companies that they were no longer in a position to attract the capital necessary to maintain their competitive position in the changing technology of the times. Surely, these recent experiences must have some significance to the formulation of regulatory policy.

The interstate natural gas transmission industry is devoted entirely to the transmission of a depletable resource from production areas to consuming areas. The calculations of future requirements upon which the majority's decision is based cover requirements which may well be met by imported natural gas, imported liquified natural gas, gas manufactured from coal, lignite or oil shale, other future technological break-throughs, or by other competing fuels. It is probable that some natural gas transmission companies will be out of business in the future and that all of them will be forced by competition to expand into different areas of production. The electric industry, which is also affected by today's decision, has a more reliable and predictable future growth pattern largely because it is vertically integrated. Hence, changes in production and transmission patterns can be more readily and flexibly absorbed by the distribution section of the industry. Here, too, however, the approaching competitiveness of nuclear fuel or other exotic patterns of generation may have such a financial impact that only financially sound companies will be able to take advantage of the large capital requirements necessary to participate in these new concepts. In addition, the spectre of onsite generation could introduce strong competitive factors even into the local distribution of electricity and necessitate entirely different concepts of electric utility service with possible large obsolescence of present day generation, transmission and distribution patterns.

In the light of recent utility history and of these facts, the policy of consistently employing every devise and every theory which seems likely to bring but a few pennies of relief to the ultimate ratepayer is utterly repugnant to fairness and common sense.

Proponents of mandatory flow-through must make certain assumptions in concluding that there is no risk of increased future taxes. I do not say that these assumptions are categorically false, but I do say that this case gives no certainty to these assumptions. They must be guessed and cannot be proven.

I, unlike the majority, do not have so much faith in my "clairvoyance" that I can totally ignore the past and be content to speculate about a future which may be replete with major technological break-throughs in liquified natural gas, manufactured gas, solar cells, and other products and services which could change the very configuration of the industries which we regulate. It is one thing, once a company, with full knowledge of the facts, has decided to take the risks inherent in liberalized depreciation, to require it to flow the benefits through. It is quite another to force a company, against the informed judgment and expertise of its management, to incur these risks. It is long past time for us as regulators to recognize that our regulatory responsibilities extend beyond the short run protection of the consumer. The protection of the long range interests of the consumer is dependent upon the financial integrity of the public utilities which serve him. In this regard his interests are closely allied with those of the millions of people who have invested billions of dollars in public utilities, accepting a smaller return than would otherwise be possible because they seek greater security of investment. The investors deserve some protection too. The risk to both consumer and investor is too great, the stakes too high, to wave aside the very real danger they face in order to grant to only one of them what is, at best, a short-range benefit, and what may, in the long run, be no benefit at all.

The Examiners' decisions should be reversed, and the companies' reversion to straight-line depreciation should be approved.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON REMANDED QUESTION OF TAX DEPRECIATION

(Issued January 11, 1966)

LEVY, *Presiding Examiner:* This proceeding was initiated by the Commission's order of April 21, 1965, 33 FPC 835, providing for a hearing on the issue of the depreciation to be used as a deduction in computing the tax allowance in Midwestern Gas Transmission Company's (Midwestern) cost of service. The tax depreciation issue was remanded for further hearing in Opinion No. 444 issued October 13, 1964, 32 FPC 993, after a Section 5(a) proceeding initiated by the Commission to determine Midwestern's just and reasonable rates. A settlement of this rate proceeding was approved by the Commission on December

30, 1964, 32 FPC 1548, leaving the tax depreciation issue for resolution in this remanded proceeding and the unrelated rate design issue subsequently decided in the Commission's Opinion No. 477, issued September 28, 1965, 35 FPC 973.

Hearing was held in this reopened proceeding on July 13 to July 15, 1965, and September 8 to September 10, 1965. A motion at the opening of the hearing on July 13th by the City of Chicago for an indefinite postponement pending judicial review of the Commission's Opinion No. 417 in *Alabama-Tennessee** was denied.[1] Briefing was concluded on November 18, 1965, after an extension requested by Staff Counsel. Briefs were filed by Midwestern, Staff Counsel, the City of Chicago and the American Public Gas Association (APGA) and the Independent Natural Gas Association of America (INGAA). On December 8, 1965, Midwestern filed a motion to strike certain portions of the reply briefs or, alternatively, to receive their supplemental reply brief, attached to the motion to strike, and on December 21st, 1965, Staff Counsel filed a motion to file an answering reply brief if the supplemental reply brief of Midwestern is received.

The Prior Proceeding

As previously noted, this hearing on the tax depreciation issue grew out of a consolidated Section 5(a) rate proceeding initiated by the Commission involving cost of service issues with respect to Midwestern, and rate design issues with respect to Midwestern and Natural Gas Pipeline Company of America. All of these issues, except the tax issue, have been settled or decided by the Commission's Opinion No. 477, issued September 28, 1965, or its prior order of December 30, 1964 (32 FPC 1548).

Beginning in 1959, and continuing through the test period, the year ending June 30, 1962, Midwestern utilized liberalized depreciation in filing its tax returns. The Commission issued its decision, Opinion No. 417, in *Alabama-Tennessee Natural Gas Company* on February 3, 1964, (31 FPC 208), reversing its prior policy of normalization under which a pipeline company using liberalized depreciation was allowed to "normalize" or raise its tax cost for rate making purposes to the amount it would have paid if it had used straight line depreciation. The difference between the lower tax actually paid under accelerated depreciation and the higher "normalized" tax was accumulated in a deferred tax account as a reserve to be used to offset the higher tax payments contemplated in later years.

The Commission abandoned deferred tax accounting and determined in *Alabama-Tennessee* that the company must "flow-through" the advantages of the higher tax deductions to its customers by using the higher liberalized depreciation in computing its tax allowance for rate making purposes. The Commission concluded that expansion in the gas pipeline industry depended on lower rates and greater sales volumes rather than additional funds for plant investment. Consequently, the flow-through of tax savings in the form of lower rates is a more effective stimulus to the new investment which was the aim of Congress in enacting Section 167 of the Internal Revenue Code. The Commission noted that "Lower rates tend to generate a higher volume of sales and thus ultimately to require expansion of gas transmission facilities." (31 FPC 218)

The Presiding Examiner, relying on the Commission's *Alabama-Tennessee* decision, concluded in his initial decision, issued April 29, 1964, 32 FPC 1012, that Midwestern's federal income tax allowance should no longer be normalized, but should be calculated[2] on the basis of the lower actual tax liability reflecting the liberalized depreciation deduction which the company had been using in its tax returns. Midwestern strongly opposed flowing through the tax benefits to customers resulting from the use of liberalized depreciation and urged that a decision on the liberalized depreciation issue be deferred pending a decision by Midwestern as to whether it would continue to utilize liberalized depreciation.

---

*Now pending on review in the Fifth Circuit Court of Appeals.

[1] Affirmed by Commission order dated August 12, 1965, 34 FPC 506.

[2] This resulted in a zero Federal Income Tax allowance (See Appendix 4).

The Presiding Examiner commented in pertinent part as follows:

> This Midwestern position assumes that if the company for reasons of its own were to elect to discontinue claiming a tax deduction which the Internal Revenue Code admittedly authorizes, it would be improper for the Commission to thereafter compute the company's income tax allowance as if it were in fact continuing to take the deduction. This assumption ignores the basic regulatory principle that a regulated public utility is required to utilize available cost-savings opportunities. *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567, 573 (CA5–1960).
>
> However, it is unnecessary to decide that particular question here, since it is concluded that the controlling fact for the purpose of the instant decision is that Midwestern *did* utilize liberalized depreciation on its tax returns during the test period. It would be pure speculation to attempt to guess what course Midwestern might take with respect to this matter at some future date, when judicial review of Op. No. 417 is completed. It is interesting to note that Midwestern itself, while making the above argument, carefully avoids any prediction that it would necessarily discontinue using the liberalized depreciation deduction on its tax returns in the event of affirmance. (32 FPC 1064).

A few days later, however, on May 11, 1964, Midwestern's Board of Directors adopted a resolution authorizing and directing the utilization of straight-line depreciation in its federal income tax returns effective January 1, 1963. In its exceptions to the Examiner's initial decision, Midwestern advised the Commission that it had discontinued the use of liberalized depreciation and contended, therefore, that it was improper to compute its income tax allowance in fixing future rates as though it would continue to utilize liberalized depreciation. It argued that the Commission should not deny the use of straight-line depreciation for rate making purposes without affording Midwestern an opportunity to submit evidence demonstrating the reasons underlying the decision of its Board of Directors to change, *pendente lite*, the method of tax depreciation.

The Commission agreed to give Midwestern an opportunity to justify its discontinuance of liberalized depreciation, stating in pertinent part as follows: (Opinion No. 444, p. 996)

> The question as to the proper treatment of depreciation in computing taxes for rate-making purposes is one of the most important issues in this case, making a difference of close to $2 million in MGT's total cost of service. It is appropriate, before deciding this question, that MGT be given an opportunity to present evidence to show why it has changed to straight-line depreciation, how the use of liberalized depreciation in computing taxes for rate-making purposes might adversely affect its interests, the effect of its change to straight-line depreciation on the rates to be charged its customers *vis-a-vis* the Commission's determination in Opinion No. 417, the method to be used in applying accumulated deferred taxes against its increased tax costs and any other relevant facts. Other parties and staff should also be given an opportunity to present evidence and to cross-examine and be cross-examined on this issue. Accordingly, we shall remand this issue to the examiner for future hearing and an initial decision. Meantime, to avoid delay in ordering the reduction of MGT's rates with respect to other issues

> in this case, we shall proceed to fix MGT's rates by utilizing straight-line depreciation in determining its tax allowance. These rates shall be subject to further reduction prospectively to reflect the use of liberalized depreciation in the tax allowance should the Commission finally determine that the liberalized method is the appropriate one to be used.

Thereafter, Midwestern refunded to its jurisdictional customers the full amount of accumulated deferred taxes ($3,569,600) pursuant to the rate settlement approved by the Commission's order of December 30, 1964 (32 FPC 1548, 1549).

The basic issue, therefore, in this reopened proceeding is the proper tax depreciation deduction to be used in computing Midwestern's tax costs for rate-making purposes.

Midwestern's Position

Midwestern argues that its actual tax cost, based on the straight-line depreciation (3.5 percent annually) utilized by it since filing its federal income tax return for 1963, should be recognized in determining its cost of service and rates. It justifies the decision of its Board in May 1964, to discontinue liberalized tax depreciation (7 percent annually) as sound and proper, because of "the substantial adverse effect on the company and its financial integrity resulting from the flow-through rates threatened by the Examiner's decision of April 29, 1964," (Br. p. 19) and the advice of its management that it would be unsound financial and business policy to continue utilizing liberalized tax depreciation.

Specifically, Midwestern contends that the continuation of liberalized tax depreciation, after the flow-through rates recommended in the Examiner's decision of April 29, 1964, would adversely affect it by requiring an immediate rate increase of at least $1,000,000 per annum. Additionally, it would create a continuing problem of instability of rates and earnings which would require Midwestern to seek annual rate increases with attendant risks, jeopardize the company's financial integrity because of the uncertainty as to whether, for competitive reasons, it could charge or collect the increased future rates required to recover the higher future tax costs resulting from the annual decrease in tax depreciation. Finally, it would reduce Midwestern's ability to meet the coverage requirements of its first mortgage bond indenture, making it more difficult and costly to raise funds by the issuance of additional securities.

Midwestern and INGAA argue, therefore, that the decision to discontinue the use of liberalized tax depreciation, and to use straight-line tax depreciation, was a sound, proper and reasonable exercise of managerial judgment and discretion. Consequently, the argument continues, the federal income tax allowance to be included in Midwestern's cost of service for the purpose of determining its rates in this proceeding should be based on the 3.5 percent straight-line depreciation now actually being used by Midwestern in its tax return.

Midwestern relies on the regulatory principle that the initial determination of what is an appropriate cost saving is made by management and that, absent an abuse of managerial discretion, such judgment should not be disturbed. The Commission has not interfered with companies which have never used liberalized depreciation and, asserts Midwestern, there should be no difference in the regulatory rate treatment of a company, such as Midwestern, which changes from liberalized to straight-line depreciation.

Midwestern's position is supported by the testimony of its witnesses, N. Knowles Davis, Vice President of Tennessee Gas Transmission Company,[3] in charge of rate matters for Tennessee and Midwestern, W. D. Walser, Vice

---

[3] Midwestern is controlled by Tennessee (see 32 FPC 993 at p. 1024), which owns approximately 88 percent of its outstanding common stock (Ex. R-1).

President of Midwestern, J. S. Brogdon, Jr. sales manager, and Fred Massey, Director of Tennessee and Midwestern's tax department. In opposition, Staff Counsel presented the testimony of William J. Powell, Chief, Division of Systems, FPC. The City of Chicago presented the testimony of Melwood W. Van Scoyoc who concluded that Midwestern should be required to reduce its rates $1,654,000 as of October 13, 1964.

Discussion

The present Commission's rejection of normalization in *Alabama-Tennessee*, cited *supra*, rested squarely upon its finding that the use of liberalized depreciation gives pipelines which maintain a growing or stable plant for the foreseeable future a permanent tax saving. Normalization, as authorized by the prior Commission (*El Paso Natural Gas Co.*, 22 FPC 260, aff'd. 281 F. 2d 567 (CA5–1960) cert. den. 366 U.S. 912 (1961)), was bottomed on the premise that the use of accelerated depreciation resulted in a tax deferral rather than a tax saving. Under normalization, the excess of the normalized tax allowance over the actual tax was charged to operating expense and credited to a reserve for deferred taxes. The actual tax, of course, was also charged to operating expense. Under the tax deferral thesis, the reserve for deferred taxes avoids giving present customers a windfall at the expense of future ratepayers or stockholders.

Midwestern's switch from liberalized to straight-line depreciation was a logical consequence of its position that the "use of liberalized depreciation will result in tax deferral, not a tax reduction or saving," (Br. p. 18) and the prospective elimination of its reserve for deferred taxes. Certainly, as argued by Midwestern, whether or not the use of liberalized depreciation for any given company will result in a tax saving or tax deferral is a question upon which there is, and can be, reasonable differences of opinion. Given Midwestern's position in favor of the theory of tax deferral, rather than tax saving, its action in switching from liberalized to straight-line depreciation, following the decision in *Alabama-Tennessee* and the Commission's rejection of normalization, represents a reasonable exercise of managerial discretion and judgment on the part of its officers and board. From the company point of view, the prospective deduction from the rate base of the accumulated reserve for deferred taxes, and the decision to refund to its customers the full amount of such reserve accumulated through the years, left Midwestern without any reserve to meet the higher future income taxes which its theory of tax deferral premised. Additionally, it deprived Midwestern of the advantages previously obtained from the use of liberalized depreciation. This is because flow-through of the tax benefits annually and the abandonment of the reserve for deferred taxes deprives the company not only of earnings on the amount of the tax reserve, but also of additional funds otherwise available to finance plant expansion, provide additional working capital, or any of the other benefits incident to the availability of the larger cash flow resulting from the creation of a reserve arising from the use of liberalized depreciation.

In *Alabama-Tennessee*, the Commission concluded that a regulated utility will never be required to pay higher income taxes because of its use of liberalized depreciation "unless its gross plant declines in dollar value as a result of lower demand or lower plant construction costs." It is Midwestern's position in this proceeding that its plant has declined and will continue to decline for the foreseeable future. Consequently, it was justified in changing to and continuing straight-line tax depreciation.

For the reasons hereinafter detailed, the Presiding Examiner finds it is premature to conclude, as does Midwestern, that it is in a period of permanent plant decline. Present indications suggest that Midwestern will maintain an expanding or stable plant for the foreseeable future. Moreover, if it resumes liberalized depreciation in 1966, its depreciation deduction will not be less than under straight-line depreciation.

Midwestern's decision to change to straight-line depreciation is justified, therefore, only if its premise of net plant decline for the reasonably foreseeable future is supported by the record. This is not the case. It is more probable than not that the company's plant will continue to grow, or at least remain stable. As noted by Witness Van Scoyoc: (Tr. 208)

> The argument or presumption of no growth for Midwestern is particularly frail. Midwestern, as an affiliate, is a part, or arm, of a pipeline system which has experienced phenomenal growth in pipeline as well as non-pipeline activities. There is no reason whatsoever to assume that Midwestern and the system of which it is a part will be precluded from sharing in the future growth of the natural gas pipeline industry. It is a virtual certainty that such a slow death could only occur if Midwestern's parent (its management, in other words), wills it. In view of the pending Applications for Midwestern's expansion it is hardly plausible to assume that such a death sentence has been decreed.

The switch to straight-line depreciation during the pendency of the rate proceeding, and the consequent increase in tax cost, conflict with Commission policy as set forth in *Alabama-Tennessee* to the effect that the tax saving resulting from the use of liberalized depreciation by a pipeline which maintains a growing or stable plant must be flowed through to its customers in the form of lower rates. Obviously, to permit a company, like Midwestern, which has utilized liberalized depreciation from its inception, to change to straight-line depreciation because of the change in Commission policy from normalization to flow-through would frustrate that policy as outlined in *Alabama-Tennessee.*

The causal connection between the *Alabama-Tennessee* decision and Midwestern's change to liberalized depreciation is apparent in Midwestern's request to the Commissioner of Internal Revenue, dated August 4, 1964, for a ruling on the proposed change and whether, *inter alia*, if *Alabama-Tennessee* is reversed, it could revert to liberalized depreciation, *ab initio*. By letter dated December 3, 1964, the Director, Tax Rulings Division, replied in the negative, "Your request to permit Midwestern to make a retroactively valid change back to the declining balance method after the straight line method has been adopted must be denied." (Ex. R-1)

The doctrine of managerial discretion, in this instance, bottomed on the theory of tax deferral and normalization, cannot be used to frustrate a Commission policy designed to flow-through the tax saving and advantages of the higher tax deductions to the ratepayers. Moreover, no disallowance of any operating expense actually incurred is involved in Staff's recommendation for a prospective resumption of liberalized depreciation and flow-through beginning in 1966. Only where the company can show clear and imminent injury from the continued use of liberalized depreciation is the change to straight line justified for rate-making purposes. This Midwestern has failed to do.

United Gas Pipe Line Company, 31 FPC 1180, and *Wisconsin Michigan Power Company*, 31 FPC 1445, are inapplicable because the tax issue in those cases was not, and is not, the justification for a change from liberalized to straight-line depreciation. Those companies did not adopt normalization, preferring to remain on straight-line depreciation in filing their tax returns, and so there was no question of flowing through the advantages of liberalized depreciation.

INGAA argues that computing Midwestern's tax cost on the basis of liberalized depreciation would deprive it of its rights under Section 167 of the Internal

Revenue Code, citing in particular Commission language in the *Wisconsin Michigan* case.

> * * * As to liberalized depreciation, the tax laws give management the option not to take liberalized depreciation and we do not believe that on this record we should in effect deprive the Company of its option under the tax law. (31 FPC at 1458)

This relates to a company that, unlike Midwestern, has never used liberalized depreciation. The Commission has permitted such companies as United and Wisconsin Michigan to base their tax allowance in the cost of service on the straight-line depreciation they have always used. However, regulatory rate making policy under the Natural Gas Act cannot be frustrated by invoking the Internal Revenue Code. The issue here is the rate making effect of Midwestern's switch from liberalized depreciation to straight-line depreciation during the pendency of the Section 5(a) rate proceeding. In determining the applicability to Midwestern of Commission rate policy under the Natural Gas Act, as articulated in *Alabama-Tennessee*, requiring pipelines using liberalized depreciation to flow-through the tax saving in the form of a *pro tanto* reduction in their cost of service, Section 167 of the Internal Revenue Code is neutral. It does not require a decision for or against the continued utilization of liberalized depreciation in the fixing of rates. That determination is governed by considerations of plant growth, stability or decline, economic and financial benefit or injury to the company, and the other factors discussed elsewhere in this opinion.

Moreover, as noted by Commissioner Black in his concurring opinion in *Wisconsin Michigan* (p. 1465), Section 167 of the Code does not restrict the Commission in the exercise of its regulatory responsibilities under the Natural Gas Act:

> Wisconsin Michigan has never elected to take liberalized depreciation—even during the period when this Commission permitted normalization and allowed 1.5 percent return on the reserve. While this factor alone is not conclusive, it at least indicates that the company's long standing depreciation practices were not dictated by considerations of changing regulatory policy. Should we be faced in the future with a situation in which a regulated utility has abandoned liberalized depreciation to avoid the effects of our recent decision in *Alabama-Tennessee Natural Gas Company*, Docket No. G-5471, *supra*, p. 208 or for any reason not consistent with the public interest, in my view a different result would be indicated.
>
> I am also uncomfortable with the Commission's suggestion that to "deprive the Company of its option under the tax law" might be a pivotal consideration. The Solicitor General of the United States in his brief *amicus curiae* before the Supreme Court in *United Fuel Gas Company* v. *Public Service Commission of West Virginia*[4] stated:
>
> > Where the Code provides such an option, it is in nowise inconsistent with the intent of Congress for a regulatory agency, State or federal, to require a public utility to take advantage of the tax savings and pass them on to its rate-payers. The mere fact that rapid depreciation procedures are not mandatory as a matter of federal tax law does not bespeak a congressional purpose to relieve tax payers of their obligations under other federal statutes or under State law. In particular, there is no purpose to immunize public utilities from otherwise valid regulations requiring them to utilize available cost-savings opportunities.

---

[4] Memorandum for the United States and Federal Power Commission as *Amici Curiae*, in the case of *United Fuel Gas Company* v. *Public Service Commission of West Virginia* (O.T. 63, No. 527) pp. 16–17; appeal dismissed for want of a substantial Federal question, 376 U.S. 784, 84 S. St. 1133.

> It is clear that Congress in enacting Section 167 of the Code did not intend to bind the hands of the Federal Power Commission and we should not use language implying that we believe otherwise.

Commissioner O'Connor, in his dissenting opinion in *Alabama-Tennessee*, observed that a return to straight-line depreciation would render Section 167 "a useless anachronism." A recent Commission press release (Release No. 14096 November 8, 1965) noted that "the larger natural gas companies have accumulated $426.9 million in deferred income taxes, of which some $357 million is a result of liberalized depreciation under Section 167." To permit these companies to change to straight-line depreciation, absent a clear showing of economic necessity, would frustrate Commission policy designed to translate the tax saving available under Section 167 of the Code into an equivalent rate reduction for the gas pipeline industry which, the Commission concluded generally, will continue to grow in demand and plant capacity for the reasonably foreseeable future. More recently, the Commission has proposed the adoption of a statement of general policy to encourage pipelines to plan their future expansion so as to provide reserve capacity in the order of one year's growth (Docket No. R-293, November 2, 1965).

Rate Increase

Midwestern argues that the use of the $5,162,328 liberalized tax depreciation deduction used in the Examiner's initial decision of April 29, 1964, exceeds the comparable straight-line tax deduction by $2,221,423, and, consequently, the continued use of liberalized depreciation would require an immediate rate increase of approximately $1,000,000 in 1965, the first full year during which the reduced rates made effective in the earlier phase of this proceeding are in effect. The decline in annual depreciation deductions under accelerated depreciation for the test year plant is shown by Midwestern as follows: (Br. p. 20)

	Annual deduction	Decline from prior year	Cumulative decline
Test year	$5,162,328		
1963	4,800,966	$361,362	$361,362
1964	4,464,898	336,068	697,430
1965	4,152,355	312,543	[8] 1,009,973
1966	3,861,691	290,664	[8] 1,300,637

[8] The required rate increase is computed by Midwestern as 92.3% of the cumulative decline in the tax depreciation deduction from the test year amount

(92.3% of $1,009,973= $932,205)
(92.3% of $1,300,637=1,200,488)

Staff points out that this table assumes no additions to the company's test year plant (the plant in service on December 31, 1961) and that, in any event, Midwestern's experience from 1962 to 1966, is irrelevant and immaterial in the context of Staff's recommendation for a prospective flow-through of tax benefits beginning in 1966.

Staff accounts for the decline following 1961, the first full year in which both systems were in full operation, by reference to the developmental phases of Midwestern's initial life cycle when the plant was overbuilt. (Br. p. 31) The critical period for evaluating the alleged adverse impact of the continued use of liberalized depreciation is the next five years (1966–70).

Midwestern's testimony indicates that it has programmed substantial plant expansion which will reverse the decline in its depreciable plant and in its annual tax depreciation deductions. (See Staff Br., App. "C".)

The testimony of Midwestern's Witnesses Brogdon and Massey shows that estimated gross plant additions in 1966–67 will exceed $22,573,000, based on the construction of $14,500,000 of estimated additions on the Northern System in 1966,[6] and $8,073,000 of storage plant additions on the Southern System in 1967.

If we add these proposed plant additions to Midwestern's depreciable plant, its annual tax deductions under liberalized depreciation will approximate the following for the next five years:

Year	Double Declining Tax Depreciation	Straight Line Tax Depreciation	Excess	Tax Effect (48% Tax Rate) 92.308% of Excess
1966	$4,940,631	$3,298,959	$1,641,672	$1,515,395
1967	5,265,380	3,633,817	1,631,563	1,506,063
1968	5,008,041	3,689,992	1,318,049	1,216,665
1969	4,771,416	3,747,010	1,024,406	945,609
1970	4,552,921	3,804,884	748,037	690,498
	24,538,389	18,174,662	6,363,727	5,874,230

Source: Staff Initial Brief Appendix "C".

On this basis, Midwestern's deductions under liberalized depreciation will continue to exceed straight-line depreciation through 1973, even if Midwestern makes no major plant additions after the projected 1966–67 growth described by Witness Brogdon. The above tabulations assume a minimal 1.5 percent average annual growth rate. (See Staff Br. App. D)

The record also indicates that Midwestern will be under continuing pressure to make plant additions and replacements by reason of the steady increase in annual and peak-day sales. Annual sales volumes have increased from 153,340,461 Mcf in 1961, the first full year in which both Midwestern's Northern and Southern Systems were in full operation, to 211,033,248 Mcf in 1964, an increase of approximately 37.62 percent, of 12.34 percent annually. Peak-day sales for both systems increased during the same period from 572,762 Mcf to 631,701 Mcf, an increase of approximately 10.29 percent, or 3.43 percent annually.

Midwestern's major Southern System, serving the Chicago-Gary area of northern Illinois and northern Indiana, was certified in 1959, after the Commission noted in Opinion No. 316, issued October 31, 1958, 20 FPC 585:

> * * * we look with favor on the construction of large capacity pipeline facilities for serving the growing needs of this [Midwest] area. Particularly desirable is a well-founded project to serve the seemingly endless requirements of the Chicago market for both industrial and space-heating gas.

There is no suggestion in the Commission's most recent rate order affecting Midwestern, Opinion No. 477 issued September 28, 1965, that it now believes a period of reduced gas demand is imminent.

The record does not contain Midwestern's present estimate of peak transmission line capacity or system capacity, or any Staff testimony in this area. Midwestern agrees generally, however, that to provide for additional sales on either of its systems would require additional facilities (Rep. Br. p. 31).

On its Northern System, Midwestern has pending in Docket No. CP66–119 an application to construct and operate additional facilities costing $13,562,000 (mainly compressor stations) to provide capacity needed to increase its contract demand deliveries to Michigan Wisconsin by 113,000 Mcf per day.

---

[6] Midwestern's application at Docket CP66–119 proposes the construction of facilities for the sale of an additional 113,000 Mcf per day to Michigan Wisconsin. (Tr. R–891)

At the present time, Trans-Canada is authorized to deliver to Midwestern a maximum of 222,360 Mcf per day. Based on a "design day" flow diagram submitted with the application in CP66–119, this maximum supply would support Midwestern's fuel requirements of 1641 Mcf and "design day capacity" of 220,719 Mcf, the latter figure including 6923 Mcf of unallocated supply. The testimony and exhibits in CP64–308 indicate that the system can actually handle 16,000 Mcf per day over the 222,360 Mcf.

Under the proposed expansion, Trans-Canada would be authorized to increase its maximum day delivery to Midwestern to 338,692 Mcf. This increase of 116,332 Mcf would support an increase from 158,000 Mcf to 271,000 Mcf in contract demand to Michigan Wisconsin and additional fuel requirements of 3332 Mcf. Thus the new "design day capacity" would be 333,719 Mcf including 6923 Mcf unallocated supply. However, this does not indicate the physical maximum capability of the system.

Midwestern also shows the maximum capability of the Northern System with the additional facilities as 344,000 Mcf (assuming such volumes were available from Trans-Canada). At this maximum capability, unallocated capacity of 11,387 Mcf is shown.

On December 2, 1965, Midwestern filed an application in CP66–172 requesting authorization to deliver on an interruptible basis an additional 25,000 Mcf per day on its Northern System during the period ending October 31, 1966.[7] Midwestern has presented, in support of its application, letters from various customers indicating a need for additional peak gas during the current heating season. The applicant states that no additional facilities will be required for this proposed service as there is sufficient capacity available on the Northern System to deliver the proposed volumes to any customer who may elect to purchase this gas.

Trans-Canada has agreed to sell to Midwestern additional volumes up to 25,000 Mcf per day (through December 10, 1966) when Trans-Canada has such gas available for sale.

Midwestern advises that it has also entered into a precedent agreement with Trans-Canada which contemplates the purchase of 26,534 Mcf of contract demand gas daily, beginning November 1, 1966, and that this agreement will represent the gas supply in a forthcoming application of Midwestern for long-term service to be filed in the near future. It appears that Midwestern is contemplating converting the proposed temporary interruptible service to a long-term firm service after November 1, 1966, and that no additional facilities will be required.

In its application in Docket No. CP63–149 covering its Southern System (certificate issued July 27, 1964, 32 FPC 369) Midwestern sought authorization to deliver an additional 25,000 Mcf per day of contract demand gas to Northern Illinois Gas Company. In explaining why no additional facilities were required, Midwestern stated that although the original authorization granted May 12, 1959, in G–16841 contemplated 14,300 compressor horsepower which would result in a design day capacity of 360,000 Mcf, Midwestern actually installed 17,100 compressor horsepower. The maximum capability flow diagram submitted with the application in CP63–149 shows estimated maximum capability of 413,963 Mcf (including compressor fuel), total peak-day obligations of 406,531 Mcf, 4000 Mcf unallocated capacity and 3432 Mcf for compressor fuel. (In a companion docket, Tennessee was authorized to increase its contract demand to Midwestern to 409,963 Mcf.)

---

[7] Related filings were made by Midwestern in CP66–173 and CP66–174 to secure import authorization and Presidential permit to operate facilities.

By application in CP66–15 (certificate issued November 29, 1965, 34 FPC 1379) Midwestern proposed to provide a firm temporary winter service to two customers for the 1965–1966 heating season in a total amount of 20,000 Mcf per day. Again, Midwestern advised that no additional facilities were required, the system being capable of handling the 409,963 Mcf per day contract demand volume from Tennessee Gas, plus the 20,000 Mcf temporary winter service volumes, also to be obtained from Tennessee Gas. The supporting "Flow Diagram Reflecting 1965–1966 Winter Operations" shows deliveries by Tennessee Gas of 429,963 Mcf, Midwestern's compressor fuel consumption of 3432 Mcf and delivery obligations of 426,531 Mcf, with no unallocated capacity on Midwestern's Southern System.

Accordingly, it seems reasonable to conclude that Midwestern is nearing the upper limits of the physical capacity of its present plant.

Nevertheless, Midwestern contends that it cannot expect to make the increased peak-day sales required for future plant growth because it is the highest cost supplier to its major customers on both its Northern and Southern Systems, and, consequently, is in an unfavorable competitive position. Midwestern's pessimism seems premature in view of the fact that its relative position as the highest cost supplier has not worsened since it appeared on the scene in 1961, the first full year of operation on both systems, and Midwestern has continued to increase its sales and revenues despite its unfavorable competitive position. Moreover, flow-through would reduce Midwestern's rates[8] and improve its general competitive position.

In Opinion No. 477 issued September 28, 1965, the Commission refused to increase Midwestern's commodity rate, as urged by the Coal Interests, noting that a precarious price balance exists in the Chicago industrial market between coal and natural gas. The Commission also commented: "We expect that in the future Midwestern will be able to reflect reductions in costs or increased revenues in improved contributions of its commodity charge to the operation of the Southern System."

Midwestern's plant growth will be stimulated by the economic growth of its service area. During the past four years, this area has grown steadily in personal income, wage and salary disbursements in manufacturing, and population.

Source: *Statistical Abstract of the United States.*

Moreover, an additional stimulus to Midwestern plant growth is the investment tax credit which permits Midwestern to subtract seven percent of the cost of eligible new property from its federal income taxes without flow-through of this tax saving.

Finally, a reduction in Midwestern's rates flowing from a reduction of $1,174,845[9] in its cost of service can only improve its competitive position. Witness Van Scoyoc testified that the reduction in net investment due to accrued book depreciation between the test year and 1965, in the amount of $9,258,000, produces a cushion or margin of return above 6.5 percent (Tr. 206). In its reply brief, the City of Chicago notes that whereas the 6.5 percent rate of return approved in Opinion No. 444, as settled, would yield a return of $5,473,030 per annum, Midwestern actually earned $6,789,101 on a smaller net rate base in 1964 (Appendix B). These computations are disputed by Midwestern which emphasizes that 1964 revenues must be adjusted for known cost increases. While it is true, as argued by Midwestern, that there will be known increases in Midwestern's gas purchase costs, ad valorem taxes, salaries, wages, and other items, Midwestern's current sales and revenue growth indicate that these increased costs will be offset by increased revenues and earnings.

So long as earnings continue to equal or exceed the allowed rate of return, and there is no persuasive evidence that they have not since the test year (1961–1962), an increase in rates is not required or threatened. Midwestern's rates remain under the continuing jurisdiction and review of the Commission and it can always file for a rate increase under Section 4 of the Act to reflect any adverse developments in its future costs or earnings' picture. This was the procedure suggested by the Commission in *Natural Gas Pipeline* to give effect to a change in rates resulting from a shift to straight-line depreciation. (Op. No. 456–A, 33 FPC 1277 at p. 1280.)

Moreover, we cannot evaluate the impact of cost increases without considering the effect of other factors including a declining rate base incident to the alleged low future growth rate and declining tax depreciation deductions. This would require a new rate case beyond the scope of the present, limited, reopened proceeding.

---

[9] See Appendix 3.

Interest coverage, credit standing and financial integrity

Midwestern's first mortgage pipeline bonds due in 1980 contain certain coverage restrictions which must be met prior to the issuance of additional bonds. The net earnings of the company available for interest and depreciation deductions before income taxes must not be less than 4.5 times annual interest charges, and not less than 1.75 times interest and sinking fund payments. Net earnings before interest and income taxes but after depreciation accruals must not be less than 2.25 times annual interest charges.

Midwestern argues that liberalized depreciation and flow-through rates would have a severe adverse impact on its ability to meet these coverages with consequent injury to its credit standing and financial integrity. These conclusions are supported by the following coverage computations: (Midwestern's Br. p. 29, Ex. R-8)

	1963	1964	1964 Restated for Rate Reduction of Oct. 13, 1964	Further Adjusted for Mr. Van Scoyoc's Rate Reduction
First Coverage—4.25 required	4.33	4.56	3.85	3.33
Second Coverage—1.75 required	2.18	2.20	1.86	1.61
Third Coverage—2.25 required	3.40	3.58	2.88	2.35

These Midwestern computations represent the effect on interest coverage of the reduction in the cost of service and revenue requirements incident to the flow-through of liberalized depreciation. If we utilize the cost of service in Opinion No. 477, as settled, Appendix A, it becomes apparent that liberalized depreciation and flow-through have a rather limited impact on Midwestern's ability to meet the applicable coverage provisions. As shown in Appendices 1 and 2, Midwestern's maximum annual requirements to service outstanding bonds is $6,567,030.00. This gives a second coverage ratio of 1.73 before flow-through and 1.55 after flow-through. However, if this figure is adjusted for bonds actually retired in 1964, a total of $5,574,000.00, the coverage ratio becomes 2.04, before flow-through, and 1.83 after flow-through, a coverage in excess of the 1.75 required. Additional annual retirements should produce an equivalent improvement in the coverage ratio due to the reduction in interest.

The basic deficiency, however, in Midwestern's argument is the assumption that its bond coverage requirements are a meaningful measure of financial integrity and a determinant of rates and revenues. In order to meet the coverage requirements of its bond indenture, Midwestern would have to have an over-all rate of return of 8.7 percent instead of the 6.5 percent that was found to be just and reasonable (32 FPC 1052–1053). The Examiner there suggested that the bondholders were more interested in the high interest rate of 5¾ percent plus a warrant sweetener than the mathematics of the interest coverage provisions:

> The high interest rate, plus the "sweetener" of the warrants, thus represented what was necessary to compensate prospective bondholders for the risks of lending money to Midwestern. Having already received this com-

> pensatory inducement for the purchase of the Midwestern mortgage bonds, it could not seriously be suggested that the bondholders are now entitled to have their investment converted into a bond with the type of interest coverage which is characteristic of an AAA-rated bond. (p. 1053).

It seems reasonable to conclude, therefore, that Midwestern's credit standing and financial integrity will not be adversely affected by whether or not its rates are determined on the basis of liberalized or straight line depreciation.

The Examiner concluded in April 1964 that "* * * it does not appear that existing bondholders are notably concerned about Midwestern's continuing ability to meet the 5¾ percent interest payment on these mortgage bonds, and it is apparent there are other investors willing to take their place" (32 FPC 1055). The bonds were bid at 104–106 during July-December 1963. Standard+Poor's Bond Guide for December 1965 shows 103 bid as of the end of November 1965.

Midwestern's ability to raise funds by the issuance of additional securities will be determined principally by its sales growth, demand, plant capacity, net earnings picture, and the financial health of the Tennessee[10] system of which it is a part, and by which it is owned and controlled (32 FPC 1000, 1046–53).

The Commission stated in the prior rate proceeding:

> MGT is controlled by Tennessee. Its equity capital was furnished by Tennessee and there is no reason to assume that Tennessee will not continue to be its primary source of equity capital. (32 FPC 1000.)

Moreover, as noted by the City of Chicago, the issuance of new securities is not a major concern of an allegedly non-growth company. The same growth which requires additional financing will provide the additional tax depreciation necessary to keep liberalized depreciation above the level of straight-line deductions.

Motion to Strike

On December 8, 1965, Midwestern filed a motion to strike certain portions of the reply briefs of staff counsel, the City of Chicago, and American Public Gas Association, or in the alternative, to receive and consider a supplemental reply brief of Midwestern attached to the motion.

Midwestern's motion is based on the allegation that important new matters are raised for the first time in their opponents' reply briefs, *to wit:* A challenge to Midwestern's testimony as to the effect of flow-through rates on Midwestern's financial ability, credit standing, and its ability to meet its bond coverage requirements, and, specifically, the City of Chicago's argument that Midwestern had excessive earnings for 1964.

The motion to strike is denied. The argument presented by staff counsel, the City of Chicago and the American Public Gas Association in their reply briefs is in rebuttal to Midwestern's contention that the imposition of flow-through rates would adversely affect its ability to meet coverage requirements and thus its credit and financial standing. The City of Chicago's specific argument that Midwestern had excessive earnings in 1964 is rebuttal, in part, to Midwestern's statement in its initial brief (p. 29) that, "If 1964 coverages were restated to reflect for the full year the rate reduction ordered by Opinion No. 444 which became effective October 13, 1964 * * * Midwestern's ability to meet all three coverages is clearly adversely affected * * *"

---

[10] Tennessee continues to use liberalized depreciation where available. See *Knoxville Utilities Board* v. *East Tennessee*, initial decision August 23, 1965, 35 FPC at p. 546. It recently proposed an $82.5 million expansion to meet the increasing natural gas requirements of its customers (Release No. 14149, Dec. 14, 1965).

The motion to receive Midwestern's supplemental reply brief, filed December 8, 1964, is granted. Midwestern should be afforded an opportunity to reply specifically to the arguments made by Staff, the City and American Public Gas Association. Staff Counsel's motion to file an answering reply brief is denied. Midwestern was required to open under the Commission hearing order of April 21, 1965; it is entitled to close.

CONCLUSION

We have found that the liberalized method of tax depreciation is the appropriate one to be used in computing Midwestern's tax costs for rate making purposes. There remains for resolution the computation of the tax depreciation deduction and the question as to whether, as urged by the City of Chicago and APGA, the resulting rate reduction should be made retroactive to October 13, 1964, or prospective, beginning in 1966, as proposed by Staff counsel.

The City of Chicago argues that the Staff proposal conflicts with the terms of the rate settlement approved by the Commission on December 30, 1964 (32 FPC 1548, 1549) under which the adjustment, if any, to Midwestern's rates resulting from a decision on the tax depreciation question would be effective as of October 13, 1964. While this language may be read as a bar to a rate adjustment effective prior to October 13, 1964, the Commission's order of December 30, 1964, approving the rate settlement, was not a decision on the issues in this reopened proceeding. One of these issues is the question of the timing, as well as the amount, of any rate adjustment that may be required after October 13, 1964.

In its decision remanding the tax depreciation question, the Commission stated in pertinent part: (Opinion No. 444, p. 996). "These rates shall be subject to further reduction *prospectively* to reflect the use of liberalized depreciation in the tax allowance should the Commission finally determine that the liberalized method is the appropriate one to be used." [Emphasis supplied.] The prospective approach is adopted in this initial decision because it will afford Midwestern the opportunity of conforming its tax depreciation with the proposed rate treatment recommended herein by obtaining the necessary consent from the Commissioner of Internal Revenue to change back to liberalized depreciation in 1966. Moreover, it is consistent with the Commission's prospective approach in *Alabama-Tennessee* in that the precise issue involved in this remanded proceeding is new and has not been decided by the Commission. The Commission allowed Midwestern in Opinion No. 444, to fix its rates on the basis of straight line depreciation pending the decision in this remanded proceeding. It is also consistent with the ruling of the Internal Revenue Service that any change back to liberalized tax depreciation cannot be made retroactive (see letter of December 3, 1964, Ex. R-1).

As a practical matter, Midwestern cannot recover any reduction in revenues for the period from October 13, 1964 to December 31, 1965, in which straight-line depreciation is being utilized. Moreover, this reopened proceeding stems from a Section 5(a) proceeding under which, generally, rate reductions are prospective.

Accordingly, a prospective reduction in Midwestern's cost of service of $1,174,845 beginning in 1966, or as soon thereafter as Midwestern is able to change back to liberalized depreciation under applicable Internal Revenue Service rules and regulations, is fair and equitable in these circumstances. Should Midwestern elect not to request the consent of the Commissioner of Internal Revenue to revert back to liberalized depreciation, the reduction for rate making purposes will be effective as of January 1, 1966. The amount of the reduction is representative of what the record reasonably suggests Midwestern will experience by way of plant growth and depreciation deductions for the period immediately following the resumption of liberalized depreciation for rate making purposes in 1966.

The five-year average adopted here is based on Midwestern's projected additions and an assumed minimal future average annual growth rate of 1.5 percent (Appendix 3). This compares with Midwestern's own estimates of 1.7 percent annually for the 14-year period from 1962–1975 (Br. p. 40), and 3.27 percent for the 10-year period ending 1970 (see Staff br. App. C). Midwestern objects to the use of data for 1966–1970, 4 to 8 years after the test period. Use of the test year suggests a retroactive reduction as of October 13, 1964, in the cost of service of $1,654,000, as proposed by Witness Van Scoyoc for the City of Chicago, as against $1,174,845, proposed herein beginning in 1966. We believe it more equitable and consistent with rate making principles to use the estimated plant for the period immediately following the resumption of liberalized depreciation. This yields an average annual tax depreciation deduction on a double declining balance basis of $4,907,678 (see App. 3 and 4), as compared with $5,162,328 in the original rate proceeding (32 FPC 1084) and $2,940,905 proposed by Midwestern on the straight-line basis.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that:

(1) Midwestern Gas Transmission Company is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this order are sales of natural gas in interstate commerce and are subject to the jurisdiction of the Commission.

(2) The proper tax depreciation deduction to be used in determining Midwestern's just and reasonable rates, in Docket Nos. RP61–19 and RP62–7 (reopened) is $4,907,678.

(3) Midwestern should be required to file substitute tariff sheets, subject to the approval of the Commission, showing a reduction in its cost of service of $1,174,845 beginning in 1966, or as soon thereafter as Midwestern is able to change back to liberalized depreciation under applicable Internal Revenue Service rules and regulations.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Within 45 days from the date of the issuance of this order, Midwestern Gas Transmission Company shall file substitute tariff sheets satisfactory to the Commission containing the rates reflecting the reduction in its cost of service found to be just and reasonable herein, as set forth in finding paragraph (3).

(B) The annual tax depreciation deduction herein found to be just and reasonable is effective January 1, 1966, should Midwestern elect not to request the consent of the Commissioner of Internal Revenue to revert to liberalized depreciation, or as soon thereafter as Midwestern is able to change back to liberalized depreciation under applicable Internal Revenue Service rules and regulations.

WILLIAM C. LEVY,
Presiding Examiner.

APPENDIX 1

MIDWESTERN GAS TRANSMISSION COMPANY

Bond Coverages Resulting from Cost of Service (Revenues) before and after flow through of tax benefits

	1964 Per Books	Cost of Service per Opinion No. 477 Settlement (Before Flow Through)	Adjusted Cost of Service (After Flow Through)
5¾ percent bonds due 1980	$55,200,000 5.75%		
Annual Bond Interest	$3,174,000		
(A) Net earnings available for interest and property retirements		$11,350,314	$10,175,469
(1) Annual interest charges on bonds outstanding		3,174,000	3,174,000
Times covered (Co. says 4½ times required)		3.58	3.21
(2) Maximum annual service charged to bonds outstanding		6,567,030	6,567,030
Times covered (Co. says 1¾ times required)		[2] 1.73	[1] 1.55
(B) Net Earnings Available for Interest		$8,264,261	$7,089,416
Annual interest charges on bonds		3,174,000	3,174,000
Times covered (Co. says 2¼ times required)		2.60	2.23

[1] FPC Form #2 shows bonds retired in 1963 of $2,379,000 and in 1964—$2,400,000. By adding together the $2,400,000 for bonds retired and interest on bonds of $3,174,000, $5,574,000 becomes the total annual service charge the company is currently paying out. By relating the $5,574,000 to the $ net earnings of $10,175,469 the coverage becomes 1.83 times instead of 1.55 times as indicated by use of Midwestern's figure of $6,567,030.

[2] The applicable coverage here would be 2.04 using the same criteria as in Footnote [1].

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP66-299

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 18, 1966)

On March 22, 1966, Colorado Interstate Gas Company (Applicant), filed in Docket No. CP66-299 an application and a supplement thereto on June 10, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition of the facilities of its wholly owned subsidiary, Natural Gas Producers, Inc. (NGPI), the further development of certain storage facilities and the rendition of peaking service from such facilities, all as more fully set forth in the application and supplement thereto.

Applicant seeks authorization for the following proposals:

(1) to acquire all of the facilities and properties of its wholly owned subsidiary, NGPI, and thereafter to render the services now performed by NGPI and, for such purpose, to operate said facilities as an integral part of Applicant's system,

(2) to continue to operate the Fort Morgan Field in Northeast Colorado, including further development thereof as a gas storage reservoir, pursuant to a four year program terminating in 1969, and in connection therewith,

(3) to construct and operate the following described facilities in the year indicated:

1966 (a) 0.6 mile of pipeline and replace 4- and 6-inch valves.

1967 (b) 56.8 miles of 16-inch storage pipeline from the Fort Morgan Field to Watkins Junction, near Denver and install (1) five wellhead dehydrators, (2) install telemetering facilities at Watkins Junction.

1968 (c) 0.8 mile of pipeline to connect three wells. Install three wellhead dehydrators.

1969 (d) 0.7 mile of pipeline to connect four wells. Drill one well, connect an existing well to injection and install four dehydrators.

(4) to render a peaking service from said storage field, peak-day sales for this proposed service being estimated to be 96,090 Mcf[1] of gas by the 1969-1970 heating season.

The application states that NGPI's main 10-inch pipeline interconnects with Applicant's pipeline system at a point in Elbert County, Colorado, approximately forty miles southeast of Denver. NGPI was organized by Applicant in 1951 as a small, intrastate transmission company for the purpose of purchasing gas in the Denver Basin area of northeast Colorado for sale to local towns. Peak and annual sales of NGPI for the year 1965 were 34,822 Mcf and 5,672,927 Mcf, respectively, at 14.73 psia. NGPI presently produces gas in the Fort Morgan Field in Northeast Colorado and purchases gas, either at the wellhead or at the tail gate of gasoline plants, in various other small fields in Morgan and Washington Counties, Colorado. The gas so produced and purchased is transported and sold to Applicant, at the point of interconnection described above and is sold for resale to distributors in the cities of Fort Morgan, Brush, and other small Colorado communities and for direct consumption to Great

---

[1] All volumes are stated at 14.65 psia unless otherwise noted.

Western Sugar Company. Applicant states that all of such sales are consummated and all of such gas is consumed within the State of Colorado.

The present capacity of the Fort Morgan Field is approximately 13,000,000 Mcf of natural gas. The additional construction proposed by the instant application will provide for the withdrawal of an estimated 4,339,000 Mcf of storage gas during the 1969–1970 heating season.

Applicant's proposed construction consists in large part of 56.8 miles of 16-inch pipeline to extend from the Fort Morgan Field to Watkins Junction, a point of interconnection with Applicant's main pipeline system near Denver. This construction is scheduled for 1967, and will cost an estimated $2,054,468.

Applicant further proposes to construct, pursuant to its four year program, approximately 2.1 miles of lateral pipeline for the purpose of connecting various wells in the Fort Morgan Field, a new well to be drilled and equipped for dehydration and oil removal together with appurtenant facilities. The total estimated cost of Applicant's proposed construction is $2,891,793.

Applicant proposes to acquire by merger all the facilities and property of NGPI including 116.7 miles of transmission and storage lines ranging from 2 to 16 inches in diameter, land and miscellaneous equipment. The net depreciated book cost was $5,455,721 on December 31, 1965. Of this amount, $4,376,975 were costs related to the storage function.

The gas supply from northeast Colorado has been on the decline. It is anticipated that by the end of 1968, the supply will be insufficient to serve the local market and that gas from storage or other sources will be required to meet the customers' demands.

In 1961 NGPI acquired the Fort Morgan Field for development as a storage reservoir. The field contained recoverable liquids and wet gas. NGPI has been conducting cycling operations since 1962 by injecting dry gas and producing reservoir liquids and wet gas. The cycling operation has progressed to the point where the field now contains substantially dry gas. Studies show that this field is suitable as a storage reservoir and presently contains about 11,900,000 Mcf of gas or approximately 91 percent of the original gas-volume-in-place. Applicant proposes to develop the storage deliverability by injecting an additional 1,000,000 Mcf of gas to attain a total storage capacity of 13,000,000 Mcf. The development program will be over a four-year period and involve a total expenditure of $2,891,793. Applicant anticipates that by the end of 1969, the storage will be capable of providing 96,090 Mcf peak day capacity to Applicant's system.

Applicant proposes to initiate a new peaking service to its customers commencing with the 1966–67 heating season. The service will be available from November 1 through March 31 to those customers purchasing gas under Rate Schedules G–1 and P–1. Eight customers have executed precedent agreements with Applicant setting forth maximum daily quantity and seasonal volumes for the next four years. These volumes reflect 5 to 49 days use of the storage.

The estimated total overall cost of the facilities, including the cost of new facilities proposed to be constructed and the net book value of the utility plant proposed to be acquired, owned, and operated by Applicant is $8,347,514, which cost will be financed from funds on hand, funds from operations, or from short term bank loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 14, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The proposed acquisition of facilities of NGPI, construction and operation of facilities and sale of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed acquisition of facilities, construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, authorizing the acquisition of facilities of NGPI, construction and operation of facilities, and the sale of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues for proposed 1966 facilities, and within 12 months of the period stated for facilities proposed for 1967, 1968 and 1969.

(D) Applicant shall file within 30 days after the issuance of this order superseding service agreements with NGPI's present resale customers executed in accordance with the Commission's Regulations reflecting the terms and conditions of the sale and delivery of natural gas to such customers.

(E) Applicant shall comply with the following stated requirements:

(1) Applicant shall cancel Volume 3 to its FPC Gas Tariff, effective May 1, 1968, and substitute its applicable rate schedules in Volume 1 at that time;

(2) The costs associated with the merger of NGPI and costs attributable to the construction of storage facilities requested herein shall not be used by Applicant to support any major rate increase before November 1, 1970;

(3) The propriety of Applicant's proposed accounting for costs of "Leaseholds" acquired by NGPI, as shown in account no. 350.2 in Exhibit S attached to the application, is hereby reserved.subject to further order;

(4) The maximum inventory of gas stored in the Fort Morgan Field shall not exceed 12,929 MMcf at 14.73 psia and the maximum wellhead shut-in pressure shall not exceed 1,370 psia without prior authorization of the Commission; and

(5) Applicant shall submit semiannual reports (to coincide with termination of the injection and withdrawal cycles) containing the following information on proposed operations:

(a) The volumes of gas injected or withdrawn each month and the corresponding total volume in the reservoir;

(b) The maximum daily injection or withdrawal volumes experienced during the month;

(c) The stabilized shut-in wellhead pressure of each observation and active well when pressure stabilization exists;

(d) A map of the most recent interpretation of underground structure;

(e) A tabulation of wells drilled, cleaned, or recompleted with subsea depths of formations and casing settings, copies of any core analyses, back-pressure tests or electric logs; and

(f) Reports shall continue to be filed until the storage inventory volume has reached or closely approximated the maximum volume permitted in the Commission's order and for two years thereafter.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NANTAHALA POWER AND LIGHT COMPANY, DOCKET NO. E–7261

DECLARATORY ORDER

(Issued July 18, 1966)*

The question presented is whether the Commission is foreclosed from requiring a license for operating and maintaining a hydroelectric development which affects the interests of interstate or foreign commerce within the Supreme Court's holding in *Taum Sauk*[1] by a Commission finding, which was made prior to the Supreme Court decision and which is not in accord with it, that the development would not affect such interests.

The proceeding arises on the Nantahala Power and Light Company's[2] petition for a declaratory order that seven constructed hydroelectric developments in the Little Tennessee River basin do not require licenses under Part I of the Federal Power Act (16 U.S.C. 791–823).[3] It appears from the petition and is assumed for purposes of this proceeding that: (1) The streams on which the developments are located, being headwaters of navigable waters of the United States, are waters over which Congress has jurisdiction under the commerce clause. (2) The sections of the streams on which the developments are located are not them-

---

*Affirmed, *Nantahala Power & Light Co.* v. *F.P.C.*, 384 F. 2d 200 (CA4–1967), cert. denied 390 U.S. 945 (1968).

[1] *F.P.C.* v. *Union Electric Co.*, 381 U.S. 90 (1965). Taum Sauk is the name of the development over which the Commission asserted jurisdiction in that case.

[2] The company, a wholly owned subsidiary of the Aluminum Company of America, has its principal offices in Franklin, North Carolina.

[3] The developments and the streams on which they are located are as follows: (1) Nantahala project on the Nantahala River, Dick's Creek, and White Oak Creek; (2) Thorpe project (formerly Glenville project) on the West Fork Tuckasegee River; (3) Queen's Creek project on Queen's Creek; (4) Tuckasegee project on the West Fork Tuckasegee River; (5) Cedar Cliff project on the East Fork Tuckasegee River; (6) Bear Creek project (formerly Bear Creek-Island Ford project) on the East Fork Tuckasegee River; and (7) Tennessee Creek project (formerly Wolf Creek project) on the East Fork Tuckasegee River.

selves navigable waters of the United States. (3) The developments do not affect downstream navigable capacity. (4) Petitioner's power system is interconnected with those of Tapoco, Inc., and the Tennessee Valley Authority, and the energy produced at the developments enters the interstate power system formed by these interconnections.[4]

Section 23(b) of the Act requires anyone desiring to construct a hydroelectric development on a non-navigable stream, but one over which Congress has jurisdiction under the commerce clause, to file a declaration of intention. If the Commission finds that "the interests of interstate or foreign commerce would be affected by such proposed construction," the section prohibits the declarant from constructing, maintaining, or operating the development without a license. If the Commission makes the contrary finding, the section grants the declarant permission to construct the development upon compliance with state law. 16 U.S.C. 817.[5]

Petitioner's developments were built at various times between 1941 and 1955. Before construction was begun on each development, Petitioner filed the requisite declaration of intention. At the time the declarations came before the Commission, the "interests of interstate or foreign commerce" as used in Section 23(b) was treated as referring only to interests in navigation and water commerce. The Commission made the statutory finding, based on the existing facts and understanding of the law, that these interests would not be affected by the proposed construction.[6]

In *Taum Sauk*, handed down in 1965, the Supreme Court rejected the assumption which underlay these findings. "Congress," it held, "drew [in Section 23(b)] upon its full authority under the Commerce Clause, including but not limited to its power over water commerce." *F.P.C.* v. *Union Electric Co.*, 381 U.S. 90, 96 (1956). A corollary of the holding is that "Congress has required a license for a water power project utilizing the headwaters of a navigable river to generate energy for an interstate power system."[7]

---

[4] The interconnection with TVA is pursuant to the so-called Fontana Agreements between the United States and Alcoa. The agreements, dating from 1941 and extending through 1982, provide that power generated by Petitioner be made available to TVA, which in turn make power available to Petitioner or Alcoa at the latter's aluminum smelting works at Alcoa, Tennessee. Tapoco, Inc. is another wholly owned subsidiary of Alcoa.

[5] Section 23(b) provides in pertinent part: It shall be unlawful for any person * * *, for the purpose of developing electric power, to construct, operate, or maintain any dam, water conduit, reservoir, power house, or other works incidental thereto across, along, or in any of the navigable waters of the United States * * * except under and in accordance with the terms of a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to this Act. Any person * * * intending to construct a dam or other project works across, along, over, or in any stream or part thereof, other than those defined herein as navigable waters, and over which Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several States shall before such construction file declaration of such intention with the Commission, whereupon the Commission shall cause immediate investigation of such proposed construction to be made, and if upon investigation find that the interests of interstate or foreign commerce would be affected by such proposed construction such person * * * shall not construct, maintain, or operate such dam or other project works until it shall have applied for and shall have received a license under the provisions of this Act. If the Commission shall not so find, * * * permission is hereby granted to construct such dam or other project works in such stream upon compliance with State laws.

[6] The findings are reported at 2 FPC 753 (Nantahala project), 2 FPC 754 (Thorpe project), 6 FPC 426 (Queen's Creek project), 6 FPC 756 (additional project works of the Nantahala project), 8 FPC 690 (Tuckasegee project), 8 FPC 1117 (Cedar Cliff, Bear Creek, and Tennessee Creek projects). The Fontana Agreement providing for interchange of power between Petitioner and TVA had been signed before all but the first two of these findings, but is not referred to in them. .

[7] The Commission decision in *Taum Sauk*, which reached the same result as the Supreme Court decision, was issued in 1962. *Union Electric Co.*, 27 FPC 801 (1962).

Shortly after *Taum Sauk* was decided by the Supreme Court, we corresponded with Petitioner, among other owners of constructed developments, in an effort to encourage voluntary filing of applications for licenses. Petitioner's request for a declaratory order that its developments do not require licenses was filed on November 29, 1965.

Petitioner contends, in effect, that the Commission is foreclosed from correcting findings on declarations of intention which were made favorably to the declarant under an erroneous interpretation of the statute. It argues that the Commission lacks statutory authority to reconsider its findings on declarations of intention, or if the Commission does have the authority, it is barred from exercising it by the doctrine of equitable estoppel. Petitioner states that when the Commission makes findings on declarations of intention that proposed construction would not affect the interests of interstate or foreign commerce, the declarant receives a Congressional permit in perpetuity for its developments under the final sentence of Section 23(b) of the Act.

We conclude that none of these arguments nor any of Petitioner's several ancillary arguments is valid, and we order Petitioner to apply for licenses.

I

The Commission's findings on Petitioner's declarations of intention were based, as we have noted, on an erroneous conception of the governing law. The courts have left no doubt that administrative agencies in general, and the Commission in particular, have authority to correct mistakes of law and are not estopped from exercising this authority. The leading case is *Automobile Club of Michigan* v. *Commissioner*, 353 U.S. 180 (1957). There the Commissioner of Internal Revenue ruled in 1934 and 1938 that the petitioner was exempt from Federal income taxes because it was a "club" within the meaning of the internal revenue laws corresponding to Section 101(9) of the Internal Revenue Code of 1939 (26 U.S.C. (1935 ed., Supp. V) 101(9)). He revoked the ruling in 1945 and retroactively applied the revocation to 1943 and 1944. The Supreme Court, noting that the "Commissioner's earlier rulings were grounded upon an erroneous interpretation of the term 'club' in § 101(9) and thus were based upon a mistake of law," stated (*id.* at 183):

> The petitioner argues that, in the light of the 1934 and 1938 rulings, the Commissioner was equitably estopped from applying the revocation retroactively. This argument is without merit. *The doctrine of equitable estoppel is not a bar to the correction by the Commissioner of a mistake of law.* [Emphasis added.][8]

See also *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 382 U.S. 223 (1965). "An agency, like a court, can undo what is wrongfully done by virtue of its order."[9]

---

[8] *Cf., United States* v. *San Francisco*, 310 U.S. 16, 31–32 (1940); *Utah Power & Light Co.* v. *United States*, 234 U.S. 389, 408–409 (1917).

[9] The Commission in *United Gas* granted certificates under the Natural Gas Act (15 U.S.C. 717–717w) without imposing conditions as to sales contract prices. On appeal the Commission was held to have erred in not conditioning the certificates and its order was vacated. The Commission instituted a second proceeding to determine appropriate conditions. Meanwhile, the gas was being sold under the original sales contract prices. The certificates granted in the second proceeding were conditioned to lower prices, and the Commission ordered a refund of the amounts collected in excess of these prices. The Supreme Court sustained the refund order.

This principle was applied to Part I of the Federal Power Act in *Niagara Falls Power Co.* v. *F.P.C.*, 137 F. 2d 787 (CA2–1943), cert. denied, 320 U.S. 792 (1943). The error there was in the interpretation of Section 23(a) of the Act (16 U.S.C. 816). The section provides that if the holder of a permit which was issued prior to approval of the Act surrenders the permit and obtains a license, the Commission will determine the net investment in the development according to its fair value. Niagara Falls had held several Federal water diversion permits, but when the Act was approved, the last of these expired by its terms, and Niagara Falls was left with only state water diversion rights. The Commission, interpreting "permit" as used in Section 23(a) to refer to state as well as Federal authorizations, issued a fair value license. Later, the Commission, reversing itself, held that "permit" referred only to Federal authorizations, and in determining Niagara Falls' net investment, refused to use the fair value standard. The Second Circuit, through Judge Learned Hand, sustained the Commission's second interpretation of the statute. Although Section 6 of the Act expressly provides that licenses "may be altered * * * only upon mutual agreement between the licensee and the Commission * * *" (16 U.S.C. 799), the court held that the fair value license condition did not need to be followed in determining net investment.[10]

Although the court in the *Niagara Falls* case, as well as those in the *Automobile Club* and *United Gas* cases, cited above, did not find it necessary to invoke any statutory provision as the source of the agency's authority to correct mistakes, such provision exists. Section 309 of the Act (16 U.S.C. 825h) authorizes the Commission to "amend * * * and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this Act." The Eighth Circuit in *Northwest Public Service Co.* v. *Montana-Dakota Utilities Co.*, 181 F. 2d 19, 23 (CA8–1950), *affirmed*, 341 U.S. 246 (1951), used this section in support of its conclusion that: "The Commission can, no doubt, correct its own mistakes." [11]

II

The final sentence of Section 23(b) provides that when the Commission makes findings on declarations of intention that proposed construction would not affect the interests of interstate or foreign commerce, "permission is hereby granted to construct such dam or other project works in such stream upon compliance with State laws." Section 4(g) of the Act (16 U.S.C. 797(g)) authorizes the Commission "to issue such order as it may find appropriate, expedient, and in the public interest to conserve and utilize the navigation and water resources of the Nation," and Section 309 authorizes it "to perform any and all acts, and to prescribe * * * such orders * * * as it may find necessary or appropriate to carry out the provisions of this Act." The issue is whether Congress intended that the permission granted under Section 23(b) would bar the Commission from subsequently requiring licenses under Sections 4(g) and 309 when it becomes clear that the interests of interstate or foreign commerce will be affected.

The Commission and the courts have held that Congress did not have such an intent. The last of the Commission's findings on Petitioner's declarations of intention spelled out that "while there may be no basis at the time a declaration of intention is filed for requiring a license for a single development, such a development in combination with others in the watershed may later be found to affect the interests of interstate commerce and hence Federal, licenses might then be required for all the developments in the headwaters."[12] 8 FPC 1119. The Eighth Circuit came to a like conclusion in *Taum Sauk*. The court held that the evidence of record would not support a finding that the Taum Sauk development would affect downstream navigability on the Black River. *Union Electric Co.* v. *F.P.C.*, 326 F. 2d 535 (CA8–1964). Under the court's interpretation of Section 23(b) of the Act—that "interests of interstate or foreign commerce" referred only to navigation and water commerce—Union Electric would have received permission to build the development under the final sentence of the section.[13] Yet the court said (*id.* at 553):

---

[10] *Cf., Pennsylvania Water & Power Co.* v. *F.P.C.*, 123 F. 2d 155, 162–163 (CADC–1941), cert. denied, 315 U.S. 806 (1941).

[11] *Cf., Public Service Commission of the State of New York* v. *F.P.C.*, 327 F. 2d 893, 897 (CADC–1964) (construing the parallel provision of the Natural Gas Act (15 U.S.C. 717o)); *Power Authority of the State of New York* v. *F.P.C.*, 339 F. 2d 269, 274 (CA2–1964).

> If in the operation of the project it later develops at any time in the future that the navigability of the Black River is impaired or threatened to be impaired, the Commission would have authority under § 4(g) of the Act to issue an appropriate order, including an order to prevent further operation of the project without a license.

Thus, as construed in these decisions, the permission granted under the final sentence of 23(b) plainly does not guarantee that the declarant will not be required to take licenses. And while the Commission and the Court addressed themselves to situations in which licenses are needed because of a change of facts, their conclusions would apply equally in situations in which licenses are needed to correct a mistake of law.

The above decisions, we believe, accurately construe Congress' intent. The obvious purpose of the final sentence of Section 23(b) was to make lawful the construction without licenses of certain hydroelectric developments on waters over which the United States exercises control. We assume that Congress by expressly authorizing the construction of these developments also implicitly authorized their operation and maintenance. Since Petitioner's developments were lawfully built and operated, any licenses issued as a result of the present proceeding would not be made retroactively effective to the date of construction.[14] We find nothing in the language of the section or its legislative history which shows that Congress also intended to authorize their operation and maintenance once the Commission has issued orders requiring licenses in response to a change in the factual situation or for the purpose of correcting a mistake of law.[15] We are constrained by a familiar rule of statutory construction to find that a Congressional permit does not include anything which is not expressly stated or necessarily implied. "[A]ll federal grants are construed in favor of the Government lest they be enlarged to include more than what was expressly included." *United States* v. *Grand River Dam Authority*, 363 U.S. 229, 235 (1960). *Accord, Charles River Bridge* v. *Warren Bridge*, 36 U.S. (11 Pet.) 420, 545-553

---

[12] Petitioner states that after it was thus advised, it "proposed no more hydroelectric developments in the area." Its point appears to be that by proposing no more developments it could assure that it would not be required to take licenses on its constructed developments. But, of course, Petitioner is not the only entity which is entitled to propose developments and receive licenses in the Little Tennessee River basin.

[13] The Supreme Court, reviewing the Eighth Circuit's decision, assumed without holding that the lower court's decision was accurate with respect to effect on downstream navigability. It then reached and, as we have noted, reversed the lower court's restrictive reading of "the interests of interstate or foreign commerce." *F.P.C.* v. *Union Electric Co.*, 381 U.S. 90, 93–94 at note 6 (1965).

[14] On backdating see: *Central Maine Power Co.* v. *F.P.C.*, 345 F. 2d 875 (CA1–1965); *Bangor Hydro-Electric Co.* v. *F.P.C.*, No. 6614 (CA1–1966); *Public Service Company of New Hampshire*, 27 FPC 830 (1962); *Niagara Mohawk Power Corp.*, Project Nos. 2318, 2320, 2330, and 2424, November 15, 1965, 34 FPC 1298.

[15] When Section 23(b) was added to the Act in 1935 (49 Stat. 846), the final sentence was not discussed in the hearings, reports, or debates.

(1837); *Reichelderfer* v. *Quinn*, 287 U.S. 315, 321 (1932); *Northwest Paper Co.* v. *F.P.C.*, 344 F. 2d 41, 51 (CA8–1965). The rule applies with special force when grantees try to derive private rights of an indefeasible nature from a Federal grant under the commerce power. *Louisville Bridge Co.* v. *United States*, 242 U.S. 409, 417 (1917); *Bridge Co.* v. *United States*, 105 U.S. 470, 480 (1881). See generally 3 SUTHERLAND, STATUTORY CONSTRUCTION § 6402 (3d ed. 1943).

Moreover, Congress' objectives in Part I of the Act (1 U.S.C. 791–823) in general, and its objectives in the 1935 amendments in particular, would not be served by a restrictive reading of the Commission's power to require licenses for constructed developments. Congress' general purpose was to delegate to a specialized, expert body authority for continuing, comprehensive planning for the Nation's hydroelectric resources. *First Iowa Hydo-Electric Cooperative* v. *F.P.C.*, 328 U.S. 152, 180 (1946); *F.P.C.* v. *Union Electric Co.*, 381 U.S. 90, 98–101 (1965). Toward this end, Congress acted "to centralize the authority over such resources in one Government agency." *Northwest Paper Co.* v. *F.P.C.*, 344 F. 2d 47, 51 (CA8–1965); *accord*, 32 Op. Att'y Gen. 525 (1921). It gave the agency "sweeping authority and a specific planning responsibility." *Scenic Hudson Preservation Conference* v. *F.P.C.*, 354 F. 2d 608, 613 (CA2–1965). In short, the "legislation was designed to vest in the Commission for the future, the control and jurisdiction which Congress had previously exercised * * *" *Northwest Paper Co.* v. *F.P.C.*, *supra*, at 52.

Section 23(b), making mandatory the filing of declarations of intention, was added to the Act in 1935 to give the Commission more effective control of the hydroelectric industry. H.R. Rep. No. 1318, 74 Cong., 1st Sess. 25–26 (1935); S. Rep. No. 621, 74th Cong., 1st Sess. 46–47 (1935). At the same time, Section 4(g) was adopted to confer upon the Commission investigatory and enforcement powers "designed to strengthen the power of the Commission to protect the water resources entrusted to its care." H.R. Rep. No. 1318, 74th Cong., 1st Sess. 23 (1935).

We note, further, that the Commission, to issue an order requiring a license, need not show that the development is not presently making optimum use of the water-power resources. Section 309, by its terms, permits the Commission to require licenses simply on a showing that the developments are within jurisdictional criteria. And while Section 4(g) requires that orders issued pursuant to it be appropriate to conserve and utilize water-power resources, all licensing serves this purpose by retaining control for the future. See, for example, Sections 14 and 15 of the Act (16 U.S.C. 807, 808), providing that upon expiration of licenses the United States may take over developments or the Commission may relicense them to a new licensee.

III

Petitioner argues that requiring licenses for its developments would be a taking of property without compensation. Its contention appears to be that Section 14 of the Act (16 U.S.C. 807), relating to recapture of developments by the United States upon expiration of their licenses, can be applied only as an exercise of the United States' dominant navigation servitude, which is not involved when jurisdiction is based on *Taum Sauk*. Congress clearly intended that this section apply to all projects of this size. See Section 10(i) of the Act (16 U.S.C. 803 (i)). The Supreme Court has noted that the statutory scheme of Part I has been several times reviewed and approved by the courts. *First Iowa Hydro-Electric Cooperative* v. *F.P.C.*, 328 U.S. 152, 181 (1946). In any event, we must presume the constitutionality of the statutes which we administer. *Panitz* v.

District of Columbia, 112 F. 2d 39, 41–42 (1940) ; *East Ohio Gas Co.*, 1 FPC 586, 592 (1939) ; *Mississippi River Fuel Corp.*, 2 FPC 170, 175 (1940).

Petitioner's final argument, reached only if its other arguments are rejected, is that since power production at its developments is scheduled by TVA under the terms of the Fontana Agreements, the developments, even though attended by Petitioner's personnel, are operated by TVA and therefore are exempted by Section 26(a) of the TVA Act from requiring licenses from the Commission (16 U.S.C. 831y–1).[16] Petitioner's parent, Alcoa, previously made this argument on parallel facts in *Aluminum Company of America*, 13 FPC 14, 21–22 (1954). The Commission said in its decision in that case: "It was not the purpose of * * * Section 26(a) to take away from the Federal Power Commission its licensing authority over non-federal projects (See p. 22 of the March 28, 1935 Hearings before the House Committee on Military Affairs, on H.R. 6793, 74th Cong., 1st Sess.)." *Id.* at 22. The Commission held that the developments were operated by Alcoa or its subsidiaries, and not by TVA, and ordered that applications for licenses be filed.[17] *Id.* at 32. We adhere in the present proceeding to the holding in *Aluminum Company*.

While the petition for a declaratory order requests a hearing, it both states facts sufficient to reach a decision[18] and fails to raise any issue upon which additional evidence need be adduced. In these circumstances, a hearing would not be useful and is not necessary. As the Fourth Circuit said in *Virginia Electric and Power Co.* v. *F.P.C.*, 351 F. 2d 408, 410 (CA4–1965), "due process [does not] require a hearing where, as here, no factual controversy exists and the litigant seeks merely to controvert the legal principles upon which the Commission acts, something he can readily do by exercising his statutory right of appeal to the federal courts." *Cf.*, *F.C.C.* v. *WJR, The Goodwill Station, Inc.*, 337 U.S. 265 (1949).

The Commission further finds:

The Nantahala Power and Light Company's Nantahala, Thorpe, Queen's Creek, Tuckasegee, Cedar Cliff, Bear Creek, and Tennessee Creek hydroelectric developments in the Little Tennessee River basin are located on headwaters of navigable waters of the United States and generate energy for an interstate power system.

The Commission orders:

The Nantahala Power and Light Company shall file applications for licenses under the Federal Power Act for the above named hydroelectric developments within ninety days of the later of (1) issuance of the instant order, or (2) if the Company files a petition to review under Section 313 of the Act (16 U.S.C. 825*l*), entry of a final order by the Court of Appeals sustaining the Commission's orders.

---

[16] Section 26(a) of the TVA Act provides in pertinent part:

The requirements of this section shall not be construed to be a substitute for the requirements of any other law of the United States or of any State, now in effect or hereafter enacted, but shall be in addition thereto, so that any approval, license, permit, or other sanction now or hereafter required by the provisions of any such law for the construction, operation, or maintenance of any structures whatever, except such as may be constructed, operated, or maintained by the Corporation, shall be required, not withstanding the provisions of the section.

[17] Alcoa and its subsidiaries filed a petition to review the Commission's order in the District of Columbia Circuit, but the petition was later withdrawn, and the review proceeding was dismissed. The licenses, which were issued in *Tapoco, Inc.*, 14 FPC 610 (1955), were accepted by the applicants.

[18] Section 1.7(c) of the Commission's Rules of Practice and Procedure requires that petitions for declaratory orders "include a complete statement of the facts and grounds prompting the petition * * *"

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-393

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 18, 1966)

On May 31, 1966, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-393 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional daily contract quantity of 444 Mcf of natural gas to United Cities Company (United Cities), an existing customer of Applicant, all as more fully set forth in the application.

United Cities has requested an additional daily contract quantity of 444 Mcf of gas, commencing December 1, 1966, to meet the increase in firm requirements of the market which it serves in Vandalia, Illinois. Applicant states that its existing service agreements with United Cities, on file with the Commission, provide Maximum Daily Quantity of 3,200 Mcf under Rate Schedule G-1. By order issued May 27, 1966, 35 FPC 828, in Docket No. CP66-169, the Commission authorized Applicant to increase deliveries by 160 Mcf per day. With the additional volume for which authorization to deliver is requested herein, the Maximum Daily Quantity will become 3,804 Mcf per day.

Applicant will not require additional facilities to make the proposed sale.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 14, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to United Cities as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, authorizing the sale and delivery of up to 444 Mcf additional natural gas per day to United Cities, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant and United Cities shall execute a superseding service agreement in accordance with the Commission's Regulations reflecting the increase in daily contract quantity and file the same with the Commission within 30 days after the issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PUBLIC SERVICE COMPANY OF COLORADO, DOCKET NO. E-6460

ORDER TERMINATING PROCEEDING

(Issued July 18, 1966)

Representations upon behalf of Public Service Company of Colorado concerning that Company's public utility jurisdictional status under the Federal Power Act and willingness to comply with regulatory requirements of this Commission obviate the necessity for further proceedings in the above-entitled matter.

Public Service Company of Colorado, respondent in this proceeding, was directed to show cause why it should not comply with accounting and rate regulatory requirements arising under the Federal Power Act, Order To Show Cause and Setting Date For Hearing, 11 FPC 1370. By letter dated December 1, 1965, respondent confirmed its position conceding the Company's jurisdictional status and intent to comply with this Commission's Regulatory provisions.

The Commission orders:

The above-entitled proceeding is hereby terminated.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SERVICE GAS PRODUCTS COMPANY (OPERATOR), DOCKET NOS. RI62-18 AND RI63-249

ORDER ACCEPTING AMENDED OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued July 18, 1966)

On April 22, 1966, Service Gas Products Company (Operator) (Service) filed an offer of settlement, which it amended on July 1, 1966, relating to sales of natural gas made under its FPC Gas Rate Schedule Nos. 1, 2 and 3. The sales are to Lone Star Gas Company, and are made at Service's Doyle, Aylesworth and West Hoover processing plants in Stephens, Marshall and Garvin Counties, respectively, in the State of Oklahoma. The offer involves proposed increased rates which were filed by Service, suspended by the Commission for the statutory period, and thereafter made effective, subject to refund, by Service.

The proposed increased rate, being collected subject to refund, under Service's FPC Gas Rate Schedule Nos. 1 and 3 is 16.8¢ per Mcf of natural gas at 14.65 psia. It proposes a settlement rate of 14.0¢ per Mcf at 14.65 psia under each of such rate schedules. Service states that its purchase of natural gas from additional acreage from producers in the area of its plants, since it produces no gas itself, makes its proposal similar to those we considered and approved in *National Fuels Corporation, et al.*, Docket No. G–20426 (order issued May 24, 1965, 33 FPC 1048) *Warren Petroleum Corporation (Operator), et al.*, Docket No. G–20478, *et al.*, (order issued June 3, 1965, 33 FPC 1212) and *Signal Oil & Gas Company (Operator)*, Docket No. RI61–438, *et al.*, (order issued December 30, 1965, 34 FPC 1608). Additionally, Service proposes to amend its contracts with Lone Star to delete the periodic and favored-nation rate provisions from its Rate Schedule Nos. 1 and 3 and substitute therefor the 14.0¢ per Mcf settlement rate until April 1, 1969, with 1.0¢ per Mcf periodic increases at five year intervals thereafter. Consideration of the circumstances in these proceedings causes us to find that the principles we enunicated in similar proceedings appertain here and we shall therefore approve Service's proposal in regard to its FPC Gas Rate Schedule Nos. 1 and 3.

Service's proposal regarding its FPC Gas Rate Schedule No. 2, under which it is presently charging and collecting, subject to refund, a rate of 12.0¢ per Mcf of natural gas at 14.65 psia, is that such rate be the settlement rate. It avers that the same circumstances set forth by us in approving the three settlement proposals cited above justify the proposed settlement rate. Data supplied by Service showing delivery volumes of natural gas to Lone Star, and the sources of the same since 1954, cause us to find that Service's averment is correct, and we shall approve the proposed settlement rate under its FPC Gas Rate Schedule No. 2.

Service proposes a moratorium on increased rate filings under all of its filed FPC Gas Rate Schedules until April 1, 1969, except, however, it reserves the right to file for contractually authorized tax reimbursement increases during such moratorium period.

Under the settlement proposal, Service proposes to refund all amounts collected, subject to refund, above the settlement rates, with applicable interest, from May 1, 1962, to the date of issuance of this order. This accords with the refund method we set forth for small producers in our order in *Jack W. Grigsby (Operator), et al.*, 32 FPC 529, and we find it proper. The total amount collected subject to refund through December 31, 1965, is approximately $1,106,000, and of that Service will refund approximately $479,000, with applicable interest, and retain approximately $53.000 of the amounts collected above the settlement rates.

We believe that Service's settlement proposal, as amended, is in the public interest and shall approve the same. However, we desire to make it clear that acceptance of Service's offer of settlement, as amended, shall not be construed as approval of any future increased rate that may be filed by Service under the subject rate schedules and is without prejudice to any findings or order of the Commission in any future proceeding involving Service's rates and rate schedules. Additionally, for all of the reasons set forth in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require Service to deposit the refund monies in a special escrow account or to commingle the retained—refunds with its general assets pending future action of the Commission.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement, as amended, filed with the Commission by Service on April 22, 1966, is consistent with the Statement of General Policy No. 61–1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement, as amended, filed with the Commission by Service on April 22, 1966, is approved in accordance with the provisions of this order.

(B) Service shall file, within 30 days from the date of issuance of this order, notices of change in rates under its FPC Gas Rate Schedules to reflect the settlement rates and executed contractual amendments in accordance with the terms of its settlement proposal, as amended, and as approved herein. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Service shall compute the difference between the rates collected subject to refund and the settlement rate for the sales for which it proposes to make refunds with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to Lone Star, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from Lone Star agreeing to the correctness of such amounts.

(D) Service shall retain the amounts shown in the report required under paragraph (C) above, subject to further action of the Commission directing the disposition of those amounts.

(E) Service may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon Lone Star.

Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the escrow agreement shall be deemed to be satisfactory and to have been accepted for filing. The escrow agreement shall be entered into between Service and any bank or trust company used as a depository of funds of the United States Government and the agreement shall be conditioned as follows:

(1) Service, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof, or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be paid out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(F) If Service elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention so to do within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 5¾% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that Service has complied with the terms and conditions of this order, the proceedings in Docket Nos. RI62-18 and RI63-249 shall terminate all without further order of the Commission.

(H) The acceptance by the Commission of Service's offer of settlement, as amended, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Service and is without prejudice to claims or contentions which may be made by Service, the Commission staff, or any affected party hereto, in any proceedings.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CHRISTIE, MITCHELL & MITCHELL COMPANY, ET AL., DOCKET NO. G-20001, RI61-123, RI63-23, RI63-398 AND RI63-440; GEORGE MITCHELL & ASSOCIATES, INC., AGENT FOR B. V. CHRISTIE, ET AL., RI64-251

ORDER GRANTING MOTION FOR PARTIAL RELEASE OF ESCROWED FUNDS

(Issued July 19, 1966)

The above-named respondents (Movants) on June 2, 1966, filed a motion requesting that the Commission in the above-captioned proceedings authorize the release of amounts attributable to the interest of Mitchell & Mitchell Gas & Oil Corporation (M&M) previously deposited under escrow agreements in said proceedings with The Chase Manhattan Bank of New York City, and permit M&M to collect subject to refund under an agreement and undertaking[1] as well as a surety bond in the amount of $48,213.39, all amounts attributable to its interest in said proceedings.

In support of its motion, Movants state that of the total amount of $91,549.47 attributable to the interest of M&M in these proceedings which is held pursuant to the escrow agreement, $48,213.39 represents the amount that was collected in excess of the last firm rate approved by the Commission or in excess of the applicable increased rate ceiling. Movants therefore propose to file a surety bond in such amount, in addition to the agreement and undertaking, to assure refunds herein. Movants cite the Commission's action granting similar requests in *Dorchester Gas Production Co.*, Docket No. G–18671, order issued June 16, 1965, 33 FPC 1265, and *George Mitchell & Associates, Inc., Agent*, Docket No. RI61–239, *et al.*, order issued December 27, 1965, 34 FPC 1544.

---

[1] Concurrently with its motion, Movants tendered for filing an agreement and undertaking in these proceedings.

Movants propose herein only the release of those amounts deposited in escrow which relate to the interest of M&M. The escrow agreements in the above-entitled proceedings will remain in effect as to the other interests covered by the rate increases of Movants involved herein. Consent of the respective pipeline purchasers to the instant proposal was set forth in attached letters to the motion.

The Commission finds:

Good cause exists for granting the Movants' motion filed herein on June 2, 1966, as hereinafter provided.

The Commission orders:

(A) Upon notification by the Secretary of the Commission that M&M has complied with the provisions of paragraph (C) hereof, The Chase Manhattan Bank of New York as trustee under the escrow agreements in the above-entitled proceedings shall release forthwith to M&M any amounts attributable to M&M's interest in these proceedings which have been deposited with it. Except as specifically provided herein, these escrow agreements shall remain in full force and effect.

(B) The agreement and undertaking filed by M&M in these proceedings is accepted.

(C) Within 30 days of the date of issuance of this order, M&M shall file an acceptable surety bond in the amount of $48,213.39 in accordance with the form attached hereto.*

(D) Upon the filing of an acceptable surety bond, M&M may collect all future amounts attributable to its interest in the above-entitled proceedings pursuant to such bond and the agreement and undertaking accepted herein.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MCALESTER FUEL COMPANY, DOCKET NOS. RI62–300, RI63–103, RI64–162, RI65–258 AND RI66–88

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued July 19, 1966)

On May 2, 1966, McAlester Fuel Company (McAlester) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure involving proposed increased rates for a sale of natural gas in the Fort Lynn Field, Miller County, Arkansas, to Texas Eastern Transmission Corporation (TETC). The rate presently being charged and collected for said sale is 15.075¢ per Mcf of natural gas at 14.65 psia. McAlester proposes a settlement rate of 15.0¢ per Mcf of natural gas at 14.65 psia, and to amend its contract with TETC to eliminate all price escalation provisions, except the provision relating to future tax reimbursement. McAlester will refund all monies collected subject to refund above the settlement rate, with applicable interest.

---

* Omitted in printing.

McAlester's proposal is consistent with the provisions of the Second and Ninth Amendments to the Commission's Statement of General Policy No. 61-1 (18 CFR 2.56) and we shall approve the same.

However, we desire to make it clear that acceptance of McAlester's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving McAlester's rate and rate schedule.

The Commission finds:

The proposed settlement by McAlester of the above-designated proceedings on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by McAlester on May 2, 1966, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by McAlester on May 2, 1966, is hereby approved in accordance with the provisions of this order.

(B) McAlester shall file, within 30 days from the date of issuance of this order, a notice of change in rate to 15¢ per Mcf and an executed contract amendment, as specified in its offer of settlement, to its FPC Gas Rate Schedule No. 3 eliminating the price escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) McAlester shall compute the difference between the rates collected subject to refund in the above-entitled proceedings and the settlement rate for the sales of natural gas to TETC involved herein with applicable interest to the date of this order, and shall within 30 days from the date of issuance of this order submit a report to the Commission, with a copy to TETC, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from TETC acknowledging receipt of such refund monies and agreeing to the correctness thereof.

(D) Upon notification by the Secretary of the Commission that McAlester has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, set forth in its settlement proposal shall be effective as of the date of issuance of this order, and the above designated proceedings shall be deemed terminated.

(E) The acceptance by the Commission of McAlester's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against McAlester, including area rate or other similar proceedings.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

INTERNATIONAL PAPER COMPANY, PROJECT NO. 2375

ORDER APPROVING REVISED EXHIBIT L PROJECT DRAWING

(Issued July 20, 1966)

On March 28, 1966, International Paper Company, licensee for Project No. 2375, filed for Commission approval a revised Exhibit L drawing for the project located on the Androscoggin River, Maine.

The drawing shows an emergency reconstruction of a portion of the Otis Mill dam (a timber crib structure) made necessary by the development of considerable leakage in the planking and crib work. The reconstruction was accomplished between October, 1964 and November, 1965, and Commission staff advises that the reconstruction was completed in a satisfactory manner.

The U.S. Corps of Engineers has approved the tracing of the drawing insofar as the interests of navigation are concerned.

The Commission finds:

The following described revised Exhibit L drawing conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit L (FPC No. 2375-15), which has been superseded, should be eliminated from the license for the project.

Exhibit	Showing	FPC No.
L, Sheet 7	Details of Dam & Forebay	2375-21

The Commission orders:

The revised Exhibit L drawing described in the above finding is hereby approved as part of the license for Project No. 2375, and the superseded Exhibit L described in the same finding is hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSISSIPPI POWER COMPANY, DOCKET NO. E-7112

ORDER RULING ON ISSUES CONTAINED IN PRESIDING EXAMINER'S SUBMISSION OF ISSUES AND RULINGS

(Issued July 20, 1966)

On July 15, 1963, 30 FPC 198, the Commission issued an order directing Mississippi Power Company (Mississippi Power) to show cause why a dual rate provision in its filed rate schedules for service to three cooperatively owned wholesale electric customers is not unlawful within the meaning of Sections 205 and 206 of the Federal Power Act.

On August 31, 1965, 34 FPC 658, the Commission: (1) amended its order of July 15, 1963 to include additional rate schedules, (2) ordered a public hearing concerning the lawfulness of the dual rate provision, and (3) ordered that a prehearing conference be held before a hearing examiner of the Commission on September 20, 1965, for the purpose of narrowing issues and setting dates for submittal of testimony and cross examination of witnesses.

On April 21, 1966, the Presiding Examiner, Seymour Wenner, submitted to the Commission: "Presiding Examiner's Submission of Issues and Rulings for Affirmation and Modification Thereof." The principal reason for the Examiner's somewhat unusual action in this proceeding seems to derive principally from the following statement in the Commission's order of August 31, 1965: "The order does not question whether Mississippi Power's schedules of filed rates and charges for service to cooperatives are unjust, unreasonable and unlawful for reasons of rate level." According to the Examiner:

> If the surcharge is found to be unreasonable, the Commission then has to determine the remedy—the future reasonable rate. In making this determination the question arises whether the Commission is obliged on request of a party to consider what the reasonable rate level should be, and whether cost of service evidence to make this determination is admissible?

The Examiner reaches the following conclusions:

> a. The issue of the general level of rates or of the surcharge is excluded from the proceeding. Cost of service evidence will not be admissible since the thrust of such evidence is to support a change in the rate level * * *
>
> b. If the surcharge is found to be unreasonable in this proceeding and ordered to be modified or eliminated, changes in the rates will be permitted so that the rate level will remain the same as before. Evidence relating to the impact of changing the surcharge and the maintenance of the existing rate level will be admissible.

We agree with the Examiner that cost of service evidence to show the general level either of the Company's rates to the Cooperatives or of the surcharge is neither necessary nor useful in this proceeding, either on the issue of lawfulness of the surcharge or in the determination of an appropriate remedy if the surcharge is found to be unlawful. As we stated in our order of August 31, 1965, we do not question the level of Mississippi Power's rates in this proceeding. We seek to determine only whether the dual form of the rate may operate in such a way as to make that rate form unjust, unreasonable, unduly discriminatory or preferential.

We do not intend in any order issued as a part of this proceeding to change the level of Mississippi Power's wholesale for resale rate. We do not believe that it is necessary or in the public interest to embark upon a full blown rate proceeding in determining this rate design question. We may assume for purposes of making this determination that the return resulting from both rates would be within the zone of reasonableness if either were considered separately.

We have determined that the rate design question raised here can be handled most expeditiously through a separate hearing. In no way does this procedure deprive the Company of any rights under the Federal Power Act to a rate level hearing in another proceeding if it chooses to avail itself of the procedures available under the Act.

The Company may at any time file rate changes pursuant to § 205(d) of the Federal Power Act unless precluded from doing so by contractual commitments. In addition, any person, including the Company, may at any time raise by complaint the issue of lawfulness of the rate level and request a hearing thereon before the Commission in another proceeding.

We see no necessity for determining at this time what the appropriate remedy will be if the surcharge is found to be unlawful. Specifically, we need not now decide whether, if the surcharge is modified or eliminated, there are any circumstances which would make it inappropriate to allow the Company to file new rates permitting it to meet the same overall revenue requirements as presently provided for in the Company's filed and effective rate schedules. It is sufficient at this stage to indicate that the intervenor cooperatives are, in our opinion, not correct in their contention that the only permissible remedy, in the case of a finding of unlawfulness of the surcharge, is its complete exclusion.

The Examiner has correctly interpreted our orders of June 15, 1963 and August 31, 1965, and the procedure proposed by him is consistent with those orders.

The Commission orders:

(A) The Examiner's conclusions "a" and "b", as set forth on page 134 above, to the extent consistent with the above discussion, are affirmed.

(B) Mississippi Power's motion for oral argument on the Presiding Examiner's submission of issues and rulings is hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NEKOOSA-EDWARDS PAPER COMPANY, PROJECT NO. 2291

ORDER APPROVING REVISED PROJECT EXHIBIT DRAWINGS

(Issued July 20, 1966)

On October 12, 1965, Nekoosa-Edwards Paper Company, licensee for Project No. 2291, filed an application for Commission approval of revised drawings of Exhibits J, K, and L to show slight modifications in the project tailrace caused by excavation to accommodate piers supporting an addition to a non-project mill building which will extend over the tailrace approximately 50 feet. The project is located on the Wisconsin River in the Village of Port Edwards, Wood County, Wisconsin.

The licensee submitted with the application prints of revised drawings of Exhibit J, sheet 1 of 1; Exhibit K, sheet 1 of 1; and Exhibit L, sheet 1 of 6; showing the modifications in the tailrace, and authorized Commission staff to change similar license drawings to show the modifications.

The U.S. Corps of Engineers has advised that the plans of the project structures, modified as shown on the prints, are satisfactory insofar as the interests of navigation are concerned.

The Commission finds:

The following described exhibits, revised by Commission staff to show the above-mentioned modifications in the project tailrace, conform to the Commission's rules and regulations and should be reapproved as part of the license for the project.

Exhibit J (FPC No. 2291-1) General Map of Project Area.
Exhibit K (FPC No. 2291-2) Project Boundary Location.
Exhibit L (FPC No. 2291-3) General Design Drawings.

The Commission orders:

The revised exhibits described in the above finding are hereby reapproved as part of the license for Project No. 2291.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, PROJECT NO. 516

ORDER APPROVING AREAS RESERVED FOR PUBLIC USE AND FUTURE RECREATIONAL DEVELOPMENT, REVISING EXHIBIT K AND GRANTING AUTHORIZATION FOR DISPOSAL OF PROJECT LANDS

(Issued July 20, 1966)

On May 9, 1966, South Carolina Electric & Gas Company, Licensee for Project No. 516, known as the Saluda Project and located on the Saluda River at Dreher's Shoals, South Carolina, filed for Commission approval a set of six drawings showing lands which have been reserved within and without the present project boundary for future development for recreational use. The reservation of these lands was made by Licensee in response to a request by the Commission in a letter dated January 5, 1966. The six drawings (FPC Nos. 516-204 through 516-209) identify six areas totaling 110.92 acres, of which 51.12 acres located outside the existing project boundary, which Licensee proposes to reserve for future public recreational development at the project. In addition to these areas, the Licensee has advised that all islands in the reservoir will be reserved for public use. The South Carolina Wildlife Resources Department, in a letter dated May 24, 1966, reported that the six areas to be reserved have excellent recreational potential and would be suitable and sufficient to meet the foreseeable requirements of public outdoor recreation in the project area. It appears that these areas which are in addition to those in Licensee's public access plan approved by Commission order issued January 5, 1966, 35 FPC 37, are adequate for future recreational requirements.

Licensee has further requested permission to dispose of certain interests in lots lying wholly or partly within the project boundary as described on 4 subdivision maps which it submitted. These lots are not located within existing or proposed recreational areas and as indicated by the South Carolina Wildlife Department, their disposal would not adversely affect recreational development at the project.

In a letter to the Licensee, dated January 5, 1966, we requested that it reserve certain areas for future recreational development, in addition to those areas approved by Commission order, issued January 5, 1966, indicating that it would facilitate future disposals in certain interests in other project lands lying above the 360 foot contour. In view of the Licensee's compliance with the Commission's request, we shall authorize Licensee to dispose of certain interests in project lands outside of the existing and proposed recreational areas, including those lots referred to above, excepting those lands below the 360 foot contour and those occupied by and required for the maintenance of the dam and powerhouses. Licensee shall incorporate in any agreement or instrument effecting such disposal a condition reserving to the Licensee, its successors and assigns the right to use the lands for project purposes; and a covenant or condition, insuring that the use of such lands will not endanger health, create a nuisance or otherwise be incompatible with overall project recreational use in accordance with Paragraph C of the Commission's Order No. 313, issued December 27, 1965, 34 FPC 1546. The Licensee shall file with the Commission executed copies of the instruments of conveyance together with plats of such lands to enable the Commission staff to make appropriate notations upon the Exhibit K.

The Commission finds:

(1) The drawings (FPC 516-204 through 516-209) submitted by Licensee identifying six areas for future public recreational development should be approved as part of the license.

(2) Exhibit K should be amended to identify the six areas reserved for future public recreational developments and to revise the project boundary to include these areas.

(3) It is appropriate to grant the Licensee authorization to dispose of interests in lands not utilized for project purposes subject to certain conditions as hereinafter provided.

The Commission orders:

(A) The proposed reservation of the six areas described in finding (1), and the existing islands within the project, for public use and future recreational development as part of the license is approved.

(B) The drawings identified in finding (1) above are approved as part of the license for Project No. 516.

(C) Exhibit K drawings FPC Nos. 516–63, –72, –91, –95, –96, and –121 are amended to identify the six areas identified in finding (1), and to revise the project boundary to include these six areas and the eight public access areas approved by the Commission in its order of January 5, 1966.

(D) Licensee is authorized to dispose of interests in project lands outside of the recreational areas, excepting those lands below the 360 foot contour and those occupied by and required for the maintenance of the dam and powerhouse; Provided that Licensee incorporate in any agreement or instrument affecting such disposal a condition reserving to the Licensee its successors and assigns, the right to use the lands for project purposes, and a covenant or condition insuring that the use of such lands will not endanger health, create a nuisance, or otherwise be incompatible with overall project recreational use in accordance with paragraph (C) of the Commission's Order No. 313, issued December 27, 1965.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of the foregoing order. In acknowledgment of this acceptance of the foregoing order, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE GAS PIPELINE COMPANY, A DIVISION OF TENNECO INC., DOCKET NOS. G–165, ET AL. AND CP60–57, ET AL.

FINDINGS AND ORDER AMENDING ORDERS OF THE COMMISSION TO SUBSTITUTE NAME

(Issued July 20, 1966)

On April 18, 1966, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (TGP) filed a petition to amend the existing orders issued by the Commission in Docket No. G–165, *et al.*, at various times from 1941 through 1966. On the same day, TGP filed a petition to amend applications in matters pending, at the time of said filing, before the Commission in Docket No. CP60–57, *et al.*, such applications having been filed at various times from 1960 to 1966. TGP requests that the applications, certificates of public convenience and necessity, orders, and any other proceeding, file or record before the Commission, whether or not specifically listed in the subject petitions, relating to Tennessee Gas Transmission Company be amended to reflect the substitution of the name Tennessee Gas Pipeline Company, a Division of Tenneco Inc., for the name Tennessee Gas Transmission Company, all as more fully set forth in the subject petitions to amend.

TGP states that on April 11, 1966, pursuant to a resolution of its Board of Directors, Tennessee Gas Transmission Company filed with the Secretary of State of the State of Delaware (the state of incorporation of Tennessee Gas Transmission Company) an amendment to its corporate charter, changing the name of the corporation from Tennessee Gas Transmission Company to Tenneco Inc. The petitions to amend recite that Tenneco Inc. is the same corporate entity for all purposes and in all respects as Tennessee Gas Transmission Company, except for the corporate name. There has been no change in assets, liabilities or capitalization of the corporation.

Pursuant to a resolution adopted on April 8, 1966, by the Board of Directors of Tennessee Gas Transmission Company, now to be called Tenneco Inc., it was ordered that the general supervision and direction of the pipeline interests of Tenneco Inc. and its several subsidiaries be delegated to a newly formed subsidiary, whose Vice Chairman of the Board and President and Vice Presidents were thereby authorized to act as agents and attorneys in-fact for Tennessee Gas Pipeline Company, a division of Tenneco, Inc. *inter alia*, to enter into and execute any and all contracts, agreements or other instruments relating to the business and affairs of the company. The certificate of incorporation of this newly formed subsidiary was filed with the Secretary of State of the State of Delaware in the name of Miwalk Corporation on March 17, 1966; on April 11, 1966, a certificate of amendment was filed changing the name of the new subsidiary corporation to Tennessee Gas Transmission Company. The Commission has been advised by Tenneco Inc., that the newly formed Tennessee Gas Transmission Company is a management and administrative organization set up to manage the pipeline activities of Tenneco Inc., and its subsidiaries, and that there are no present intentions for the newly formed company to own any properties, have any salaried employees, to arrange any financing or to have any income.

Due notice of the filing of the petitions to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 24, 1966 (31 F.R. 7492). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's orders issued in Docket No. G–165, *et al.*; the pending matters at the time of the filing of the subject petition in Docket No. CP60–57, *et al.*, and any other applications, certificates of public convenience and necessity, orders, other proceeding, file or record before the Commission, whether or not specifically listed in the subject petitions, relating to Tennessee Gas Transmission Company be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's orders issued in Docket No. G–165, *et al.*; the pending matters at the time of the filing of the subject petition in Docket No. CP60–57, *et al.*, and any other applications, certificates of public convenience and necessity, orders, other proceeding, file or record before the Commission, whether or not specifically listed in the subject petitions, relating to Tennessee Gas Transmission Company are amended to reflect the substitution of the name Tennessee Gas Pipeline Company, a Division of Tenneco Inc., for the name Tennessee Gas

Transmission Company, all as hereinbefore described and as set forth in the subject petitions to amend.

(B) In all other respects the matters amended by this order shall remain in full force and effect.

(C) Nothing herein shall be taken as indicating any determination as to the status of the newly formed Tennessee Gas Transmission Company (successor to Miwalk Corporation) under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-399

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEET FOR FILING

(Issued July 20, 1966)

On June 6, 1966, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP66-399 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to render Annual Contract Quantity (ACQ) gas service to its customers in accordance with the provisions of proposed revised Article 13 of the General Terms and Conditions of Applicant's FPC Gas Tariff, Second Revised Volume No. 1, all as more fully set forth in the application in this proceeding.

Applicant seeks authorization to permit, pursuant to the proposed changes in its Tariff, a customer who purchases ACQ gas, and who operates an integrated system in two of Applicant's rate zones, to take such ACQ gas in either rate zone provided that Applicant's ability to meet its other system requirements is not impaired thereby. No change or addition to existing facilities is proposed.

Applicant has tendered for filing its Second Revised Sheet No. 77 to its FPC Gas Tariff, Second Revised Volume No. 1, providing for the proposed change in ACQ service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 14, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G-880 (6 FPC 148).

(2) The proposed change in ACQ gas service hereinbefore described, as more fully described in the application in this proceeding, is subject to the jurisdiction of the Commission and to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed change in ACQ gas service is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) Applicant's Second Revised Sheet No. 77 to its FPC Gas Tariff, Second Revised Volume No. 1, should be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Texas Eastern Transmission Corporation, to render ACQ gas service to its customers in accordance with the change proposed in its FPC Gas Tariff, Second Revised Volume No. 1, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant's Second Revised Sheet No. 77 to its FPC Gas Tariff, Second Revised Volume No. 1, is accepted for filing to become effective on the date this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CHUGACH ELECTRIC ASSOCIATION, INC., PROJECT NO. 2170

ORDER APPROVING PROJECT EXHIBIT K DRAWINGS AND FIXING ANNUAL LAND CHARGES FOR TRANSMISSION LINE RIGHTS-OF-WAY

(Issued July 21, 1966)

On September 8, 1965, Chugach Electric Association, Inc., licensee for Project No. 2170, known as Cooper Lake Project, situated on Cooper Lake, Cooper Creek and Kenai Lake, Alaska, filed for Commission approval nine Exhibit K drawings showing the center line surveys and the rights-of-way for the 69 kv transmission line from the Cooper Lake Project powerhouse to the Kasilof (Homer) substation via the Quartz Creek substation and the 115 kv transmission line from Quartz Creek substation to the Anchorage substation—both of which lines are now operating. The transmission lines occupy lands of the United States within the Chugach National Forest and other lands of the United States.

In the original license for the project, issued May 27, 1957, 17 FPC 759, and made effective as of May 1, 1957, the Commission found that the then proposed 69 kv and 115 kv transmission lines are parts of the project within the meaning of Section 3(11) of the Federal Power Act, and should be included in the license for the project, and the lines were included in the license. However, acceptable Exhibit K drawings showing the specific center line locations of the lines were not received until the September 8, 1965 filing. The Exhibit K drawings show that the 69 kv line occupies a 6.3 mile long 100 foot wide right-of-way on lands of the United States from Cooper Lake powerhouse to the Quartz Creek substation and a 59.01 mile long 100 foot wide right-of-way on lands of the United States from the latter substation to the Kasilof (Homer) substation, and that the 115 kv line occupies an 86.47 mile long 100 foot wide right-of-way on lands of the United States. The annual charges under the license for the occupancy by the lines of a total of 151.78 miles of rights-of-way on lands of the United States are computed as being $1,214.24. No annual charge for such occupancy has been fixed in the license for the project.

The Commission finds:

(1) Exhibit K (FPC Nos. 2170–25 through –33) conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit J (FPC No. 2170–14), which has been superseded, should be eliminated from the license for the project.

(2) The amount of annual charges to be paid under the license for recompensing the United States for the use, occupancy, and enjoyment of its lands for transmission line rights-of-way is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) Exhibit K (FPC Nos. 2170–25 through –33) is hereby approved as part of the license for Project No. 2170, and superseded Exhibit J (FPC No. 2170–14) is hereby eliminated from the license for the project.

(B) Subparagraph (iii) of Article 29 of the license is hereby modified to read as follows:

(iii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands used for transmission line rights-of-way, $1,214.24, effective as of May 1, 1957.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER APPROVING PROJECT EXHIBITS AND ADJUSTING AUTHORIZED INSTALLED CAPACITY AND ANNUAL CHARGES

(Issued July 21, 1966)

On April 4, and May 24, 1966, respectively, Sacramento Municipal Utility District, licensee for the Upper American River Project No. 2101, filed for Commission approval Exhibit M–6 and revised Exhibit L drawings. The project is located on the upper Rubicon River and South Fork American River and tributaries, California.

The exhibit and drawings show the 71,250 kw generating unit No. 2 proposed to be installed in the constructed Camino powerhouse as occurring by February or March of 1968 rather than during construction of the Brush Creek facilities originally planned for completion in May 1968. The licensee plans to delay until the early 1970's construction of the facilities which will provide diversion of Brush Creek waters and a forebay reservoir located on Brush Creek near the Camino tunnel outlet to permit additional peaking capability. Approximately 80 percent of the nameplate rating of generating units Nos. 1 and 2 in Camino powerhouse will be usable without the Brush Creek forebay. The Camino development of Project No. 2101 consists of a concrete arch dam, a reservoir having 650 acre feet of usable storage, a power tunnel, a penstock, and a powerhouse containing generating unit No. 1 of 71,250 kw, with provision for generating unit No. 2.

While the Camino tunnel is designed to convey 1,200 cfs in its upper 24,100 feet and 2,000 cfs in its lower 1,900 feet to provide for the originally planned future Brush Creek forebay, the upper portion of Camino tunnel can convey higher flows but with increased head losses, and the licensee plans a maximum flow of 1,700 cfs upon the installation of generating unit No. 2 by February or March of 1968. Upon the installation of generating unit No. 2, the dependable capacity of Camino power plant will be increased from 75,000 kw at 1,000 cfs to 114,000 kw at 1,700 cfs, or an additional dependable capacity of 39,000 kw. However, because of the high head losses in the upper tunnel associated with flows in excess of the designed flow, the licensee plans normally to operate Camino powerplant below 114,000 kw. Our staff estimates that Camino will be able to generate about 100,000 kw at 1,400 cfs, the hydraulic capacity of the licensee's upstream Jaybird plant.

The licensee estimates that the costs for purchasing and installing generating unit No. 2 and associated equipment at the earlier date will be $2,500,000, based on actual bid prices for major equipment items. Using fixed charges amounting to 5.4 percent of the estimated capital cost, plus operation, maintenance, and other expenses, the total estimated annual cost of adding unit No. 2 is $190,250. Using the minimum cost of alternate power available to the licensee from Pacific Gas and Electric Company ($10.73 per kw-year) the annual value of 39,000 kw of dependable capacity is $418,470. Hence, the estimated annual benefits exceed the estimated annual costs by $228,220, with no credit given to additional energy generated during periods of high stream flow.

The Commission finds:

(1) The following described revised Exhibit L drawings and Exhibit M-6 conform to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit L drawings (FPC No. 2101-114, -115, and -116), which have been superseded, should be eliminated from the license for the project:

Exhibit	FPC No.	Entitled
L-128	2101-220	Camino Powerhouse, General Arrangement, Plan—El. 1885.0;
L-129	2101-221	Camino Powerhouse, General Arrangement, Plan—El. 1838.0;
L-130	2101-222	Camino Powerhouse, General Arrangement, Transverse Sections—Unit No. 1 & Service Bay.; and

Exhibit M-6, consisting of one typewritten page entitled "Camino Power Plant, Unit No. 2, General Description of Equipment."

(2) The authorized capacity to be installed in the project for the purpose of computing the capacity component of the administrative annual charge is by this order increased to 706,600 horsepower, and the amount of annual charges, based upon such increased capacity, to be paid under the license for the costs of administration of Part I of the Federal Power Act is reasonable.

The Commission orders:

(A) The revised Exhibit L drawings and Exhibit M-6, designated and described in finding (1) above are hereby approved as part of the license for Project No. 2101, and the license Exhibit L mentioned in the same finding as being superseded is hereby eliminated from the license for the project.

(B) Article 25 of the license is hereby further modified by adding thereto the following subparagraph (f):

(f) Commence construction for the installation of Camino generating unit No. 2 in the Camino powerhouse within 10 years from the effective date of this license (August 1, 1957) and shall thereafter and in good faith and with due diligence prosecute such construction; and shall complete such construction within 11 years from the effective date of the license.

(C) Article 46(a) of the license is hereby further modified, effective as of July 1, 1966, by substituting "(706,600 horsepower)" for "(612,000 horsepower)" as the presently authorized installed capacity of the project.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 492-A

SKELLY OIL COMPANY, ET AL., DOCKET NO. G-18638, ET AL.*

OPINION AND ORDER AMENDING AND CONFIRMING ORDER REQUIRING REFUNDS

(Issued July 21, 1966)

Syllabus

1. Opinion No. 492 did not hold that the various equitable considerations were entitled to no weight; it did hold that such considerations, without more, were not sufficient to prevent ordering of refunds. P. 144.
2. There was no question here of burden of proof—the only burden on producers was to set forth any particular equities peculiarly within their knowledge which would outweigh principle that one who has collected excess rates is not entitled to keep them. P. 144.
3. Escrow provisions are for purpose of establishing a procedure to convey as large a portion of refunds as possible as far along to those entitled thereto as Commission's jurisdiction will allow. P. 145.
4. Absent a showing of special circumstances warranting such treatment, there is no equitable reason why producer of less than 10,000,000 Mcf should be excused from making refunds of excessive amounts collected merely because he is a small producer. P. 145.

---

*For additional parties see Opinion No. 492 and order issued June 1, 1966, 35 FPC 849.

5. Commission *amends* and *confirms* prior Opinion and order.
Commissioner O'Connor *dissents.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

On June 1, 1966, the Commission issued its Opinion No. 492, 35 FPC 849, requiring refunds by certain natural gas producers of a part of the amounts collected by them in excess of the 15 cents per Mcf later determined to be the proper initial rate. Because these excess amounts were collected while operating under temporary certificates without refund conditions, and a balancing of the equities indicated that refunds in full should not be ordered, no refunds were ordered of certain excess amounts collected but later expended in tax and royalty payments which cannot be recouped. Applications for rehearing were filed by Skelly Oil Company (Skelly), Tenneco Oil Company (Tenneco), George H. Coates (Coates), Prado Oil and Gas Company (Prado), (the predecessor of Sohio Petroleum Company), Coastal States Gas Producing Company (Coastal), and Glen A. Martin (Martin), on dates ranging from June 8 to June 30. By order of July 7, 1966, the Commission granted rehearing for the limited purpose of permitting consideration of all such applications timely filed.

Most of the arguments advanced in the applications for rehearing have been previously made and fully considered. On re-examining these arguments we find nothing that would cause us to depart from our prior determinations. Our views with respect to these arguments are set forth in Opinion No. 492, and need not be repeated here.

Statements made by the applicants indicate misinterpretations of our prior opinion, some so glaring that they should be corrected. It is stated (Skelly Application, pp. 3–4): "The Commission also mistakenly concludes that many of the equitable considerations advanced by Skelly and other producers are entitled to no weight because * * * these equitable considerations were known to the Court at the time it issued its decision on review of Opinion No. 362." We did not hold that the various equitable considerations were entitled to no weight. We did hold that these considerations, without more, were not sufficient to prevent the ordering of refunds of excessive amounts collected. If the factors known to the court were sufficient in and of themselves to militate against the ordering of refunds, there would be no reason for the court to have remanded the matter for further consideration. We would add that the particular equities referred to (set forth in the fourth full paragraph of page 852 of Opinion No. 492 would not be of sufficient weight as a matter of equity even if the court decision were not controlling, to overcome the countervailing equities calling for refund of amounts collected in excess of the rate determined to be proper.

Prado states that the Commission erred in holding that Prado had the "burden of proof" to show factual situations which would make refunds inequitable. Skelly states that the Commission erred in altering the "measure of proof" to require producers to show that it would be inequitable to order refunds.

There was no question of burden or measure of proof in this proceeding. The statements of the producers as to the relevant facts were accepted at their face value without presentation of evidence. The only burden cast upon the producers was to set forth any particular equities which would be peculiarly within their knowledge, and which would outweigh the ordinary equitable principle that one who has collected rates in excess of the rate determined to be proper should return the excess.

Skelly argues that the Commission "could not determine who would be equitably entitled to refunds", and that this is apparent from its direction to the producers to escrow the refunds. This statement is not in accordance with the facts. The escrow provisions are for the purpose of establishing a procedure to convey as large a portion of the refunds as possible as far along the way to those entitled to them as the jurisdiction of this Commission will allow. There is no question as to who is entitled to the refunds.

Prado and Coates urge that small producers should not be required to make refunds, but they do not allege any special circumstances warranting such treatment. In the absence of such a showing we think there is no equitable reason why the producer of less than 10,000,000 Mcf should be excused from making refunds of excessive amounts collected, merely because he is a small producer.

Tenneco's application objects to the inclusion of Tenneco in the order accompanying Opinion No. 492. It states that Tenneco never made deliveries of gas under a temporary certificate, and all deliveries under its permanent certificate were at the in-line price of 15 cents per Mcf. In these circumstances, there is nothing to refund. Tenneco fears it may be prejudiced in future proceedings if the present order is made to apply to it, even though no refund statement would be required where no excess amounts were collected. Accordingly, Tenneco will be deleted from the order in Opinion No. 492.

The only argument presented by Martin is the technical, legal one that the Commission order in Opinion No. 362 (Ordering Paragraph G) provided: "The certificates issued to the producer applicants listed below are hereby conditioned to prohibit any total initial price * * * greater than 15 cents per Mcf at 14.65 psia *from the date of issuance of this order* until such prices may be lawfully changed * * * *Glen A. Martin*, Docket No. G-18639." [Emphasis supplied.] Martin contends that this was a final order from which (so far as it concerned Martin) no one appealed, and that the decision of the Court of Appeals in Skelly does not apply to him. Martin contends that the Commission could have ordered refunds for the time prior to the order in Opinion No. 362, and did not do so, and that it is now foreclosed from doing so.

In Opinion No. 492 the Commission held that in the original *Skelly* opinion (Opinion No. 362, 28 FPC 401) it had not decided this question, and that the matter was still open. Martin has advanced no new arguments in the application for rehearing, and we adhere to our original view.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed by Skelly Oil Company on June 8, 1966, by Glen A. Martin, *et al.* on June 15, 1966, by George H. Coates on June 15, 1966, by Prado Oil and Gas Company (as predecessor of Sohio Petroleum Company) on June 16, 1966, and by Coastal States Gas Producing Company, on June 30, 1966, present no new facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 492 in this proceeding issued June 1, 1966.

The Commission orders:

(A) Appendix A to Opinion No. 492 and its accompanying order, issued June 1, 1966, is hereby amended by deleting therefrom: "Tenneco Oil Company" and Docket Number "G-18765."

(B) Opinion No. 492 and its accompanying order, issued June 1, 1966, except as amended by paragraph (A) hereof, are in all respects confirmed.

(C) The relief requested on rehearing in the applications filed by all named parties other than Tenneco Oil Company is hereby denied.

Commissioner O'Connor *dissents* for the reasons set forth in his statement accompanying Opinion No. 492 issued June 1, 1966, and would grant the relief sought in the applications for rehearing.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF TACOMA, WASHINGTON, PROJECT NO. 2016

ORDER APPROVING EXHIBIT L DRAWINGS SHOWING REMEDIAL CONSTRUCTION

(Issued July 21, 1966)

On April 26, 1966, City of Tacoma, Washington, Licensee for Project No. 2016, the Mayfield-Mossyrock development, on the Cowlitz River, filed an application for "amendment of plans" submitting therewith drawings showing the "as-built" additions and changes made to protect the plunge pool area below the Mayfield dam spillway from erosion and the addition of an aerial fish flume supported by a suspension bridge. The construction covered by Licensee's application which was performed in accordance with general emergency provisions of Article 3 of the license was necessitated as a result of floods during December, 1964 and January, 1965 which caused rock slides to fill the plunge pool and damage the downstream migrant fish flume.

The Commission finds:

The following described Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L-M	FPC No.	Title: Cowlitz Power Development—Mayfield
Sheet 1	2016-102	Excavation, Scaling, and Rock Bolting.
Sheet 2	2016-103	Drainage Wells and Rock Anchors.
Sheet 3	2016-104	Plunge Pool Lining.
Sheet 4	2016-105	Plan-Bank Stabilization Features.
Sheet 5	2016-106	Gravity Wall.

The Commission orders:

The Exhibit L drawings as described in the above findings are hereby approved as part of the license for Project No. 2016.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNECO OIL COMPANY (OPERATOR), ET AL., DOCKET NO. G-16867

ORDER DENYING MOTION TO VACATE OR ALTERNATIVELY TO STAY ORDER TO SHOW CAUSE

(Issued July 21, 1966)

On June 1, 1966, 35 FPC 866, the Commission ordered the applicants in this proceeding to show cause why excessive amounts collected, during the periods of operation under temporary certificates, should not be refunded in accordance with the principles of *Skelly Oil Company, et al.*, Opinion No. 492 issued June 1, 1966, 35 FPC 849, confirmed in Opinion No. 492-A issued July 21, 1966, *supra*, p. 143. On June 16, 1966 Tenneco Oil Company (Tenneco) moved to vacate the show cause order, or in the alternative, to stay the order pending judicial review of Opinion No. 492. Tenneco urges that, if Opinion No. 492 should be reversed by the courts, it would be a useless expense to Tenneco to comply with the present show cause order.

The intention and purpose of this Commission, and of the courts which have dealt with the present proceeding, have been to deal with the applicants in this proceeding in exactly the same manner as the applicants in *Skelly Oil Company, supra.* Each applicant in the Skelly proceeding was given the opportunity to set forth any equities which might differentiate its case from the general run. That opportunity is now being given the applicants in this proceeding. We do not believe that the delay requested by the movant would be consistent with speedy administrative determination and the prompt ordering of refunds enjoined upon us by the Supreme Court in *United Gas Improvement Corp. v. Callery Properties, Inc., et al.*, 382 U.S. 223, 15 L. Ed. 2d 284 (1965).

In the event the applicants here do not advance individual equities which require different treatment, they will be dealt with in exactly the same manner as the applicants in *Skelly Oil Company, supra.* If any stay of refunds is granted by court or Commission to the applicants in *Skelly Oil Company*, the applicants here will be entitled to similar stays. The purpose of the show cause order in the instant proceeding was not to require refunds to be made before a review of Opinion No. 492 can be had, but only to elicit statements from the applicants in this proceeding from which it may be determined whether the cases here should be differentiated from those in Opinion No. 492. If no differences exist, a simple statement to that effect will be no great burden upon Tenneco. If differences exist, they should be made known.

The motion to vacate the show cause order, or, alternatively, to stay it, will be denied.

The Commission orders:

The Motion to Vacate or Alternatively to Stay Order to Show Cause, filed June 16, 1966 by Tenneco Oil Company, is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL. AND PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. G-16946

ORDER DENYING RECONSIDERATION AND GRANTING EXTENSION OF TIME FOR FILING

(Issued July 21, 1966)

On July 5, 1966, *supra*, p. 12, this Commission issued an order in this proceeding permitting certain producers of natural gas in Southern Louisiana and offshore thereof to file briefs and statements of facts revelant to the question of whether they should be required to make refunds of excessive rates collected while operating under temporary certificates without specific refund provisions. On July 15, 1966, Pan American Petroleum Corporation (Pan American) filed an application for rehearing of the order of July 5, 1966, and alternatively, for extension of time from August 4, 1966 to September 19, 1966 to file the briefs and statements.

The applicant argues that the Commission was without jurisdiction to issue the order of July 5, 1966, because the case is now before the Circuit Court of Appeals for the Tenth Circuit, which has exclusive jurisdiction under Section 19(b) of the Natural Gas Act. Pan American also argues that the Commission has no power to order refunds in these circumstances even if it has jurisdiction, and that, even if the Commission has both jurisdiction and the power to make the order of July 5, 1966, that order was an abuse of discretion because it imposed "avoidable and unnecessary burdens" upon the producers "and compels costly, useless acts" by them.

In the alternative, if rehearing is denied, Pan American requires an extension of time to file the statements and briefs. It bases its request upon two grounds: First, that the producers are referred for guidance by the July 5, 1966 order to *Skelly Oil Company*, Opinion No. 492 (June 1, 1966), but Opinion No. 492, 35 FPC 849, is now being reconsidered by the Commission and so can furnish no guidance; second, that more time is needed in any event to prepare the necessary briefs and statements.

The order of July 5, 1966, was an intermediate procedural order. An application for rehearing of such an order will not lie. We shall therefore consider the application of Pan American as a motion for reconsideration, so that the contentions may be considered on their merits.

Ordering paragraph (C) of Opinion No. 436, 32 FPC 254, in this proceeding specifically reserved the question whether refunds should be ordered in the circumstances we are now considering. This question is not properly before the Court. We reject the view that any appeal to a court removes jurisdiction from this Commission to act on issues not properly before the court. We think that reserved issues remain within the jurisdiction of the Commission. This is necessarily so, unless it was the intent of Congress to render orderly administration of the Act impossible.

Applicant's contention that the power of the Commission to order such refunds is now before the Court is incorrect. No such refunds have been ordered, nor can they be until the particular circumstances have been considered.

Pan American's third argument is that the order of July 5, 1966, was unreasonable and an arbitrary abuse of discretion because it imposed "avoidable and unnecessary burdens" and "costly, useless acts" upon the producers. Pan American states that the in-line price of 20 cents per Mcf may be overturned by the Court, in which case refunds may not be necessary and the labor of preparing a brief and statement of fact will be wasted.

The Pan American contract was dated October 10, 1958. "* * * the appropriate price for gas from southern Louisiana and the offshore Federal domain for the years 1956, 1957, 1958 and 1959 has been considered by the Commission on three prior occasions: *CATCO*, 27 FPC 96 (1962); *Placid Oil Company*, 30 FPC 283, mod. 30 FPC 682 (Opinion No. 398-A, 1963); and *United Gas Pipe Line Company*, 30 FPC 329 (1963). In each proceeding, on the basis of evidence substantially similar to that before us here, we concluded that the proper initial price was 18.5 cents per Mcf, plus 1.5 cents reimbursement for Louisiana severance tax where applicable.

"The evidence presented in the present proceeding for contracts entered into from 1957 to 1959 corresponds with that on which our three prior determinations of the in-line price for this area were based and we find no reason to depart from the conclusions reached in these cases." (Opinion No. 436 in this proceeding, 30 FPC 254 at p. 256.)

The determination of this in-line price in *Placid Oil Company*, *supra*, was reviewed by the Supreme Court in *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 382 U.S. 223. The Supreme Court said, at page 229:

> The in-line price of 18.5 cents is supported by the contract prices in the south Louisiana area that were not "suspect" * * *

In such circumstances we think it most unlikely that the in-line price of 18.5 cents (plus 1.5 cents tax reimbursement) applicable to Pan American's 1958 contract will be overturned or increased to such an extent that there will be no refund exposure, particularly in view of the collection by Pan American of a rate of 23.55 cents per Mcf during the period in question—a rate substantially higher than those of almost all other producers here.

Nor are we convinced that the burden upon Pan American is so great as to justify delaying these proceedings until the in-line price has been passed upon by the Courts. In at least five similar proceedings[1] involving numerous large and small producers, those filing briefs and statements have been able to do so within the time prescribed (in some cases much less), and it has in no way been indicated that the burden upon them was as excessive as Pan American would represent. No computation of refunds is required; no refunds are ordered; the only burden upon Pan American is the statement of the facts of its case and the presentation of a legal brief. We do not think this burden so great as to justify an administrative delay of many months.

We turn now to Pan American's request for an extension of time for submission of briefs and statements. The applicant rightly points out that the order of July 5, 1966, referred the producers to Skelly Oil Company, Opinion No. 492, for guidance. The Commission later granted rehearing in that case for purposes of reconsideration, leaving the status of Opinion No. 492 uncertain. While the guiding principles of Opinion No. 492 have now been confirmed by Opinion No. 492–A, *supra*, p. 143, we think all producers in this proceeding should have an extension of time beyond the August 4 date previously fixed within which to file briefs and statements. We think that 30 days from the date of this order is a reasonable extension.

The Commission orders:

(A) The time for filing briefs and statements pursuant to ordering paragraph (A) of the order of July 5, 1966 in this proceeding is hereby extended to August 29, 1966.

(B) The application of Pan American Petroleum Corporation filed July 15, 1966 in this proceeding is in all other respects denied.

Commissioner O'Connor *concurs* in the result only.

OPINION NO. 498

H. L. HAWKINS & H. L. HAWKINS, JR. (OPERATOR), ET AL., DOCKET NO. G–18077, ET AL.*

OPINION AND ORDER REQUIRING REFUNDS

(Issued July 22, 1966)

1. In accordance with *Skelly,* refunds are not required of amounts collected above "in-line" price attributable to royalty payments made prior to February 1, 1964. P. 151.
2. In view of earlier judicial ruling in *Skelly,* by February 1, 1964, every producer can equitably be charged with knowledge that refunds might be ordered of excess amounts collected under unconditioned temporary certificates. PP. 151, 152.

---

*Additional parties set forth in Appendix A attached hereto. See order issued September 8, 1966, granting rehearing. Confirmed and motions for stay denied by Opinion No. 498–A issued December 6, 1966, 36 FPC 981. Affirmed, *W. S. Kilroy* v. *F.P.C.,* 401 F. 2d 730 (CA10–1968).

3. Production tax refunds will be ordered only insofar as such overpayments can be recouped out of future production tax liability, except for payments made after February 1, 1964. P. 152.
4. Failure to claim recoupment of production tax payments when such can be had shall not defeat refund obligation. P. 152.
5. Any anticipations producer may have had as to price [*i.e.* leading it to decline intrastate sale in order to accept temporary certificate], are not sufficient to defeat refund obligation. P. 153.
6. Transfers of interest in producing properties are not sufficient ground to refuse to order refunds as matter of equity. P. 153.
7. Where payment of full refund would be a hardship, Commission provides for installment payments. P. 153.
8. No refund is ordered where abandonment order contained no provision reserving question of refund liabilities. P. 154.
9. In a proceeding under Section 7 of the Natural Gas Act Commission *orders* refunds of amounts collected in excess of "in-line" price where producers initiated deliveries under unconditioned temporary authorizations.

Commissioner O'Connor *dissenting.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

By our Opinion No. 475 and order, issued September 22, 1965, 34 FPC 897, we granted permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act to the producers listed in Appendix A hereto for sales of natural gas in Texas Railroad Commission District No. 3.[1] These certificates were conditioned upon initial prices of 16 cents per Mcf and 17 cents per Mcf, as indicated in Appendix A, which prices the Commission found to be the applicable "in-line" prices for the area.

All of the producers here involved had charged and collected rates in excess of the "in-line" prices of 16 and 17 cents per Mcf while making sales under their temporary certificates prior to obtaining permanent certificates. The temporary certificates contained no refund conditions. Ordering Paragraph (I) of Opinion No. 475 and order provided, in part, with respect to the producers listed in Appendix A hereto: "* * * the decision whether refunds should be ordered as a condition to the permanent certificates is deferred for subsequent determination." The Commission provided that any party might file briefs as to whether refunds should be ordered and as to the extent of such refunds, and further provided that any party wishing to introduce additional facts into the record should file with its brief a statement of such additional facts and the evidence by which such facts would be established.

Skelly Oil Company, et al., Opinion No. 492, issued June 1, 1966, 35 FPC 849, amended and confirmed Opinion No. 492–A (July 21, 1966, *supra*, p. 143) was the first decision by this Commission to require refunds from producers who collected amounts in excess of the applicable "in-line" price while operating under temporary certificates without refund conditions. In that case the producers had had no hearing upon the equities with respect to refunds, but were allowed to present briefs, and the issues were decided upon the basis of accepting the factual statements of the producers. In the instant case, the presiding examiner allowed the parties to present evidence upon the refund issue, cross-examination was had, and the relevant facts which the parties wished to introduce appear in the record. Although the Commission provided for the parties to submit statements as to any additional facts and supporting evidence, no party has set forth any additional relevant facts or evidence which it wishes to introduce, except on the questions of taxes and royalties. As the facts with respect to taxes and royalties have been accepted as stated by the producers, no further benefit could be gained by additional hearings.

---

[1] Certificates were also issued by said order to four other producers with which we are not here concerned.

In *Skelly Oil Company, et al.*, Opinion No. 492, we stated: "It is now established that the Commission had both the power and the duty to require refunds of amounts collected in excess of the "in-line" price in the absence of a showing of factual situations which demonstrate that it would be inequitable to require refund of either all or part of the excess amounts collected." (p. 852.) This decision was not reached solely because it was the law of the case as established by the Court of Appeals for the District of Columbia (329 F. 2d 242). The ruling of that court that refunds might be required despite the absence of refund conditions in temporary certificates had been recognized by this Commission as the law in *Amerada Petroleum Corporation, et al.*, Opinion No. 422 (March 23, 1964, 31 FPC 623), cited in *Skelly, supra.* (p. 852.)

Consistent with the opinion in *Amerada, supra*, we must reject the suggestions in the dissenting opinion that we should not accept the doctrine of *Skelly* as precedent in other cases. The dissent would have us apply the principle expressed in *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 270 F. 2d 404 (CA10–1959) that a producer is entitled to know with some degree of certainty the conditions under which its gas will be sold in order to make an intelligent decision to accept or reject the tendered certificate. The *Sunray* case, however, did not involve the question now before us. To the extent it is contrary to *Skelly*, it was rejected by the Court of Appeals in the latter case. *Sunray* was also cited and heavily relied upon in argument before the Supreme Court in *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 382 U.S. 223, 15 L. Ed. 2d 284 (1965). The argument was rejected by the Supreme Court. Although there was no mention of the *Sunray* case in the opinion, it seems clear that either the principle of the *Sunray* case was not accepted, or tnat the Supreme Court was not willing to extend its principle so far as to prevent the ordering of refunds.

Among the principles established in *Skelly* that need no further elaboration here are these: that evidence as to a producer's company-wide cost of service is not relevant, that evidence that a loss is incurred on a particular producing property is not relevant, and that evidence that only a small portion of refunds will reach the consumer is not relevant. *Skelly* further held that refunds should not be delayed until the determination of a just and reasonable rate where no Section 4(e) proceeding is involved.[2] The contentions of the producers upon all these points must be rejected.

The Commission held in *Skelly* that refunds would not be required of any amounts collected above the "in-line" price to the extent the producers made payments of royalties attributable to the excess amounts collected. In the present case this policy will be adhered to, except in the case of payments made by a producer on or after February 1, 1964.

On January 23, 1964, the Court of Appeals for the District of Columbia declared that refunds might be required of amounts in excess of the "in-line" price collected under a temporary certificate without refund condition. In view of the wide and rapid dissemination throughout the industry of information as to important court decisions affecting gas producers, we think that by February 1, 1964 every producer can equitably be charged with knowledge that refunds might be ordered in such circumstances. No payments made by a producer after that date can be said to have been made in reasonable reliance upon immunity from such refunds. From that time on, a producer should have taken steps to protect himself in the event refunds were ordered, and if he failed to do so, he has no equity to plead which will affect his refund obligation.

---

[2] The amounts subject to refund in the present proceeding will be considerably reduced by reason of the fact that Section 4(e) proceedings are now pending with respect to a considerable portion of the production involved. It has been the practice of the Commission to postpone the determination of the question of refunds of amounts collected during the period that a rate increase is in effect subject in a Section 4(e) proceeding. (See, for example, *Union Texas Petroleum, et al.*, Opinion No. 436, 32 FPC 254 at p. 266.)

It might well be argued that, in view of the general knowledge throughout the industry of court cases affecting it, the producers should be charged with knowledge of possible refund obligations much earlier than the actual date of the court decision. It is undoubtedly true that many of these producers had such knowledge at the time the matter was appealed to the court, and probably even as early as the time the contention was first raised before the Commission in 1962. This is especially true with respect to the three producers here involved who were parties to *Skelly*. Since the exact date of such knowledge as to all parties has not been established, we have selected the latest date as the most equitable under the circumstances.

As in *Skelly*, to the extent production taxes were paid because of the excess amounts collected, refunds will be ordered only to the extent such tax overpayments can be recouped out of future production tax liability, unless the tax payments were made after February 1, 1964. Two of the producers have pointed out that if a refund of such amounts is ordered at this time, the producers will be out-of-pocket until recoupment takes place. If production should cease so that there can be no recoupment, a producer might be out-of-pocket permanently. With respect to such tax payments, each producer will be permitted to make this portion of its required refund as recoupment becomes possible. The failure to claim recoupment when recoupment can be had shall not defeat the obligation to make refunds.

Skelly Oil Company (Skelly) introduced evidence in this proceeding that, in reliance upon the fact that it would receive a 17.5-cent price, and assuming it would not have to make refunds, it declined an intrastate sale at the equivalent of 17.5 cents in order to accept the temporary certificate issued in Docket No. G–20155.[3] While the intrastate prices were 14, 15 and 16 cents, the intrastate sale would have required that the gas be taken in 15 years instead of the 22-year period of the present contract. In addition, the intrastate sale would not have required the laying of a delivery line, at a cost of $21,748, which Skelly undertook as part of the interstate sale. Its witness further noted that Skelly "felt certain" that it would receive a permanent certificate at 17.5 cents as this was less than the guideline price. Skelly argues that it would be inequitable to compel refunds in these circumstances.

The properties involved in Skelly's Docket No. G–20155 were assigned to Superior Oil Company on August 1, 1962, a little over eight months after deliveries had begun. The sale, presumably, was for the value the parties placed upon the gas to be delivered over the remaining life of the contract, and would not have been influenced by any prior opportunity Skelly may have had to made an intrastate sale. Skelly's investment in the additional pipeline (which would not have been needed in the intrastate sale) was thus liquidated. Its refund liability in this docket, exclusive of taxes and royalties, appears to be only about $1,200, since very little of the life of the contract was devoted to production prior to the transfer. We think that any anticipations Skelly may have had as to price, in the circumstances here stated, are not sufficient to defeat its obligation to make refunds of amounts collected in excess of what we have found to be proper.

---

[3] In Skelly's other docket, No. CI63–672, there were no special facts alleged or placed in evidence that require consideration separate from that given the general arguments presented by the producers.

Callery Properties, Inc. (Callery) presented testimony by Witness Jones (who was subject to extensive cross-examination) in support of its contention that Callery's peculiar circumstances would made it inequitable for refunds to be ordered. According to the testimony, Callery does not own any part of its producing properties. It is merely an agent or nominee for participants who may own as little as one percent of the property and who pay Callery a fee for its management functions. Since Callery had no warning that refunds would be required it distributed the entire amount collected among these various participants. At the time the gas was first produced, the working interest was divided among 55 participants (Tr. 184). Twenty-seven subsequently transferred their interests, totaling 53.98284 percent of the original group interest in Wells 1 and 2 and 56.06903 percent in the other wells. The 27 transfers were made to another 55 individuals, trusts, estates, or corporations by sale, demise, gift or partnership liquidation (Tr. 184). Some of these in turn made transfers; at last count there were 87 separate working interest owners (Tr. 184). Jones testified, "Callery anticipates that current owners of interests could and would legitimately refuse to make refunds of portions of monies which were received by previous owners. As for previous owners, a number are now dead, their estates settled and their executors discharged. I anticipate that Callery would also have great difficulty in collecting from some of the previous owners of interests who are still living, and I believe it likely that legal action would be necessary in some cases." (Tr. 184) There is a further complication in that production payments may be retained when an interest is sold or may be assigned to an insurance company or bank. It would appear from the testimony (Tr. 185) that recovery would be difficult and Callery has been so advised by its attorneys, especially in the case of middlemen who have no liquid funds.

We do not think that transfers of interests in producing properties are sufficient ground to refuse to order refunds as a matter of equity. (See *Skelly Oil Company, supra*, page 856, with respect to Morgan Minerals Corporation.)

It should be also pointed out that Callery filed an increased rate which became effective, subject to refund in a Section 4(e) proceeding, on December 1, 1962. The only period with which we are here concerned is prior to that date. The testimony as to transfer and proliferation of ownership was given in July 1964, more than two years later, and apparently refers to a time when diversification of ownership was much greater than during the period with which we are concerned.

Callery has indicated that making payment of the full refund would be a considerable hardship and staff's initial brief recommends that payment of the refunds over a period of time should be permitted if a producer so desires. Our order will so provide.

The temporary certificate issued Kilroy Properties, Inc. (Kilroy) in Docket No. CI60-478 contained the following express condition: "This authority is conditioned on Kilroy refunding to Trunkline any amounts * * * collected in excess of the amount resulting from the rate finally determined to be proper in the Docket No. G-17263 proceeding in the event the matter is remanded to this Commission, and is further conditioned upon * * * agreement to be bound by the ultimate disposition of the proceedings now pending in the United States Court of Appeals for the District of Columbia in *Public Service Company* (sic.) v. *Federal Power Commission*, No. 15601, within 20 days hereof by a responsible official of the company." The sale in Docket No. G-17263 was certificated at 20 cents per Mcf and the appeal in No. 15601 was dismissed for lack of jurisdiction by order of June 1, 1960. Kilroy argues that under the express refund condition it was liable to make refunds only of amounts collected in excess of 20 cents per Mcf and that therefore, no refund would be due since 20 cents per Mcf was the initial rate collected by Kilroy. Abandonment was permitted by Commission order issued December 22, 1964, and the only producing well was plugged.

The order permitting abandonment contained no provision reserving the question of refund liabilities. The last deliveries were made in 1962, and less than $750 in refund obligations is involved. Under the circumstances, we think that no refunds should now be ordered.

The Commission orders:

(A) As a condition of the certificate granted in each of the dockets listed in Appendix A hereto, each certificate holder other than Kilroy Properties, Inc. shall file within 60 days of the effective date of this order a report of the amounts collected by said certificate holder in excess of 16 cents per Mcf at 14.65 psia, in the case of each certificate holder listed in Part I of Appendix A, and 17 cents per Mcf at 14.65 psia in the case of each certificate holder listed in Part II of Appendix A, less any amount specified in ordering paragraphs (B), (C), and (D). Interest to the date of this order shall be added at the rate of 6 percent per annum on all such excess amounts collected prior to March 1, 1960, and at the rate of 7 percent per annum on all such excess amounts collected on or after March 1, 1960, except that no interest shall be included on refunds to the extent state production taxes, paid but recoupable, are included in such refunds, and interest shall not exceed the legal rate recoverable by the certificate holder on that portion of the amount of any refund which was in fact paid over by certificate holder, not for his own benefit, to any third party prior to February 1, 1964.

(B) Each certificate holder listed in Appendix A, Part I, hereto, may omit from the reports required by ordering paragraph (A) any amount by which payments made before February 1, 1964, of royalties and overriding royalties were increased by reason of the difference between the price of 16 cents per Mcf and the rates actually collected, and any amounts by which payments made before February 1, 1964, of state production taxes, not recoupable by credit or in any other manner, were increased by reason of said difference.

(C) Each certificate holder listed in Appendix A, Part II, hereto may omit from the reports required by ordering paragraph (A) any amount by which payments made before February 1, 1964 of royalties and overriding royalties were increased by reason of the difference between the price of 17 cents per Mcf and the rates actually collected, and any amounts by which payments made before February 1, 1964, of state production taxes, not recoupable by credit or in any other manner, were increased by reason of said difference.

(D) The reports required by ordering paragraph (A) shall not include excess rates collected during any period when an increased rate in the docket in question was subject to possible refund in proceedings pursuant to Section 4(e) of the Natural Gas Act.

(E) Notwithstanding any other provision of this order, any state production taxes paid prior to February 1, 1964 by any party listed in Appendix A hereto, shall be required to be subject to the provisions of ordering paragraph (H) and the interest payments required thereby only from the time and to the extent that such excess tax payments may be recouped by credit or otherwise.

(F) Each report required by ordering paragraph (A) shall set forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest, with the reasons for differing rates of interest on different portions of the principal), the basis used for such determination, the period covered and a letter from the purchaser of the gas agreeing to the correctness of the amounts.

(G) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants who within 45 days of the issuance of this order shall so request in writing, and upon the purchaser of the gas.

(H) Each certificate holder listed in Appendix A hereto shall retain the amounts shown in the reports required under ordering paragraph (A) subject to further order of the Commission directing the disposition of those amounts. If any such certificate holder elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 5¾ percent per annum on all funds thus available from the date of the filing of the refund report to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission. If the certificate holder elects to deposit the retained refunds in a special escrow account, the certificate holder shall tender for filing on or before the date of the filing of the refund report an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be entered into between the certificate holder and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Certificate holder, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or an agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary of this Commission quarterly, certifying the amount deposited in the trust account for the quarterly period.

Commissioner O'Connor *dissenting.*

O'CONNOR, *Commissioner, dissenting:*

This is the first proceeding in which the Commission, when not compelled to do so by a court decision standing as the law of the case, has ordered a producer to make refunds of amounts collected pursuant to the price specified in a temporary certificate which contained no refund condition. In *Skelly Oil Company, et al.*, Opinion No. 492 (issued June 1, 1966) we were constrained by the opinion of the Court of Appeals for the District of Columbia, which was the law of that case and binding upon us. That opinion of the court expressed the view that the Commission had the power to order refunds and that there should be a careful weighing of the equities to determine whether, in addition to the absence of any specific condition, refunds should be ordered. This view differs from that expressed by the Circuit Court of Appeals for the Tenth Circuit in *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 270 F. 2d 404 (CA10–1959), in which the court indicated that a producer was entitled to know with some degree of certainty the conditions under which its gas would be sold so that it might make an intelligent decision whether to accept or reject the tendered certificate. See also *Sohio Petroleum Company* v. *F.P.C.*, 298 F. 2d 465, 468 (CA10–1961). I believe that the decision of the Circuit Court of Appeals for the Tenth Circuit expresses the better view of the law, and I regret that the majority of this Commission has seen fit to accept, when not compelled by a binding court decision, a view of the law which I believe to be erroneous and which is contrary to the previous view expressed by the Commission in *Amerada Petroleum Corporation*, 29 FPC 218. The Commission there expressly disclaimed any intention to order refunds on the ground that it would be inequitable to the producers, saying at page 220:

> Petitioner's proposal in other words comes down to little more than an argument that we should unilaterally impose a new refund commitment upon the producers. This we will not do. Assuming, without deciding, that we have authority to impose such additional restriction where extraordinary conditions exist that would justify such action, we think this clearly would not be a proper action for us to take here. Since the producers cannot abandon service without our authority and since, as indicated above, it would not be in the public interest to approve any such abandonment request, we would be in a position of having induced producers to dedicate their gas to the market upon one set of conditions, and then imposing more stringent conditions upon them. Such a course of action, except under the most extraordinary conditions, would appear to be inconsistent with the Commission's obligation to act upon applications with "such certainty as to allow the exercise of choice upon [the producer's] part." *Sunray Mid-Continent Oil Company* v. *F.P.C.*, 270 F. 2d 404. Equally important it would so denature the value of a Commission authorization as to place any reliance upon our actions in this area in serious jeopardy.

The Commission then flatly stated that it had provided that "*the temporarily certificated price is not subject to refund.*" [(Page 220), emphasis supplied.]

This accords with the Commission's prior view expressed in the *Skelly* case that to order such refunds would be improper. We were compelled by the adverse opinion of the Court of Appeals to depart from our opinion in the *Skelly* proceeding. We are not so compelled here. It is my view that until such time as the Supreme Court has reconciled the divergent opinions in the Court of Appeals the Commission should follow that view of the law which it proclaimed prior to the decision of the Court of Appeals in *Skelly*. Here the circumstances are more in the nature of retroactive legislation than adjudication, and hence constitutes a prohibited reparation. This is particularly the case here for all previous decisions, both administrative and judicial, required specific conditions in order that reliance on agency action would be forthcoming and that an applicant would be apprised fully of his potential obligations. I feel that this view of the law is to be preferred; it is the view which has previously been accepted by the Commission itself; it is a view which should be accepted as a matter of procedure; and it is one which we have recognized as more equitable than the one required of us by the Court of Appeals in *Skelly*.

The matter which we are considering here is not one in which a hardship should be thrust upon these producers upon the ground that failure to do so might establish a dire precedent. I think it safe to say that no temporary certificate will be issued in the future without full consideration of possible refunds and a determination as to potential liability. What we are dealing with in these cases then, is a particular phenomenon which in all probability will never come again. Yet in the larger sense our repeated efforts at price stability should be forthcoming. The benefit to the consumers of the retroactive requisition of the refund liabilities will be small. The producers have offered proof that only a fraction of any refunds made will ever reach consumers. In comparison to the entire gas bill to be paid by the consumers even the total refunds to be ordered here are very small. The impact upon the individual producer, however, and upon his operations, will in many instances be staggering, for that program is devoted sixty percent to exploration. Whether this subject be examined from the point of view of strict law, of justice and equity, of economic benefits to the consumer as opposed to the injuries to the producers, or in the light of creating a regulatory climate in which a producer can make intelligent decisions in reasonable reliance upon the decisions of the regulatory agencies and the courts, it seems clear that this Commission had committed error in accepting the decision of this Court of Appeals in *Skelly* as controlling precedent for other proceedings. I accordingly dissent.

I reemphasize that the law is fully supported by the equities here. Well over one-half of these dockets involve small producers. The necessity to such persons for reliance upon Commission certificates is clear, as set forth in my dissent to *Skelly Oil Co.*, Opinion No. 492 (issued June 1, 1966). The record here fully documents that conclusion. The inequities imposed by deferring and potentially excusing refunds by some producers who, subsequent to receiving temporary authorization, file rate increases is also compelling for deferral here. The role of the temporary to mitigate emergencies should not detract from a necessity for price stability in the natural gas industry. On this subject the law should not be vacillating between one year's compulsion and the next year's retraction, for such *ex post facto* reversal becomes an illegal reparation instead of a properly suspended or conditioned refund obligation.

For these reasons I dissent from the order issued today.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS OIL & GAS CORPORATION,[1] DOCKET NOS. G-19769, RI61-181, RI62-84, RI63-111, RI64-253 AND RI65-240

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, REQUIRING REFUNDS, SEVERING AND TERMINATING PROCEEDINGS

(Issued July 22, 1966)

On May 31, 1966, Texas Oil & Gas Corporation (Texas Oil) filed an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Texas Eastern Transmission Corporation (TETC) by Texas Oil in the East Provident City Field, Lavaca County, and the Garwood Area, Colorado County, Texas (Texas Railroad Commission District Nos. 2 and 3, respectively). The East Provident City Field sale is made under Texas Oil's FPC Gas Rate Schedule No. 44, at a presently effective rate of 15.6¢ per Mcf of natural gas, and its Garwood area sale is made under its FPC Gas

---

[1] Successor to Salt Dome Production Company.

Rate Schedule No. 45, at a presently effective rate of 15.8¢ per Mcf.[3] Each of the presently effective increased rates were suspended by order of the Commission for the statutory period, and thereafter were made effective, subject to refund, by Texas Oil, or its predecessor.

Under the terms of the offer, Texas Oil proposes to eliminate the periodic price escalation clauses from the subject rate schedules and to substitute therefor in each a life-of-contract rate of 15.0¢ per Mcf rate. Additionally, it proposes to refund all amounts of monies collected in excess of the settlement rates, subject to refund, with applicable interest, either by itself or its predecessor. The refund amount will be approximately $73,400, exclusive of interest, and Texas Oil's current annual revenue from these sales will be reduced by $28,500.

Texas Oil's proposal is consistent with the provisions of the Second and Ninth Amendments to the Commission's Statement of General Policy No. 61–1 (18 CFR 2.56) and we shall approve the same.

However, we desire to make it clear that acceptance of Texas Oil's offer of settlement shall not be construed as approval of any future increased rates that may be filed by Texas Oil under the subject rate schedules in accordance with its reservation of the right to file increases to cover possible future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Texas Oil rates and rate schedules.

Additionally, for all of the reasons set forth in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require Texas Oil to deposit the refund monies charged and collected from TETC prior to June 1, 1965, in a special escrow account or to commingle the retained refunds with its general assets pending future action of the Commission. As to those refund monies charged and collected from sales made to TETC under the subject rate schedules by Texas Oil, subsequent to June 1, 1965, we shall order that refund be made, since such date TETC has agreed to an express flow-through obligation of such refund monies, but that TETC shall deposit such monies in a special escrow account, or commingle such retained refunds with its general assets pending further action of the Commission, pending determination of the flow-through obligation of certain of its customers.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Texas Oil on May 31, 1966, is consistent with the Statement of General Policy No. 61–1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement filed with the Commission by Texas Oil on May 31, 1966, is approved in accordance with the provisions of this order.

(B) Texas Oil shall file, within 30 days from the date of issuance of this order, notices of change in rates under its FPC Gas Rate Schedules to reflect the settlement rates and executed contractual amendments in accordance with the terms of its settlement proposal and as approved herein. The notices of change and contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

---

[3] Pressure base at 14.65 psia. Rate Schedule No. 45 is subject to a 1.5¢ gathering charge deduction, and a downward Btu adjustment.

(C) Texas Oil shall compute the difference between the rates collected subject to refund and the settlement rate for the sales for which it proposes to make refunds with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to TETC, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from TETC agreeing to the correctness of such amounts.

(D) Texas Oil shall retain the amounts charged and collected prior to July 1, 1965, including the interest computed thereon, as required under paragraph (C) above, subject to further action of the Commission directing the disposition of those amounts; as to the refund monies charged and collected subsequent to June 1, 1965, it shall refund the same to TETC ten days after filing the letter from TETC required in paragraph (C) above, with applicable interest computed to May 31, 1966.

(E) TETC shall retain the amounts refunded to it by Texas Oil in accordance with paragraph (D) above, subject to further action of the Commission, and shall within 15 days from receipt of such monies report to the Commission its proposed disposition thereof.

(F) Texas Oil and TETC each may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below.[3]

Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the escrow agreements shall be deemed to be satisfactory and to have been accepted for filing. The escrow agreements shall be entered into between Texas Oil and TETC, respectively, and any bank or trust company used as a depository of funds of the United States Government and the agreements shall be conditioned as follows:

(1) Texas Oil and TETC, the banks or trust companies, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such banks or trust companies shall be bound to pay over to such person or persons as may be identified and designated by final action of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The banks or trust companies may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof, or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said banks or trust companies in the exercise of their sound discretion may select.

(3) Such banks or trust companies shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from them.

(4) Such banks or trust companies shall be entitled to such compensation as is fair, reasonable and customary for their services as such, which compensation shall be paid out of the escrow accounts to such banks or trust companies. Said bank or trust companies shall likewise be entitled to reimbursement for their reasonable expenses necessarily incurred in the administration of the escrow accounts, which reimbursement shall be paid out of the escrow accounts.

---

[3] Texas Oil shall accompany its escrow agreement with a certificate showing service of a copy upon TETC.

(5) Such banks or trust companies shall report to the Secretary quarterly, certifying the amount deposited in the banks or trust companies for the quarterly period.

(G) If Texas Oil or TETC elects to commingle the retained refunds with their general assets and use them for business purposes, each shall notify the Secretary of the Commission of its intention so to do within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 5¾% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(H) Upon notification by the Secretary of the Commission that Texas Oil has complied with the terms and conditions of this order, the subject proceedings shall terminate, and Docket Nos. G–19769, RI61–181, RI62–84, RI63–111 and RI64–253 shall be severed from the Texas Gulf Coast area rate proceeding, Docket No. AR64–2, all without further order of the Commission.

(I) The acceptance by the Commission of Texas Oil's offer of settlement, as amended, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Texas Oil and is without prejudice to claims or contentions which may be made by Texas Oil, the Commission staff, or any affected party hereto, in any proceedings.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G–16611, G–16612 AND KERR-MCGEE OIL INDUSTRIES, INC. (NOW KERR-MCGEE CORPORATION), DOCKET NOS. G–16718, G–16719

ORDER PERMITTING FILING OF FACT STATEMENTS AND BRIEFS

(Issued July 25, 1966)

Pursuant to Opinion No. 470, issued August 11, 1965, 34 FPC 486, certificates of public convenience and necessity under Section 7 of the Natural Gas Act, were issued to Phillips Petroleum Company (Phillips) and Kerr-McGee Oil Industries, Inc., now Kerr-McGee Corporation (Kerr-McGee), for the sales of gas from the Rollover Field, off the shore of Louisiana, and from the Hog-Bayou Field, also off the shore of Louisiana, but within its jurisdiction. Order Paragraph (C) of Opinion No. 470 provides that any refunds for the period from November 5, 1958 to July 23, 1964, will be determined in the manner set forth in Ordering Paragraph (C) of Opinion No. 436, *Union Texas Petroleum, et al.* (July 23, 1964), 32 FPC 254 and that the parties to this proceeding may make filings as provided in the latter opinion.

Ordering Paragraph (C) of Opinion No. 436 deferred decision as to whether refunds should be ordered, and the amounts of such refunds, where producers operating under temporary certificates, without express refund conditions, collected rates in excess of the "in-line" prices later determined—20 cents per Mcf in the case of gas produced within the domain of Louisiana, and 18.5 cents per Mcf for gas produced offshore outside the domain of Louisiana. Paragraph (C) of Opinion No. 436 further provided that the producers might within 30 days file briefs and statements of fact bearing upon the ultimate determination of the refund obligation. The filing of such briefs and statements was deferred by later order of the Commission. By order issued July 5, 1966, *supra*, p. 12, the Commission allowed the producers affected by Opinion No. 436 to set forth any equities which they might contend would militate against ordering refunds of any or all excess amounts collected under their temporary authorizations. The same opportunity should be afforded Phillips and Kerr-McGee with respect to the sales which concern us here. Accordingly, Phillips and Kerr-McGee may within 30 days file briefs on this question; together with any statements of the relevant facts which they may wish to prove in any hearing which may be ordered, together with a statement of the evidence which it is proposed to introduce in support of such facts. We urge Phillips and Kerr-McGee not to reiterate general arguments which have been repeatedly presented and rejected by the Commission, and to confine their briefs and statements to matters which may be relevant in the light of the determination of this Commission in *Skelly Oil Company, et al.*, Opinion No. 492, 35 FPC 849, as modified and confirmed in Opinion No. 492–A (1966), *supra*, p. 143, and subsequent decisions of the Commission.

The Commission orders:

(A) Phillips Petroleum Company and Kerr-McGee Corporation may file within 30 days of the effective date of this order a statement of any facts which it is contended would render unjust or inequitable the refund of any or all amounts collected in excess of the prices certificated in Docket Nos. G–16611, G–16612, G–16718 and G–16719, together with a statement of the evidence which will be introduced to prove such facts in the event a hearing is ordered, together with a brief upon the propriety of ordering refunds under the circumstances.

(B) Each participant who wishes to be served with copies of the statements and briefs permitted by Ordering Paragraph (A) shall give notice to the Secretary of the Commission in writing filed not later than ten days from the date of this order. The Secretary shall transmit, to Phillips Petroleum Company and Kerr-McGee Corporation and to each participant filing notice pursuant to this paragraph, a list of the participants filing such notice.

(C) Copies of all filings made pursuant to Ordering Paragraph (A) hereof shall be served at the time of filing upon all participants who have filed timely notice pursuant to Ordering Paragraph (B) hereof.

(D) Any participant shall have 20 days to respond to any statement or brief filed pursuant to Ordering Paragraph (A) hereof.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. CP66–345

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 25, 1966)

On April 29, 1966, South Texas Natural Gas Gathering Company (Applicant) filed in Docket No. CP66–345 an application, as supplemented on May 9 and May 13, 1966, pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the period August 1, 1966, through June 30, 1967, and operation of gas purchase facilities to enable

Applicant to take into its certificated pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and existing supplies of natural gas in various producing areas adjacent to said system.

Applicant requests waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act so that it may maintain its competitive position in acquiring new supplies of natural gas. The total cost of the proposed facilities will not exceed $1,000,000, with no single project to exceed a cost of $250,000, which costs will be financed from cash on hand, from cash generated from normal operations and from internal sources.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 21, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Delaware corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its Opinion and order issued August 30, 1962, in Docket No. G-18907 (28 FPC 401, 418).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the period August 1, 1966, through June 30, 1967, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(9) The certificate issued hereinafter should not be construed as authorization to attach new customers or to increase the volume of sales, above those heretofore authorized, to existing jurisdictional customers.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, South Texas Natural Gas Gathering Company, to construct during the period August 1, 1966, through June 30, 1967, the proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, and to operate such facilities only to take natural gas into its certificated facilities from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the period August 1, 1966, through June 30, 1967, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act is granted.

(F) The certificate issued by paragraph (A) above shall not be construed as authorization to attach new customers or to increase the volume of sales, above those heretofore authorized, to existing jurisdictional customers.

OPINION NO. 499

TURNBULL & ZOCH DRILLING CO., ET AL., DOCKET NO G-17960, ET AL.*

OPINION AND ORDER REQUIRING REFUNDS

(Issued July 25, 1966)

Syllabus

1. It is established that Commission has both power and duty to order refunds of amounts collected in excess of in-line price by producers operating under temporary certificates without specific refund conditions, absent factual showing that it would be inequitable to require refunds. P. 165.
2. *Reaffirming Skelly* and subsequent line of cases, Commission holds (1) it would be inequitable to order refunds of amounts attributable to excess prices paid out in royalties prior to February 1, 1964: (2) state production taxes actually paid prior to February 1, 1964, attributable to excess amounts collected shall be refunded only to extent recoupable; (3) prop-

*Additional parties set forth in Appendix A attached hereto. See order issued September 2, 1966, granting rehearing. Reconsideration denied by order issued October 14, 1966, 36 FPC 762.

erties transferred from one owner to another will not eliminate earlier owner's refund obligation for period of his ownership; and (4) evidence of producer cost of service and whether a loss was sustained on a particular producing property is irrelevant. P. 165.

3. Change in stock ownership of producer will not defeat refund requirement even though successive stockholders may have paid for stock in belief no refund requirement existed. P. 166.
4. A successor in interest is subject to all obligations which would have been fixed upon predecessor had no transfer taken place. P. 166.
5. Fact that producer may have conducted a loss enterprise is not sufficient to defeat refund obligation. P. 166.
6. That producer tied up funds in unprofitable exploration and development is no reason to forgive refund obligation. P. 166.
7. Where producer may have conducted loss enterprise, he should be given opportunity to work out refund obligation over period of time. P. 166.
8. It is neither inequitable nor discriminatory that one producer obtained more favorable results for same sale through an over-all settlement than protesting producers obtained by pursuing matter to decision. P. 167.
9. No purpose would be served by presentation of evidence where briefs do not indicate necessity for hearing and relevant facts set forth therein have been accepted as established. P. 167.
10. In a proceeding under Section 7 of the Natural Gas Act, Commission *requires* refunds of excess amounts collected under temporary authorizations containing no specific refund conditions.

Commissioner O'Connor *dissents.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

By our Opinion No. 478 and order, September 30, 1965, 34 FPC 1001, pursuant to Section 7 of the Natural Gas Act, the Commission issued permanent certificates of public convenience and necessity in 64 dockets for sales of natural gas by producers in Texas Railroad Commission District No. 4. In 61 of these dockets the question of whether refunds should be ordered of excessive amounts collected during the period of operation under temporary certificates was deferred for subsequent consideration.

It is now established that the Commission has both the power and the duty to order refunds where amounts in excess of the in-line price have been collected by a producer operating under a temporary certificate without specific refund conditions "in the absence of a showing of factual situations which demonstrate that it would be inequitable to require refunds of either all or part of the excess amounts collected." *Skelly Oil Company, et al.*, Opinion No. 492 (35 FPC 849 at 852; June 1, 1966) amended and confirmed Opinion No. 492-A (July 21, 1966, *supra*, p. 143), and *Hawkins & Hawkins (Operator), et al.*, Opinion No. 498, (July 22, 1966, *supra*, p. 149).[1] We have determined in the cited cases that it would be inequitable to order refunds of amounts attributable to the excess prices which have been paid out in royalties or overriding royalties prior to February 1, 1964. We have also determined that state production taxes actually paid out by a producer prior to such date and attributable to the excessive portion of rates collected shall be refunded only to the extent recoupable, by credit or otherwise. On the other side of the coin, we have determined that the fact that properties were transferred from one owner to another will not eliminate any refund obligation of the earlier owner for the period of his ownership. We have also established that evidence of the cost of service of a particular company is irrelevant and that it is also irrelevant whether a loss was sustained upon a particular producing property. To these principles we adhere in the present proceeding.

---

[1] In the latter case we expressly rejected the suggestion that the principle expressed in *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 270 F. 2d 404 (CA10–1959), would militate against refunds under these circumstances.

Examination of the briefs submitted discloses that little has been advanced except general arguments with which we have dealt in our earlier decisions. There are certain contentions, however, which should be specifically noted.

Continental Oil Company (Continental) states that in any hearing allowed by the Commission it would show that Continental and another company had agreed to each acquire a one-half interest in properties of Delhi-Taylor Oil Corporation and that the "negotiation and decision to acquire an interest in the Dehli-Taylor properties for certain considerations were based, in part, on the understanding that there were no refund obligations for these Delhi dockets since they were unconditioned temporary certificates." We have previously pointed out (*Skelly Oil Co., et al.*, Opinion No. 492, page 856) that a change in stock ownership of a producer will not defeat a refund requirement even though the successive stock holders may have paid for their stock in the belief that no refund requirements existed. Any successor in interest, whether his successorship occurs by lease acquisition, stock purchase, or however, takes the risk that his interpretation of the law or his suppositions as to the facts may be erroneous, just as he acquires the possibility of unexpected gain should some unforeseen legal interpretation or newly discovered fact increase the value of what he has acquired. A successor in interest is subject to all obligations which would have been fixed upon his predecessor had no transfer taken place.

Jonnell Gas, Incorporated, (Jonnell) urges that the potential refund exposure for gas in its Docket No. CI60-323 is approximately $540,000. It states that even if Jonnell could recover from other interests the respective portions of any refunds required "Jonnell's remaining net portion of the potential total refund, standing alone, continues to be a substantial amount." Jonnell alleges that the money allocable to it has been reinvested for drilling and development purposes, and that its producing properties have not worked out well, which makes borrowing difficult or impossible. It asks whether the Commission would require Jonnell to substantially liquidate its sole business and operation under sacrifice conditions in order to make a refund. Jonnell also raises the question of whether a forced liquidation would produce a sufficient excess of proceeds over liabilities to allow a refund to be made.

The fact that a producer may have conducted a loss enterprise is not sufficient to defeat his refund obligation. The fact that a producer has tied up his funds in unprofitable exploration and development is no reason why his refund obligation should be forgiven. To the extent that this refund obligation was incurred prior to February 1, 1964, however, we think that Jonnell should be given every opportunity to work out its refund obligation over a period of time. Whatever the equities, there is no practical purpose to be served by requiring the liquidation of its business. While the equities may not eliminate the refund obligation, both equity and common sense would seem to dictate that all possible accommodation be given to enable Jonnell to meet its obligation. Accordingly, while refunds will be ordered, Jonnell will be permitted to present a proposed schedule of payments for approval by the Commission. Any other producer for whom immediate payment will constitute a hardship may do the same.

Blanco Oil Company (Operator), et al. (Docket No. CI61-618), and *Killam & Hurd* (Docket No. CI61-626) protest that it is inequitable to impose a refund obligation upon them because none was imposed in the settlement of The Atlantic Refining Company's (Atlantic) Docket No. CI61-482. Atlantic's sales were made under identical contracts from the same field to the same purchaser, and, in one instance, from a well owned jointly by Atlantic and the two protesting producers. "Applicants cannot imagine how, in justice or good conscience, the Commission could require Applicants (smaller producers in the field) to refund any amounts previously collected without requiring Atlantic (largest in the field) to do so." (Brief, p. 4.)

The Atlantic settlement involved all of its jurisdictional sales in which conflicting viewpoints were resolved with respect to level of rates and amount of refunds. Compromise of these differences resulted, among other things, in an immediate reduction in Atlantic's rate in Docket No. CI61-482 without refunds. In the same manner, a company-wide settlement of the Jake L. Hamon rate questions resulted in an immediate reduction of rates for sales being made in Texas Railroad District No. 4 under temporary certificates without refund conditions. Partial refunds under these rate schedules were agreed to by the parties and accepted by the Commission. *Jake L. Hamon, et al.*, Docket No. RI61-408, *et al.*, order issued November 5, 1965, 34 FPC 1243. The protesting producers made no attempt to settle their rate problems through the settlement process under the Grigsby formula for small producers or otherwise. *Jack W. Grigsby (Operator), et al.*, 32 FPC 529 (1964). The fact that Atlantic obtained more favorable results for this sale from an over-all settlement than the protesting producers obtained by pursuing the matter to a decision is neither inequitable nor discriminatory. If the results had proved to be less favorable to those who settled, they would have no just complaint.

Nothing has been set forth in any of the briefs submitted which indicates the necessity for a hearing upon the refund issue. To the extent that relevant facts have been set forth, they have been accepted as established for the purposes of this order. In these circumstances no purpose would be served by the presentation of evidence.

Accordingly, refunds will be ordered of all amounts collected in excess of the in-line price established in this proceeding during the periods producers were operating under temporary certificates, except that refunds will not be ordered of payments of royalties or overriding royalties attributable to the excess amounts collected, or of nonrecoupable state production taxes to the extent paid on account of excess amounts collected, provided said payments of taxes or royalties were made prior to February 1, 1964.

The Commission orders:

(A) As a condition of the certificate granted in each of the dockets listed in Appendix A hereto, each certificate holder shall file within 60 days of the effective date of this order a report of the amounts collected by said certificate holder in excess of the price conditioned in said certificate, less any amount specified in ordering paragraphs (B) and (C). Interest to the date of this order shall be added at the rate of 6 percent per annum on all such excess amounts collected prior to March 1, 1960, and at the rate of 7 percent per annum on all such excess amounts collected on or after March 1, 1960, except that no interest shall be included on refunds to the extent state production taxes, paid but recoupable, are included in such refunds, and interest shall not exceed the legal rate recoverable by the certificate holder on that portion of the amount of any refund which was in fact paid over by certificate holder, not for his own benefit, to any third party prior to February 1, 1964.

(B) Each certificate holder listed in Appendix A hereto may omit from the reports required by ordering paragraph (A) any amount by which payments made before February 1, 1964, of royalties and overriding royalties were increased by reason of the difference between the price conditioned in its certificate and the rates actually collected, and any amounts by which payments made before February 1, 1964, of state production taxes, not recoupable by credit or in any other manner, were increased by reason of said difference.

(C) The reports required by ordering paragraph (A) shall not include excess rates collected during any period when an increased rate in the docket in question was subject to possible refund in proceedings pursuant to Section 4(e) of the Natural Gas Act.

(D) Notwithstanding any other provision of this order, any state production taxes paid prior to February 1, 1964 by any party listed in Appendix A hereto, shall be required to be subject to the provisions of ordering paragraph (G) and the interest payments required thereby only from the time and to the extent that such excess tax payments may be recouped by credit or otherwise.

(E) Each report required by ordering paragraph (A) shall set forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest, with the reasons for differing rates of interest on different portions of the principal), the basis used for such determination, the period covered and a letter from the purchaser of the gas agreeing to the correctness of the amounts.

(F) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants who within 45 days of the issuance of this order shall so request in writing, and upon the purchaser of the gas.

(G) Each certificate holder listed in Appendix A hereto shall retain the amounts shown in the reports required under ordering paragraph (A) subject to further order of the Commission directing the disposition of those amounts. If any such certificate holder elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 5¾ percent per annum on all funds thus available from the date of the filing of the refund report to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission. If the certificate holder elects to deposit the retained refunds in a special escrow account, the certificate holder shall tender for filing on or before the date of the filing of the refund report an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be entered into between the certificate holder and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Certificate holder, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or an agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary of this Commission quarterly, certifying the amount deposited in the trust account for the quarterly period.

(H) Any certificate holder may apply to the Commission, within 15 days of any order directing payment of any or all amounts held by such certificate holder pursuant to ordering paragraph (G), for leave to make payments over a period of time in discharge of its refund obligation. Such application shall set forth the reasons for the application and the proposed payment arrangements, which shall be subject to Commission approval.

CONSOLIDATED GAS SUPPPLY CORPORATION, DOCKET NO. CP66–343

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 26, 1966)

On April 28, 1966, Consolidated Gas Supply Corporation (Applicant), filed in Docket No. CP66–343 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas transmission facilities, all as more fully set forth in the application.

Applicant proposes to replace its Line No. 2 (26.8 miles of 10-inch pipeline) extending between the Sabinsville Compressor Station, Tioga County, Pennsylvania, and its junction with Line No. 10 in Potter County, Pennsylvania, and 9.3 miles of the easternmost portion of 12-inch Line No. 10, extending between the western terminus of Line No. 2 and Roulette Gate, Potter County, Pennsylvania.

The pipeline proposed to be constructed and operated, looping Applicant's Line No. 280, will consist of (1) 26.2 miles of 26-inch pipeline extending between the Elk Run Gate, Tioga County, Pennsylvania, the present southern terminus of Line No. 50, and Finnefrock Compressor Station, Clinton County, Pennsylvania, and (2) 21.6 miles of 24-inch pipeline extending between Finnefrock Compressor Station and Driftwood Gate, Cameron County, Pennsylvania.

The replacement will increase the capacity of its transmission system upstream of its northern storage pool area. The proposed facilities, to be constructed in 1966, will be needed to meet the injection requirements of its northern storage pools beginning with the 1967 injection season.

The total estimated cost of Applicant's proposed facilities is $5,207,850, which cost will be financed by funds on hand and funds to be obtained from Applicant's parent corporation, Consolidated Natural Gas Company.

At a hearing held on July 21, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Consolidated Gas Supply Corporation, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 24, 1965 in Docket No. CP65-262 (33 FPC 1047).

(2) The facilities hereinbefore described and as more fully described in the application and exhibits in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Consolidated Gas Supply Corporation, authorizing the construction and operation of facilities as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-356

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 26, 1966)

On May 9, 1966, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP66-356 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the twelve months period commencing July 13, 1966, and the operation of gas purchase facilities to enable Applicant to take into its main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from cash generated from operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 21, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 14, 1950, in Docket No. G-1302 (9 FPC 167).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve months period commencing July 13, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Michigan Wisconsin Pipe Line Company, to construct during the twelve months period commencing July 13, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the twelve months period commencing July 13, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATIONAL SULPHUR COMPANY, DOCKET NO. CP66-282

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 26, 1966)

On January 24, 1966, National Sulphur Company (Applicant) filed in Docket No. CP66-282 an application, as supplemented on April 29, 1966, for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation and sale of natural gas in interstate commerce for resale, all as more fully set forth in the application as supplemented.

Applicant proposes to construct and operate approximately 10.3 miles of 4-inch pipeline from the outlet of its sulphur plant to a connection with the mainline of Texas Eastern Transmission Corporation (Texas Eastern), all in Cass County, Texas. Applicant will purchase sour gas from Humble Oil & Refining Company (Humble) in the Queen City Field, Cass County, Texas, process the gas for the removal of sulphur, and then sell the residue gas to Texas Eastern. Humble will sell gas to Applicant pursuant to a percentage-type contact which requires Humble to maintain a minimum deliverability potential of 3,000 Mcf per day for the first four years and 1,500 Mcf per day thereafter. The contract between Applicant and Texas Eastern provides for the sale of a daily contract quantity of 2,500 Mcf of gas per day at a rate of 13.0 cents per Mcf at 14.65 psia. Applicant estimates that there are approximately 10,000,000 Mcf of gas available to it for processing.

The estimated cost of the proposed facilities is $148,600, to be financed by a bank loan.

Although it filed a pipeline-type application, Applicant requests that it be permitted to file its gas sales contract with Texas Eastern as a special rate schedule in lieu of filing a pipeline tariff, that it be exempted from compliance with the Uniform System of Accounts, and that it be permitted to file producer-type annual reports in lieu of those required of pipeline companies. In view of the size and nature of the proposed operation, it is appropriate that these requests be granted.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on July 21, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, National Sulphur Company, a Texas corporation having its principal place of business in Midland, Texas, upon commencement of the transportation and sale of natural gas in interstate commerce hereinafter authorized, will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should comply with those Commission Regulations applicable to natural gas pipeline companies except as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, National Sulphur Company, to construct and operate facilities and to transport and sell natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized herein shall be completed and placed in actual operation and the transportation and sale of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within six months from the date of this order.

(D) Applicant shall comply with those Commission Regulations under the Natural Gas Act applicable to natural gas pipeline companies, except that

(a) Applicant shall file its gas sales contract with Texas Eastern as a special rate schedule pursuant to Section 154.52 of the Regulations under the Natural Gas Act, and to the extent that said contract does not conform to the requirements of Sections 154.32 and 154.33 of said Regulations the requirments of said sections are waived;

(b) Applicant is exempt from compliance with the Uniform System of Accounts Prescribed for Natural Gas Companies (Class D); and

(c) Applicant shall file those annual reports required to be filed by independent producers of natural gas in lieu of those required to be filed by natural gas pipeline companies pursuant to the Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NEW ENGLAND POWER COMPANY, DOCKET NO. E-6950

ORDER APPROVING HEADWATER BENEFITS SETTLEMENT

(Issued July 26, 1966)

This is an order approving settlements for headwater benefits provided in the Connecticut River basin by licensed hydroelectric developments to non-Federal downstream developments. Section 13.1 of the Regulations under the Federal Power Act provides that headwater benefits settlements between non-Federal parties may be filed for approval by the Commission in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The licensed developments providing headwater benefits are the New England Power Company's (Nepco's) Comerford and Moore developments, comprising part of Project No. 2077, on the Connecticut River and its Somerset and Harriman developments, comprising part of Project No. 2323, on the Deerfield River. Comerford and Moore provide benefits to the Western Massachusetts Electric Company's downstream Cabot development, Project No. 1889, on the Connecticut

River and to the Holyoke Water Power Company's downstream Project No. 2004, consisting of the Hadley Falls development on the Connecticut River, the Boatlock and Beebe Holbrook developments on the first level of the Connecticut Canal, and the Riverside development on the second level. Somerset and Harriman provide benefits to Western's downstream Gardner Falls development, Project No. 2334, on the Deerfield River and to Holyoke's downstream Project No. 2004.

By letter dated November 27, 1963, Nepco filed a contract with Western dated September 30, 1963. This contract, superseding a contract executed on December 16, 1930, is effective from October 1, 1963, until terminated by either Company giving written notice twelve months in advance of termination but not earlier than June 30, 1970. Both the present contract and that which it supersedes provide that the owner of the Cabot and Gardner Falls developments (Western) shall pay Nepco monthly amounts for upstream benefits computed by multiplying the gross operating head of the owner's plants by $2.78 per billion cubic feet of upstream storage capacity developed by Nepco. Under this formula, Western presently makes monthly payments of $1,670.64 for storage at Nepco's four upstream licensed developments.

By letter dated October 27, 1965, Nepco filed with the Commission a contract with Holyoke dated October 22, 1965. This contract is effective from January 1, 1964, until terminated by either Company giving written notice twelve months in advance of termination but not earlier than June 30, 1970. It provides that Holyoke shall make a monthly payment to Nepco of $1,200 for benefits provided to Project No. 2004 by Nepco's licensed upstream developments.

The Commission finds:

The aforesaid contracts constitute an effective and reasonable method for compensating the New England Power Company for headwater benefits provided by its licensed projects in the Connecticut River Basin to downstream projects of the Western Massachusetts Electric Company and Holyoke Water Power Company.

The Commission orders:

The aforesaid settlements are approved with respect to headwater benefits under Section 13.1 of the Regulations under the Federal Power Act until changed conditions may require further order of the Commission.

OPINION NO. 500

TRANSWESTERN PIPELINE COMPANY, DOCKET NOS. CP63-204 AND CP64-91; GULF PACIFIC PIPELINE COMPANY, DOCKET NO. CP63-223; EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-76

OPINION AND ORDER GRANTING AND DENYING CERTIFICATES

(Issued July 26, 1966)*

Syllabus

1. There is no validity to argument that determination of necessity of providing natural gas to a community to combat air pollution is solely for local authorities. P. 185.

---

*Initial decision appears on p. 262. Ordering clauses corrected by order issued August 19, 1966 and rehearing granted by order issued September 21, 1966, 36 FPC 491, 658. Confirmed and rehearing denied by Opinion No. 500-A issued December 9, 1966, 36 FPC 1010. Affirmed. *Southern California Edison Co.* v. *F.P.C.*, 387 F. 2d 619 (CA3-1967). Cert. denied, 392 U.S. 909 (1968).

2. **Record fails to demonstrate that introduction into Los Angeles market of enough gas to eliminate completely the burning of fuel oil during winter months would have appreciable effect upon smog problem or any beneficial effect on health of people. P. 189.**
3. **Proposal certificated here is adequate to maintain existing level of natural gas service in Los Angeles area at least through 1968. P. 190.**
4. **Commission *discusses* need for additional gas in the Southern California market. P. 191.**
5. **Technology with respect to treating power plant emissions to reduce pollutants is in a state of change; Gulf Pacific with its fixed supply and customers under 20-year contract is peculiarly ill-adapted to meet the situation. P. 193.**
6. **El Paso-Transwestern proposal is flexible enough to accommodate future developments in energy needs of rapidly changing market. P. 194.**
7. **Commission *discusses* effect of nuclear energy on long-term energy requirements of Southern California market. PP. 197–199.**
8. **Prospect of committing two electric companies to using natural gas exclusively to generate power until 1988 is not an attractive alternative to inherently flexible TSP [Tailored Supply Program], either from an economic or air pollution standpoint. P. 199.**
9. **Whatever past effect of Gulf Pacific proposal in spurring competitor applicants to greater efforts, it cannot outweigh its competitive disadvantages insofar as present proposal is concerned. P. 200.**
10. **Absent unusual circumstances there is no reason to certificate duplicative service to particular industrial customer where local distributor indicates willingness and ability to serve. P. 201.**
11. **Question here is not determination of an in-line price for jurisdictional sale but whether certification of a pipeline dependent upon two very large nonjurisdictional sales at prices involved is required by present or future public convenience and necessity. P. 202.**
12. **Purchase of gas by distributors from producers is a direct sale not subject to Commission jurisdiction under Section 1(b) of the Gas Act; proposed transportation thereof by pipeline in interstate commerce is jurisdictional. P. 202.**
13. **To certificate instant direct sale at above in-line ceiling price not subject to modification up or down when just and reasonable price for area is established would seriously jeopardize Commission's continuing control over price at which gas is sold in interstate commerce for resale, as well as the amount of gas available for this market. P. 203.**
14. **Certification of the Gulf Pacific proposal under rate structure proposed here would have substantial adverse impact on public interest. P. 205.**
15. **Commission *discusses* suggestion that objections to producer's field price [where, as here, sales are nonjurisdictional] would be overcome by utilization of conditioning powers under Section 7(c) of the Act. P. 205.**
16. **Whether costs upon which rates will necessarily be based are treated on an incremental or rolled-in basis, Commission believes a marked short-term advantage in El Paso-Transwestern TSP proposal can be demonstrated and nothing is likely to occur in foreseeable future to indicate such advantage will be overcome. P. 206.**

17. Concept that cheap expandibility of existing pipeline resources is something to be hoarded rather than taken advantage of at earliest feasible opportunity does not make economic sense. P. 209.
18. Section 2.61(a) of Rules having modified 12-year deliverability requirement and Transwestern having shown ability to attach additional reserves, Commission accepts its reserve and deliverability showing. P. 212.
19. The Tailored Supply Program of El Paso and Transwestern most adequately meets needs of Southern California market and is most consistent with public interest. P. 213.
20. On basis of particular situation in Los Angeles area, evidence in record and current state of technology and scientific understanding of air pollutants and their effect on human beings, Commission *concludes* that none of proposals here would have any appreciable effect upon health of people of Los Angeles. P. 213.
21. One of most compelling reasons for certificating TSP is that it leaves Federal Power Commission and California Commission in a position to take whatever action future circumstances may require. P. 214.
22. Producers proposed sale to distributors at above in-line price would encourage other major producers to remove large blocks of gas from interstate market to inevitable detriment of jurisdictional customers. P. 214.
23. There is no merit to Gulf Pacific contention that it would introduce competition in Southern California market to benefit of consumers. P. 214.
24. Rejection of Gulf Pacific does not mean that under different supply and demand situations an industrial pipeline performing solely interstate transportation functions for a few large natural gas consumers would not be consistent with public interest. P. 215.
25. Appropriate supply of gas for Southern California market is one which, while meeting peak requirements, would keep total levels of gas consumption at approximately present levels. P. 215.
26. TSP proposal is clearly preferred to Gulf Pacific because it (1) more clearly meets peak day and annual market needs; (2) is substantially cheaper on both rolled-in and incremental basis; (3) avoids serious problems of high field prices upon which Gulf Pacific is predicated; and (4) provides for necessary flexibility in use of gas in market over next two decades of rapid change. P. 215.
27. Certification of El Paso and Transwestern conditioned on filing of rates based upon cost of service submitted here adjusted to reflect rates of return of 6⅛ percent and 6¼ percent, respectively. P. 216.
28. It would not be appropriate to impose flow-through policy of *Alabama-Tennessee* in this certificate proceeding where no previous consideration was given matter with respect to one pipeline and only limited evidence was introduced respecting the other. P. 217.
29. In a proceeding upon competitive proposals under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity to Transwestern and El Paso and *denies* application filed by Gulf Pacific.

Commissioner O'Connor *dissenting.*

Raybourne Thompson, James W. McCartney and *John S. Battle, Jr.* for Transwestern Pipeline Company.

Harry S. Littman, Jack Werner, Richard Littell, Harold L. Talisman, Robert E. Shaw, Melvin Richter, Richard Richards, W. C. Braden, Jr., John A. Ferguson, Jr., L. R. Pankonien and *W. C. Alletag* for Gulf Pacific Pipeline Company.

Malcolm T. Dungan, Gordon E. Davis, Bart Koeppen, Stanley S. Harris, Jeremiah C. Collins, C. Frank Reifsnyder, Allen R. Grambling and *E. J. Najaiko* for El Paso Natural Gas Company.

Harold W. Kennedy and *David D. Mix* for Air Pollution Control District of Los Angeles County, California.

Harry A. Poth, Jr., Richard M. Merriman, Peyton G. Bowman, III and *N. H. Powell* for Arizona Public Service Company.

Bernard Foster, Jr., Edwin A. Collier and *Stuart J. Scott* for The Atlantic Refining Company.

Louis Sherman, Laurence Cohen, William T. Dodd and *C. J. Haggerty* for Building Construction Trades Department, AFL–CIO.

Henry F. Lippitt, II for California Gas Producers Association and Oil Producers Agency of California.

Malcolm T. Dungan and *Gordon E. Davis* for California Manufacturers Association.

Roger Arnebergh, Alfred H. Driscoll and *Gilmore Tillman* for the City of Los Angeles, California.

Frank P. Saponaro, Jr., Martin L. Friedman and *Michael J. Shea* for Colorado Interstate Gas Company.

Jerome J. McGrath, John A. McGrath and *Thomas C. Williams* for Fuels Research Council, Inc., National Coal Association and United Mine Workers of America.

R. Clyde Hargrove, Jesse H. Foster, Jr., William H. Holloway, Carl Illig and *A. C. McClain* for Humble Oil & Refining Company.

Sherman Chickering, C. Hayden Ames and *Stanley Jewell* for San Diego Gas & Electric Company.

Rollin E. Woodbury, William E. Marx, Harry W. Sturges, Jr. and *William R. Connole* for Southern California Edison Company.

Harry P. Letton, Jr., John Ormasa, K. R. Edsall, J. David Mann, Jr., Robert H. Young, Arthur B. Edgeworth, Milford Springer, Robert M. Olson, Jr., Oscar C. Sattinger, William L. Cole, R. D. Twomey, Jr., John P. Egan and *Frederick Moring* for Southern California Gas Company, Southern Counties Gas Company of California and Pacific Lighting Gas Supply Company.

Mrs. Michael Levee for Stamp Out Smog.

Gerald H. Trautman for Standard Oil Company of California.

Philip K. Verleger, Max K. Jamison and *John P. Killeen* for Western Oil and Gas Association.

Sheldon Rosenthal, Richard E. Tuttle and *J. Calvin Simpson* for the People of the State of California and the Public Utilities Commission of the State of California.

Richard W. Sabin for Public Utilities Commissioner of Oregon.

Morton L. Simons and *Kent H. Brown* for Public Service Commission of the State of New York.

Herbert E. Squires, Alan R. Squires and *Joseph C. Bruno* for Pennsylvania Public Utility Commission.

Robert E. Simpson for Washington Utilities & Transportation Commission.

William I. Harkaway and *James N. Horwood* for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge

WHITE, *Chairman:*

Introduction

This proceeding involves a comparative hearing under Section 7 of the Natural Gas Act to determine which of the competitive applications pending before us in this consolidated proceeding is best adapted to deliver additional natural gas to the Southern California market. Southern California Edison Company (Edison) and the Department of Water and Power of the City of Los Angeles, California (LADWP) propose to purchase gas to fuel their electric generating plants from Humble Oil & Refining Company and other producers in the Katy and Pledger Gas Fields located on the Texas Gulf Coast in Railroad District No. 3. The gas would be transported from the fields to the generating plants by Gulf Pacific Pipeline Company, a subsidiary of Tennessee Gas Transmission Company (TGT)[1] (see attached map). El Paso Natural Gas Company and Transwestern Pipeline Company propose to purchase gas in the Permian and San Juan Basins and sell additional amounts to their present customers, the local distributors in Southern California. These form the Pacific Lighting Group (Pacific Lighting), which is composed of Southern California Gas Company (So Cal Gas), Southern Counties

---

[1] Now Tenneco Inc.

Gas Company of California (So Counties) and Pacific Lighting Gas Supply Company (Pac Ltg Supply),[2] all subsidiaries of the Pacific Lighting Corporation. The matter is now before the Commission upon exceptions to the decision of Presiding Examiner Alvin A. Kurtz issued December 16, 1965, *infra*, p. 262.

The issues involved in this proceeding include those traditionally found in Section 7 cases, such as market, adequacy of gas supply and cost of service. In addition, there are other important and controverted issues which have arisen in but few cases. These include the problem of air pollution in the Los Angeles area and the effect that approval of a direct field sale of a large block of gas for use as boiler fuel would have on the price and supply of gas available to interstate resale consumers. Other issues include a determination of which project will meet the needs of the market most economically; the desirability of introducing another competing pipeline into the Southern California market; and the dedication of new producing areas to the California market. Since this is a comparative proceeding within the meaning of the *Ashbacker* doctrine[3] each of the competing proposals will be considered on a comparative basis.

Background and Procedure

In 1946 El Paso became the first interstate supplier of natural gas to the Southern California market and remained the sole out-of-state supplier until 1960 when the Commission certificated Transwestern (22 FPC 391). In the intervening years there were other moves to deliver more gas to the area.

For many years Edison has purchased gas from Pacific Lighting under interruptible rate schedules. These purchases have become increasingly important due to the greater use of steam generation, which has risen from 4 percent in 1940 to its present 80 percent of Edison's total generation. In 1956 in order to firm up its gas supply Edison entered into a contract with El Paso for the direct sale of 100,000 Mcfd (thousand cubic feet per day) of gas to be carried in the pipelines of Pacific Lighting. However, because of the effect the direct sale would have on prices in the field and because of the proposal's inflexibility in accommodating the changing requirements of the California market, the Commission did not approve it and required that El Paso's sales be made to Pacific Lighting for resale.[4]

In 1957 Edison entered into an agency agreement with TGT to supply its fuel requirements. The result was the so-called "Pemex Project" by which Humble was to sell gas to Edison in the Gulf Coast area of Texas. The gas was to be carried in a pipeline running through Mexico and was to be delivered to Edison's generating plants in the Los Angeles area. When certain defects in the project became apparent, the company withdrew the proposal during the course of the hearing (Docket No. CP61-172, *et al.*).

In 1958 El Paso filed an application to increase its supply of gas to the California market. In this application for the so-called "Rock Springs Project" (Docket No. G-16235), El Paso sought to build a new pipeline from Green River, Wyoming, to the California border to increase its deliveries to the Pacific Lighting Group by some 475,000 Mcfd. Because there was not an immediate market for much of the gas and because there appeared to be less costly ways of delivering gas to California, the Commission denied El Paso's application on July 12, 1963 (30 FPC 77). In so doing the Commission said it would institute a proceeding "to determine how the long term needs for natural gas deliveries to

[4] *El Paso Natural Gas Co.*, 22 FPC 900.

Southern California may be met in the manner which is most desirable from the standpoint of the public interest." The Commission added that: "In the new proceeding further opportunity will be given for the presentation of evidence on alternative methods for serving the Southern California market. These methods may include, in addition to the pending Gulf Pacific proposal, expansion of El Paso's Southern Division's facilities, expansion of Transwestern, and the delivery of gas by PGT into Northern California as well as a line from the Rocky Mountain area to California. We do not exclude other possibilities." (30 FPC 92–93.) The pending applications are an outgrowth of that proceeding.

El Paso's Proposals

El Paso's principal transportation system consists of two 30-inch pipelines, looped double or more, extending westward from the Permian Basin in Western Texas and the San Juan Basin in Northern New Mexico to the California border. There is also a lateral extending to the Texas Panhandle. El Paso sells gas in several states including New Mexico and Arizona but the bulk of its gas, amounting to 1,130,000 Mcfd,[5] is sold to the Pacific Lighting Group and 1,025,000 (Mcfd) to Pacific Gas & Electric Company, at the California border. El Paso is presently subject to an order of the United States Supreme Court[6] to divest itself of its Pacific Northwest Division which largely consists of a pipeline extending from the San Juan Basin to the Canadian border.

On September 30, 1963, El Paso filed its original application in Docket No. CP64–76 to sell and deliver an additional 250,000 Mcfd to So Cal Gas and So Counties at the California border. The necessary facilities, consisting of loops and compression on the San Juan mainline and one short loop on the Plains-to-Gallup crossover, are estimated to cost $50,442,000. The combination of the 250,000 Mcfd from El Paso, and 340,000 Mcfd of contract demand gas from Transwestern as requested in Docket Nos. CP63–204 (50 M^{2}cfd) and CP64–91 (290 M^{2}cfd) would be used by So Cal Gas and So Counties for what Pacific Lighting calls its "Tailored Supply Program" (TSP). When its deliveries reach 200,000 Mcfd under TSP El Paso proposes to reduce its rates by ¾ of a cent to all its customers both in and outside California. It also has committed itself to pass on to its customers producer rate decreases.

In an amendment to its application filed November 12, 1963, El Paso offers as a separate proposal to deliver to Pacific Lighting at the Colorado River up to 575,000 Mcfd,[7] which when added to the additional 290,000 Mcfd contract demand gas proposed by Transwestern in Docket No. CP64–91 would approximately equal the 865,000 Mcfd proposed by Gulf Pacific. This would require El Paso to construct 393 miles of new 30-inch line from Chaco in the San Juan Field to the California border at Needles, extensive looping on the line between Permian and San Juan and additional compression, all costing $134,207,000. On the record El Paso showed how its present system could be expanded, even without the Chaco-Needles line, to deliver 575,000 Mcfd. When its deliveries under this program reach 500,000 Mcfd, it would reduce its rates to all of its customers by an additional ¼ of a cent, making one cent in all.

In its amended application El Paso also proposed to deliver the whole 865,000 Mcfd from the Colorado River to Los Angeles and deliver it as required by this Commission if Pacific Lighting could not transport the gas. El Paso estimated the capital cost of this transportation to be $63,448,000.

---

[5] An additional 70 million cubic feet per day (M^{2}cfd) may be sold on an interim basis by order of March 23, 1965, in Docket No. CP63–296, 33 FPC 592.

[6] *United States* v. *El Paso Natural Gas Co.*, 376 U.S. 651.

[7] At 14.9 pounds per square inch absolute (psia). It equals 581,613 Mcfd at 14.73 psia.

Transwestern's Proposals

Transwestern's pipeline consists principally of a 30-inch mainline which connects with two supply laterals near Roswell, New Mexico, and extends westward 645 miles across New Mexico and Arizona to the California border where it delivers gas to Pac Ltg Supply. Its supply laterals extend into the Panhandle-Hugoton-Anadarko areas of Texas and Oklahoma and to the Permian Basin. Transwestern is presently authorized to sell and deliver to Pacific Lighting up to 345,000 Mcf per day of natural gas on an annual average basis, of which 300,000 Mcf per day are sold under its contract demand Rate Schedule CDQ–1 at 41.8 cents per Mcf and additional volumes are sold under its overrun Rate Schedule LX at 21 cents per Mcf. On an interim basis it is authorized to deliver 440,000 Mcfd annually.[8] The optimum capacity of its present facilities, however, is 640,000 Mcfd.

In its applications in Docket Nos. CP63–204, and CP64–91, Transwestern proposes to install facilities, estimated to cost $44,188,700 and to increase its contract demand deliveries to Pacific Ltg Supply in steps from 300,000 Mcf per day to 640,000 Mcf per day. It proposes to reduce its CDQ–1 rate from the present 41.8 cents to 32.7 cents as the TSP increments take effect, and suggests further reductions as a result of the *Permian* case, AR61–1, Opinion No. 468, 34 FPC 159, issued August 5, 1965. The TSP increased deliveries as applied for here by El Paso and Transwestern may be summarized as follows:

[In M^{2}cf]

Date	Transwestern (at 14.73 psia)		El Paso Daily Contract Quantity—	
	Contract Demand Quantity	Maximum Daily Demand	at 14.9 psia	at 14.73 psia
Present Permanent Authorization	300	345	1,130	1,143.0
Nov. 1, 1963	350	460		
Nov. 1, 1964	450	535		
Nov. 1, 1965	535	640	1,280	1,294.7
Nov. 1, 1966			1,330	1,345.3
Jan. 1, 1967	640	640		
Nov. 1, 1967			1,380	1,395.9
Increase	340	295	250	252.9

Gulf Pacific Proposal

On February 12, 1963, Gulf Pacific filed its application in Docket No. CP63–223. Gulf Pacific, a wholly owned subsidiary of TGT formed solely for this purpose, proposes to construct 1,398 miles of 36-inch pipeline from the Katy Field to Los Angeles, 45 miles of 20-inch line from the Pledger Field to Katy, Texas, 102 miles of delivery lines in California and 15 compressor stations. The total estimated cost of these facilities is $313,923,000. The gas is to be purchased by Edison and LADWP directly from the producers pursuant to 20-year contracts. The contracts fix the field price at 18.5 cents per Mcf[9] for the first four years with a one-cent escalation in each successive 4-year period. Gulf Pacific proposes to transport 694,430 Mcfd during the first year of service and, after five years, 865,095 Mcfd, of which 570,845 Mcfd will be transported for Edison and

---

[8] Order of December 27, 1965, in Docket No. CP64–34, 34 FPC 1560.

[9] At 14.65 pounds per square inch absolute (psia). At 14.73 psia the price would be 18.6.

294,250 Mcfd for LADWP, all at 14.73 psia.[10] The proposed transportation contracts provide for a cost of service formula.

Specifically referring to its *Rock Springs* opinion the Commission by order of October 21, 1963, consolidated the applications of Transwestern, El Paso and Gulf Pacific. After a prehearing conference, and the exchange of prepared testimony the hearings began on June 1, 1964 and concluded March 17, 1965. The 169 days of hearing amassed a transcript of 28,022 pages and 897 exhibits.

Presiding Examiner's Decision

The examiner's decision would grant a certificate to Gulf Pacific for its proposed project and deny certificates to El Paso and Transwestern. In reaching this result the examiner criticized Transwestern's and El Paso's gas supplies. He found that Los Angeles' air pollution problem would be reduced significantly by the increased use of natural gas under boilers. He found the market sufficient in the future to receive the Gulf Pacific gas and to leave Pacific Lighting with a larger interruptible market available than in 1963 and 1964. He also found that Pacific Lighting effectively controlled the market in the Los Angeles area and had not met the demands of the electric companies. He further found that the competition which would result from the certification of Gulf Pacific would have a beneficial effect upon the customers of Pacific Lighting.

After the issuance of the examiner's decision and the filing of exceptions and answers thereto, the Department of Health, Education, and Welfare (HEW) requested intervention and filed a brief on the air pollution issue. By order of March 4, 1966, 35 FPC 334, the Commission permitted HEW to participate in the oral argument held March 28–29, 1966, as *amicus curiae*.

Alternative Proposals

To summarize, we have before us several proposals and variations:

(1) Under the tailored supply program (TSP) El Paso would deliver an additional 250,000 Mcfd (at 14.9 psia, or 252,875 Mcfd at 14.73 psia) and Transwestern would deliver an additional 340,000 Mcfd (14.73 psia) contract demand gas in steps to the full amount on November 1, 1967, which represents 216 billion cubic feet (M^3cf) a year at 100 percent load factor.

(2) Under its enlarged proposal El Paso would deliver to Pacific Lighting an additional 575,000 Mcfd (at 14.9 psia, 581,613 Mcfd at 14.73 psia) instead of 250,000 Mcfd. With Transwestern's proposed additional deliveries of 340,000 Mcfd (14.73 psia) this would total about 922,000 Mcfd, or 337 M^3cf a year. To effect these deliveries El Paso would build its proposed Chaco-Needles line or, alternatively, increase the capacity of its present system. El Paso has also offered to build a pipeline to carry the 575,000 Mcfd, plus 290,000 Mcfd from Transwestern, to Los Angeles and deliver it according to the direction of the Commission.

(3) Gulf Pacific proposes to transport from the Texas Gulf Coast amounts of gas increasing to 865,095 Mcfd in the sixth year (at 14.73 psia or 316 M^3cf annually), to the power plants of Edison and LADWP. Under a 20-year contract the gas would be sold by Humble and other producers directly to Edison and LADWP.

---

[10] Gulf Pacific will supply gas to the powerplants as follows (Mcf at 14.73 psia):

	Daily volume, Mcfd	Annual, Mcf
Contract Year:		
1	694, 430	253, 466, 950
2	759, 165	277, 095, 225
3	800, 360	292, 131, 400
4	847, 440	309, 315, 600
5	859, 210	313, 611, 650
6 through 20	865, 095	315, 759, 675

(4) As a variation, the Public Utilities Commission of California has recommended that a certificate be granted to Gulf Pacific plus Transwestern at an additional daily contract quantity of 235,000 Mcfd, representing one of the steps in the TSP increases. This would be an increase of 1,100,000 Mcfd or 402 M^3cf a year as compared to 337 M^3cf per year under El Paso's enlarged proposal.

As set forth below we shall deny a certificate to the Gulf Pacific project and grant certificates to El Paso and Transwestern for the TSP program. We are also providing that El Paso and Transwestern file revised rates reflecting the lower costs of increased deliveries of gas, the rates of return presently allowed and limitations on the inclusion of prepayments for gas in computing rate bases. The record in this proceeding is not adequate upon which to determine whether the benefits of liberalized depreciation should be flowed-through to the pipelines' customers. We are therefore initiating a separate proceeding in which to make a determination on this matter.

AIR POLLUTION

Pollution of the atmosphere is properly a matter of growing concern throughout the nation. The problem is in part due to the increasing concentration of our population in large metropolitan areas and to the noxious byproducts of the highly industrialized standard of living which we otherwise enjoy. This awakening of public concern finds expression in local, state and federal legislation, and in the increased emphasis now being given to research into the causes and the means of controlling atmospheric pollution.

The County of Los Angeles, pursuant to authority delegated to it by the State (California Health and Safety Code, Chap. 2. Div. 20) has passed stringent air pollution control measures. The most important air pollution provisions relevant to the present proceeding are Rules 62 and 62.1 of the Los Angeles County Air Pollution Control District (APCD). Rule 62 forbids, with certain exceptions, the burning of any fuels with more than a slight amount of sulphur[11] between April 15 and November 15. Liquid fuels, however, may be burned when gas is not available due to accident or failure of the supplier. Rule 62.1 applies the same rules November 16 to April 14, but permits the use of liquid fuel when the supplier "interrupts the delivery of gaseous fuel to the user." In other words during the winter gas must be utilized if available.

An issue has been raised in this case as to the manner in which the Commission is authorized to take the matter of air pollution into consideration in a certificate proceeding under the Natural Gas Act. In *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1, the United States Supreme Court held that end use of gas was properly of concern to us, and made it clear that air pollution was a relevant consideration although the air pollution evidence there was insufficient to overcome the other objections to the particular project. There is no validity, in our opinion, to the argument that the determination of the necessity of providing natural gas to a community to combat air pollution is solely for local authorities. Specifically, the *Air Pollution Control Act*, 42 U.S.C. § 1857, *et seq.*, which is largely concerned with research and with abating instances of air pollution in cooperation with state agencies, does not deprive this Commission of its statutory authority and responsibility to make an independent determination on the basis of an evaluation of all relevant circumstances as to whether applications for pipeline certificates are required by the public convenience and necessity. Although local regulation is an important factor which we take fully into account in appraising any air pollution issue, it does not and cannot bind this Commission.

---

[11] Gaseous fuel must contain no more than 50 grains per 100 cubic feet, calculated as hydrogen sulphide at standard conditions. Liquid or solid fuel is limited to a sulphur content of 0.5 percent by weight.

The term "air pollution" does not describe a single phenomenon which is exactly the same wherever it is found. Rather, it encompasses anything from an unpleasant odor in the amtosphere to a mixture of toxic gases, solid matter and even radioactive material. In some areas atmospheric pollution is aggravated by a photochemical reaction of the gases in the air. In the Los Angeles Basin the principal ingredients contributing to the air pollution problem are: (1) Hydrocarbons and carbon monoxide, which are emitted as the result of burning gasoline in automobiles and other internal combustion engines; (2) Oxides of nitrogen, which result from any combustion, including fuel oil and natural gas; (3) Sulphur dioxide (SO_2)—a colorless, toxic gas produced by burning sulphur or sulphur compounds—which in the atmosphere changes to sulphur trioxide (SO_3) and eventually to sulphuric acid and other sulphates; and (4) Liquid and solid particles in the atmosphere known as aerosols or particulates, some of which are formed in the atmosphere as the result of a photochemical reaction and others which are emitted from industrial and power plant stacks.

More than 80 percent of the total contaminants emitted into the Los Angeles atmosphere come from automobiles and other vehicles. These vehicles alone are responsible for 95 percent of the carbon monoxide, 73 percent of the hydrocarbons, and 50 percent of the nitrogen oxides. According to APCD statistics, power plants account for only 3.5 percent of the total emissions during the winter months, when some fuel oil is being burned, and even less in the summer. Other industrial sources, including petroleum refinery and chemical manufacturing, are responsible for the remaining emissions.

The Los Angeles area's air pollution is complicated by the geographic and meteorological conditions which exist in the Los Angeles Basin. The area, covering about 400 square miles, is enclosed by the Pacific Ocean to the west and by hills on the other three sides. The basin is subject to a condition of "temperature inversion," the result of a layer of warm air at a level above the ground, which confines the pollutants. Winds tend to be weak, and although there is an offshore breeze at night and early morning, there is an onshore breeze in early afternoon. As a result, the pollutants are often blown out to sea and then back again.

It is plain on this record that Los Angeles has an acute air pollution problem. We also accept the considerable medical evidence that this air pollution may have some deleterious effect upon the health of the residents of Los Angeles as contended by the Los Angeles County Medical Society, the APCD and others, although the extent of the deleterious effect is a matter of dispute. While common sense tells us that any actual or potential danger from air pollution will be decreased if there is a substantial reduction in the concentrations of pollutants in the Los Angeles atmosphere, our resolution of this issue would be heavily influenced by a clear indication that the existing levels are either well within levels of tolerance or well above such levels. The many health experts who participated in this proceeding have not defined any such standard with respect to the various aspects of the air pollution question with which this record deals, and it does not lie within the competence of this Commission to do so. The record is sufficient, however, to permit us to arrive at reasonable conclusions as to the effect the use of greater volumes of natural gas in Los Angeles is likely to have on air pollution, which we can weigh along with the other factors we are required to consider under Section 7 of the Natural Gas Act in determining which, if any, of the proposals before us should be certificated.

Smog

Photochemical smog is a visible phenomenon characterized by haze in the atmosphere and eye irritation. It is the result of a photochemical reaction between nitrogen dioxide (NO_2) a brown irritating gas formed by the oxidation of nitric oxide (NO) produced by any combustion, and hydrocarbons produced largely by the incomplete combustion of gasoline in automobiles. It results in the formation of ozone (O_3) and a series of irritating organic compounds, which form fine liquid or solid particles in the atmosphere called aerosols or particulates. This photochemical process which creates smog is activated by strong sunlight penetrating the stagnant atmosphere. Smog is a more severe problem in summer months than in the winter.

It is important to distinguish the photochemical smog condition of Los Angeles from the more common type of air pollution which has historically been present in large cities throughout the world. Photochemical smog may be characterized as "oxidant", that is, it readily gives up oxygen. It is accompanied by large amounts of ozone in the atmosphere. Photochemical smog is typically worse on warm, sunny days. The more usual type of air pollution is ordinarily associated with soot, sulphur oxides and a variety of industrial emissions and is most pronounced on cold foggy days. This may be characterized as a "reducing" smog, that is, it tends to remove oxygen.

The aerosols or particulates are produced not only as a result of the photochemical reaction but also have other origins. These include emissions into the atmosphere from power plants, industries and motor vehicles and the oxidation of sulphur dioxide (SO_2) described below into sulphates. The aerosols emitted from power plants and industrial stacks form plumes and, with the aerosols found in the atmosphere, reduce visibility. Some are said to cause damage to vegetation and other property and possibly to increase the damage of other pollutants to lung tissue. The record shows that, based upon 1962 APCD statistics, particulates resulting from the burning of liquid fuel comprise 28 percent of all aerosols emitted directly into the atmosphere. Substituting gas in both power plants and industries would reduce all particulates emitted by about 25 percent. There is no evidence of the total amount of aerosols in the atmosphere, including the photochemical aerosols, as distinguished from those emitted by various sources. We cannot conclude, therefore, that this reduction would have any appreciable effect on the overall concentration of aerosols in the atmosphere. In any event, it is obvious that aerosols emitted from the high stacks of industries and power plants would have less effect on the concentration near the surface of the ground than aerosols from other sources. We are told that there will be fewer particulates in the air if natural gas is the only fuel used in power plants, but there is no showing that the amounts produced under current practice are above or below permissible levels.

The evidence in this proceeding makes quite clear that the burning of additional gas rather than fuel oil in the Los Angeles area will have little effect on the photochemical smog, and that such effect as it might have would not necessarily be beneficial.[13] In 1962 over half the total amount of nitrogen oxides in the Los Angeles atmosphere came from motor vehicles. It is contended in the present proceeding that the substitution of natural gas for the burning of fuel oil would contribute to the alleviation of the photochemical smog problem. The evidence, however, is conflicting as to the results which would flow from such a substitution. A Public Health Service publication introduced in evidence shows that natural gas emits almost twice as much nitrogen oxide in pounds per million Btu as is emitted as a result of burning oil. A Public Health Service expert witness testified in the present proceeding, however, that substituting natural gas in place of oil in all the power plants in the Los Angeles Basin in 1962 would have reduced nitrogen oxide emissions by only 7.3 percent. Even assuming that the testimony in the present proceeding is the more accurate viewpoint, the evidence shows that the substitution of gas for all uses of oil including industrial uses would have reduced nitrogen oxide by only 11.4 percent. The evidence in the record does not permit a conclusion that such a moderate reduction, or any reduction of less than 50 percent, would have a beneficial effect on photochemical smog.

---

[13] In fact, evidence in the record indicates that reducing the amounts of nitrogen oxide emitted into the atmosphere might increase smog by making it easier for hydrocarbons to bring about the production of ozone, aerosol and peroxyacetyl-nitrates.

Further evidence in the record relating to seasonal concentrations of nitrogen oxides in Los Angeles adds weight to our conclusion that substitution of gas for oil will not alleviate the smog problem in any significant way. While there is a smog problem in winter, the problem admittedly is considerably worse in summer (when the power plants are burning gas exclusively) because there is more sunlight. Thus the record shows an average winter visibility at the Los Angeles Civic Center of 6.4 miles and an average summer visibility of 3.1 miles. The January 1963 average daily ozone maximum in downtown Los Angeles was .05 ppm (parts per million) while in July it was .18 ppm. These variations do not appear to relate to the nitrogen oxides emitted by power plants since, as noted earlier, the APCD rules require natural gas to be used by power plants during the summer months.

In any event, it is far from clear that the burning of more natural gas is the answer to controlling emissions of nitrogen oxides in the power plants. Consideration of all the evidence indicates that one of the most significant factors in controlling nitrogen oxide emissions in power plants is unit design. A study was introduced in the record which shows a higher concentration of nitrogen oxides from burning oil at Edison's El Segundo plant; however, a sample of units from other power stations across the nation had quite different results, with gas-fired units often exceeding oil-fired units in nitrogen oxide emissions by significant amounts. This would tend to indicate the absence of a significant correlation between the type of fuel used in generators nationwide and nitrogen oxide emissions. Moreover, the consultants who conducted the study concluded that the major element in controlling nitrogen oxide emissions was unit design. As a result of this study a two-stage combustion unit was designed to minimize nitrogen oxide emissions and incorporated into two units at Edison's Mandalay Station in Ventura County and in two units at its Huntington Beach Station in Orange County. An Edison witness testified that this device reduced nitrogen oxide emissions from Edison's plants from 600 ppm to 350 ppm for oil-fired generators and from 450 to 250 ppm for gas-fired generators. The record indicates that LADWAP has not converted its generators to this two-stage design nor has the APCD promulgated any rule requiring it, even though this design could reduce nitrogen oxide emissions by almost 50 percent. It would seem that this design has far more potential for reducing the emission of nitrogen oxides in the Los Angeles Basin than does the introduction of additional natural gas.

Because burning gas rather than oil would, at most, only modestly reduce nitrogen oxides emitted and because there is considerable doubt whether even a substantial reduction in nitrogen oxides would affect photochemical smog, it is our opinion that year-round burning of gas in power plants would have no appreciable effect on the photochemical smog problem in Los Angeles. Likewise, there is no evidence that reduction in emitted aerosols by the burning of natural gas instead of oil would appreciably affect the overall concentration of aerosols in the atmosphere.

Sulphur Dioxide

The contribution of SO_2 to the pollution of the Los Angeles atmosphere has been considered at great length in this proceeding. Attention has also been given to the derivative sulphates although the record on the concentration of sulphates in the Los Angeles atmosphere is ambiguous. For example, it appears that there have been very high concentrations at Long Beach, but this area is adjacent to sulphate producing industries. It is appropriate to treat the sulphates, since they result from the oxidation of SO_2, as part of the SO_2 problem.

The burning of natural gas produces minimal amounts of sulphur dioxide. While motor vehicles and non-combustion sources, such as chemical manufacturing, produce some SO_2, about 75 percent of the emissions of sulphur dioxide come from the burning of liquid fuel oil. It is significant, however, that in summer when no fuel oil is being burned in Los Angeles, concentrations are still about half of what they are in the winter. This would seem to indicate that only part of the winter emissions of SO_2 go to raise the concentration, probably because SO_2 is emitted from power plant stacks mixed with hot gases high in the air.

The witness from HEW's Public Health Service presented by the staff stated his opinion that a concentration of 0.1 ppm is about the lowest 24-hour average concentration which has been associated with undesirable effects on human beings. Without citing any materials of which we could take official notice, HEW now states in pleadings and oral argument that there is no scientific assurance that lower concentrations will not affect human health. As commendable as this view may be in terms of scientific caution, it simply does not provide this Commission with any meaningful guidance.[13] Taking the 0.1 ppm standard as a basis of comparison the record shows that in the four-year period between 1960–1963 it was exceeded at measuring stations on only five days at El Segundo, one at Inglewood, and one at Dominguez. These locations are at least comparable to monitoring stations in other cities where this standard is exceeded much more often.

During the year 1963 alone this standard was exceeded on 42 days in Washington, 75 days in Philadelphia, 186 days in Chicago and 196 days in New York. The 24-hour maximum concentrations in various other cities in 1963 exceeded any of the highest days in the Los Angeles area in the years 1960–1963. Thus the concentration rose to 0.46 ppm in Philadelphia, 0.79 ppm in Chicago and 0.85 ppm in New York while the highest concentration in the Los Angeles area was 0.19 ppm at Inglewood on March 27, 1963. While it is not our position, of course, that other cities' greater concentrations of SO_2 justify the presence of this pollutant in the Los Angeles atmosphere, the Commission feels that the data provided above are helpful in placing Los Angeles' problem in context.

Conclusion on Air Pollution

To summarize, the record in this proceeding fails to demonstrate that introduction into the Los Angeles market of enough natural gas to eliminate completely the burning of fuel oil during the winter months would have an appreciable effect upon the area's smog problem. The additional gas would reduce the concentration of sulphur dioxide somewhat but there is no showing that using only gas in power plant boilers would have any beneficial effect on the health of the people of Los Angeles.

[13] See *"The Adequacy of Technology for Pollution Abatement,"* a report of the Research Management Advisory Panel (Subcommittee on Science Research and Development) to the Committee on Science and Astronautics, U.S. House of Representatives, 89th Cong. 2d Sess. (1966).

We are fully conscious that we are here dealing with an issue of public health which does not lend itself to absolute proof and should not be thought of exclusively in economic terms. Obviously, a showing that additional natural gas for boiler use would reduce air pollution in any significant manner would merit the most serious attention, for this Commission, like the general public, is increasingly concerned about the environment in which we live. Not only has there been no such showing, but under the broad public convenience and necessity requirement of the Natural Gas Act, this factor, as important as it is, cannot be considered in isolation. It would, of course, greatly simplify the Commission's consideration of this sharply contested and many-faceted proceeding, if we were to approve only those proposals which would insure adequate gas for boiler fuel in any community with an air pollution problem. As tempting as this approach may be, we conceive our responsibilities to be broader and to require a more analytical review of all relevant factors including alternate means of reducing air pollution. In this case, the record does not establish that certificating one rather than another of the proposals now before us will have any appreciable effect upon human health.

The proposal which we are certificating here is adequate to maintain the existing level of natural gas service in the Los Angeles area at least through 1968. Unlike the situation which would exist if we certificated Gulf Pacific, the California Commission will have continuing control over the availability of natural gas for use in Edison's and LADWP's plants. This is important because of the progress which is being made in reducing pollutants emitted from power plants. For example, as set forth in our National Power Survey, it is possible that a large part of the SO_2 content of the flue gases could be removed and converted to sulphuric acid by a catalytic converter.

The record shows that Edison has been conducting tests at El Segundo station of a device called a "bag house," which reduces the SO_3 content of the flue gases and removes almost all of the particulate matter. In addition, improvements can be made in allocating fuels among power plants to minimize air pollution at plants which are poorly located or poorly equipped with respect to protective equipment; allocating power load among plants so that smaller loads are carried by the older, less efficient plants; and shifting of loads to less pollution-producing fuel at power plants where the dispersive capacity of the atmosphere is less.[14] If these prove successful, the amount of gas received by power plants may be less important in the future. Furthermore, the future expansion of steam-electric generation in the Los Angeles area will be limited to an extent not now clearly foreseen by the greater use of nuclear generation, by coal-fired steam generation outside of California and by the establishment of the power intertie between the electric systems in California and the facilities of the Bonneville Power Administration to the North. Should the area need additional supplies of gas in the future they can and will be considered in future proceedings. We are confident there will be a continuing sufficient supply of gas available to serve the needs of the California market.

While we cannot conclude on the present record that additional amounts of natural gas should be certificated because of the effects of such certification upon the air pollution situation, our decision leaves this Commission and the California Commission in a position to take appropriate action should it be required by future circumstances.

The dissent suggests that our decision here will increase the health hazard in Southern California, but at the same time contends that, in view of the cost considerations, it is likely that even more units will be built at existing generation sites, many of which are located in the Los Angeles Basin. To the extent that this possibility is advanced as a justification for certificating Gulf Pacific it is clear that it could result in perpetuating or even increasing the overall level of combustion in Los Angeles. However, as indicated below, one of the principal reasons for not certificating Gulf Pacific is that the trends in nuclear energy, the development of remote coal-fired steam electric plants, and the build up in EHV interregional interties will minimize the need for additional generation in Los Angeles county. In fact, it is entirely possible that with the availability of these other sources of generation, the present gas burning plants in Los Angeles would be converted to peaking service, a development which would be impeded by Gulf Pacific's fixed fuel supply proposal.

THE SOUTHERN CALIFORNIA MARKET

The need for additional gas in the Southern California area is an essential element in this case. However, the exact size of the Southern California interruptible gas market in the next few years is subject to the rapid changes taking place in the generation of electric power, as discussed later in this opinion, so that it is extremely difficult to make reliable estimates with respect to this controversial matter. Furthermore, although the amount of gas to be delivered by the various proposals before us is known, this volume of gas will be supplemented from California sources, a supply which is also subject to speculation and to errors in estimates. Nevertheless, it is clear that at present the overall market for gas is growing and that additional supplies of gas are necessary to maintain adequate service. In relating the proposed projects to the predicted market it is necessary to consider both peak day demands and annual requirements in Southern California. It is also necessary to determine whether the level of service proposed is economical.

Peak Day Market

It is essential, of course, that the pipeline project certificated here be adequate to serve the peak firm requirements of the Southern California market. Pacific Lighting shows its peak day firm requirements for the heating season 1969–1970 as 4,176 M^2cf, including 56 M^2cf representing interruptible loads, which, as an operational matter are not readily curtailable. The record shows that these peak-day figures should be adjusted to reflect a reduction in the peak-day requirements of the San Diego Gas & Electric Co. by 50 M^2cf and a partly offsetting increase in demand by the City of Long Beach from 78 M^2cf to 84.5 M^2cf, so that the peak day figure becomes 4,132.5 M^2cf. To supply this peak day in 1970 TSP would have available from El Paso 1,143 M^2cf as previously certificated and 253 M^2cf additional, and from Transwestern 345 M^2cf as presently certificated and 295 M^2cf additional, or a total of 2,036 M^2cf.

Pacific Lighting estimates storage withdrawals of 955 M^2cfd assuming TSP supplies available. Gulf Pacific, based on a report made by Pacific Lighting to the California Commission claims that storage withdrawals could amount to 1,112 M^2cfd. This calculation is supported by the record and will be accepted for purposes of comparison.

Pacific Lighting shows a peak day supply from California sources of 1,033 M^2cf. Gulf Pacific would raise this amount to 1,259 M^2cf on the basis of increased takes from certain fields and greater supplies available from gas injection projects. We do not believe selective upward adjustments of the California supplies should be made, because they do not take into account offsetting decreases. Furthermore, the increase from gas injection projects is entirely speculative in the sense that it depends on whether the producers see fit to discontinue gas injections in their quest for oil and make such gas available to the utilities in California. There is no convincing showing that such a change in operations is economically warranted. Taking the lower Pacific Lighting figure, the TSP would exceed peak day requirements of 4,132.5 in 1970:

	M^2cf
Out-of-state supplies under TSP	2,036
Storage withdrawals	1,112
California sources	1,033
Total	4,181

With Gulf Pacific, however, no additional gas is made available for firm peaks. Present supplies for peak day service from El Paso (1,143 M^2cfd) and Transwestern (345 M^2cf on the peak day) would amount to only 1,488 M^2cf, storage withdrawals would be 1,112 M^2cf, and 1,033 would be available from the California producers, or 3,633 M^2cf in all, compared with the peak day demand of 4,132.5. There would be a shortage even with the addition of the full amount proposed by Transwestern (295 M^2cf), and, even assuming the maximum Gulf Pacific estimated of 1,259 M^2cf peak-day supply from the California producers, the peak day figure would barely be satisfied. Gulf Pacific cites a number of sources of peaking gas such as back flow from injection wells used in pressure maintenance projects, and emergency deliveries from PG&E, but the record indicates that the availability of these sources is speculative. In short, Gulf Pacific alone, or even with Transwestern, could not be relied upon to meet peak requirements without a condition such as that proposed by the California Commission, which would completely change the nature of the Gulf Pacific proposal.

Annual Requirements

Pacific Lighting and Gulf Pacific have each made market presentations, and the staff has reached its own conclusions on the basis of the record. Using the years 1968–1970, very likely the first three years of Gulf Pacific's operation, the forecasts of the total annual fossil fuel market available to gas afforded by Pacific Lighting's customers including San Diego Gas & Electric Company and Long Beach are as follows:[15]

[M^3cf at 14.73 psia]

	Pacific Lighting			Gulf Pacific			Staff
	1968	1969	1970	1968	1969	1970	1970
Firm	459	475	494	449	463	477	493
Interruptible:							
Other	195	198	201	234	242	250	201
Steam electric	421	438	472	446	472	508	508
Total interruptible	616	636	673	680	714	758	709
Gross market	1,075	1,111	1,167	1,129	1,177	1,235	1,202
Less voluntary use of alternative fuels outside the Los Angeles area	36	36	36	60	63	65	36
Total	1,039	1,075	1,131	1,069	1,114	1,170	1,166

[15] It must be assumed that to the extent that gas is not available to serve the entire market, service to the interruptible customers will be curtailed and that the needs of the customers will be met by alternative supplies of fuel oil. The allowance for voluntary use of alternative fuels reflects those customers who choose to burn oil even though gas is available. They would all be located outside the Los Angeles area, because of Rules 62 and 62.1 of the Air Pollution Control Board.

El Paso is already certificated to deliver 417 M^3cf annually and Transwestern 110 M^3cf annually. Under TSP with full deliveries commencing November 1, 1967, El Paso would deliver an additional 92 M^3cf a year and Transwestern would deliver 340 M^2cfd or 124 M^3cf a year. These increments are designed to maintain approximately the past levels of service to the interruptible market. El Paso in its expanded program proposes an increase of 212 M^3cf a year instead of 92 M^3cf.

Gulf Pacific on the other hand would supply 253 M^3cf, 277 M^3cf and 292 M^3cf in the years 1968–1970 assuming that these are the first three years of operation. Transwestern would supply 86 M^3cf per year in addition to the Gulf Pacific proposal according to the proposal of the California Commission.

To these available supplies must be added an allowance for gas received from California sources. Pacific Lighting provided extensive evidence on this question. As Pacific Lighting shows, most of the gas from California production is oil-well gas and is subject to the contingencies of oil production. Pacific Lighting's witness studied individual fields, and, making his estimates for the years 1966 through 1970, he included future volumes available under existing contracts and under those which are currently the subject of negotiations with producers. Total supply from all other sources considered to be available in 1965 was trended to obtain the estimated volumes for subsequent years. This trend is designed to reflect both normal decline in production and the addition of new sources of gas. In addition the witness included for 1968 and later years an estimate of supplies to be obtained from currently operative gas injection projects. On this basis the witness estimated the supply from California sources to be 228 M^3cf in 1968 and 221 M^3cf in 1970.

The California producers claim that very large additional amounts of gas are available both on an annual basis and on the peak basis. As already discussed we believe that such increases are of doubtful validity because of their selectivity and because the gas comes in large part from gas injection projects, which depend upon the economics of the oil production operations of the producers. Therefore, we see no sufficient basis for the adjustments contemplated by the California producers, although we recognize that some deviation from Pacific Lighting's estimates is entirely possible.

Irrespective of which of the three market estimates above are accepted, either the gas supply from TSP, from El Paso's enlarged proposal or from Gulf Pacific alone could be absorbed in the market by 1970 or at least by 1971. There is substantial doubt, however, whether the market could absorb the Transwestern proposal in addition to the Gulf Pacific proposal as suggested by the California Commission, particularly when account is taken of the development of nuclear and coal-fired electric generation outside of California. In any case, service by Gulf Pacific plus Transwestern, as the dissenting opinion makes clear, would represent approximately 100 percent saturation of the annual requirements of the market including the requirements of the interruptible customers. This is not the most economical level of service, as we shall show.

Gulf Pacific alone would not provide a level of service in the first few years that is out of line with past levels of service. However, as will be developed further, the market available to gas in Southern California is subject to varying factors such as the utilization of coal-fired steam generation outside California and the increased use of nuclear power. We also know that the technology with respect to treating power plant emissions in order to reduce pollutants is in a state of change. Gulf Pacific with its fixed supply and fixed customers under a 20-year contract is peculiarly ill-adapted to meet this situation. It would be purely speculative to try to estimate what level of service should be maintained in the distant future. The long-range forecasts made in the National Power Survey were concerned only with planning and not with actually committing any market to a fixed program for a 20-year period. Even in the case of the National Power Survey, however, we are updating it every three to five years to reflect changes in market, technology and competitive energy sources.

It is probable that portions of the El Paso-Transwestern gas would be used in the power plants. However, this gas supply is subject to control by the California authorities so that its allocation can be adapted to serve the market needs as they develop in future years. In short, the El Paso-Transwestern proposal is flexible enough to accommodate future developments in energy needs of this rapidly changing market.

TSP according to the testimony is designed to continue past levels of service leaving part of the interruptible load to be served by alternate fuels. The last TSP increment takes effect November 1, 1967, and TSP continues such service at least through 1968. El Paso's enlarged program, which represents 325 M^2cfd or 129 M^3cf per year more than TSP, would saturate or exceed the market in 1968 and would more than likely represent service at a higher and less economical level in 1970.

We may note also that in 1968 TSP would not only provide sufficient gas for the system-wide firm customers but would appear to be sufficient to supply all of the interruptible requirements in Los Angeles County where Rules 62 and 62.1 are in effect. The record indicates that 67 percent of the Southern California industrial fuel requirements would be in Los Angeles County, so that even taking Gulf Pacific's higher market estimates, there would be substantial volumes of gas left over to supply interruptible loads outside the County.

Level of Service

The record shows that service of the whole interruptible market as proposed by either the California Commission or the dissent is not the most economical level of service from the standpoint of cost to the firm customers. This is indicated by Pacific Lighting's computer study introduced to show the impact of Gulf Pacific on its costs. This study makes some factual assumptions which do not appear realistic and accordingly, its numerical results can not be taken at face value. Yet it is more than sufficient to demonstrate that, whatever the actual levels of service under differing proposals may be, anything approaching full gas service to the interruptible market is made at a sacrifice by the firm customers. The study shows revenue required at 16 levels of service over a period of future years. Its top level of service, the 16th level, postulates 100 percent service to the interruptible customers in an average temperature year, apparently excluding about 36 M^3cf of gas representing voluntary use of fuel oil outside the Los Angeles area. Between 1967 and 1970 the study shows the most economical level of service as the 11th level or approximately 86 or 87 percent of the interruptible requirements.

The staff study generally confirms this result. The staff studied the market on the basis of "full requirements", *i.e.*, the entire market would be served on every day, and on the basis of "winter curtailment", *i.e.*, service would be fully curtailed to interruptible customers during the coldest period. While some aspects of the staff study are also subject to modification, it indicates that the cost of gas at the load center is less under winter curtailment conditions than under full requirements whether the additional gas comes from Gulf Pacific or El Paso.

One clear reason that full service for the entire gas market is more expensive than service at some lower level is that at the top level there is little flexibility in meeting daily and seasonal load requirements and a great deal more storage capacity will be required. Pacific Lighting has 27 M^3cf of storage capacity available for seasonal swings. While in 1970, storage requirements at the 11th level of service, which roughly coincides with the existing levels of service, are estimated to be only 24 M^3cf, at the 16th level they are estimated to be 68 M^3cf. This, as Pacific Lighting shows, can be obtained only at the cost of additional storage in combination with excess pipeline capacity. TSP will meet all the firm requirements of the Southern California market through 1970 and will provide substantial volumes of gas to the interruptible customers resulting in a much more economic level of service than service under any of the other proposals which, as the dissent makes clear, would be at a higher level of service.

Long Term Market Factors

We believe the dissent misconceives the majority's position when it suggests we have rejected our promise to consider the long-term needs of the Southern California market. On the contrary, our analysis of the evidence of record in the light of our knowledge of current and prospective developments of the fuel situation in the electric industry generally and for the Southern California market in particular reinforces our selection of the more flexible tailored supply program. It is precisely an objective review of the long-term market which leads us to this conclusion.

Coal, for example, has historically been an insignificant factor in the energy economy of Southern California due primarily to the high cost of transportation, and more recently, in Los Angeles County, to the APCD rules which prohibit the burning of high-sulphur content fuels. There is evidence, however, which shows that coal will play an increasingly significant role in the future. The record shows extensive untapped coal reserves in Arizona, New Mexico and Utah capable of supplying steam electric plants which will produce large quantities of electric energy for Southern California. The U.S. Geological Survey estimates recoverable reserves in these three states alone to be 47 billion tons, substantial portions of which can be immediately developed. In addition, there are another 100,000,000 tons of recoverable reserves in Colorado and Wyoming which are potentially available to the Southern California market. For the most part this coal is low in sulphur content and of good quality for boiler use. There is evidence in the record that this coal could be delivered to strategically placed electric power generating plants at costs which even now are comparable to existing power plant costs throughout the country. The coal industry has in recent years demonstrated an aggressive attitude toward securing a larger share of the primary energy market. With the modern tools and mining technology, there is reason to expect even greater cost competitiveness in the future. Coal is a decreasing cost industry and in the last 15 years has been able to reduce its average mine-mouth prices even in the face of increased labor and supply costs.

The major deterrent to the greater use of coal in California in the past has been the cost of transportation. It is understandable, therefore, that natural gas which is economically transportable has secured a lion's share of the fossil-fuel market. Recent advances in extra-high-voltage (EHV) transmission technology, however, have opened new opportunities for coal to supply the California electric power market by sending "coal by wire", that is, the development of mine-mouth electric generating power plants. After a slow beginning EHV technology is now playing a major role in the nation's transmission patterns. When this proceeding commenced in 1963 there were no transmission lines in commercial operations above 345 kilovolts. Today the trend is toward higher voltages and there are now more than 706 miles of transmission line operating at 500 kv and above and 59,000 more miles scheduled for operation by 1970. In addition, there has been a recent announcement of plans for a 765-kilovolt transmission line which will traverse 1,000 miles in five states. Direct current transmission is also playing a significant role in electric power transmission. Construction is imminent on one of the two 750-kilovolt direct current transmission lines which together with two 500-kv alternating current lines, parts of which are now in service at lower voltages, will make up the West Coast Intertie. One 835-mile line is scheduled to be energized in 1969 and the second in 1971.[16]

The carrying capacity of transmission lines varies roughly with the square of the voltage, while construction costs are more or less directly proportional to voltage. Thus there are significant cost economies in this trend toward higher voltage transmission lines, and there is every reason to believe that this will affect the patterns of electric power generation in Southern California.

Coal-fired steam-electric generating plants to serve Los Angeles are not a distant possibility but a present reality. Southern California Edison, along with Los Angeles Department of Water and Power are members of the Western Energy Supply and Transmission Associates (WEST), a power planning and research association covering nine western states.[17] Since the commencement of this proceeding Edison in conjunction with other members in WEST is participating in the construction of two additional units at the coal-fired Four Corners Plant near the San Juan River in New Mexico. Edison reported that each of the two units is rated at 750 megawatts, with the first unit scheduled for operation in 1969 and the second by 1970. Under its agreement Edison is entitled to 48 percent of the output of these units. As revealed in this record, Southern California Edison also announced plans for the construction of the new Mohave plant on the Colorado River in Nevada. This plant, originally scheduled for operation in 1971, will initially be equipped with two 750 megawatt units. In addition, Edison, along with San Diego Gas & Electric and Arizona Public Service, has recently acquired mineral leases covering some 38,690 acres near Lake Powell in South Central Utah. Definite scheduling of generating plants at this site depends upon securing water rights, some of which have already been approved. Coal and water resources are abundant, and it is reasonable to expect that it will ultimately be developed.

When this proceeding began Edison did not contemplate the introduction of coal-fired plants on its system before 1974 or 1975 at the earliest. The advancement of these dates illustrates the rapidly changing nature of electric power technology and also the increasing reliance Edison is placing on remote coal-fired units as a means to meet its expanding loads. Thus, Gulf Pacific's statement in its brief opposing exceptions that the most that could be said for the Pacific Lighting's coal-fired plant study "is that they correctly recognize that the electric utilities will explore the possibility of building several remote coal-fired plants before 1985" is so inconsistent with Edison's own actions as to reveal a totally unwarranted pessimism.

There is also evidence that LADWP, a member of WEST, has been watching closely the developments in the use of coal. Its witness testified at the hearing that the decision on whether to build two additional units at its Scattergood Station will depend, in part, on how successful it is in getting power from outside

See also Hearings, Subcommittee of the Committee on Appropriations, House of Representatives, Public Works for 1967, Part 2, p. 498.

[17] Other members of WEST who are Pacific Lighting's customers include Burbank Public Service Dept., Glendale P.S.D., Imperial Irrigation District, Pasadena Municipal Light & Power, and San Diego Gas & Electric.

Los Angeles. Presently it has a 20 percent interest in the generation from the proposed Mohave project.

Gulf Pacific relies heavily upon the history of slow development of nuclear energy in Southern California in an effort to minimize the role it may be expected to play in the area's future energy market. We do not believe this gloomy prognostication is warranted in view of the rapid advances in nuclear technology and its accelerated use. It is significant that nuclear energy accounted for approximately one-fifth of the total electric power generating capacity ordered throughout the country in 1965 and approximately one-half of the new capacity ordered during the first four months of 1966.

When the National Power Survey was published in late 1964 there were less than one thousand megawatts of nuclear energy generating capacity in operation in the entire United States and this was mostly in high-cost developmental plants. In 1962 the Atomic Energy Commission, in a report to the President, estimated that 40 thousand megawatts of nuclear capacity would be installed in the contiguous United States by 1980. Based upon the rapid pace of progress in the intervening two years the National Power Survey added another 30 thousand megawatts to this estimate. It now appears that even this estimate was conservative. The Atomic Energy Commission now estimates that installed nuclear capacity by 1980 will approach 90 thousand megawatts and the industry itself estimates that it could well exceed 100 thousand megawatts. This means that by 1980 nuclear energy alone will represent between 15 percent and 20 percent of the nation's generating capacity. In the rapidly growing electric power market in Southern California, it may be expected that nuclear energy will acccount for possibly an even greater percentage of the installed capacity.

Gulf Pacific attempted to show at the hearing that Pacific Lighting's estimate as to the future of nuclear energy in Southern California was exaggerated. In its brief in reply to exceptions Gulf Pacific contends that the National Power Survey "predicts that all the utilities (except PG&E) located in area N, Arizona, most of New Mexico, California and Nevada * * * will install a total of 4310 megawatts of nuclear capacity between 1970 and 1980 * * * In contrast, Pacific Lighting has assumed that Edison alone will install 7130 megawatts of nuclear capacity by 1980 * * *—or 65 percent more than the total forecast for most of the three state area."

Gulf Pacific's contention that only 4,310 megawatts of nuclear capacity will be installed in area N outside PG&E's area is based upon a press release issued by PG&E in February, 1963, which states that the company expected to install a minimum of 10,300 megawatts of nuclear capacity by 1980. Contrary to Gulf Pacific's contention, this estimate is not reflected in the Survey, which projected approximately 15,500 megawatts for all of area N by 1980. In fact, as indicated on Figure 116 of the Survey more than half of this generation was projected for Southern California. Thus, we do not believe that the projection that Edison will install 7,130 megawatts of nuclear capacity by 1980 is unreasonable. In view of the rapid advances made in the development of nuclear power since the Survey wäs published in 1964 this estimate may even be conservative at this time.

Southern California Edison is not a newcomer to the field of nuclear generation, having operated an experimental nuclear generating station since 1957. Its new San Onofre nuclear plant is scheduled for operation in 1968. This plant will have an initial installed capacity of 395 megawatts. It is obvious that the company has confidence in the future of nuclear generation. Likewise, the City is now scheduling completion of its 463 megawatt Malibu Nuclear Plant for 1969 or a little later. Although there have been some delays in getting site approval for this facility, there is no reason to believe that the City's own scheduling estimate is unreasonable. We are confident that this problem can and will be solved by the people of Southern California in a manner which will make available the benefits of this low-cost energy to that growing area.

Pacific Lighting introduced a study showing that the production of electrical energy for the Southern California area by nuclear generating plants is expected to be competitive with gas-fired plants utilizing 35¢ Mcf fuel in 1969 and thereafter. The study also indicated that nuclear units should enjoy continued improvement in competition with other fuels after 1969, due to the downward trends in nuclear costs. Gulf Pacific charges that these estimates are unreasonable and that they display greater optimism than an objective review of the present state of the art justifies. Whatever merits Gulf Pacific's position may have had in 1964 when testimony on this subject was taken, it now appears that nuclear generation is meeting this economic test. In fact, the latest data indicate that nuclear energy may even be more economical than new gas-fired units. Just last month the Tennessee Valley Authority authorized its first nuclear powered generating station, a two-unit 2.2 million kilowatt plant. The first unit is scheduled for operation in 1970.[18] The agreement was for a 12-year guaranteed fuel cost of 1.25 mills per kilowatt hour.[19] For gas to match such a fuel cost, its price would have to be 14¢ per Mcf.[20] Gulf Pacific's cost is 34¢. Moreover, the plant or capacity costs of the proposed TVA nuclear plant is $116 per kilowatt, well below the cost of many gas-fired plants. The recent Oyster Creek Plant also represents remarkably lower costs than those possible under Gulf Pacific.

One additional topic requires us to comment on the impact of technological development in this case. The Pacific Northwest-Southwest Intertie, from which Southern California Edison, the Department, and other California utilities [21] will purchase electrical energy, was not included in the Gulf Pacific exhibits because its witness deemed it too speculative. In Exhibit 882, however, Edison revised its exhibit to show exchanges with Bonneville in 1971 and Canadian Treaty Power in April, 1968, among other power purchases. It has been recently reported that the Bonneville Power Administration line will probably be in service by October, 1967,[22] and it is equally probable that California Power Pool will have a strong North-South 500-kv tie by April 1967. Here, again, the pace of innovation has exceeded the estimates of the original planners.

Watching the speed and enthusiasm with which the electric utilities have encouraged new modes of generation and transmission within the past few years, we cannot believe that a 20-year fixed supply of gas is necessary or desirable. Of course, we recognize that these new generation sources will not in the near future obviate the need for the continued use of the existing gas-fired units. However, both coal and nuclear units operate most efficiently as base load plants. Nuclear generation, in particular, has the lowest unit cost when operated at a high plant factor. This would indicate that existing gas-fired plants may be more economically utilized for peaking purposes, thus reducing their annual volumetric needs for gas. The inflexibility of Gulf Pacific's long-term supply of firm gas, which would have to be paid for whether used or not, would inhibit this logical development. In addition, the emphasis on cleaner air for metropolitan areas will add increasing pressure upon large fuel users, like electric power companies, to continue to seek new forms of producing electricity and to rely less heavily on traditional means. From the standpoint of minimizing air pollution in the Los Angeles Basin, the greater use of remote coal-fired units is far more preferable than the introduction of additional natural gas which would increase combustion and generation in the heart of the congested Los Angeles metropolitan area.

---

[22] See, Hearings, Senate Subcommittee on Public Works, *supra,* and Hearings, House Subcommittee on Appropriations, *supra.*

To sum up, we have extensively considered the long-term energy needs of Southern California. The prospect of committing two electric companies to using natural gas exclusively to generate power until 1988 does not pose an attractive alternative to the inherently flexible TSP, either from an economic or air pollution standpoint. The dynamic, indeed revolutionary, developments in the generation of electricity amply support our conclusion.

Conclusions on Markets

With the gas supply available from El Paso and Transwestern under TSP Pacific Lighting will be able to meet the peak requirements of its firm market through 1970. If Gulf Pacific alone were certificated, there would be no additional gas available to meet the peak day needs, and it is extremely doubtful whether Pacific Lighting would be able to meet the peak requirements in 1970; there could easily be a shortage of peaking gas even with the additional gas proposed by Transwestern. With respect to annual requirements, the needs of the California market for gas within the next few years are great enough to accommodate either the El Paso-Transwestern TSP proposal, the Gulf Pacific proposal or the enlarged El Paso-Transwestern proposal; however, the Gulf Pacific proposal plus the Transwestern proposal would likely saturate or oversupply the market, when weight is given to the development of nuclear and out-of-state sources of electric power. In any case, service to the interruptible market at the higher levels proposed under either Gulf Pacific plus Transwestern or El Paso expanded plus Transwestern could only be achieved at a considerable extra cost as contrasted with service at the lower TSP level. The long term demand for gas for use by electric companies is extremely questionable. In view of the emergence in the West of coal and nuclear energy as new and competitive fuel sources, and the imminence of the Pacific Coast North-South Intertie, it may well be that the demand will materially decrease over the next two decades.

COMPETITION

An additional argument which Gulf Pacific makes is relevant to the discussion of the Southern California market. This is the contention that certification of Gulf Pacific will introduce competition to the benefit of Pacific Lighting and its customers. Gulf Pacific mentions the ¾ cent rate reduction offered by El Paso as one such benefit. It further contends that once it is on the scene, its mere presence will be a continuing competitive force.

We are, of course, aware of the fact that competition among pipelines to serve additional demands for gas of major growing markets like Southern California can and does play a significant role in reducing prices to consumers. We have, accordingly, not been hesitant in certificating competitive service to such major markets as Chicago, New York, Philadelphia, Detroit, and New England. In

California we authorized competition to El Paso, which had been the sole out-of-state supplier, both to Northern California via Pacific Gas Transmission and to Southern California via Transwestern. The new company to be created as a result of the divestment ordered in the El Paso divestment proceeding should eventually add another factor in this picture. The extensive intrastate production of gas in California provides still another competitive source of supply. Furthermore, the very size of the California market has meant that other pipelines and potential pipelines have not hesitated to compete for a share thereof whenever they felt it opportune to do so. The present Gulf Pacific proposal and the earlier Pemex one—together with the major role played by Colorado Interstate in the Rock Springs proposal are proof of the validity of the Supreme Court's view that competition in the interstate pipeline field primarily takes the form of competition of knowledgeable groups with access to capital and production resources for major additions of supply to the principal markets.[23]

Any competition maturing into the filing of actual competing applications will normally play at least an immediate role in bringing down the price of the other competitors. Thus, we can agree that the Gulf Pacific application may have played a role in the reduction in the price at which El Paso offered gas to the Pacific Lighting here as contracted with the Rock Springs project, though other factors including our decision in that case and the competition from Transwestern obviously were also relevant. As we made clear, however, in the recent *Oklahoma Illinois* case (*Natural Gas Pipeline Co. of America*, 34 FPC 771, Opinion No. 474, issued September 9, 1965), the fact that a newly organized project will bring new competition to an area and spur the existing parties to present better proposals does not mean that an inferior or destructive proposal should be granted.

Whatever the past effect of the Gulf Pacific proposal in spurring El Paso, Transwestern, or the Pacific Lighting companies to greater efforts, it cannot outweigh its competitive disadvantages insofar as the present proposal is concerned. If the establishment of the Gulf Pacific pipeline gave any real promise of serving as a continuing spur to beneficial competition for the sale of gas in the California market, this fact would be a significant plus factor to be weighed in the scales in making our final judgment here. The record, however, does not support any such conclusion.

The trouble with the argument presented by Gulf Pacific is the extremely limited nature and inflexibility of the competition it offers. Initially, it is competition for the electric utility market only, *i.e.*, the two largest customers in the area are offered an opportunity to increase their gas supplies and, allegedly, to cut their costs at the expense of substantially delaying reductions in costs to all other classes of customers of Pacific Lighting, El Paso and Transwestern. Nor does Gulf Pacific, once it has successfully skimmed off the cream of Pacific Lighting's market, offer any real or continuing competitive spur such as was the case with both Transwestern and Pacific Gas Transmission when they were certificated to bring new service to California. Gulf Pacific would be operated at full capacity to transport the gas Edison and Los Angeles have already purchased. According to the terms of its contract with Humble and Edison, it cannot purchase gas for resale; therefore, only a large direct purchaser like Edison willing and able to commit itself to producers for a long-term firm supply would be able to utilize Gulf Pacific's existing facilities, and then only to the extent that its commitment was great enough to justify the necessary looping expenses. All other purchasers, as was made clear in oral argument, would have to look to the construction of an entirely separate and new line—in effect an entirely new pipeline project even if it were to be constructed and operated in the name of Gulf Pacific. There has been absolutely no showing that Gulf Pacific has any reserves to serve such a market or, for that matter, that any such market exists; the testimony and argument of the California Manufacturers Association strongly suggests it does not.

---

[23] See *United States* v. *El Paso Natural Gas Co.*, 376 U.S. 651, 660.

The Commission has consistently held that absent unusual circumstances there is no reason to certificate duplicate service to particular industrial customers where the local distributor indicates it is willing and able to serve.[24] As a matter of fact, the Commission applied this principle to the last proceeding in which additional quantities of gas were permanently certificated to the Southern California market.[25] In that case, El Paso proposed to expand its facilities to deliver 100,000 Mcf per day to Southern California Edison. The Commission required this sale to be made through the California distributors so that this gas would be available to all and found that the California Commission was best equipped to allocate gas in a manner which would be most beneficial to the entire area. The Commission also expressed concern over the price and supply problems which would result from permitting a pipeline to distribute a large portion of its sales capacity to a single customer for a specific type of use.

Edison and LADWP allege inadequate service from Pacific Lighting with whom they compete and would prefer Gulf Pacific as their own independent source of gas. Similarly, the California Commission contends that the El Paso-Transwestern proposals would have the effect of perpetuating the existing discord between Pacific Lighting and its electric utility customers. We can appreciate the desire of the power utilities to have a supply of gas which is free from the circumstances of having to respond to the demands of residential consumers, but we cannot agree that such a supply should be made available at the consumers' expense. Moreover, under the statutory scheme it is the responsibility of the California authorities to see that Pacific Lighting renders the kind of service to its electric power customers, which, considered along with all other needs of the market, will best meet the public interest. We believe they are fully capable of discharging this task.

The dissent would leave the impression that El Paso has not been active in seeking to supply the requirements of the Southern California market. However, the history of the proceedings before this Commission since 1959 make it abundantly clear that this is not so. An El Paso application was one of the principal proposals before us in the *Rock Springs* case. The Commission's decision in that case finding that no new pipeline would be needed in Southern California until 1968 was issued in July 1963, 30 FPC at p. 85. The present applications of Transwestern and El Paso were filed on September 30 and October 11, 1963, respectively, scarcely five months after the *Rock Springs* decision. This can hardly be considered an undue lapse of time. As the dissent itself admits, the firm requirements of Southern California have been and are continuing to be met. It does not appear, therefore, that the alleged reluctance of the present suppliers to meet the market needs is substantiated.

The dissent makes the point that one competitive advantage of Gulf Pacific is that it would provide the major electric utilities an assured long term supply, thus enabling them to lower rates for the utility customers. There is no basis for this assumption in the record. Despite specific questioning at the oral argument, Edison stated that it had not even studied the possibility of effectuating a rate decrease, much less providing any assurance that reductions would be forthcoming. In fact, certification of such a long term supply of gas could ultimately put the electric utilities in an adverse take or pay situation, thus raising their fuel costs.

ECONOMICS OF SERVICE

Field Price

Humble and other producers have a contract with Edison and LADWP to sell their gas at 18.5 cents per Mcf (at 14.65 psia) with escalations of one cent each four years during the twenty years of the contract. Humble has also warranted to supply the quantities of gas that Edison and LADWP are entitled to purchase under the terms of the gas purchase contracts and to make any additional gas available needed to meet the obligations to the purchasers. The Katy and Pledger Fields, from which all the gas will come, are located in Texas Railroad District No. 3. The "guideline" price in District No. 3 is 17 cents, and the Commission determined in *Hawkins & Hawkins*, 34 FPC 897, Opinion No. 475, Docket No. G–18077, *et al.*, September 22, 1965, that the "in-line" price was also 17 cents (both at 14.65 psia). In the present case the staff witness Jones presented precisely the same price array as he did in *Hawkins*.

The question here is not the determination of an in-line price for a jurisdictional sale but whether certification of a pipeline dependent upon two very large nonjurisdictional sales at the prices here involved is required by present or future public convenience and necessity. We do not believe it is, since, among other reasons, the sale of this large block of gas would likely result in an increase in prices to interstate jurisdictional purchasers.

The examiner did not condition the certificate he granted to Gulf Pacific with respect to the field price; he concluded that there would be no increase in prices for gas to interstate purchasers because contracts had been entered into at lower prices than the Humble sales in District No. 3 after the Humble contract on January 14, 1963. Humble and Gulf Pacific also argue that in view of the premium features of the sales, they will not have any inflationary effect on field prices but will in fact tend to hold the price for gas in an ordinary sale down to the area price. On the other hand, the staff argues that the price is out of line, that it will encourage producers to channel gas to the nonregulated market and that any certificate issued to Gulf Pacific should be conditioned to a 17 cent field price. The New York Public Service Commission and the Pennsylvania Public Utility Commission both attack the 18.5 cent price as destroying the effectiveness of the Commission's interim pricing policy. The California Commission concludes that the danger to the public should be obviated by proper conditioning of the Humble field prices so that they will not exceed the guideline and the area price.

The instant purchase of gas by Edison and LADWP from Humble and the other producers is a direct sale not as such subject to our jurisdiction under Section 1(b) of the Natural Gas Act. Its proposed transportation by Gulf Pacific in interstate commerce is subject to our jurisdiction under Section 7 of the Act and is not to be authorized unless required by public convenience and necessity. This standard in turn requires consideration of the effect upon the public interest of the price at which the gas is sold by the producers to the electric company purchasers (*F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1). Accordingly, any adverse effect its approval would have upon our efforts to regulate the price of gas that flows interstate cannot be ignored.

To approve a certificate for the direct sale of this enormous amount of gas at a price above the in-line ceiling and not subject to modification up or down when the just and reasonable price for the area is established would, in our opinion, seriously jeopardize our continuing control over the price at which natural gas is sold in interstate commerce for resale, as well as the amount of natural gas available for this important market.

Under the existing pattern of operation in the natural gas industry the very great bulk of the gas moving in interstate commerce is purchased by pipelines for resale directly or indirectly to residential, commercial, and industrial consumers. Other things being equal, it may be assumed that a natural gas producer will sell his gas where he can secure the highest price. The local intrastate market can usually compete advantageously with the interstate market because of the lesser transportation costs. The diversion of gas to the intrastate markets, however, is limited by the demand for gas so that the remainder of the gas must be sold in interstate markets or not at all. What is proposed here are two large direct sales to open up a new and highly selective direct sale market in California at a price which is higher than we would authorize for sales for resale in the interstate resale market. By this arrangement additional gas could be diverted from the interstate resale consumers. If Gulf Pacific's project is granted, producers in the Texas Gulf Coast area and other areas would be inevitably induced to hold their gas off the regulated interstate market with the objective of packaging it for sale at higher prices to similar direct buyers. Inevitably, such action would eventually have a substantial adverse effect upon both the price and amount of the gas available for the interstate resale market to which the millions of small gas consumers must necessarily look.

The situation here is somewhat similar to that involved in *F.P.C. v. Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1, where Consolidated Edison Company contracted to buy gas from Texas producers to burn in a power plant in New York City while Transco agreed to transport the gas, mixed with its own resale gas. While this case antedated establishment of guideline ceilings, the Court upheld the Commission's denial of a certificate on the basis widespread direct sales at high prices would probably result in price increases. Here we think the result will be the same. Staff and other parties aptly quote *Transco* (365 U.S. at pp. 29–30): "Moreover, as a matter of common sense, it would seem difficult to deny that the channeling of vast quantities of a wasting reserve into unregulated transactions at a high price will result in scarcity to other consumers and a general price increase."

We do not believe it is significant that prior to our action upon the Gulf Pacific application there have been a number of new, though relatively small sales for resale in Texas Railroad District No. 3 which have continued to be made at or below the 17 cents per Mcf guideline-in-line price. We do not suggest that even if Gulf Pacific were to be certificated all or even most of the gas developed in the area would be withheld from sale for resale in the interstate market, and prior to any such certification any reliance thereon by other producers would be speculative indeed. Moreover, other producers are aware of the heavy burden of proof to support certification of any jurisdictional contract calling for more than 17 cents. But the absence of a demonstrable short-term effect of the Gulf Pacific application does not show or even indicate that its grant would not have serious long-term consequences. Thus, at the time of the *Transco* case, too, the high proposed price of the direct sale to Consolidated Edison did not result in any immediate escalation of the general price level.

In support of the 18.5 cent price level, Humble emphasizes the large amount of gas which it is offering, the gathering and other services it provides before the gas gets to the pipeline, and its warranty of a full 20-year deliverability to meet Gulf Pacific's obligations to its purchasers. This is not the first time the Commission has been confronted with the argument that a high price should be allowed because of the alleged premium features in a particular contract and that the particular sale was so unique that it would have no effect upon general pricing patterns in the field. This was the standard claim in the 1950's with the almost uniformly unfortunate results the Supreme Court referred to in *CATCO*. Even today in in-line proceedings we are repeatedly told we should certificate a sale at an out-of-line price because it is no higher than some particular high priced sale justified under "special circumstances" in the past. The history of the Natural Gas industry demonstrates that in the absence of sophisticated regulation the special situations of today establish the normal price floors for tomorrow.

In recognition of this pattern in the last four years, virtually without exception we have refused to adjust the in-line price at which we certificated new jurisdictional sales of gas in interstate commerce for resale upward to accommodate claimed bonus values. See *e.g.*, *Standard Oil Company of California*, 27 FPC 1153, 1158–1159, affirmed on this point *California Oil Co., Western Division* v. *F.P.C.*, 315 F. 2d 652 (CA10); *Texaco Seaboard, Inc.*, 29 FPC 593; *El Paso Natural Gas Co.*, 35 FPC 40, Opinion No. 484, Docket No. CP64–211, *et al.*, decided January 9, 1966. In the *California Oil* case the Tenth Circuit not only upheld the Commission's action in refusing a bonus price for alleged gathering, processing, dehydrating and compressing services as a lawful exercise of its discretion but went on to express "serious doubts as to whether any of the costs or delivery services urged by petitioner to sustain the initial price of 18.5 cents [as against an in-line price of 15.384 cents] are relevant at all in determining the 'in-line' price in a Section 7 proceeding" (315 F. 2d at p. 659). And in the *Texaco Seaboard* case, also involving a sale by Humble in Texas Railroad District No. 3, we expressly rejected (29 FPC at 598) the contention that it was entitled to a higher price for the large volume of gas it was delivering under the sale because unlike some other sales in the field the Humble gas "will be gathered and dehydrated before delivery."

This does not mean that in determining a just and reasonable price for gas in an area proceeding all sales of the same vintage will necessarily be limited to an identical maximum price. We have provided for certain quality differentials in our Permian decision, and other pricing distinctions could possibly be justified in pending or future proceedings. But here our approval is sought, without subsequent recourse either by refund or prospective rate revision for a transaction involving a large sale at a price two cents above the just and reasonable price for pipeline quality new gas fixed in Permian[26] and a cent and a half above the in-line price at which jurisdictional sales are certificated in the area. Certificating Gulf Pacific at the proposed 18.5 cent field price, and taking into account the periodic escalations, would mean that producers would receive during the term of the contract revenues of more than $220 million above what they would receive at the 17 cent in-line price. It is, of course, possible that if the sale was being certificated as a jurisdictional one, Humble would exercise its authority to escalate, subject to refund, to the 18.5 cent contract price (or even the higher rates provided for in the contract's escalation provisions) and that as a result of the proceedings in AR64-2, it would be able to continue to charge this rate. One thing is certain if we were to certificate Gulf Pacific, far from "holding-the-line", we would be encouraging other major producers to remove large blocks of gas from the interstate resale market to the inevitable detriment of the jurisdictional consumers it is our responsibility to protect. We conclude, therefore, that certification of the Gulf Pacific project under the proposed rate structure would have a substantial adverse impact on the public interest.

---

[26] Opinion No. 468, issued August 5, 1965, 34 FPC 159. In *Permian*, of course, our decision was based upon evidence relating to the average national costs of producing gas-well gas.

It has been suggested that any objections we might have to Humble's field price would be overcome by appropriate utilization of the Commission's conditioning powers under Section 7(c) of the Act. It is clear, however, that the only type of condition which would afford full protection to the public against the effects referred to above would be a condition which not only would make the initial field price no higher than would be authorized under a jurisdictional sale in the area, but would maintain the Commission's authority to adjust the price down if in the future it were to be determined that the just and reasonable price for sales of gas were lower than the initial price. In other words, only by assuming that the sale is subject to the same price controls as if it were jurisdictional could the adverse impact of the sale on jurisdictional sales be avoided. The parties to the Gulf Pacific proposal have given no indication they would accept any such conditions, and there are obvious administrative problems in enforcing such action since only Gulf Pacific, which is not a party to the contract, would be subject to our jurisdiction. Despite our doubts as to the efficacy of this remedy, we shall, for purposes of this comparative consideration, assume that any grant which would be made to Gulf Pacific would be made on the condition that the producers and Edison and LADWP would revise their contracts to provide for an initial price of 17 cents, which could be escalated to the contract price[27] only subject to refund, and which would be subject to further revision at such times as the Commission fixed different just and reasonable rates which would be applicable if the sales were jurisdictional.

While such an assumption, of course, markedly improves the Gulf Pacific proposal comparatively (and is perhaps unfair to the other applicants since it assumes in turn that *Humble, et al.* would either not escalate from the 17 cent in-line price to the 18.5 cent contract price, or if it did would subsequently be ordered to refund the difference,[28] for the reasons noted it still does not lead to a conclusion that the Gulf Pacific proposal is to be preferred.

Cost Considerations

In any comparative case between two or more pipelines, each willing and able to provide the amount of natural gas required by the common market to be served, considerations of cost will inevitably play a major and sometimes decisive role. This case proves no exception.

Cost considerations are here complicated by a number of factors. Gulf Pacific seeks to serve the two electric customers in the Los Angeles area whereas El Paso and Transwestern would serve Pacific Lighting, the existing Southern California distributor, at the state line, with Edison and the City receiving additional gas along with other customers of Pacific Lighting according to such terms, and at such rates, as the California Commission might fix. Gulf Pacific's actual rates to Edison and the City are dependent upon (1) the rate of return we would allow;

---

[27] But no more than 19.0 cents prior to January 1, 1968, or the decision in AR64-2 (see 31 FPC 447).

[28] We assume that it would not be an appropriate exercise of our conditioning authority to require Humble to accept a condition less favorable to it than if it were making a jurisdictional sale.

and (2) whether we assume that any grant to it would be made upon condition that the price of the gas purchased by the electric companies in the field from Humble and the other producers would be conditioned to the in-line or subsequent just and reasonable rates. At the same time evaluation of whether the El Paso and Transwestern rates to Pacific Lighting would be less than the reductions proposed in their applications will depend upon considerations of the appropriate rate of return to be allowed for those companies; whether they should be required to apply the provisions of Opinion No. 417 relating to the rate treatment of liberalized depreciation; and the effect of the Permian Basin area rate determination on their rates. We must also consider whether any short-term differentials between the two sets of applicants are offset by differences between the long range price cost prospects of the two groups.

Despite these complications we believe it can be clearly demonstrated that there is a marked short-term advantage to the El Paso-Transwestern TSP proposal, and that nothing which we can conclude is likely to occur in the foreseeable future indicates that this advantage will be overcome.

This is true whether we treat the costs, upon which rates will necessarily be based, upon an incremental or rolled-in basis. Incrementally, the cost of the additional 250,000 Mcfd expansion proposed by El Paso for the years 1968–1970 is 25.65 cents at the points of delivery to Pacific Lighting, without giving any consideration to the questions of (1) whether there is any justification for permitting (as these figures do) El Paso a rate of return of more than the 6⅛ percent fixed in Opinion No. 366,[29] (2) the application of Opinion No. 417 to El Paso,[30] and (3) the effect of the *Permian* decision. Transwestern's incremental cost for its proposed delivery of 290,000 Mcfd at a 6⅔ percent rate of return which it proposes to use is about 24.5 cents. This figures too ignores downward adjustments relating to rate of return, liberalized depreciation and effect of the *Permian Basin* decision.

The combined El Paso-Transwestern average incremental cost at the border under this proposed, but conservatively computed, cost of service would be approximately 25 cents per Mcf. The incremental cost for transporting this volume of gas from the California border to Los Angeles would be about 2.3 cents per Mcf. At the same time, the reduced border price to Pacific Lighting would be reflected in a further saving on the purchase price of California gas, which is contractually linked to border price. The end result is an incremental cost of gas *at the Los Angeles* load center of less than 27 cents per Mcf. And the record also indicates that, if needed El Paso could supply at least 900,000 Mcfd additional gas at incremental costs lower than Gulf Pacific's cost.

This is considerably cheaper than the Gulf Pacific cost, even assuming that we were to impose and Gulf Pacific (and the producers) were to accept, conditions which would substantially reduce its cost. Thus, in the fifth year of its service, utilizing the 6 percent rate of return found by the examiner to be reasonable for Gulf Pacific and 17 cent in-line price for gas[31] Gulf Pacific's costs would be 30.35 cents per Mcf at the Los Angeles load center,[32] substantially above the maximum El Paso-Transwestern figure. If instead of the fifth year of service for Gulf Pacific's price, we utilize the average price of its gas for the entire 20-year period of the sale to Edison and LADWP as suggested by Humble we get 29.38 cents per Mcf again using 6 percent rate of return and a 17 cent field price for gas.

---

[29] *El Paso Natural Gas Co.*, 28 FPC 688, 701, 702.

[30] *Alabama-Tennessee Natural Gas Co.*, 31 FPC 208, 928, affirmed as *Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, 359 F. 2d 318 (CA5–1966).

[31] There is, of course, considerable doubt that this would be an adequate rate of return in view of current market conditions. Similarly we have no assurance the producers would not escalate their field prices to the contract level immediately.

[32] See Staff Brief, Appendix C, Schedule 2 of 2. 29.46 cents $+ (17.09 - 16.2) = 30.65$ cents.

The dissent suggests that incremental costs represent an invalid basis of comparison since the proposed rates do not directly reflect lower incremental costs. But it fails to recognize that the low incremental costs inherent in the El Paso and Transwestern TSP proposal permit them to offer (and the Commission to require) huge rate reductions to all their jurisdictional customers. In the case of El Paso alone, the ¾ cent reduction it proposes will exceed one hundred and sixty-five million dollars ($165,000,000) computed over a 20-year period, *i.e.*, the touchstone of Gulf Pacific's proposals. For Transwestern, the savings are even more dramatic. Its present 41.8 cent price for 110 M^{2}cf of contract demand gas will be reduced to 32.7¢ for 234 M^{2}cf or a saving of $426 million ($426,000,000) over a 20-year period. Every year the TSP project is postponed represents several additional millions of dollars consumers actually pay in rates. Unless these possible savings are taken advantage of they are lost forever, since they are not recoupable. These great savings are proof that incremental costs are indeed entitled to considerable weight in any comparative evaluation. Despite its criticisms of the majority's incremental cost approach it is interesting also to note that the dissent itself uses incremental costs as a basis for selecting between El Paso and Transwestern for providing the additional gas which it would certificate over and beyond the Gulf Pacific proposal.

The dissent suggests that the majority's consideration of rate reductions that would flow to natural gas consumers if El Paso were certificated under the TSP program is "tenuous," and casually dismisses the plea of the "small group of customers" who would receive rate reductions. The record shows that certification of El Paso means approximately $1.6 million a year to customers located in New Mexico, Texas and Arizona. By the end of 1970, the cumulative amount of the rate reductions to the east-of-California consumers would total approximately $6,817,664. Also, the dissent fails to mention that Pacific Gas and Electric, a customer of El Paso serving *Northern* California, would receive an annual rate reduction of $2.8 million per year and an aggregate amount of $11.7 million by the end of 1970.

Other savings not mentioned by the dissent that would flow from the El Paso-Transwestern rate reductions are the reductions in the price of California gas since the cost of this gas is tied to the border price. In 1968 alone, the Pacific Lighting Companies will have approximately $2.5 million in their local gas purchase costs. Edison will also benefit substantially since its contract with Richfield Oil Corporation for 500 million Mcf of natural gas calls for payment of either the price of natural gas at the border plus 4¢ or a favored-nation price.

Gulf Pacific argues that its rates would be reduced approximately 4.75 cents per Mcf during the first four years of its operation (.6 cent over the full 20 years of its contract) as a result of (1) filing a consolidated tax with other companies in the Tenneco Inc. system; and (2) flowing through to the two electric companies the net investment tax credit generated by Gulf Pacific in this period. This reduction depends upon a favorable ruling from the Internal Revenue Service, which has not been received and also factually on whether the companies in the group will have sufficient taxable income to take advantage of the investment tax credit Gulf Pacific would generate. We believe it entirely too speculative to give any credence to this hope since, even assuming a favorable tax ruling to be forthcoming, the Tenneco system has not been able to absorb substantial balances of investment tax credits from other members of the group in several past years. There is thus no reason to believe income would be available to absorb the additional investment tax credits generated by Gulf Pacific.

The cost comparison picture is essentially the same when we look at what might be called the rolled-in effect of the two alternatives. Again making the most favorable comparison to Gulf Pacific (*i.e.*, the 29.38 cent per Mcf average 20-year price, assuming a 6 percent rate of return and a 17¢ field price of gas) and ignoring potential cost saving factors to El Paso and Transwestern (rate of return, flow through of liberalized depreciation, Permian Basin reductions) we would find that the cost of gas at the Los Angeles load center, without Gulf Pacific, (*i.e.*, granting El Paso and Transwestern under the TSP proposal) would be about 34.36 cents per Mcf and 34.34 cents with Gulf Pacific. This difference of 0.02 cents per Mcf would amount to only about $200,000 per year. This computation ignores, of course, the fact that under the TSP proposal El Paso would also be making a reduction across the board of at least ¾ of a cent and that this would amount to an additional reduction of about $4,442,000 to Pacific Gas and Electric in Northern California and to El Paso's jurisdictional and nonjurisdictional customers in Arizona, New Mexico, and Western Texas.[33] Moreover, the actual comparison will almost certainly be much more favorable to El Paso and Transwestern. Thus, the effect of the Permian Basin area rate proceeding alone would be to reduce the rolled-in cost of gas at the Los Angeles load center *without Gulf Pacific* by over a cent. Considering the rolled-in costs *with Gulf Pacific* the effect of the Permian decision would be to shift the cost advantage to El Paso and Transwestern by at least ¼ cent per Mcf. Other reductions in the El Paso-Transwestern costs could stem from considerations of rate of return and the flow-through of liberalized depreciation.

The dissenting opinion suggests that while there may be a cost price advantage in granting the basic El Paso-Transwestern TSP program as contrasted with granting the Gulf Pacific program alone, this comparison is reversed if we consider large volumes—specifically the expanded El Paso proposal plus Transwestern's as compared with Gulf Pacific plus Transwestern. If the cost comparison attempted to be drawn by the dissenting opinion were a valid one it would at least raise a substantial question as to where the long-run cost advantage lay. But it is demonstrably invalid. Specifically, the dissent contends that, as of 1970, the rolled-in cost of gas with Gulf Pacific and Transwestern's proposed sales added to present supplies would be 33.46 cents per Mcf, whereas the rolled-in cost of gas at the Los Angeles load center with El Paso's expanded proposal (575 M^{3}cf additional) plus Transwestern would be 34.81 cents per Mcf. These figures, however, ignore the decreases in rates to El Paso's other customers (almost $6,000,000 annually at this increased volume), as well as any effect of El Paso or Transwestern flowing through liberalized depreciation. They are seriously deficient in at least two other respects: (1) they use a cost of Pacific Lighting transporting gas to the load center which is almost 3 cents per Mcf more than that justified by the record[34]; and (2) they ignore the fact that, with the loss of the Edison and Los Angeles balancing load, Pacific Lighting would necessarily incur greater costs due to greatly increased storage operations or takes of gas at reduced load factors. This need for increased storage is particularly aggravated if additional Transwestern gas is used.

---

[33] It also fails to consider that under the Gulf Pacific proposal *none* of the Pacific Lighting's customers other than the two electric companies will get any reduction, while under TSP all of these customers, including the electric companies will share in the reduction to an extent fixed by the California Commission.

[34] The almost 6¢ figure as the cost of Pacific Lighting transporting from the border to the load center used in the dissenting opinion is presumably based on an inter-company agreement filed by Pacific Lighting with the California PUC in 1963. However, the total costs in the inter-company agreement were based on broader operations than merely the cost of delivering out-of-state gas (*e.g.* costs of moving gas from storage and from California producing fields). If the out-of-state volumes are related to the costs of transporting those volumes, the proper unit transportation cost in the year shown in the inter-company agree-

Gulf Pacific's principal contention on the cost phase of the comparison is that any short run advantage of the TSP proposal is outweighed by the fact that its maximum price is fixed over the 20-year period of its contract. The present El Paso and Transwestern prices over this period for the additional gas will vary with their costs which Gulf Pacific says are bound to increase. In the long run, therefore, it is contended, the public will gain by choice of the Gulf Pacific alternative.

El Paso and Transwestern admittedly do not have enough presently committed reserves to assure deliverability of gas over a twenty-year period and offer no guarantee of the type Humble has provided the two electric companies. Gulf Pacific contends that the two pipelines, even if they were to pay no more in the future to producers for additional gas than their present weighted price average, would inevitably have to install expensive gathering facilities to attach such new reserves. However, this argument overlooks the fact that any such additional cost can be absorbed by El Paso at the rate of approximately $40,000,000 per year, resulting from the effect of depreciation on El Paso's existing rate base. It also ignores the fact that El Paso already has extensive gathering facilities in the Permian and San Juan areas from which it secures, and undoubtedly will continue to secure, a large portion of its gas. The same is true to a slightly lesser extent of Transwestern.

It is also argued that increased costs of finding and producing gas, plus general nationwide inflation, will undoubtedly raise El Paso's and Transwestern's purchased gas costs over the next two decades. Here we are in a realm of almost pure speculation. It is, of course, possible that field costs and prices for gas will increase over the period involved. But the fact that field prices have risen markedly over the last two decades—as gas went from an unwanted by-product to a premium fuel—does not provide any more basis for assuming there will be any significant increase in the next 20 years than the present cost and price stability proves to the contrary. Moreover, even if we asume that the two electric utilities, who alone among Southern California gas consumers stand to gain from the Gulf Pacific project, will secure benefits from a firm supply at a fixed price not subject to market vagaries, the other customers of Pacific Lighting and El Paso can only suffer injury if progressive field price inflation adds to the adverse effect of deferring the reductions which would otherwise result from additional sales by El Paso and, possibly, Transwestern. The concept that cheap expandability of existing pipeline resources is something to be hoarded, rather than taken advantage of at the earliest feasible opportunity simply does not make economic sense.

Finally, it is clear that there is no basis in the record for the suggestion that it is only a matter of time before California must seek new and presumably more costly sources of gas supply and that accordingly the present opportunity to tap the East Texas fields should not be lost. Even if those fields were being opened up for the resale market in California, which they are not, it would be doubtful

---

ment (1963) is 3.6¢ per Mcf. Future costs, the evidence indicates, averaging 2.9¢ per Mcf in the 1966–1975 period, will be lower than the 1963 cost because the capacity of the Pacific Lighting system can be increased at a low incremental unit cost since it is not presently operating under optimum conditions. This is verified by El Paso's showing that its cost of transporting 865 M^2cfd from the border to the load center would range from 3.01¢/Mcf in the first year to 2.90¢/Mcf in the third year.

whether it would make sense to seek new sources of supply in an area whose distance from the California consumer entails such high transportation costs. Nor is there anything in the existing supply situation in East Texas to indicate that it is likely to be either a cheaper or more profuse source of supply than the areas which already serve California, or those newer areas in the west which, like the Rocky Mountain fields, are a potential source of future supply to California should they become more productive.

GAS RESERVES AND AVAILABILITY

There is considerable controversy of a very technical nature in the record about the extent of the gas reserves dedicated to the three pipelines involved here. In the case of Gulf Pacific we have already noted that Humble and other producers have contracts with Edison and LADWP to sell them gas directly from reserves in the Katy and Pledger Fields located on the Texas Gulf Coast in Railroad District No. 3 at 18.5 cents per Mcf. Humble has also warranted to supply the quantities of gas that Edison and LADWP are entitled to purchase under the terms of the gas purchase contracts and to make additional gas available that is needed to meet the obligations to the purchasers. Gulf Pacific and others contend that El Paso's and Transwestern's reserves are inadequate to support their proposals and, in addition, that Transwestern has failed to meet the deliverability requirements specified in the Commission's rules.

Gulf Pacific's Reserves

Gulf Pacific presented evidence showing that available reserves in the Katy and Pledger Fields as of July 1, 1965, amount to 6.01 trillion cubic feet (tcf) at 14.73 psia, providing a deliverability of 16 years at a 95 percent load factor without taking into account Humble's warranty. While El Paso's witness would reduce Gulf Pacific's claimed reserves substantially, the staff and the examiner found its estimates reasonable. Because we find other aspects of the Gulf Pacific project inferior to the proposals of El Paso and Transwestern, it will not be necessary to determine the adequacy of Gulf Pacific's reserves, but for the purposes of this opinion we regard Gulf Pacific's estimates as reasonable and the reserves adequate for what it proposes.

El Paso's Reserves

The gas reserves dedicated to the El Paso and Transwestern proposals must be examined because the viability of these projects depends on sufficient reserves and deliverability for a long enough period in the future to insure that their California customers will receive continued and reliable service. El Paso contends that its gas reserves will be sufficient either for its proposed 250 M^2cfd increase for TSP or for its alternate 575 M^2cfd proposal. It estimates that its total recoverable gas reserves as of January 1, 1963 are 30.9 tcf at 14.73 psia. These consist of 17.5 tcf in the Permian Basin area, 12.8 tcf in the San Juan Basin, and 0.6 tcf from its Northwest Division which has been retained by El Paso to meet requirements during 1963 and 1964, 5.3 tcf of gas reserves belonging to the Northwest Division were excluded because of the imminent divesture. For the 250 M^2cfd proposal El Paso estimates a deliverability life of 15 years, and for the 575 M^2cfd proposal a deliverability life of 13 years, in each case computed from January 1, 1963.

Humble, Gulf Pacific and the staff, in varying degrees, would reduce El Paso's estimates, but the staff found that El Paso's estimates were adequate to support its application. The examiner, however, concludes that El Paso cannot meet its full estimated requirement under the 250 M^2cfd proposal after 1972 nor the 575 M^2cfd proposal after 1970.

A further discussion of our findings on El Paso's gas reserves is set out in Appendix A. Briefly, we believe El Paso's reserves should be reduced by approximately 0.53 tcf in the Gomez Field, by 0.30 tcf in the Worsham Field and by 0.43 tcf in the Brown-Bassett Field, for a total reduction of 1.26 tcf. The staff would reduce El Paso's reserves by about 1.75 tcf,[35] and El Paso's deliverability life of 15 years for the smaller expansion by only about a third of a year. However, the staff's study did not reflect the reduced availability of the west Texas casinghead gas nor partly offsetting increased estimates of El Paso's reserves in Basin Dakota and Gomez amounting to 0.92 tcf. Based upon our determinations of El Paso's reserves and making some allowance for the decreased availability in west Texas, El Paso's deliverability life would amount to at least 11 or 12 years even for the major expansion. At certain stages of the divesture proceedings the Department of Justice advocated the transfer of additional reserves, amounting to 0.6 tcf or 1.25 tcf, to the new company, which will take over El Paso's Northwest Division. These additional amounts would be less than 5 percent of El Paso's reserves and would not change the result substantially. There is a good possibility the gas would be sold to El Paso in any event. We are convinced that El Paso's deliverability life is adequate to support either its original application or its expanded application.

Even if we followed the Gulf Pacific and Humble reductions completely and reduced El Paso's deliverability to 10 and 8 years as of January 1, 1963, we would still find El Paso's gas supplies adequate for these proceedings. El Paso has displayed an aggressive gas acquisition policy in the prolific Permian Basin area. There is no reason to believe it will not continue to do so in the future. Therefore the deliverability requirement should be flexible as provided in § 2.61(a) of our Rules, discussed below.

Transwestern's Reserves

Transwestern's claimed reserves are in the Permian Basin and in the Panhandle-Anadarko Basin of Kansas, Oklahoma, New Mexico and Texas. It claims 5.5 tcf as of July 1, 1963, of which 0.87 tcf is gas that the Gulf Oil Corporation, owner of more than 30 percent of Transwestern's common stock, has warranted to make available. Transwestern's attempt to put in evidence 0.53 tcf of additional reserves covered by six additional contracts with Gulf Oil made in October 1964 was rejected by the examiner as untimely. However, Transwestern was permitted to introduce the six contracts. Both Gulf Pacific and Humble sharply criticized the Transwestern showing, and the examiner agreed, finding that it is apparent from this record that Transwestern's gas supply is not sufficient to justify issuance of a certificate.

Gulf Pacific directed its attack at Transwestern's claimed reserves in six Permian Basin Fields. Here Transwestern had used the volumetric method of measuring its reserves. Gulf Pacific employed the pressure decline method and concluded that the reserves should be reduced by 0.448 tcf, about half of which is in the Worsham (Delaware) Field. The pressure decline method, while a useful tool, requires a sufficiently reliable history of production in order to establish its accuracy as applied to particular fields. Under this method pressure should decline as gas is produced, but, in many instances here the pressure actually increased as gas was produced, showing that pressures were erratic. Furthermore in preparing its estimates Gulf Pacific used the maximum shut-in pressures reported to the Texas Railroad Commission, but the record shows that water in the well bores precludes the use of shut-in pressures and that bottom-hole pressures should have been used instead.

---

[35] Adjusting the Brown-Bassett reduction for CO_2 content.

We agree with the staff that Transwestern's estimates of its reserves are founded on sufficient evidence and should be accepted. The question remains, however, whether the deliverability life it shows is sufficient. Transwestern's evidence shows that, excluding the Gulf Oil warranty gas but taking into account the proposed 100,000 Mcfd sale to Cities Service Gas Company approved last August,[36] it has an ability to meet its requirements from July 1, 1963, until 1970 before any significant deficiency occurs and until 1972 before the deficiency becomes serious. As with El Paso, we do not agree with Gulf Pacific's argument that the deliverability life should be decreased for the time that has elapsed since July 1, 1963, the date of its reserve study. Section 2.61(a) of our Rules provides—

> (a) When a pipeline company has demonstrated through the annual reports filed pursuant to § 260.7 of this chapter that it has an active procurement organization and its pipeline system extends into production areas in which exploration is continuing, the twelve-year deliverability life heretofore found to be a primary requisite by the Commission will not necessarily be applied and the Commission's deliverability requirement will be flexible.*
>
> *"Deliverability" as used herein represents the number of future years during which a pipeline company can meet its annual requirements for its presently certificated delivery capacity from presently committed sources of supply. The availability of gas from these sources of supply shall be governed by the physical capabilities of these sources to deliver gas, by the terms of existing gas-purchase contracts and limitations imposed by state or federal regulatory agencies.

Transwestern has met these qualifications. It has filed such annual reports. It has an active gas acquisition policy as demonstrated by the six additional contracts made a part of this record. Furthermore, its pipeline system extends into prolific supply areas, particularly in the Permian Basin. In fact, its present reserve status results from its need to refrain from attaching further supplies of gas because of a serious take-or-pay problem.

Gulf Pacific further points to Section 2.61(c) of our Rules which provides:

> (c) The deliverability life showing of a new pipeline company seeking to initiate service, or of an existing pipeline company seeking to serve major new markets or to serve major existing markets from new sources of supply over new routes will be dependent upon the future availability of gas in its proposed new supply areas, but in no event shall the minimum deliverability life of the incremental supply needed to serve the new or expanded market be less than twelve years.

Although Transwestern has made no such 12-year showing, it is clear that its proposal does not fall within the purview of this rule. It does not intend to serve from new sources of supply over new routes, so that Section 2.61(c) does not apply. Since in accordance with Section 2.61(a) above we have modified the 12-year reserve requirement and since Transwestern has shown ability to attach additional reserves, we shall accept Transwestern's reserve and deliverability showing, and conclude that its showing is sufficient to meet the requirements of its proposal here.

---

[36] *Transwestern Pipeline Co.,* 34 FPC 659, Opinion No. 472, Docket No. G-20464, August 31, 1965.

SUMMARY AND CONCLUSIONS

We have examined the proposals before us in great detail in order to determine which best meets the needs of the Southern California market and is most consistent with the public interest. This examination has led us to conclude that the Tailored Supply Program most adequately meets these requirements. None of the other proposals offer the same benefits or are as adaptable to the needs of the market. Accordingly, we are certificating El Paso and Transwestern to supply the necessary increments of gas.

The Commission is fully aware that one of the important factors in determining the extent and scope of the market for natural gas in any community is the contribution which additional gas might be able to make to alleviating air pollution. However, our meticulous and comprehensive examination of all facets of the air pollution issue leads us to conclude that, on the basis of the particular situation in the Los Angeles area, the evidence in the record, and the current state of the technology and scientific understanding of air pollutants and their effect on human beings, none of the proposals before us would have any appreciable effect upon the health of the people of Los Angeles. Thus, we are not confronted with a choice between a proposal which would make a contribution to the health and wellbeing of the people of Los Angeles on the one hand, and, on the other, a proposal that was superior on the basis of other factors.

Specifically, there has been no showing that photochemical smog, which represents probably the single most irritating aspect of the area's air pollution problem would be diminished by a complete switch to gas. As indicated earlier in this opinion automobiles and other vehicles account for more than 80 percent of the total contaminants emitted into the Los Angeles atmosphere. This includes approximately 73 percent of the hydrocarbons and 50 percent of the oxides of nitrogen which react under sunlight to create smog. Power plants account for only 3.5 percent of the total emissions during the winter months, when some fuel oil is being burned, and even less in the summer. The full utilization of natural gas in place of fuel oil would have little effect on hydrocarbon emissions and there is no basis for concluding that the modest reduction in the emission of oxides of nitrogen which would result would have any beneficial effect on the smog situation.

While the complete elimination of fuel oil would reduce the emissions of sulphur compounds, the Los Angeles area, which has only rarely and to a very limited degree exceeded a measured sulphur dioxide concentration of .1 part per million, presently ranks low compared to other metropolitan areas in the amount of such emissions. No showing has been made that such low concentrations are harmful. On the other hand, there is evidence in the record which indicates that steps can and are being taken to reduce even these sulphur compounds emissions by the electric companies when they burn fuel oil.

Under such circumstances, we do not believe that 100 percent gas service to the interruptible market is warranted. With respect to the Gulf Pacific proposal, there is an added difficulty since its inherent inflexibility would commit the local-utilities to a large, long-term supply of natural gas at the very time when the development of nuclear-power generation, remotely located coal-fired steam electric plants and the buildup of extra-high-voltage interregional interties promise to minimize the need for additional electric generation in Los Angeles and to make it possible to limit the use of a portion of the existing facilities to peaking purposes. TSP provides a flexible supply which can be accommodated to this evolving, but still uncertain, market.

One of the most compelling reasons for certificating TSP is that it leaves this Commission and the California Commission in a position to take whatever action may be required by future circumstances.

The TSP proposal would supply gas in amounts roughly equivalent to existing levels of service which would be adequate to meet the market requirements on both a peak day and annual basis. It is clear that Gulf Pacific also could be absorbed on an annual basis, but there is considerable doubt whether Gulf Pacific alone or even with Transwestern would be sufficient to meet the peak-day requirements. On an annual basis the market could also probably absorb the El Paso expanded proposal plus Transwestern but there is considerable doubt whether it would be able to absorb Gulf Pacific plus Transwestern. In any event it is clear that either of these two larger proposals would supply gas to the interruptible market at a higher, less economic level of service than TSP.

In view of the 17-cent in-line price applicable to all jurisdictional sales of gas in Texas Railroad District No. 3, and the pending area rate case involving all jurisdictional sales in that region, any proposal which involves the sale of gas from Humble and the other producers to Edison and LADWP at a fixed initial rate of 18.5 cents per Mcf with escalations of one cent each four years during the 20-year life of the contract cannot be justified. Such a sale would encourage other major producers to remove large blocks of gas from the interstate market, to the inevitable detriment of the jurisdictional consumers it is our responsibility to protect. Arguably, if we were to certificate Gulf Pacific we could condition a grant to a field price which would be no higher than would be authorized for a jurisdictional sale, subject to downward price adjustment if in the future it were determined that the just and reasonable price for sales of gas were lower than the initial price. However, the parties to the Gulf Pacific proposal have given no indication in the record that they would accept any such condition and, in any event, such a condition would create obvious administrative problems since we could enforce it against only Gulf Pacific, which is not a party to the producer contracts.

Strongly supporting grant of the TSP proposal is a consideration of costs as they would be reflected in rates. The incremental costs of gas under TSP at the Los Angeles load center is 27 cents per Mcf, and this figure does not include any further savings made possible by maintaining El Paso and Transwestern at the present rate of return, by flowing through the savings from the use of liberalized depreciation, and by reflecting the reductions in gas costs as a result of our *Permian* decision. This 27 cent incremental cost would permit rate reductions by El Paso and Transwestern exceeding $29,000,000 a year—and as indicated this figure does not reflect the full reduction in their rates which can be expected. Gulf Pacific on the other hand even upon the most favorable assumption would have an additional incremental cost of over 2 cents per Mcf. The only savings it would make possible would redound to the two electric utilities with the other customers of Pacific Lighting and the Northern California and east-of-California customers of El Paso receiving no benefit. Moreover, on a rolled-in basis (again making the most favorable assumptions with respect to the Gulf Pacific proposal) the slight advantage of 0.02 cents per Mcf or about $200,000 per year in favor of Gulf Pacific at the Los Angeles load center would be far outweighed by an annual decrease in the cost of El Paso gas to Northern California and the states east-of-California amounting to $4,442,000 per year.

We find no merit in Gulf Pacific's contention that it would introduce competition in the Southern California market to the benefit of consumers. Gulf Pacific offers alleged savings only to two large electric customers of Pacific Lighting at the expense of all Pacific Lighting's firm and other interruptible customers as well as at the expense of consumers outside of Southern California dependent upon El Paso. Since the long term fuel needs of these electric utilities are necessarily speculative, even Gulf Pacific's fixed gas supply is of extremely doubtful benefit. Because of the proposed nature of the Gulf Pacific operation, its availability to meet the future needs of area consumers purchasing their gas from distribution companies is virtually nonexistent, and there is grave doubt as to the ability of even the largest industry customers to take advantage of its facilities. This Commission has certificated competitive service to other major markets throughout the country and if Gulf Pacific gave any real promise of providing a continuing competitive service of gas for the Southern California market, its competition arguments would carry much weight. The record, however, does not support any such conclusion.

Our rejection of Gulf Pacific does not mean that under different supply and demand situations an industrial pipeline such as Gulf Pacific, performing solely interstate transportation functions for a few large consumers of natural gas, would not be consistent with the public interest. There may well be situations in which such pipelines are a useful adjunct to the normal operational pattern of interstate pipelines. But this is not one of them. For as we have shown, the operation of the proposed Gulf Pacific project cannot be disassociated from the service Pacific Lighting and the existing suppliers provide to their other customers and thus Gulf Pacific could be authorized only at great detriment to those other customers.

We have found, contrary to the examiner, that all three applicants have reserves of gas committed or available to them to meet the minimum qualifications which an applicant for a certificate of public convenience and necessity must possess before we would make any grant under the provisions of Section 7 of the Act. Comparatively, it is clear that Gulf Pacific, particularly in view of the Humble warranty, is at an advantage in this respect since it should not require any significant additional expense to maintain gas supplies for the full 20 years of the sales contracts whereas both El Paso and Transwestern within such period will have to acquire and attach new reserves. The cost of such action cannot be foretold. However, any advantages of cost certainty in this area which might otherwise accrue to the Gulf Pacific proposal are largely offset by the uncertainty of whether the two electric companies which will purchase the gas under the long-term contract with the producers will have a continuing use for all the gas for which they are committing themselves for the full 20-year term. And, in any event, the entirely speculative possibility that the present cost advantage of the TSP proposal might be decreased or even wiped out over the next two decades cannot outweigh its real and present benefits.

In summary we conclude that the appropriate supply of gas for the Southern California market is one which, while meeting peak requirements, would keep total levels of gas consumption at approximately present levels. Higher levels of gas service, such as those which would result from grant of either the expanded El Paso proposal or Gulf Pacific with Transwestern, would add to the cost of gas with no appreciable public benefit. At the lower levels, the El Paso-Transwestern TSP proposal is clearly to be preferred to Gulf Pacific because it (1) more clearly meets peak day and annual market needs; (2) is substantially cheaper on both an incremental and rolled-in basis; (3) avoids the serious problems of the high field prices upon which the Gulf Pacific proposal is predicted; and (4) provides for a necessary flexibility in the use of gas in the market over the next two decades of rapid change, particularly having in mind the nature of the electric fuel market for Southern California. These advantages clearly outweigh any minimal advantages which could conceivably result from authorizing a new pipeline of Gulf Pacific's nature to serve the market.

CONDITIONS

A number of conditions are recommended by the staff or the California Commission or both for insertion in either or both of the certificates granted to El Paso and Transwestern. Our views on this aspect of the case are as follows:

1. As indicated, both El Paso and Transwestern recognize that grant of their proposed applications will substantially decrease their unit costs, and they offered in evidence proposed rate reductions supported by cost of service computations. In both cases, however, the rate reductions which they propose are inadequate to bring the indicated rate of return down to that last allowed by the Commission. Specifically, El Paso's proposed ¾ of a cent reduction will leave it with a projected return significantly in excess of the 6⅛ percent rate of return we prescribed for the company in *El Paso Natural Gas Co.*, 28 FPC 688, 701–702. The reduction in Transwestern's 100 percent load factor CDQ rate from 41.8 cents per Mcf to 32.7 cents per Mcf likewise would result in a projected return for that company substantially in excess of the 6¼ percent rate of return which we set as the appropriate rate of return upon which its rates were to be based in the original Transwestern proceeding.[37] Neither pipeline introduced any direct evidence in this proceeding demonstrating that under present conditions they are entitled to a higher rate of return than that earlier prescribed for them. Transwestern put on a rebuttal witness who testified in support of higher rate of return. Even assuming it would ever be appropriate to permit a pipeline to justify a higher rate of return in a certificate case (but see *Texas Gas Transmission Corp.*, 22 FPC 378), it is not an appropriate matter for initiation on rebuttal.

Under these circumstances, we agree with the staff and the California Commission that certification of El Paso and Transwestern should be conditioned to require them to file rates based upon the cost of service they submitted in the proceeding adjusted to reflect a 6⅛ percent rate of return in the case of El Paso and 6¼ percent rate of return in the case of Transwestern. Both pipelines will, of course, be free if they so desire to file rate increases based upon such higher rate of return that they may believe justified.

2. The staff recommends that in any cost of service upon which Transwestern's new rates are to be based, prepayments in any amount above the $948,621 already shown as being booked should not be permitted since Transwestern in this proceeding has asserted that further gas prepayments could be avoided if certificates were issued. We agree with the staff and shall provide that the rates required to be filed by Transwestern herein be based on a cost of service reflecting no prepayments in the rate base in excess of $948,621, and shall make a similar provision with respect to El Paso.

3. Both El Paso and Transwestern take liberalized depreciation for tax purposes but the cost of service from which their proposed reduced rates were calculated utilized straight-line depreciation and "normalized" taxes. Moreover, both cost-of-service exhibits provided for a full return on the accumulated reserves which had been developed through the use of liberalized depreciation and normalized accounting therefor. The staff and the California Commission have recommended that Transwestern's new rates be calculated on the basis of flowing through the benefits of liberalized depreciation and deducting accumulated reserves from the rate base. However, no party has recommended any such

---

[37] See letter–orders of August 4, 1960 and August 11, 1960 in Docket No. G–14871.

action with respect to El Paso, and both the record[38] and pleadings are silent on the question insofar as that company are concerned.

The recommendations with respect to Transwestern apply to the present case the principles utilized in the Commission's decision in Opinion No. 417 (*Alabama-Tennessee Natural Gas Company*, 31 FPC 208). The Commission's decision in that case has now been affirmed (*Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, 359 F. 2d 318 (CA5). The *Alabama-Tennessee* decision makes clear that the use of liberalized depreciation will produce tax savings with respect to any pipeline company whose gross plant is either growing or stable (*i.e.*, additions to plant equal retirements). While the Annual Reports filed by the companies indicate that both El Paso and Transwestern have growing plants, and thus there is a *prima facie* case for applying the policy of *Alabama-Tennessee* to these two pipelines (even without consideration of the effect of the expansions authorized here), we do not believe it would be appropriate for us to impose flow-through on the two pipelines in this certificate proceeding in which no previous consideration was given to the matter insofar as El Paso is concerned and only limited evidence has been introduced with respect to Transwestern. Furthermore, there is no basis on this record for determining the appropriate annual amount of the flow-through for either company were we to apply the principles of *Alabama-Tennessee*. Accordingly, we shall not adopt the suggestion of the staff and California in this respect. We are, however, by separate order directing El Paso and Transwestern to show cause why their rates should not be further reduced to flow-through the benefits of utilizing liberalized depreciation for tax purposes to their customers and to deduct the accumulated reserves in Account No. 282 from the rate base upon which their return is calculated.

4. The California Commission would require an adjustment of Transwestern's price if the heating value of its gas falls below the 1,072 Btu used by it in the hearing. We do not think such a condition is appropriate. There is no evidence to show that the heating value of its gas will decline, or that the heating value of the gas would be relevant in any future rate proceeding involving Transwestern.

5. The California Commission recommends that we require the straight-line remaining-life method of depreciation for Transwestern. This is not a rate case, and, on the record here, there is insufficient justification for ordering a change in Transwestern's method of computing depreciation.

6. The California Commission objects to Transwestern's application of all of its proposed rate reductions to the commodity component of its two-part rate schedule; it suggests that the reduction be equally applied to the commodity and demand components. No such recommendation is made by the California Commission, or any other party, with respect to El Paso. Nor is there present in the record any of the comprehensive testimony which would be required in order for us to make a reasonable evaluation of the appropriate rate designs of the two proposals, which cannot, of course, be considered in isolation from one another. See *Natural Gas Pipeline Company of America*, 28 FPC 1033.

Under these circumstances, while we believe that possible changes in both Transwestern and El Paso's rate designs may be appropriate matters for consideration in any future rate case, as well as for continued study by our staff, we do not believe that there is any basis for adopting the California Commission's suggestion here.

---

[38] A witness for the California Commission did state in passing that *any* grant should be conditioned on the flowing through of liberalized depreciation, but he made no attempt to discuss the factual situation with respect to El Paso.

7. Finally, the California Commission asks us to require Transwestern (and El Paso if we were to grant this application) to flow-through any field price reductions and any producer refunds. Both applicants have indicated their willingness, if they secured the certificates applied for, to reduce their rates to reflect reductions in their purchase gas costs, and we believe the public interest requires this to be done. We shall accordingly require that both Transwestern and El Paso shall flow-through any producer rate reductions and refunds relating to the period commencing with the date rates filed in accordance with the opinion and order become effective.

The treatment of any refunds received by El Paso or Transwestern relating to periods prior to the effective date of the new rates ordered herein presents a different question. The matter of insuring the pipelines pass along such refunds to consumers in appropriate circumstances has been a matter of concern to us. Accordingly in a number of cases we have provided for the escrow of refunds by the producers pending the determination of whether the pipeline or their customer are entitled thereto. We believe that (subject to the El Paso settlement agreement in Docket No. G-4769, *et al.*) the question of the disposition of the refunds to be received by El Paso and Transwestern for a period prior to the effective date of the new rates should be similarly treated.

The Commission further finds:

(1) El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission. *El Paso Natural Gas Company* (4 FPC 486).

(2) Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission. *Transwestern Pipeline Company* (22 FPC 391).

(3) Gulf Pacific Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, upon construction and operation of the facilities proposed by it in Docket No. CP63-223, would become a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The facilities hereinbefore described, as more fully described in the applications and the record in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales of natural gas proposed are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Each of the above-named applicants is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The application of Gulf Pacific has not been shown to be required by the present or future public convenience and necessity.

(7) The construction and operation of the facilities proposed by El Paso in these proceedings and approved in this order, and the transportation and sale of 250 M^2cfd (14.9 psia) of natural gas by El Paso to Pacific Lighting are required by the public convenience and necessity as hereafter ordered and conditioned.

(8) The construction and operation of the proposed facilities and the transportation and sales of natural gas by Transwestern are required by the public convenience and necessity as hereafter ordered and conditioned.

The Commission orders:

(A) The application of Gulf Pacific in Docket No. CP63–223 is denied.

(B) A certificate of public convenience and necessity is issued to Transwestern in Docket Nos. CP63–204 and CP64–91, authorizing the construction and operation of the facilities and the transportation and sale of natural gas in the total amount of 640 M^2cfd (14.73 psia) to Pacific Lighting as described above and as more fully described in the applications in this proceeding, upon the terms and conditions of this order.

(C) A certificate of public convenience and necessity is issued to El Paso in Docket No. CP64–76 authorizing the construction and operation of the facilities as described above and as more fully described in its application in this proceeding for increasing the capacity of its present system in order to effect the sale of an additional 250 M^2cfd or a total of 1380 M^2cfd of natural gas (14.9 psia) to Pacific Lighting, upon the terms and conditions of this order.

(D) The certificates issued in paragraphs (B) and (C) and the rights granted thereunder are conditioned upon compliance by El Paso and Transwestern with all applicable Commission Regulations under the Natural Gas Act and particularly the terms and conditions set forth in paragraphs (c) and (e) of Section 157.20 of such Regulations.

(E) The certificate issued to Transwestern shall be on the following conditions:

(1) Subject to completion of the necessary facilities Transwestern's sales to Pacific Lighting shall be at a contract demand quantity of 535 M^2cfd (14.73 psia) and a maximum demand quantity of 640 M^2cfd; after January 1, 1967, both contract demand and maximum demand shall be 640 M^2cfd.

(2) Transwestern shall file tariff sheets acceptable to the Commission reflecting as follows:

(i) Upon attaining the capacity to deliver a contract quantity of gas in the amount of 535 M^2cfd, a CDQ–1 rate at a rate level which reflects a reduction of the 36.0 cents per Mcf it proposed in its letter agreement with Pacific Lighting (Exs. 93 and 492) after giving effect to (1) a rate of return of 6¼ percent, (2) the existing corporate income tax rate of 48 percent, and (3) inclusion of not in excess of $948,621 of gas prepayments in its rate base. Rates other than the CDQ–1 (set forth in Exs. 93 and 492) shall be similarly modified.

(ii) Commencing January 1, 1967, a CDQ–1 rate at a rate level which reflects a reduction of the 32.7 cents per Mcf proposed in Exs. 93 and 492 after giving effect to items (1) through (3) of ordering paragraph (E)(2)(i) above. Rates other than the CDQ–1 proposed in Exs. 93 and 492 for a capacity of 640 M^2cfd shall be similarly modified.

(3) All construction for the deliveries specified in Paragraph (E)(1) above shall be completed within one year from the date of this order.

(F) The certificate issued to El Paso shall be on the following conditions subject to construction of the necessary facilities:

(1) El Paso shall deliver maximum quantities of gas per day in addition to those under previous permanent certificates as follows (14.9 psia): commencing with the issuance of this order 150 M^2cfd; November 1, 1966, 200 M^2cfd; and November 1, 1967, 250 M^2cfd.

(2) All construction for the deliveries specified in Paragraph (F)(1) above shall be completed before November 1, 1967.

(3) El Paso shall file tariff sheets applicable to its Southern Division acceptable to the Commission reflecting as follows: Upon attaining an increase in its pipeline capacity and sales to Pacific Lighting of 200 M^2cfd (14.9 psia), rates and charges which, in addition to the reduction of its commodity rates by ¾ cent on

its Southern Division as proposed in these proceedings, shall reflect such further reduction as results after use of (1) 6⅛ percent rate of return; and (2) exclusion of any prepayments for gas from its rate base.

(G) The certificates herein issued to the pipelines, Transwestern and El Paso, are further conditioned to provide that the rates and charges computed as provided in (E)(2)(i) and (ii) and (F)(3) respectively above shall be further modified to reflect the following:

(1) If during the period commencing with the date the rates computed under (E)(2)(i) or (F)(3) above, as the case may be, become effective and ending on the first date on which rates other than those herein provided become effective, any reductions in the present rates of any gas supplied to the pipelines become final and no longer subject to court review, the pipeline shall file with the Commission appropriate reductions in their rate schedules to reflect the effect of such reductions in their costs of purchased gas; provided, however, that such reductions may be offset by them to the extent of any increased rates in the cost of gas which become effective during this period, and provided that the pipelines need not make rate reductions until the net reductions in the cost of purchased gas amount to at least 0.1 cent per Mcf.

(2) Any refunds received by the pipelines relating to the period commencing with the dates the rates computed under (E)(2)(i) or (F)(3) above, as the case may be, become effective, shall be refunded to their customers within 30 days after receipt of such refund, provided that no refund need be made unless the amount to be refunded in the case of Transwestern shall be at least $250,000, except for the final refund which shall be at least $12,500, and in the case of El Paso shall be at least $1,000,000, except for the final refund which shall be at least $50,000. The pipelines within 15 days after making any such refunds shall submit reports to the Commission setting forth the amounts refunded to each customer and the billing determinants used in the computation of such refunds.

(H) The certificates issued to El Paso and Transwestern shall be void and without force and effect unless accepted in writing by both applicants within thirty (30) days from the issuance date of the order issuing such certificate.

(I) Exceptions not granted are denied.

Commissioner O'Connor *dissenting.*

APPENDIX A

El Paso's Reserves

El Paso's San Juan Basin reserves claimed are as follows:

Blanco Mesaverde Field	6.4 tcf
Pictured Cliffs Field	2.0 tcf
Basin Dakota Field	3.6 tcf
Casinghead and other	.8 tcf
Total	12.8 tcf

There is no dispute as to the Pictured Cliffs and casinghead reserves. However, in the Blanco Mesaverde Field, in which El Paso had used a modified pressure decline method, Gulf Pacific would reduce El Paso's reserve estimate from 6.4 tcf to 4.9 tcf in large part because it disagreed with El Paso's assumption that reserves under undeveloped acreage would be equal to the average reserves per acre in the adjacent township or unit already developed. On this we agree with the staff that, although there were occasionally incongruities, the method is reasonable, and we shall accept the result. It appears that Gulf Pacific, which also used the pressure decline method in estimating El Paso's reserves, used the original pressures of the wells in many cases. Since Mesaverde has low permeability, original pressure falls off rapidly once production starts, but less rapidly as production continues. Use of original pressure in this case results in the underestimate of reserves.

In the Basin-Dakota Field Gulf Pacific reduced El Paso's estimate from 3.6 tcf to 1.7 tcf, although both companies employed a volumetric method. El Paso used the original bottom hole reservoir pressure as a basis for its estimates and used core data on 80 wells to compute porosity and interstitial water saturation. Gulf Pacific, on the other hand, used current pressure adjusted for production.

We agree with staff that the volumetric method of estimating reserves was proper for this undeveloped field and that the original bottom-hole pressure should be used rather than trying to calculate original pressure from current pressure as did Gulf Pacific. In other respects, such as porosity and connate water, the data used by El Paso and the factors which it employed were reasonable. The staff itself would have reduced El Paso's reserves in this field by 0.8 tcf because it did not think the estimates from the undeveloped portions of the field were supported, but, because of subsequent drilling, states that its reduction should be less than originally estimated. Actually, a great many wells have been drilled since staff completed its study and they are distributed in and about the field, although not in all sections. Every well drilled within the field has reached a certain amount of pay although some have been plugged and abandoned. Considering this rapid development of the field shown by the record we shall allow El Paso's claimed reserve of 3.6 tcf as reasonable.

El Paso's claimed reserves in the Permian Basin area are as follows:

Delaware Basin (Dry gas)	2.1 tcf
Dry gas	5.8 tcf
Residue gas	9.6 tcf
Total	17.5 tcf

In the Delaware Basin, both Gulf Pacific and the staff would reduce El Paso's volumetric estimate by over half.[1] Gulf Pacific contends that El Paso should not have included, as proven, reserves more than one mile from a gas well, and should not have applied its estimate to 100 percent of the thickness of the Ellenburger formation but should have used 70 percent as an assumed net pay.

This net pay reduction depends on experience in another field and is speculative. El Paso has determined the pay thickness of the Ellenburger formation by well drilling, and there is no reason to reduce it. As will be explained below whether or not we accept this and other adjustments made by Gulf Pacific will not affect our determinations here.

In the Gomez field, which draws gas from the Ellenburger formation, both Gulf Pacific and the staff would reduce the acreage to four sections. There are only two wells already proved here and, if a mile is used as a rule of thumb, not much more than four sections would be included in the producing acreage. It is a matter of public knowledge that the field is developing further and, consequently, staff's estimate is probably low; however, the record does not reflect this further development, and for the purpose here we shall accept the staff's reduction of .533 tcf from 1.17 tcf down to .637 tcf.

In the Worsham-Bayer-Ellenburger Field El Paso claimed .49 tcf, but Gulf Pacific made no allowances for reserves at all even though there was one producing well near part of El Paso's claimed acreage and an additional well was later drilled within El Paso's claimed area. Since El Paso included acreage far from the area of development, this should be excluded, and the claimed reserves, we estimate, should be reduced by approximately .30 tcf to about 0.19 tcf. The Delaware Basin reserves would thus be reduced from around 2.1 tcf to 1.3 tcf. As for the other Permian dry gas reserves, the staff properly reduced El Paso's claim in the Brown-Bassett Field by .43 tcf from .78 tcf to .35 tcf using the pressure decline method, which, contrary to El Paso's arguments, gave consistent results from well to well.[8]

---

[1] Gulf Pacific by 1.3 tcf and staff by 1.4 tcf.

In Lea County, N. Mex., Humble would reduce El Paso's reserves from 1.7 tcf to 1.21 tcf. Humble used a composite pressure decline curve in estimating the reserves in these fields while El Paso used individual well curves in some of the fields. Humble contends the individual curve method is totally inappropriate since this method can only be used in fields where the producing formations are so tight that there is little communication between the wells. In our opinion the individual curve method can be used even in a completely permeable field; the individual curves can be averaged to reflect the total reservoir experience. We agree with El Paso that the use of individual well curves enables one to eliminate unrepresentative pressure readings and arrive at a more accurate estimate of reserves. Furthermore, Humble's composite pressure decline curves do not show trends unambiguously and should not be used as a basis for reducing El Paso's estimate. We shall accept El Paso's estimate.

Reserves for the 9.6 tcf of casinghead gas in west Texas are not questioned, but the availability of the supply is contested. It is alleged that El Paso assumed a too rapid increase in allowable producing days, and failed to take into account loss of gas production through water flooding to create a drive for the production of oil. As the staff points out, historically the allowable producing percentage decreased to around 24 percent in 1962 and rose to 28 percent in 1963, but El Paso used increasing percentages up to 80 percent for 1970.

While there is every reason to believe that the allowables will be increased, El Paso has gone too far. By reducing the historical allowable percentage to 40, Humble calculates on the basis of thirty fields a decrease in deliverability of about 20 percent of the Permian Basin casinghead reserves, but this would amount to only about 6.8 percent of the company's total deliverability. Humble argues that this reduction should be increased by applying it to all fields in the Permian Basin; on the other hand it has exaggerated the effect by computing reduced deliverability in direct proportion to the allowable producing percentage, neglecting some marginal wells, which are exempt from state limitations on production.

We will not make an adjustment for water flooding because El Paso's witness has already taken this factor into account in a number of fields and, as a matter of experience, water flooding does not always reduce the availability of casinghead gas, although it increases the production of oil.

To conclude on El Paso's gas supply, Gulf Pacific and Humble would reduce its 30.9 tcf of claimed reserves by about 5.2 tcf. On the basis of these reduced reserves plus a reduction in available casinghead gas from West Texas, Gulf Pacific estimates El Paso's deliverability life as of January 1, 1963 to be 10 years for the 250 M^2cfd expansion and 8 years for the larger 575 M^2cfd expansion. Gulf Pacific would reduce these deliverability lives by the time that has expired since January 1, 1963. There is no justification for this, because as time elapses additional reserves, not in the record may be added, and the deliverability life further extended.

---

[8] The staff reduction of .87 tcf applied to reservoir volumes of 1.58 tcf, which are about half carbon dioxide, already taken into account by El Paso.

In accordance with the discussion above we would reduce El Paso's reserves by approximately .53 tcf in the Gomez Field, by .30 tcf in the Worsham Field and by .43 tcf in the Brown-Bassett Field, or 1.26 tcf in all. The staff would have reduced El Paso's reserves by about 1.75 tcf,[8] and El Paso's deliverability life of 15 years for the smaller expansion by only about a third of a year. However, the staff's study did not reflect the reduced availability of the west Texas casinghead gas nor partly offsetting increased estimates of El Paso's reserves in Basin Dakota and Gomez amounting to .92 tcf. Based upon our determinations of El Paso's reserves and making some allowance for the decreased availability in west Texas, El Paso's deliverability life would amount to at least 11 or 12 years even for the major expansion. At certain stages of the divestiture proceedings the Department of Justice advocated the transfer of additional reserves, amounting to .6 tcf or 1.25 tcf, to the "New company", which will take over El Paso's Northwest Division. These additional amounts would be less than five percent of El Paso's reserves and would not change the result substantially. In any case there is a good possibility the gas would be sold to El Paso. We have no difficulty in finding that El Paso's deliverability life is clearly adequate to support either its original application or its expanded application.

Even if we followed the Gulf Pacific and Humble reductions completely and reduced El Paso's deliverability to 10 and 8 years as of January 1, 1963, we would still find El Paso's gas supplies adequate for these proceedings. El Paso has displayed an aggressive gas acquisition policy in the prolific Permian Basin area and there is no reason not to believe it will continue to do so in the future. Therefore the deliverability requirement should be flexible as provided in § 2.61(a) of our Rules, discussed below.

APPENDIX B

SUMMARY OF PRINCIPAL ASSUMPTIONS

Unless otherwise noted, the principal assumptions underlying these studies were those contained in our staff's calculation of comparative economics, presented in the staff's brief to the examiner and summarized in its brief on exceptions. The market assumed is that used in the staff's studies of comparative economics. However, the results would be almost identical using the substantially similar Gulf Pacific market estimates.

In the assumption "Without Gulf Pacific" the volumes and rates used were those proposed by Transwestern and by El Paso in its basic application.

In the study "With Gulf Pacific" third year volumes at 100 percent load factor were used and the rates reflect 20-year average rates for Gulf Pacific assuming a 6 percent rate of return and a field price of 17.09¢ per Mcf (at 14.73 psia). The El Paso and Transwestern rates used in this study are those presently in effect.

No adjustment has been made to reflect the different Btu contents of the various supplies.

In the study "Without Gulf Pacific" about 16,000 M^2cf more storage was scheduled than in staff's study of comparative economics. In the study "With Gulf Pacific" about 10,000 M^2cf less storage was scheduled than in the staff's calculation of comparative economics. No additional storage facilities were added to existing facilities in either study.

[2] $\frac{13.5}{26.0}$ (16,228.1 MMcf) = 8,426,129 Mcf.

[3] $\frac{12.5}{26.0}$ (16,228.1 MMcf) = 7,801,971 Mcf.

O'CONNOR, *Commissioner, dissenting:*

By certificating the Tailored Supply Program (TSP), the majority has presented the consumers of southern California with a short-term solution to a long-term problem. The declared purpose of this proceeding was, "to determine how the *long-term* needs for natural gas deliveries to southern California may be met in the manner which is most desirable from the standpoint of the public interest." [Emphasis added] (*El Paso Natural Gas Co.*, Opinion No. 393, 30 FPC 77 at 92 (1963)). The reasoning behind the majority's facile rejection of this heretofore declared purpose is unascertainable.

The purpose of a comparative hearing is to accord mutually exclusive applicants a full hearing on the merits of their alternative projects, and it is well established that, absent a finding of urgent necessity, a hearing on the merits must be provided. *Ashbacker Radio Corp.* v. *F.C.C.*, 326 U.S. 327 (1946). By considering only the period up to 1968, and making no effort to consider reasonable projections introduced by all parties for the period into 1970 and beyond, the majority conveniently avoid the comparative merits of Gulf Pacific since that project necessarily is delayed until 1968 by the sheer immensity of time consumed by administrative delay. Since the expanded El Paso proposal represents but an extension of the Tailored Supply Program, the majority's reluctance even to provide at least five years of relative supply stability is inexplicable. There is no finding that additional supplies beyond 1968 are not necessary. There is no finding that El Paso expanded is not required. Neither is there a finding on a comparative basis as to why Gulf Pacific must be denied. The majority's anomalous position, after a decade of extensive effort by the parties here to settle their market requirements, requires scrutiny.

Consider what they deny. The Gulf Pacific project would provide the necessary supplies of gas for the reasonably foreseeable market at the lowest possible costs to consumers. Furthermore, the certification of Transwestern guarantees the short-term market while continuing the historical levels of service traditionally realized in southern California. As collateral benefits, the Gulf Pacific-Transwestern projects would introduce supplies of natural gas adequate to reduce certain amounts of air pollution, which the majority would argue are insignificant, but which nevertheless contribute to the overall air pollution problem and could be readily and conveniently eliminated as a result of certificating these projects. In addition, the Gulf Pacific project also introduces a competitive second supplier into southern California and provides to the major electric utilities an assured long-term supply which will enable them to lower rates to utility consumers and compete for energy services with the present supplier. Furthermore, it represents one of the finest gas supply proposals ever presented to this Commission.

Instead of responsive findings on these critical issues, the majority has chosen to place its faith in the highly speculative possibility of nuclear and remote mine-mouth coal generation coming into competitive being by 1970 to meet the demands of this rapidly growing market. Such a chimera denies Gulf Pacific a proper comparative hearing.

It is clear that when Gulf Pacific is considered on its merits, the majority cannot support the result they seek for that project's comparative benefits, jointly with Transwestern, are overwhelmingly favorable on virtually all points as against the alternatives. By refusing to make the comparison required, the majority are apparently hopeful the producers supporting Gulf Pacific will withdraw. If anything, the holding back has come from administrative delays, and by the necessity, within accepted conservation practices, to develop the reservoirs to their maximum potential of oil and gas production. The proclivity of some to ascribe uneconomic motivations to producers should cease, for the Permian area rate proceeding established that producers are not receiving unreasonable revenues from their production efforts. The majority's action also reflects their determination to deny the right to make an unregulated, direct sale, although today's opinion need not even consider the issue if supply only to 1968 is required.

This proceeding has resulted in one of the most comprehensive records ever compiled, and all issues have been thoroughly and carefully considered. A problem of long-standing urgency demands a long-term solution, and all the elements for decision are before us. This Commission should acknowledge the effort, make its comparative analysis, and reach its decision on the merits. Since the majority does not, it is necessary to consider the record at length in order that their combined position not disregard the fundamental issues before this Commission. A prediction of probable future developments for at least the next five years must be attempted, as this Commission has done in every other proceeding but this one.

I. THE COMPARATIVE MERITS—INTRODUCTION

In competitive pipeline proceedings the primary issue is a determination of which project, or projects, would provide the necessary reliable service at the least cost to consumers. In this proceeding that applicant is Gulf Pacific.

Nevertheless, the comparative merits do not end with the cost consideration but the resolution of the issue places the burden of persuasion upon opponents to demonstrate overriding policies which compel denial. In this proceeding all collateral benefits preponderate in favor of Gulf Pacific. As recommended by Examiner Kurtz, the State of California, The Department of Health, Education, and Welfare, and the City of Los Angeles that project should be certificated. The majority opinion neither considers the comparative issues nor responds to the positions of these public authorities. This being the case, the opinion cannot readily be supported.

The majority apparently advance three fundamental reasons for rejecting the Gulf Pacific project. First, they emphasize incremental costs should govern, even though that position gives scant consideration to rolled-in costs, which are the rates paid by consumers. Second, they argue that certification of Gulf Pacific even with conditions pertaining to Humble's non-jurisdictional producer sale, would have disruptive effects on jurisdictional sales in Texas Railroad District No. 3 since the Commission could not directly regulate Humble's prices to Edison and Department. Third, they rely upon flexibility, and authorize no more than a short-term, declining supply, apparently believing natural gas no longer should play a major role in southern California's energy supply. This unarticulated but necessary belief requires a fundamental review of all policies with regard to natural gas, for if alternative fuels will be priced lower than the rates here proposed, we must reject pipeline expansion, revise the clairvoyance of liberalized depreciation treatment, disallow expenditures for future investment in gas-fired steam electric plants, and increase depreciation rates in order that the industry recover its investment over the limited future available to it. The flexibility demanded by the majority, absent a full explanation for the major new departures announced this day, must result in uncertainty or rapid recover of industry investments as soon as possible. The majority place themselves in control of future energy patterns for southern California, yet they cite no reason for the management's abuse of discretion here. Neither do they cite valid reasons for suddenly rejecting all projections for the next decades, nor set forth any careful and convincing facts in support of their position.

II. THE MARKET FOR NATURAL GAS IN SOUTHERN CALIFORNIA

Of the many issues in this proceeding, the one which has assumed paramount significance is that of the role to be accorded natural gas in meeting, at the lowest possible cost to consumers, the energy requirements of southern California for the foreseeable future. The majority decision, reflecting an uncertainty about the future role for natural gas determining that other sources of energy are preferable, chooses the short-term proposal of Pacific Lighting, even though that alternative is more expensive to consumers and provides inadequate supplies for the area.

1. TRADITIONAL PATTERNS OF ENERGY CONSUMPTION

It is common knowledge that southern California has grown rapidly, and, to the extent we can have confidence in the future prosperity of the nation, that area promises to continue expanding at one of the fastest rates in the nation. Furthermore, we can be certain the area's energy requirements will grow even more rapidly as new technology and affluence make more expansive demands for energy.

To appreciate this expansion and need, it is only required to review the history of energy developments in southern California. Prior to 1940 the area had abundant supplies of natural resources nearby, and it was able to meet all its energy requirements from within the state. Hydroelectric power was the primary source of electric generation, although large supplies of oil and gas were increasingly utilized for steam generation. During World War II these fossil fuels became imperative as the area's population expanded. In less than a decade the market expanded to over three times its prior size. In the course of this market explosion all hydroelectric facilities were thoroughly developed, and the bulk of intrastate fuel resources was fully utilized. In the absence of coal, energy had to come from oil and gas. It was in this background that critical shortages of energy in 1946 led to El Paso's entry into southern California, and it was from this source that supplies proved adequate over the next decade. By the late 1950's requirements were such that El Paso could not meet the demand, and it was necessary for Transwestern to be certificated.

Since 1959, however, no additional supplies of natural gas have been permanently certificated into southern California.

The period since the mid-1950's instead has witnessed major efforts on the part of the electric utilities there to acquire assured volumes of natural gas at the lowest possible cost. The energy requirements have been tremendous, and the conflicts of major proportions. As early as 1955 Edison sought additional supplies from Pacific Northwest. The outcome of this effort has been documented by the Supreme Court as follows:

> In 1956 (Pacific Northwest) indeed engaged in negotiations for the sale of natural gas to Southern California Edison Co. (Edison). The latter, largest industrial user of natural gas in Southern California, used El Paso gas purchased through a distributor. It had, however, a low priority from that distributor, being on an "interruptible" basis, *i.e.*, subject to interruption during periods of peak demand for domestic uses. Edison wanted a firm contract and, upon being advised that it was El Paso's policy to sell only to distributors, started negotiations with Pacific Northwest in May 1956. The idea was for Pacific Northwest to deliver to Edison at a point on the California-Oregon border 300 million cubic feet of Canadian gas a day. In July 1956 they reached a tentative agreement. Edison thereupon tried to develop within California an integrated system for distributing Canadian gas supplied by Pacific Northwest to itself and others. El Paso decided to fight the plant to the last ditch, and succeeded in getting (through a distributor) a contract for Edison's needs. Edison's tentative agreement with Pacific Northwest was terminated. Before Edison terminated that agreement with Pacific Northwest, Edison had reached an agreement with El Paso for firm deliveries of gas; and while the original El Paso offer was 40¢ per Mcf, the price dropped to 38¢ per Mcf, then to 34¢ and finally to 30¢. Thereafter, and while the merger negotiations were pending, Pacific Northwest renewed its efforts to get its gas into California. *U.S.* v. *El Paso Natural Gas Co.*, 376 U.S. 651 (1964).

The majority opinion leaves this unmentioned. Yet the competitive background for the last decade cannot be overlooked nor can its effect, as found by the Supreme Court be disregarded. The merger of Pacific Northwest with El Paso, since dissolved by the Supreme Court, terminated efforts in this direction. Edison then sought to obtain firm supplies from El Paso, but this was denied by this Commission for the reason that proper allocations of costs for use of the pipelines' facilities could not be satisfactorily resolved. See *El Paso Natural Gas Co.*, 22 FPC 900 (1959). At the same time, it was making this ill-fated effort, Edison had begun negotiations with Tennessee Gas for supplies from the Texas Gulf Coast. This proposal led to the Pemex project, which was subsequently withdrawn in 1963, due to the availability of the cheap supplies now before us. In the meantime El Paso was also seeking to make the necessary supplies available. As early as 1955 it had entered into agreements to take gas to be supplied from the Gulf Coast. These early efforts were not successful, but severe shortages of El Paso's supply led to its proposed entry into South Texas with the Lo-Vaca project. El Paso was also seeking new supplies from the Rocky Mountain area by means of a pipeline from Rock Springs into California. This Commission approved the project, subject to approval by the California Public Utilities Commission. The CPUC would have imposed strict conditions on the project, and subsequent consideration led to abandonment for the reason, among others, that no new pipeline would be needed in southern California until 1968. The Gulf Pacific project, presently before us was put together to fulfill this need.

From this background it would appear to be manifest that further efforts to disrupt patterns in southern California should be avoided for, no matter how much this Commission can be confident of its regulatory abilities, it cannot force applicants to come before it. We are, like it or not, in the position of having to pass upon applications, not initiating them, and, due to the tremendous expense and delay inherent in providing an acceptable project, an opportunity for supply must be taken or it will likely demise with no alleviation of area market problems. See *Natural Gas Pipeline Company of America, et al.*, Opinion No. 474 (issued September 9, 1965, 34 FPC 771). The proceeding on remand, proved unviable. By order of February 24, 1966, 35 FPC 251 at p. 252, in that same proceeding, this Commission stated, "It is unfortunate that there is not now pending an application to deliver gas to Mississippi at St. Louis. However, * * * the Natural Gas Act does not give this Commission authority to compel the enlargement of transportation facilities." * * * We can be certain further competitive proposals to serve Southern California from the Texas Gulf Coast will not be forthcoming, except through those pipelines presently serving the area. However, it is clear that Edison will continue to seek additional long-term supplies, at lower costs than are permitted it by Pacific Lighting. If it is unsuccessful in finding traditional energy sources at attractive prices, it will be forced to turn to other sources more speculative in nature at uncompetitive prices within the foreseeable future. To be forced into such a position will also involve considerable expense in non-utilization of existing facilities.

PATTERNS OF NATURAL GAS SUPPLY

In order to determine the immediate pattern of natural gas supply into southern California it is only necessary to consider the levels of service which have prevailed over the last five years. This level will provide some indication of future needs, at the optimum level of service traditionally realized in that area, although not, contrary to the majority, the pattern which will be least expensive to the present distributor. We cannot consider supplies merely in terms of costs, for it is clear that, were this approach taken, the cheapest supply would be to curtail any further expansions. The majority's shortsighted solution may contemplate this result in their efforts to control end-use patterns. The market, however, is there, and it must be served if the public utility concept of natural gas service at adequate supply to consumers is to be realized.

Turning therefore to the past history of Pacific Lighting's service, its obligations and service can be set forth.

	1960	Ex. 76 1961	1962	Ex. 469 1963	Ex. 887 1964
Gas Purchases	625	664	727	741	847
Storage Withdrawal	36	34	32	44	51
Total Supply	661	698	759	785	898
Firm	312	315	355	350	403
Storage Injection	40	27	42	39	49
Total Interruptible Market	407	434	435	470	540
Voluntary use of Alternative Fuels	79	76	55	72	27
Curtailment	19	2	18	2	68
Percent Curtailment of Involuntary Users of Fuel Oil	5	0	4	0	13

These figures establish the pattern of natural-gas use in Southern California. It must be emphasized that:

1. All firm requirements have been met;
2. In 1961 and 1963 virtually all the interruptible requirements were met;
3. The shift in 1964 in voluntary use of fuel oil reflects the imposition by local authorities of requirements that natural gas be utilized whenever possible;
4. Even for 1964, the market for interruptible sales would have been thoroughly met except for an unusually cold year with degree days increasing from 1750 to 1845. Had 1964 been an average year, curtailment would have been only 25 M^{3}cf, so that there would have been curtailment of only five percent of all interruptible sales, excluding voluntary use of fuel oil. Thus, even with the heavy imposition of air pollution restrictions, the market to be satisfied received virtually the same service.

The pattern emerges clearly. Natural gas has been the major source of energy for southern California. Even the lowest priority customers have received virtually 100 percent service. The use of fuel oil has declined, in part because of strict air pollution restrictions and in part due to its high cost.

By tailoring supplies of natural gas to Pacific Lighting's existing system, the majority is in effect denying adequate supplies to meet the traditional market of southern California. The result will unquestionably be an increase in energy costs in the future.

3. THE FUTURE MARKET FOR NATURAL GAS

It is clear the southern California area is expanding vigorously, at a rate of more than 100,000 cubic feet a day of 40 billion cubic feet a year. Major additional supplies of natural gas are required to maintain adequate service.

The exact size of the southern California market has been the subject of much consideration in this proceeding. Pacific Lighting, Gulf Pacific and the Commission staff have each presented their own market estimates. Based upon 1970, very likely the second year of operation for Gulf Pacific, the forecasts of the total fossil fuel market available to gas in the Pacific Lighting service area including that of San Diego Gas and Electric Company and Long Beach (M^{3}cf at 14.73 psia) are as follows:[1]

---

[1] It must be assumed that to the extent gas is not available to serve the entire market, service to the interruptible customers will be curtailed and the needs of the customers will be met by alternative supplies of fuel oil. The allowance for voluntary use of alternative fuels reflects those customers who choose to burn oil even though unlimited gas is available. They would all be located outside the Los Angeles area, because of Rules 62 and 62.1 of the Air Pollution Control Board.

	Pacific Lighting	Gulf Pacific	Staff
Firm	494	477	493
Other interruptible	201	250	201
Steam electric	472	508	508
Gross Market	1,167	1,235	1,202
Less Voluntary Use of Alternative Fuels Outside the Los Angeles Area	36	65	36
Total	1,131	1,170	1,166

In appraising these estimates certain adjustments in each category are required. The parties generally agree on the firm category with the exception of Gulf Pacific's placing some 15 M^{3}cf in the interruptible category since it is exchange gas. It appears that this amount is firm, based upon figures provided by Pacific Lighting to the CPUC. In the "other interruptible" category, certain adjustments are required. The Pacific Lighting figure is not correct for it is based upon a load growth projection which has already been exceeded. On the other hand the Gulf Pacific figure is based upon growth rates for 1950–56, instead of the more recent record of 1956–64, which indicates a somewhat lower rate of growth. Gulf Pacific also included the full amount of exchange gas in this category. Neither party's figure is correct, so we should use a figure reflecting a slightly more rapid rate of growth than Pacific Lighting, which would appear entirely proper where sufficient quantities of gas are available at low rates. Accordingly, the record supports the figure of 218 M^{3}cf. Pacific Lighting's requirements for steam electric are understated. This arises from the fact that they relied upon projections of electric requirements developed in 1962, while the figures used by Gulf Pacific and the staff are based upon 1964. We think the more recent Gulf Pacific figure of 508 M^{3}cf a year should be used, but only as a starting point.

None of the market requirements reflect the presently proposed use of coal to develop power at sites outside the Los Angeles area or of the use of intertie power from the Pacific Northwest. These additional sources of electric energy will be forthcoming by 1970 and even earlier. The date of these proposals has been advanced since the basic estimates were made and, while no definitive statement as to the amounts of energy are in the record, they have been reflected in projections prepared by Edison. By 1970, or earlier, a steam electric plant known as Four Corners or Navajo will be built in New Mexico and a plant known as Mohave will be built in Nevada for the production of power, part of which will be transmitted to the Los Angeles area for consumption on Edison's system. By 1968 large blocks of purchased power will also be available. Estimating from Edisons' graphic projections approximately 50 M^{3}cf a year should be deducted from the estimate of steam electric requirements to allow for the operation of these plants, and an additional 30 M^{3}cf should be deducted for purchased power. On the other hand, this latest presentation on the record increases Edison's requirements by 25 M^{3}cf, and this increase should also be reflected.

The allowances for the voluntary use of fuel oil outside the Los Angeles area are estimated by Pacific Lighting and Staff without Gulf Pacific in operation. With Gulf Pacific in operation they would deduct 27 M^{3}cf from the market available to gas. The Gulf Pacific figures, on the other hand, are unduly high due to their projecting a larger market and estimating for fuel oil off the Pacific Lighting system. There are no figures to indicate total fuel oil use in southern California. On the other hand, when consideration is given to the projected pattern of fuel use by Pacific Lighting, it is clear more gas can be utilized by present customers if the gas is available. In 1966 it shows a "hard core" of only

21 M^3cf; in 1967, this is at 22 M^3cf; and in 1968 it is at 23 M^3cf. This indicates very clearly that under either proposal there will be an impact on fuel oil, but one required not by this Commission but by local authorities.

With these changes in Pacific Lighting's service area, the market estimate is as follows:

Market Available to Gas (M^3cf per year at 14.73 psia)

Firm	493
Other interruptible	218
Steam electric	452
Gross Market	1,163
Less Voluntary Use of Alternative Fuels outside Los Angeles Market	(21)
Total Market—1970	1,142

Although the majority refuse to make any finding as to the 1970 market—now less than 3½ years in the future, the above estimate will in all probability materialize. Of course, changes can occur statistically within deviations of approximately 12 M^3cf (1%) of the market figure, depending upon availability and price of gas.

4. APPLICANTS' PROPOSALS TO MEET THIS MARKET

To serve this market El Paso and Transwestern propose in their original applications—part of the Tailored Supply Program, to deliver the following amounts of gas.

California sources	224 M^3cf
El Paso (as presently certificated—1,143 M^2cfd)	417
El Paso—TSP—(253 M^2cfd)	92
Transwestern (Present 300 M^2cfd)	109
Transwestern—(TSP—340 M^2cfd)	124
Total	966 M^3cf

This uses Pacific Lighting's estimate of gas from California sources, although the record does not show the reserves and deliverability of this gas. Gulf Pacific objects to this estimate, but any upward bias would likely be accounted for by evidence of record that deliveries could go higher as new fields are developed. This project is woefully short of the projected market by 176 M^3cf. The Tailored Supply Program does not meet the immediate annual market. Of course, Pacific Lighting says it is willing to meet any demand, but by its own admission a higher level of service at greater costs will be required. The record is silent as to where these supplies will come from or what they will cost. Any close examination of the market would call for the elimination of TSP.

Under El Paso's expanded proposal, which would be in addition to TSP, deliveries would be as follows:

California sources	224 M^3cf
El Paso (as presently certificated—1,143 M^2cfd)	417
El Paso—(proposed—582 M^2cfd)	212
Transwestern (Present 300 M^2cfd)	109
Transwestern (additional 340 M^2cfd)	124
	1,086 M^3cf

This proposal, the only one which shows supplies and costs adequately, is also replete with shortcomings—deficient by 56 M^3cf, and would not provide the service necessary.

If Gulf Pacific should be certificated along with part of the Transwestern proposal, as advocated by the California Commission, deliveries would be as follows in 1970:

California sources	224 M^{3}cf
El Paso (as presently certificated—1,143 M^{2}cfd)	417
Transwestern (300 M^{2}cfd)	109
Gulf Pacific (third year—750 M^{2}cfd)	273
	1,023 M^{3}cf
Additional Transwestern (235 M^{2}cfd)	86
Total	1,109 M^{3}cf

If Transwestern is certificated in its entirety, the total supply, including the additional 38 M^{3}cf, would be 1,147 M^{3}cf. Assuming the hard core of fuel oil will remain unchanged, this would mean excess total supply at only 5 M^{3}cf. Compared with the estimated market requirements of 1,142 M^{3}cf for 1970, it is clear that the Gulf Pacific proposal could be readily absorbed by this market. The market could also use all the gas from Transwestern, assuring the projected leeway.

In the light of this supply the majority's reluctance to proceed as required cannot be readily explained. The market is there. Only Gulf Pacific with Transwestern will meet it. Reluctance to supply the market must be explained in terms of rates or other policies. However, as developed hereinafter, the majority cannot do so.

The above analysis of the market presentations is a measure of the immediate task before this Commission. At least for the next four years it should provide a certain stability to the market. In addition, over the long term there are compelling considerations which militate in favor of Gulf Pacific. The examiner stated that, unless additional sources of electric energy are available, there will be a need for a new Gulf Pacific every six years. It is clear that alternative sources will be developed; however, the extent to which they would fulfill the requirements for the next twenty years is speculative. Estimates have ranged from fifty to one hundred percent of future requirements. Edison has stated it does not consider the fifty percent figure unreasonable. However, it seems unduly optimistic to expect the entire needs to come solely from out-of-state plants. The existing steam plants in Los Angeles certainly cannot be retired from service, and both utilities are presently adding additional generation capacity at existing sites. Even should the entire market which would develop in the future be dedicated solely to coal and Northwest hydro electric power, the present supplies would be required and would be fully utilized. In my opinion the more likely result is that additional natural gas will be utilized. This is the conclusion reached in the *National Power Survey*, Vol. II (Advisory Committee Report No. 18,211, *et seq.* (1964) at p. 56), where it was predicted that use of natural gas in the Pacific states would more than double by 1980, increasing from an actual consumption in 1960 of 39 M^{4}cf to 74 M^{4}cf in 1970 and to 83 M^{4}cf in 1980. The Advisory Committee Report concludes: "Although all three major gas use categories should increase from 1960 through 1975, electric generation should increase the most, about 129 percent, compared with some 43 percent for industrial use and 85 percent for residential and commercial use." *National Power Survey, supra*, p. 211, *et seq.* Thereafter, decreasing electric use is predicted, but industrial, commercial, and residential service will increase. That Survey also predicted a decline in fuel oil use, and the advisory committee indicated a "steady downward trend" noting it would result "largely because of such factors as air pollution control and the cost of coal and nuclear generation." Local controls have brought about that decline. The majority's order reverses the decline.

5. IMPACT UPON PACIFIC LIGHTING'S LOAD BALANCING REQUIREMENTS

It is well established for the natural gas business that load-balancing is required for a distributor to be able to balance high winter peak demand with low summer valleys. Pacific Lighting alleges it will lose this ability; however, it has not established that level which is the necessary dividing point for its load equation requirements. In arriving at a measure of this potential impact, we are forced to make certain assumptions. First, it must be conceded that southern California has realized a high degree of firm service to interruptible customers. The industrial economy is strongly devoted to that pattern, and the local air pollution authorities have further required it. Second, it is clear this Commission should certificate at least sufficient capacity to meet the peak day requirements of the area. It appears clear from the record that Pacific Lighting has purchased more than sufficient supply to meet the peak day requirements, and this firm supply has been certificated by the Commission to continue the traditional patterns of energy supply to the area. While there is some question as to the propriety of the cost allocations between firm and interruptible, this is a matter outside our jurisdiction. The CPUC approves or permits these allocations, and any changes will be possible only from that agency. In any event the result would be to increase the interruptible rates, at least for those customers who receive the higher priorities of service. This serves only to increase the more preferable status of the unchanging Gulf Pacific rates, discussed hereinafter.

Although I agree with the peak day requirements figure developed by the majority, it would be erroneous to attach any significance to it. The majority obscures the issues of this case by disregarding the fact that the parties were primarily concerned with the annual interruptible industrial market which Gulf Pacific and Transwestern can unequivocably meet. Instead of accepting these facts, the majority improperly seeks to shift the emphasis away from the annual interruptible market to peak day requirements which it maintains Gulf Pacific cannot meet in 1970.

The irony of this position is that TSP takes its last increment in 1967, but is completed in 1968. To carry it further, more gas must be purchased at additional costs if TSP is to be extended to 1970. Despite these factors, the majority points out that TSP will not only meet all the requirements of its system-wide firm customers in 1970, but also be able to supply, "* * * *all* of the *interruptible* requirements in Los Angeles County where Rules 62 and 62.1 are in effect." [Emphasis added.] No mention is made, however, of exactly how they propose to take care of the requirements of the interruptible customers outside of Los Angeles County who have heretofore enjoyed an exceptionally high historical level of service. This weakness will be inherent in TSP from the beginning. The obvious answer is that these customers will either have to undergo serious curtailments or be driven to obtain new sources of energy supply which may not be readily available or economical.

The majority goes on to allege that the TSP will be able to meet the peak day demands in 1970 but Gulf Pacific will not. By the majority's figures, however, it is entirely probable that Gulf Pacific and Transwestern, in combination with sources of Richfield and pressure maintenance project supplies would be able to meet the peak day demand, albeit by a very narrow margin. I submit, however, that peak day requirements were of very little concern to any of the parties during this proceeding and that if the majority want to shift the emphasis to this phase of the market, they should say what peak day supply is required in 1968 to take care of the interruptible market and what interruptible market is necessary to take care of the peak day requirements in 1970. If this were done, the total inadequacy of the TSP would be apparent. It is evident that the parties did not consider peak day supply of paramount importance in this case as reflected in the fact that El Paso and Pacific Lighting did not initially provide for the TSP to extend to 1970. Thus, the majority is obscuring the true market issues by according peak day such importance.

On the other hand, we can obtain some measure of the impact on Pacific Lighting if it is denied the interruptible sales to Edison and Department. It appears clear that this severance would not adversely affect its load equation requirements. If Transwestern is certificated for its full volumes, and assuming Gulf Pacific is in its second year of operations by 1970, there would be a total supply of 4,042 M^2cfd, with excess requirements amounting to less than 90.5 M^2cfd, which could easily be provided by a slight increment in storage or out-of-state supply, or by curtailment of certain interruptible customers. Thus, as stated by Humble, "The size of the increment of interruptible market which will be a loss sale [firm interruptible beyond load equation] increases to such an extent when the *full* market is served by Gas Cos. [Pacific Lighting] alone that the only solution is to have that portion of the market served by a full cost of service to the electric power plants. This is what Gulf Pacific does, * * * but avoid[s] the loss incurred by sale of excessive volumes of interruptible gas." [Emphasis added.] The conclusion is inescapable. Even with Gulf Pacific using a portion of Pacific Lighting's interruptible market, there is more than enough remaining to satisfy that distributor's load balancing requirements while permitting it to fully serve its firm demand.

This can be readily demonstrated. For 1970 the firm supply from the California producers, Transwestern, and El Paso will be 874 M^3cf, which contracts permit swing down to 822 M^3cf. Less the firm market of 493 M^3cf of Pacific Lighting's, the amount of gas that must be disposed of is 329 M^3cf. This is met up to 41 M^3cf by storage injections, leaving the required interruptible market of 288 M^3cf. This compares to the interruptible market available to Pacific Lighting with Gulf Pacific in operation of 397 M^3cf. The conclusion from this is simply that Pacific Lighting will have more than adequate interruptible load remaining to balance with its firm annual requirements. In fact, the interruptible market remaining will exceed Pacific Lighting's firm supply by 109 M^3cf.

The requirements stated herein represent the best estimate from the record, and it is clear there is a large and rapidly growing market in southern California which will require substantial additional volumes in the near future. Gulf Pacific can be accommodated to that market with no adverse impact on present patterns of supply, and after 1970 there will be necessity for additional volumes. The picture of supply and market over the next five years, with Gulf Pacific commencing operation in the summer of 1968, is as follows:

	1966	1967	1968	1969	1970
Total Market	1,025	1,076	1,110	1,148	1,163
Supply:					
El Paso—firm	417	417	417	417	417
El Paso—interim	50	----------	----------	----------	----------
Transwestern	233	233	233	233	233
PG&E	17	----------	----------	----------	----------
Calif. Producers	224	224	224	224	224
Gulf Pacific	----------	----------	100	253	273
Total Supply	941	874	974	1,127	1,147
(Less alternative fuels)	(21)	(22)	(23)	(22)	(21)
Curtailment	63	180	113	(1)	(5)
Percent Curtailment	6	16	10	0	0

The above figures establish the pattern of deliveries which were recommended by the CPUC, although their proposal would not have permitted Transwestern all its requested volumes at a firm load. If the division is made as recommended by the CPUC of permanently certificated volumes to Transwestern of only 196 M^{3}cf, it can be seen there would remain even more flexibility in the market for interruptible sales. Available supply from PG&E and other sources would permit full accommodation in 1966–68, prior to Gulf Pacific commencing operations.

The additional supply above the requirements for 1969 and 1970 could be used to develop an additional increment of storage to meet the peak day requirements for 1970.

These figures establish that Gulf Pacific can be accommodated fully to the market, and that all the volumes proposed by Transwestern could be utilized. Furthermore, the interruptible market would still be available to Pacific Lighting in sufficient volumes. The interruptible market would receive supplies in accordance with the traditional level of service that prevailed up to 1965. Finally, Pacific Lighting would still be in a position to make interruptible sales to Edison and Department, for neither utility contemplates receiving sufficient volumes from Gulf Pacific so as not to need further fuel supplies. Thus, for all these reasons, the market justifies the proposal of the CPUC, in terms both of demand and the lack of an adverse impact on Pacific Lighting.

The majority's refusal to satisfy this market at traditional levels is thoroughly inexplicable. The results are easily predictable. California will receive less gas at higher cost, and the amounts of pollutants emitted will increase in both percentages and in absolute amounts. The fuel oil suppliers will be protected, and the impetus will be placed upon Edison and Department to develop alternative sources of generation at earlier dates and higher prices. Of course, the applications which would satisfy the market most nearly cannot be certificated without a showing that the rates for that service would be reasonable. As is developed in the comparative economics discussion those rates are lower at the higher level of service demanded for southern California.

The majority without having made a market finding proposes to supply the future needs of the southern California market with energy received from the "exotic" sources of generation: remote mine-mouth coal and nuclear, in addition to the hitherto untried Northwest-Southwest Intertie. The fundamental error committed by the majority in this respect is that it places too much reliance on the ability of these highly speculative sources of energy to effectively and economically compete with traditional sources upon the scheduled conclusion of TSP in 1968.

I would point out that plants for remote mine-mouth coal generation are planned for various areas in the states of Nevada, Utah, Arizona and New Mexico. Inasmuch as vast quantities of water are required to operate these plants, their planners have run into numerous problems with regard to securing sufficient water rights in the arid to semi-arid regions where the deposits proposed for development are located. This is not to say that these plants will not be a factor to be reckoned with by conventional power plants in the years after 1970. However, it is premature at this time to think that the many problems with which they are fraught can be solved in time for them to materially affect the southern California market until well into the 70's.

Similarly is the situation with nuclear generation. The presently existing nuclear plants are more experimental than competitive, however, new plants are being planned which will supposedly be able to compete with traditional fuels, but to date none of these plants exists, so whether they actually will be competitive remains to be seen. In addition to a certain amount of public opposition which construction of nuclear plants has aroused in California, the majority would do well to heed the more cautious approach towards this type of generation expressed in the *National Power Survey* and by various experts in power generation. The *National Power Survey* predicts an increased use of nuclear energy, particularly for southern California, but it does not conceive nuclear energy will replace any existing plants there nor that it will provide more than 17 percent of requirements for 1980. The majority's optimism is perhaps best rejected by the following conclusions expressed by Philip Sporn:

> To those concerned primarily with nuclear power, I urge dissatisfaction with the manner in which it has advanced its competitive position over the past year or more. I have been dismayed to sense indications that in certain quarters the growing attitude is that atomic power "has it made." My judgment is that nuclear power will have it made only when such attitudes are non-existent; when favored price treatment of nuclear plants and components is fully eliminated; and when people begin to look at projects such as Oyster Creek not as ancient history, but as large, new units, the initial operation of which will not occur for some time and the economic performance of which cannot be fully verified until the next decade. These are the questions that necessitate a 2¢/MBtu band of uncertainty around my cost estimates and these are the factors which will preclude our developing a clearly focussed picture until the 1970's. *Nuclear Power Economics* (March 17, 1966).

The majority also relies upon a third source of energy, the intertie, which involves exchanges of power with Bonneville in 1971 and Canadian Treaty Power in 1968, utilizing the North-South intertie. This intertie, while theoretically practicable, involves transmission of power at levels and by methods which have never been in actual operation. Inevitably, difficulties can be forecast, both in timing and cost. The Northwest Preference clause, contained in the enacting legislation, poses additional speculative uncertainties as to the amounts of this power available for areas outside the Northwest during the latter part of the market period with which we are concerned.

The majority has chosen to rely on these new sources of energy, for the long-range market in southern California. They also maintain that the present gas and oil-fired generating units can be converted from base load to peaking plants when the new electrical energy sources arrive on the scene. This unrealistic position fails to consider the investment exceeding $1 billion dollars which these traditional plants represent. To be sure, in the future some of these plants may warrant conversion for peaking purposes, but this stage is well down the road. The majority is apparently willing to risk depriving the consumers of southern California a level of service comparable to that which they have had in the past.

I cannot disregard the findings of the Examiner to the effect that, "This additional power [nuclear and coal], if it can be obtained, will not *replace* but *supplement* the generating plants in the Los Angeles Basin." [Emphasis added] (Examiner's Opinion, *infra* at 300). In my opinion, the majority has taken a recklessly optimistic position with regard to these new sources of electric energy and an equally pessimistic view as to the future of gas-fired plants in southern California to the ultimate derogation of the consumer.

III. COMPARATIVE ECONOMICS

The above market is determinative of the supply which this Commission should certificate in this proceeding. It is the market which must be met to continue present patterns of gas utilization in southern California as requested by CPUC.

Once the market is established, our consideration turns to that project or projects which would most adequately meet the projected requirements at the least cost to the consumer. It must be admitted that the comparative merits are difficult to determine, for Gulf Pacific would provide far more adequate supply, and the additional cost to El Paso cannot be accurately measured. Furthermore, the additional costs of transporting the gas from the California border to the load center are difficult to measure. Finally, the impact of the field prices on overall rates to consumers is not readily determinable for a twenty-year period. Nevertheless, comparison can be made for 1970 and 1972 on these points so as to provide that examination of the comparative merits which the law requires.

1. PRELIMINARY CONSIDERATIONS

In his decision the examiner analyzed at length the comparative merits of the pipeline applicants here before us, and, with the exception of supply, he concluded each met the preliminary requirements of the public interest as set forth in our regulations. It appears that, due to the Commission's recent relaxation of its deliverability standard, none of the applicants can be disqualified for failure to meet the threshhold requirements. Nevertheless, the examiner's determination of the reserves available to each applicant indicated clearly that neither El Paso nor Transwestern has adequate supplies as compared to the reserves committed to the Gulf Pacific proposal. The majority does not make this comparison, leaving the implication that Gulf Pacific presents no more than a supply equating to that of the other two. This is fundamentally unfair because it is clear that the Katy and Pledger reserves present one of the best natural gas supplies to be presented to this Commission. In order that this fact not be overlooked, the reserve posture of Gulf Pacific must be set forth.

In the case of Gulf Pacific's reserves, the company's witness, Mr. Born, using the volumetric method, testified that the reserves available to the Gulf Pacific project in the Katy and Pledger Fields as of July 1, 1965, amount to 6.01 trillion cubic feet (tcf) at 14.73 psia, providing a deliverability of 16 years at a 95 percent load factor. In addition, Gulf Pacific emphasized that its supplier, Humble, has warranted to supply any additional gas which may be needed above the reserves already dedicated to meet the full requirements of Edison and Department under their purchase contracts upon the same terms and conditions.

In opposition to Gulf Pacific's claim of adequate reserves El Paso's witness found reserves of only 3.91 tcf available to Gulf Pacific with a deliverability-life of 8.7 years. The Staff witness found Gulf Pacific's estimates reasonable, and the examiner agreed.

The differences in the estimates depend on three factors: (1) the number of acre-feet of producing sand in the Katy Field, (2) the percent of pore space occupied by connate water and not gas, and (3) the percentage of the gas-in-place that can be produced expressed as a recovery factor. On the number of acre-feet there was a difference in reading the logs of the wells drilled; and on this Staff reviewed the well logs and took no issue with Gulf Pacific's witness. Part of the difference was also due to El Paso's exclusion of the wedge sloped border of the Katy Field. El Paso considers this criticism of its computation inconsequential but Staff, it would seem justifiably, thinks the wedge area is of considerable importance.

On connate or interstitial water Gulf Pacific's witness found a weighted average 21.7 percent saturation in the Katy Field in contrast to El Paso's claim of 30 percent. Gulf Pacific used the capillary pressure method, which it claims is one of the most reliable, to plot graphically permeability against water saturation for 22 core samples taken from two wells, and it applied the average result to some 4,464 sample measurements furnished by Humble. On the other hand El Paso's data was obtained from electric log calculations from ten wells scattered throughout the field. El Paso says its 30 percent figure is consistent with data obtained from nearby fields and with scientific publications cited by it. The staff comments that the data relied upon by Gulf Pacific was far more extensive than that upon which El Paso made its determination. Gulf Pacific's method should be accepted. While log analysis is an accepted technique, data obtained from cores is that against which the log data is checked.

Gulf Pacific assumed that 85 percent of the gas would be recovered, while El Paso used a recovery factor of only 70 percent. El Paso's witness admitted that where there was "water drive" a 70 percent recovery was equivalent to 2,000 pounds abandonment pressure while if he had used an abandonment pressure of 1,000 pounds, a recovery factor of 89 percent would result. What El Paso had done, according to Gulf Pacific, was to assume a very strong "water drive" in the Katy Field by which the pressure would remain high as the gas was withdrawn. This apparently is not the condition in the Katy Field, and the abandonment pressures assumed by El Paso appear unreasonably high. The record thus supports the examiner in finding that the estimate of reserves and deliverability made by Gulf Pacific was reasonable. A sixteen-year deliverability is clearly sufficient and further consideration can be given to Humble's warranty for the remaining years of the contract. El Paso's estimate is apparently based on theoretical assumptions and an apparent lack of information. Gulf Pacific's estimate of reserves is reasonable, and its estimate of deliverability is adequate and should be accepted.

On the other hand the majority must struggle at length to bring El Paso and Transwestern up to the standard generally prescribed by the Regulations. While the majority's estimates should be accepted, certain important deficiencies require emphasis. For El Paso the majority alludes to deliverability of 11–12 years. It is clear that, when careful consideration is given each of the downward adjustments required, the deliverability for the expanded proposal is eleven years. This necessarily results from the many uncertainties which circumscribe the reserves presently available to El Paso. Its supply from Permian is sixty percent casinghead, and deliverability depends upon the allowable oil-production prescribed by the Texas Railroad Commission. The reserves in San Juan are in an area of limited permeability, and the rate of production is accordingly seriously curtailed. The impact of the divestiture proceedings cannot be accurately determined at this time, but it is clear that some five percent of El Paso's dedicated reserves will be lost to Pacific Northwest. While it is generally accepted that the Delaware Basin will provide large supplies in the future, the additional expenses of developing that area will clearly increase. The Commission's recent approval of a certificate to connect reserves in that area was at an additional cost of $10 million to El Paso, yet the reserves attached were less than one year's supply for the company's vast system. Furthermore, that field is still largely undeveloped, and its potential is difficult to measure. El Paso only recently found itself in a very tight supply situation, and it was willing to attempt the Rock Springs project in order to bolster its supply, yet that project involved gas costs of over 37 cents per Mcf. It is fortunate that ill-fated attempt did not succeed. El Paso also is attempting to increase permeability in San Juan by the use of nuclear explosions; but the expense of this is great, and the results are not predictable at this time. El Paso is clearly aware of the deficiencies in its general supply area, and it has sought to attach reserves and supply in the Texas Gulf Coast region, much as Gulf Pacific proposes herein. In its Lo-Vaca project El Paso would have extended a line into Texas Railroad District No. 4. The cost of those facilities would have been greater than the costs proposed herein by Gulf Pacific. As a result, purchased gas cost would have been extremely out-of-line. While El Paso abandoned that project following Supreme Court action adverse to it, it prosecuted the proposal for over six years. It was permitted to withdraw the project on the allegation that it had adequate reserves in the Delaware Basin. Yet El Paso continues to have a very active exploration and development program in the Texas Gulf region, with expenditures in District #4 of over two million dollars, and with leases there of almost 50,000 acres. This is almost one-half of El Paso's exploration program for 1964, yet it is entirely off-system. While these reserves have some utility for transfers with Natural, it appears likely that El Paso will find it necessary in the near future to extend its facilities into that area. Finally, since El Paso does virtually all its gathering, extensive additional resources must be invested, and the throughput costs of those small lines is over six times that for the line Gulf Pacific will provide.

Furthermore, the majority's findings as to Transwestern must also be placed in a comparative perspective. That pipeline has reserves dedicated to it of approximately eight years, although the warranty from Gulf Oil cannot be overlooked. While it has an active procurement program, it has been hampered in recent years by take-or-pay problems. It can reasonably be concluded Transwestern also conforms to the flexible 12-year standard, but again it must be emphasized that it falls far short of the 20-year supply guaranteed by Humble. Since Transwestern and El Paso are being considered together, it can be further emphasized that the deliverability evidenced by both on this record is less than ten years, in comparison to Gulf Pacific's deliverability of 20 years. This Commission is called upon to compare a twenty-year deliverability with a ten-year deliverability. There is no certain way to show what it will cost El Paso and Transwestern to attach reserves sufficient to deliver gas equating to the southern California market for an additional ten years. If the majority were to consider trends over the last two decades, however, the conclusion would be inescapable that the project they favor will necessarily result in higher costs to consumers than the Gulf Pacific proposal. Even if we disallow any wellhead price increases over the next twenty years, and postulate an increase in gathering, transmission, and distribution costs which equates to the national average increase in costs of doing business, it is clear that their shortsighted project will cost more. This is made clear when consideration is given to the comparative cost of transmission which is not adequately presented on this record. Gulf Pacific will deliver gas into Los Angeles. El Paso and Transwestern halt at the California border. In order that the supplies of the latter two systems be delivered to a comparable load center, it is necessary by Pacific Lighting's own admission for additional costs to be incurred of approximately 35 million dollars. For El Paso to do it, expenditure of still another $30 million would be necessary. When this cost is added to the El Paso-Transwestern expanded project it cannot be ignored that the total cost of facilities for that alternative will be greater than that proposed by Gulf Pacific.

2. FIELD PRICE

Considerable attention in the record has been accorded to the propriety of the field price of the Humble gas at 18.5 cents per Mcf at 14.65 psia (18.6 cents at 14.73 psia) as it is 1.5 cents higher than the 17 cents per Mcf at 14.65 psia in-line price for jurisdictional sales in Texas Railroad Commission District No. 3.

Since, however, the Humble sale would be exempt from FPC jurisdiction under the provisions of Section 1(b) of the Natural Gas Act as being a direct industrial, and in view of the many premium qualities, I would certificate the Gulf Pacific project conditioned upon the producer contract containing provisions for an 18.5 cents per Mcf initial field price with escalations every four years, but not to exceed the triggering level (presently 19 cents per Mcf) or a future area rate set higher than 19 cents. In the event the area price were increased, the contract should allow escalation to the new price. Such a condition would preclude any possible adverse effect on jurisdictional sales as a result of triggering.

The majority maintains that there is no indication that the producers would accept conditioning requirements, however, it was stated specifically in the oral argument by producer's counsel that they would not reject summarily a conditioning proposal, but would simply have to reconsider their position. Under the circumstances, this was a reasonable position to take. However, to refuse further consideration of the project on the basis that the parties who proposed it did not immediately seize at the opportunity of changing their initial offer when a change was suggested to counsel in oral argument, is indeed unreasonable.

By rejecting the possibility of conditioning the producer's contract the majority apparently rejects the touchstone of area pricing, *i.e.*, a stable price for a term of years. This is an unreasonable consideration upon which to base a rejection of the entire project and undoubtedly is attributable to the majority's apprehension of not having jurisdiction over direct sales, even though the Congress of the United States has seen fit to deny us that jurisdiction. I would submit, however, that it is not the proper concern of this Commission to deny a project such as Gulf Pacific's which would enure to the ultimate benefit of the consumers of California—a project which the consumers are on record as desiring on the basis, express or inferred, that this Commission does not have jurisdiction over the direct sale.

Furthermore, it is perfectly clear that the consumers of California will, under any project certificated, have the protection and benefits of regulation as prescribed by the CPUC, through its regulation of electric rates. Consequently, whether regulation is under the jurisdiction of the Federal Power Commission, CPUC, or a dovetailing of the two, the ultimate consumer will be completely protected. Thus, no argument can be heard that this is an "unregulated" sale.

It is also argued that certification of Gulf Pacific would induce producers in the Texas Gulf Coast area to "* * * hold their gas off the regulated interstate market with the objective of packaging it for sale at higher prices to similar direct buyers." The proponents of this argument are apparently unmindful of the problems involved in putting together such a project as that proposed by Gulf Pacific. Finding a market is one thing, but to amass sufficient reserves to warrant the construction of a pipeline to transport the gas to the market is quite another. It would be an almost impossible task for the average independent producer, or even a very large one, to attach reserves comparable to those in the Katy and Pledger Fields. Consequently, I do not share the majority's concern that certification of Gulf Pacific would lead to an exodus from the jurisdictional interstate market by independent producers.

There are numerous services and qualities which justify the initial field price. An example is to be found in the fact that Humble will perform extensive gathering which will allow Gulf Pacific to take delivery of the gas at two central points.

In addition, Gulf Pacific will not have to install any compression[2] and the gas will be completely dehydrated upon delivery to the pipeline.

In the Permian Area Rate proceeding full consideration was given to just and reasonable pricing policies, and it was concluded there should be a premium for gas of above the ordinary Btu content. We further indicated allowances might be forthcoming for other services, and on rehearing we granted full consideration of the necessity for a higher price to cover deeper drilling in the same acreage. (*Area Rate Proceeding, supra*). In *Panhandle Eastern Pipe Line Co.*, 27 FPC 35 (1962) Opinion No. 350, we were confronted with extensive gathering, though not to the extent contemplated here, and an additional allowance was deemed proper. Similarly, in *Socony Mobil Oil Co., Inc.*, 27 FPC 347 (1962, Docket No. G–13780, a gathering premium was allowed. Finally, we have stated that "a consistent application of the in-line comparison requires that we give consideration at the stage of certification to any additional feature of the proposed sale which is of objectively measurable value." *Medina Gathering Corp.*, 30 FPC 227, 232 (1963), Opinion No. 397. It should further be noted that El Paso's total cost for gas is slightly above 18.0 cents in the event its own high-cost production is included in its gas cost. The extensive services of Humble entitle it to similar increments. In any event, it is clear that there is complete justification for the field price as proposed.

Insofar as direct producer sales are concerned, this Commission would not approve direct producer sales in the *Transco* case (*Transcontinental Gas Pipe Line Corporation*, Docket No. G–13143, *et al.*, 21 FPC 138 [1959]), where the pipeline proposed to transport gas to New York that had been purchased by Consolidated Edison in the field, or in *El Paso* (*El Paso Natural Gas Co.*, Docket No. G–12580, 22 FPC 900 [1959], Opinion No. 333), where Edison sought direct sales from El Paso, with Pacific Lighting providing the necessary transportation services. There were dangers in both these proposals, for in one, the field price would have clearly triggered price inflations, and in the second, objections of the CPUC to cost allocation problems were persuasive. In the instant proceeding, however, the majority cannot find the field prices unduly high in comparison to service and warranty. As to approving other like sales, Gulf Pacific emphasizes that, before any similar project is approved, it must receive a certificate under Section 7. This is a valid position. Since Gulf Pacific is fully justifiable in terms of cost to the consumer, then it should not be denied merely because other unfavorable projects might seek to accomplish a similar result.

3. COST TO CONSUMERS

Under the Natural Gas Act, it is the duty of this Commission to authorize natural gas service at the lowest reasonable cost to consumers consistent with sufficient supply. The majority's cost comparison shows that the proposal they are authorizing is more expensive to the consumer than Gulf Pacific. This comparison was arrived at without any consideration of the additional supplies which will be required and the additional expenses for facilities to deliver those supplies. The TSP is unquestionably the most expensive proposal before the Commission.

---

[2] Some indication of the additional value to a pipeline of gas which does not require compression may be had from the record in the Permian Basin area rate proceeding. (*Area Rate Proceeding*, 34 FPC 159, *Opinion No. 468*, Docket No. AR61–1, *et al.*, August 1965. The Presiding Examiner's Initial Decision (p. 370) : "* * * the most recent pricing patterns show that under contracts for the sale of old residue gas, 99 percent of the one-stage residue gas is selling at a differential of at least 2.5¢ below 95 percent of the three-stage gas; and that some 99 percent of the two-stage gas sells for at least 2¢ below 95 percent of the three-stage gas * * *"

a. *Incremental Costs*

Before this conclusion can be developed the majority's position must be thoroughly considered. They rely to a great extent on incremental costs, which involve essentially a measure of the additional facilities required to provide adequate service. Their conclusion is that, for El Paso, Transwestern and Pacific Lighting to provide adequate gas to Los Angeles, the additional cost would amount to approximately 27 cents per Mcf. They compare this to Gulf Pacific's possible rate of 30.35 cents, and reject it as being too expensive. This is fundamentally unfair for the rate to be paid by the consumer will not be 24.5 cents, but a figure which is much higher. Yet even when consideration is limited to allocation of resources, for southern California to receive adequate service for the foreseeable future far greater facilities and expenditures will likely be incurred. The majority's figure does not attempt to compare the additional costs of attaching supplies adequate for the future. Surely they cannot expect this Commission to permit rates to be set on an incremental basis, yet the rates for the certificated facilities would still be far higher. The majority relies upon the isolated statement in the *Rock Springs*, 30 FPC 77, proceedings that emphasis would be given to incremental costs. We did not say this was to be the sole standard, and certainly consideration must be given to rolled-in costs. As we stated in *Rock Springs*, "savings are shown even on the basis of rolled-in costs." 30 FPC at p. 85. Since the rolled-in rates for adequate service are considerably lower, that rate comparison should be made and should be accorded considerable weight.

Furthermore, when due consideration is given the lack of comparability between the low incremental costs of El Paso-Transwestern on the record before us, and the long-term assured supply available under Gulf Pacific-Transwestern, it is apparent that El Paso, with Transwestern, is deficient, as determined by the reserve analysis, by almost ten years. We must therefore compare ten year's deliverability with the twenty years available from Gulf Pacific. It cannot be determined with precision what additional investments will be required by El Paso. Nevertheless, it is a certainty those investments will have to be made, and clearly the resources required would be well above those for Gulf Pacific.

With regard to the rolled-in rates it should also be pointed out that there is no stability to the rates proposed on this record; however, the rates to be charged by Gulf Pacific would be virtually stable. Department states it considered the potential impact of inflation, and concluded that, on a conservative basis, costs will rise over the twenty-year period by at least one-and-one-half percent per year. Furthermore, since the rise in natural gas prices at the burner tip has been accounted for 80 percent by increases in transmission and distribution costs, and only 20 percent by wellhead increases, even if the latter prices remain stable, which is unlikely since there will be a gradual rise to the new gas-well gas rate in Permian alone, additional expenses for transmission and distribution will likely add significantly to the investments proposed in this proceeding. Even if we assume El Paso's costs would go down, it would be required they decrease by almost two cents an Mcf to equate to the stable, noninflationary price to be charged by Gulf Pacific. For it must be emphasized that Gulf Pacific's rates, based upon a six percent return on net investment, will not rise, but will decrease virtually concomitant with increases at the tailgate for the producers' sales. To the extent Gulf Pacific is subject to increases for operation and maintenance so also is El Paso for a much larger system, which already makes sales of over 1.3 trillion cubic feet a year, requiring constant additions to supply. Proposed safety legislation could add even greater costs to the El Paso system, to a far lesser degree for Transwestern, and virtually none for Gulf Pacific. To conclude, Gulf Pacific will provide virtually the same rate for 20 years, and all its facilities are before us now. El Paso will require extensive additional investment to provide service comparable with Gulf Pacific. Even the incremental cost argument of the majority, when properly considered on a comparative basis, is without foundation.

When due consideration is given the long-term allocation of this nation's resource, Gulf Pacific is preferable for the foreseeable needs of southern California. El Paso's cheap expandability, on the other hand, can readily be utilized in less than five years, and even for the period 1966–1968, when increasing deficiencies in the market will require interim supply. El Paso refuses to offer what Gulf Pacific will provide. Comparatively, the reservoirs available to Gulf Pacific in one of the major producing regions of the nation militates strongly in its favor. El Paso's present deficiencies, in a producing area which cannot provide the same long-term supply, are not to be preferred.

The costs in terms of resources cannot be considered apart from the resulting rates. The costs must be translated into the price to be paid by consumers, for the Natural Gas Act requires this Commission provide the "lowest reasonable rates" to consumers.

b. *The Public Interest in the Lowest Possible Rates*

The majority's treatment of rolled-in costs compares different programs at different levels of service for different years. With certain adjustments to make the applicants comparable it can reasonably be predicted that the following rates will be charged to Edison and Department:

	Cents
For 1970:	
1. By Gulf Pacific	33.96
2. By Pacific Lighting	34.84
For 1972:	
1. By Gulf Pacific	33.98
2. By Pacific Lighting	34.28

Over a twenty-year period the average rate by Gulf Pacific to the utilities would be 31.37 cents, and in the last year it would be 31.74 cents, well below present rates for natural gas or any alternative fuels. This is the benefit which would accrue to over eight million consumers of electricity. The comparison is completed when the comparative rates to natural gas consumers, virtually the same persons, are set forth as follows:

	Cents
For 1970:	
1. With Gulf Pacific	33.46
2. Without Gulf Pacific	34.81
For 1972:	
1. With Gulf Pacific	34.11
2. Without Gulf Pacific	34.28

These latter figures represent the weighted average cost of gas to southern California, and they can readily be computed from the many exhibits on the record. For Gulf Pacific in 1970, this breaks down as follows: For El Paso the rate at the border would be 30.08 cents, as at present, with reductions of one cent for Permian area rate decreases and adjusting for pressure and Btu.

The weighted average cost of natural gas to southern California for 1970, with Gulf Pacific in operation, would be 33.46 cents per Mcf. This is computed as follows:

1. The El Paso rate is presently 30.08 cents per Mcf at 14.9 psia, or 29.74 cents at 14.73 psia. This will be reduced at least one cent, according to El Paso for rate reductions from *Permian, supra*, and, adjusting that rate from 1083 Btu's to 1080 Btu's, the final El Paso rate for its permanently certificated volumes of 418 M^{3}cf is 28.66 cents.

2. The Transwestern rate will be reduced to 32.70 cents, with further reductions of 1.60 cents for Permian area rate reductions, and, adjusting from 1051 Btu's to 1080 Btu's, the final rate is 31.96 cents.

3. The California producers' rate will be 30.44 cents, derived from the weighted average rate at the border for the out-of-state gas.

4. The Gulf Pacific rate is 33.07 cents, based on Exhibit 324, with the pipeline receiving a six percent return on net rate base, and this figure is adjusted downward by 0.29 cents to reflect revisions in the income tax laws during the pendency of the hearing. The resultant figure is adjusted to 1080 Btu's for a final figure of 33.96 cents.

5. To the cost for El Paso, Transwestern and California-produced gas must be added the costs to Pacific Lighting of moving that gas from the points of purchases into the Los Angeles load center. This figure is 3.31 cents, derived from Pacific Lighting Exhibits 393 and 761.

6. This produces the final rate to be charged by Pacific Lighting at the load center of 33.28 cents.

7. Averaging this figure and volumes of 851 M^{3}cf with Gulf Pacific's volumes of 273 M^{3}cf at 33.96 cents, the resultant figure is 33.44 cents, which is the weighted average price of all natural gas to the California consumer in southern California.

If Gulf Pacific is not certificated, it would then cost the consumer an average of 34.81 cents per Mcf to obtain comparable service from Pacific Lighting. This is derived as follows:

(a) The El Paso rate of 27.67 cents is its proposed rate for the maximum expansion, at 28.75 cents, reduced by one cent for the Permian rate reductions, and adjusted from 1083 to 1080 Btu's.

(b) Additional volumes of 60 M^{3}cf are assumed to come from El Paso at the same rate.

(c) The Transwestern rate is the same as with Gulf Pacific, above, and is 31.96 cents.

(d) The California producers are assumed to be able to supply an additional 19 M^{3}cf, and the rate, based upon the average for Transwestern and El Paso, is 29.42 cents.

(e) The weighted average price at the point of delivery for the above gas is 28.86 cents per Mcf.

(f) The costs to Pacific Lighting of delivering the gas into the Los Angeles load center are 5.95 cents, derived from Exhibits 393 and 761.

(g) Adding Pacific Lighting's costs to the cost of its gas, the weighted average price of natural gas to the California consumer at the Los Angeles load center would be 34.81 cents. Since this Commission should maintain present patterns of gas supply, the conclusion is inescapable, as Pacific Lighting itself emphasizes, that its service will cost more.

Since the cost of gas to consumers will be virtually the same, albeit lower with Gulf Pacific by a few mills, it can then be emphasized that the cost to Edison and Department will be considerably lower, by almost two cents. It should also be emphasized that, with the comparative alternative of Gulf Pacific, there is every likelihood the lower rate would be achieved. This would likely not occur without Gulf Pacific for the potentially low rates from Pacific Lighting would be free to fluctuate as they have in the past up to eight cents above the border rates. Finally, it cannot be ignored that the Pacific Lighting costs will gradually increase, as they have for the past 20 years. This is patently clear on the present record, for it proposes the level that would be optimum to it, not to the consumers. The majority's shortsighted solution is only to be tolerated in the event there is to be a drastic decline in natural gas service to southern California.

c. *Impact on Pacific Lighting*

As all members of this Commission emphasized in *Oklahoma Illinois, supra*, we must consider the possibility of an adverse effect upon consumers of the existing supplier. In the present proceeding it is clear there would be none. This is so largely because similar rate reductions would be made available to all utility consumers, regardless of which project or projects is certificated. Thus, if Gulf Pacific is authorized Edison and Department will be able to reduce their electric fuel costs to consumers by over three cents per Mcf of gas. Since Transwestern should also be certificated, major rate reductions could be realized. If the El Paso-Transwestern expanded proposal is approved, then rate reductions of some two cents would result with an additional one cent overall reduction possible under the Permian decision. The Permian rate reduction will, of course, be realized by all gas consumers regardless of the project approved. On the other hand, the additional costs to Pacific Lighting of making the necessary service available will require an overall increase of almost two cents. For this reason, Pacific Lighting presents the more expensive proposal. On the predictions we can presently make, the result is inescapable that after five years the overall cost of gas would be virtually identical under either proposal. The reductions under the Gulf Pacific-Transwestern project would be realized immediately and for the long-term in electric fuel costs, and, since the consumer utilizes both services, he will realize the maximum benefit under Gulf Pacific-Transwestern. The impact on consumers is adverse without Gulf Pacific.

The adverse impact alleged by Pacific Lighting is largely an argument it would lose its load balancing abilities. This is misplaced for the interruptible market available to it once Gulf Pacific is certificated will be more than adequate to meet its peak firm responsibility, and to provide more than adequate interruptible service. This has been demonstrated previously. The firm requirements are offset by the large volume of interruptible sales remaining.

The majority takes the position that impact cannot be determined, but they infer at various points in their opinion it would be adverse. It can be determined and it will not be adverse. What it does establish is that either procedure has the result of lowering gas costs to the consumer to approximately the same level overall. Yet it also establishes that the cost to the consumer of electricity will be far less with Gulf Pacific. Finally, it can be pointed out that, Gulf Pacific would not commence operations until 1968, which would provide more than ample time for Pacific Lighting to adjust its operations accordingly, and to increase its interruptible sales.

In the circumstance of lower rates to consumers with Gulf Pacific, the majority takes the tenuous position that El Paso's east-of-California customers will not get the benefits of El Paso's increased deliveries. For this group of customers, since the sales there are of far smaller volumes than those available to California consumers, there is no equating the greater benefits of larger rate reductions to southern California. Clearly the balancing of the alternative rate reductions preponderates with Los Angeles and Edison. Furthermore, if a project can be denied because a small group of customers of a competitor would be denied rate reductions with the new supplier, then no existing pipeline need fear that a competitor will enter its market. This clearly was not intended as evidenced in the House Report on the 1942 Amendments to Section 7 of the Natural Gas Act. Subsection (g) is intended "to make clear that the Commission will not be deprived of the authority, in the proper case, to issue certificates for extensions to serve an area already being serviced by another natural gas company." House Report No. 1290, 77th Cong., 1st Sess. (1941), at 4. In addition, we recently stated, that "We do not minimize the rate reductions which will enure to the benefit of the (present supplier's) other customers. However, this factor alone cannot justify the grant of an application which is clearly inferior to other competitive proposals." *Transcontinental Gas Pipe Line Corp.*, Opinion No. 493 (issued June 8, 1966), 35 FPC 917 at 922.

d. *Additional Cost Considerations*

The majority points to a one cent reduction in El Paso's costs as a result of the Permian area rate decision. It should be pointed out that this reduction will come about regardless of the outcome of the present proceedings, and further, its effects will soon be overcome because of El Paso's rising gas costs. At present, El Paso's cost of purchased gas is below the new gas price for Permian and most of its supply is from old contracts which are rapidly depleting. Therefore, they must attach tremendous new reserves for a sufficient supply to offset their declining old gas reserves in order to provide for presently certificated and new markets. These new reserves will be at the 16.5 cents rate and will necessarily raise El Paso's average cost of purchased gas. It is, therefore, inescapable that El Paso's rates will continue to rise as new high cost reserves are attached.

The majority maintains that El Paso will be able to absorb the facilities for new reserve acquisitions at the rate of $40,000,000 annually as a result of reduced depreciation on existing rate base. At the same time, they forecast a pessimistic outlook for gas in southern California, thereby inferring that El Paso's rate base will either remain stable or decline, due to the lack of need in the future for mainline facilities. This reasoning is in conflict with the majority's philosophy of liberalized depreciation which requires an ever expanding rate base for the benefits to flow uniformly. (See, *Alabama-Tennessee* Opinion No. 417, 31 FPC 208 (1964)).

The majority states that the grant of the TSP project would result in a $165,000,000 reduction to El Paso's customers which would be denied them if Gulf Pacific were certificated. This is completely untrue. As I have stated heretofore, the El Paso project would still be necessary after 1971 if Gulf Pacific were certificated. This means that by 1974, the sixth year of Gulf Pacific, that the same ¾¢ rate reduction now proposed will then be forthcoming. The effect of this is only to delay six years this reduction, and over the 20 year period, stated by the majority, would still result in reductions to El Paso's customers of $115,626,000. Further, the fact that El Paso would not have to rely on their $40,000,000 annual depreciation to construct facilities to attach additional gas means that its rates could be reduced approximately $5,000,000 a year until such time as new supplies are necessary. With El Paso's presently certificated supplies and the market which would be available after certification of Gulf Pacific, El Paso would not have to attach any reserves for at least 14 years. This results in additional reductions of $68,600,000 for a total reduction over the 20-year period of $184,226,000. It is, therefore, apparent that all of El Paso's customers both within and without California would receive substantially more benefit from the certification of Gulf Pacific than would be derived under the majority's action today.

Thus, the majority's reliance on possible rate reductions as a result of the Permian area rate decision, flow-through of liberalized depreciation, and possible future rate reductions is without merit insofar as cost comparison with Gulf Pacific, since regardless of whether Gulf Pacific is certificated or not, these benefits will still be passed on to the ultimate consumer. Reductions from these sources cannot be considered in any valid cost comparison.

4. *A Tailored Supply for Southern California*

In view of the above considerations, Gulf Pacific is preferable on the basis of economic benefits. Nevertheless, two important considerations have been established by the record in this proceeding. As Pacific Lighting makes clear, there will be a definite shortage of natural gas supplies to California by this coming winter unless additional facilities are certificated for deliveries this fall. It will be impossible for Gulf Pacific to meet this shortage. It will require at least one year to construct its facilities, and it can reasonably be expected there will be additional administrative delays of at least a year. As the CPUC points out, deliveries could not start before some time in 1968, and it is reasonable to assume this would not be possible before mid-1968. Therefore, although Gulf Pacific will provide excellent supplies for the twenty-year period after it commences operations, some supplies are needed now. No new supplies have been permanently certificated to California since 1959. Only the utmost efforts of present suppliers have made the present situation adequate. Thus, we are called upon in this proceeding to exercise our certificate responsibilities to meet both long-term and short-term requirements. As contemplated by our order providing for this hearing, the long-term market must be supplied, at the very least so that there will be an end to the long delays characterized by administrative proceedings. Of course, the principal purpose is to provide the necessary energy for southern California at the lowest possible cost.

But we must meet the short-term also, and the choice here is between Transwestern or El Paso. For the short term, it is clear the greater rate reductions and the lesser costs will be realized by certification of Transwestern, as recommended by the CPUC. Transwestern can provide additional supplies in less than six weeks, and, in comparison to El Paso, it involves greater volumes at lesser costs, and with greater benefits to rate payers.

The needs of southern California can be met in the most feasible manner by so proceeding. This is, as recommended by the CPUC, the preferable resolution of their fuel problems. The record fully supports their conclusion. The TSP which we have considered is not the alternative necessary to accommodate the demands of both the immediate and the long-term requirements of southern California. In order to expedite Transwestern's deliveries, their application should be severed from this proceeding.

The majority rules to the contrary. By so deciding, this Commission embarks upon many new precedents. It authorizes high cost gas supply. It relies primarily on incremental costs, thus ending all competitive proposals. It denies to consumers the benefits of inexpensive fuel. It also denies an appropriate direct sale for no valid reason. It is well established that when a project is shown to involve the lowest costs, it can nevertheless be denied for overriding considerations of public interest. The majority has not even attempted this burden of persuasion. In this case other issues include arguments as to air pollution, end use, alternative fuels and competition. These collateral issues must be examined as to whether they override the clear savings to consumers with Gulf Pacific.

IV. Collateral Considerations

This Commission cannot possibly sanction any and all proposals of the type involved here for the reason that cost considerations and price impact on wellhead sales must continue to be our primary concern under the Act. Nevertheless, where the project would provide lower rates at lower costs, and where it would not increase field prices, then this Commission should approve such proposals unless there is a clear and convincing showing of detriment to the public interest. In this proceeding the collateral benefits preponderate in Gulf Pacific's favor.

Pacific Lighting greatly emphasizes the flexibility it would provide. Yet this flexibility, while fully advantageous to it, does nothing to reduce electric costs to the consumer, requires the use of considerable additional fuel oil and supporting facilities, and provides no assurances whatsoever to Edison and Department that they will be able to meet, at the lowest possible cost, the tremendous electric market for which they have responsibility over the next decade. This emphasis on flexibility, when we have before us existing plants and unchallenged electric requirements for the future, can mean only that increased costs will result to electric consumers while gas consumers will receive, at best, only temporary rate advantages. Furthermore, it overlooks the inherent flexibility in the Gulf Pacific proposal as to rates of take—down to 85 percent or over 140,000 Mcf per day, as compared to El Paso and Transwestern of 92 percent. Also, the necessity for flexibility must be posited upon a cassandric view of the future for natural gas, yet all reasonable predictions indicate a strong continually increasing demand. Even assuming radical change, the companies here involved would not be unamenable to non-injurious contract renegotiations subject, of course, to this Commission's approval. Meanwhile, as Edison has repeatedly emphasized, it will continue to seek its own supplies as are necessary for meeting its responsibilities to the public, with the continuing delay of the long-term resolution of southern California's energy requirements. Fully aware of the local problems confronting the electric utilities, the CPUC supports Edison and Los Angeles in these efforts.

It is in this background of electric utilities' requirements that we consider the policy considerations posed.

1. AIR POLLUTION

Fundamentally, I agree with the factual statement of the air pollution problem as set forth in the majority opinion. However, further comment is necessary in order that my position will be clearly understood and differentiated from theirs.

It is undeniable that Los Angeles has a severe air pollution problem. The dispute arises as to the degree burning fuel oil in steam generating plants contributes to this problem. Along these lines I am impressed with the evidence presented by the Department of Health, Education, and Welfare, U.S. Public Health Service, Los Angeles County Physicians, Los Angeles County Board of Supervisors, Los Angeles APCD, and the Los Angeles County Medical Association, in favor of the Gulf Pacific project and will comment later on some of their statements. It is significant, I feel, that these agencies and individuals are primarily interested in protecting the health of the people of Los Angeles and the nation as opposed to trying to sell either gas or fuel oil.

a. *Smog*

Insofar as smog is concerned, the majority correctly points out that automobiles are the primary source of hydrocarbons as well as 50 percent of the total nitrogen oxides, both of which go into the chemical makeup of smog. They did not, however, give proper consideration to the reductions in nitrogen oxides which would be affected through the substitution of natural gas for fuel oil. The present power plants in the Los Angeles Basin emit daily averages of between 175 and 240 tons of nitrogen oxides into the atmosphere. This amounts to about 35 percent of the nitrogen oxides contributed by automobiles. Since more than 100 percent more nitrogen dioxide is produced by the combustion of fuel oil as opposed to an equal quantity of natural gas, it logically follows that the substitution of natural gas for fuel oil would have a reasonable effect on the reduction of nitrogen oxides presently being emitted into the Los Angeles atmosphere. Whether this would amount to a substantial reduction in the overall nitrogen oxide emissions in the Los Angeles area is subject to conjecture. Likewise, would be the overall effect on the smog problem, but the majority fails to realize that this is just one contaminant of several, the overall percentage of which can be lessened by the substitution of gas for fuel oil.

The majority's reference to the study showing that some gas-fired units across the country emit greater concentrations of nitrogen oxides, bears closer scrutiny. In the first place it is not clear as to whether these units were comparable in nature, *i.e.*, one-stage combustion, two-stage combustion, etc. Thus with today's modern plant design a comparison without equal conditions, is totally unfair. Furthermore, by their own admission, two-stage combustion units which were put into use at Edison's Mandalay Station and two units at Huntington Beach, "reduced nitrogen oxide emissions from 600 ppm to 350 ppm for oil-fired generators and 450 to 250 ppm for gas-fired generators." To be sure, there is a very important role to be played by unit design in limiting air pollution, but likewise, as can be seen from these figures, there is also a role to be played by natural gas. Significantly, even with the two-stage combustion unit, emissions of nitrogen oxide from the comparable plants in question are 100 ppm less when gas is being burned as contrasted with fuel oil.

b. *Sulphur Dioxide, Sulphates and Aerosols*

Of even greater significance than the nitrogen oxides are the sulfur oxides which will be substantially reduced as a result of substituting natural gas for fuel oil since about 75 percent of the present emissions of sulfur dioxide are attributable to the burning of fuel oil. The burning of natural gas, however, produces only negligible quantities of SO_2. Along with reduction of SO_2 it could be expected that the sulfate percentages will also be reduced proportionately since they are the result of the interaction between SO_2 and moisture in the atmosphere. It is worthy of note that the Los Angeles Air Pollution Control District (APCD) measurements indicate high sulfur dioxide concentrations in the area of power plants, diminishing with distance, whereas, sulfate concentrations increase progressively at greater distances from the power plant area. This would indicate that a decrease in the sulfur dioxide concentrations can be attributed to their conversion into sulfate aerosols. Whether this phenomenon contributes to the lower measured sulfur dioxide concentrations in the Los Angeles area as compared with other areas suffering from air pollution is subject to dispute, but it remains that with the substitution of natural gas for fuel oil both sulfur dioxide and resultant sulfate aerosols will be substantially diminished. Thus, the majority's contention that there are greater concentrations of sulfur dioxide in other cities of the nation does not in the least lessen the problems created by levels of these contaminants in Los Angeles.

In addition to reductions in quantities of sulfur dioxide and sulfates emitted into the atmosphere as a result of substituting natural gas for fuel oil, reductions can also be expected in the liquid and solid by-products of combustion known as aerosols or particulates. Through these reductions certain percentages of sub-micron particulates will be eliminated. These sub-micron particulates are believed to be particularly harmful in that they are easily inhaled into the lungs and there where they absorb subsequently inhaled gaseous pollutants. Furthermore, they comprise 86.6 percent to 88.5 percent of the fine particulate matter emitted as plumes from the stacks of electrical steam generating plants in Los Angeles County. The substitution of gas for fuel oil would reduce emissions of particulates approximately 25 percent by the majority's own admission. Nevertheless, the majority would deemphasize the importance of this percentage presumably in reliance on future research in perfecting more efficient boilers and "bag houses" to lessen these concentrations. To date, however, there is no evidence of any device that can reduce the number of sub-micron particles as effectively as the use of natural gas. Furthermore, the use of natural gas in boilers under the circumstances of this case is by far the most practical way of eliminating visible stack plumes.

When the vast sums of money which have been expended by the taxpayers of southern California for the elimination of the air pollution problem are taken into consideration, it becomes self-evident that their desire for more gas is not so much founded on economic considerations as how to get the greatest supply for the longest period of time. Since the creation of the Los Angeles APCD in 1948, over $35 million has been spent towards the control of air pollution: $10 million of this amount has gone towards research and development. The District's annual budget amounts to $3½ million and through application of APCD Rules and Regulations, industry has been encouraged to spend an additional $108 million. Furthermore, the APCD's banning of backyard incinerators in 1957 cost an initial $40 million to say nothing of the $30 million that has been required annually for the implementation of the new trash disposal system. At the present time there are under consideration proposals for the installation of devices on automobile exhausts and regardless of the proposal selected, additional millions will be required to implement it. Thus, these vast expenditures can only be interpreted as indicating an intense desire of the people of Los Angeles towards curbing the amounts of contaminants emitted daily into the atmosphere regardless of the percentage of the total air pollution problem the offending industries or machines contribute.

In view of the evidence presented with regard to the deleterious effects of air pollution, I cannot let pass without comment the majority's statement "* * * Air pollution may have some deleterious effect upon the health of the residents of Los Angeles * * * The *extent* of the deleterious effect is a matter of dispute." [Emphasis supplied.] I would agree that it is not within the expertise of this Commission to set levels at which the various pollutants are deemed to be either "safe" or "harmful". But I cannot be unmindful of the testimony and evidence presented with regard to the overall effects of air pollution on the health of the people of the Los Angeles area as well as the role played by fuel oil in contributing to these effects. In particular, I have reference to the testimony of Dr. Goldsmith of the State Department of Public Health who in testifying with regard to the lack of conclusive evidence as to "safe" or "harmful" levels of pollution, said, "[W]e cannot continue to expose our population to a serious health risk simply to perfect the evidentiary proof * * *. [T]o wait until such definitive results are obtained would be to wait too long. For by then we might have forfeited our chance to safeguard the population against serious chronic disease and the shortening of life span." Similarly, with regard to the deleterious effects present levels of fuel oil combustion have on the citizens of the area, policy statements of the Los Angeles County Medical Association concluded that "* * * pollution from fuel oil burning is a present threat to human health. Just as we would advise a physician to prevent a known disease which may never be contracted, we must seriously urge action *now* to eliminate the air pollution threat." The Los Angeles County Medical Association also endorsed testimony of record that a London-Donora type disaster could occur in Los Angeles County and urged that, "* * * Continued fuel oil burning threatens the public health and safety."

There was also the testimony of Dr. Smart, Chairman of the APCD's Scientific Committee who said, "* * * Fuel oil combustion products are importantly related to the physiological disorders which I have personally observed." He went on to state that the reduction of contaminant emissions from fuel oil burning would have a beneficial effect on human health in Los Angeles.

CONCLUSION

Since the commencement of its population explosion in the 1930's, the Los Angeles area has suffered increasingly from air pollution, due in part to its unusual geographical location and atmospheric conditions. At present, this problem has developed to the extent that the citizens of the area have had to readjust their domestic and industrial living habits away from the use of traditional energy sources, in the event that use should result in a deleterious by-product. As a result, they have gone to great lengths and expense to seek out ways of eliminating, or at least reducing, these traditional by-products of combustion, regardless of the percentage each individual source might play in the overall air pollution problem. The substitution of natural gas for fuel oil has been one of their goals.

Since the mid-1950's additional quantities of gas have been sought for the Los Angeles market. These attempts have been largely frustrated, but in *Rock Springs, supra,* the Commission gave encouragement by saying, "* * * We shall institute a proceeding to determine how the *long-term* needs for *natural gas deliveries* to southern California may be met in the manner which is most desirable from the standpoint of the public interest." [Emphasis supplied.] The Gulf Pacific project would meet this promise, but by certificating the El Paso project for 2½ years the majority has in effect reversed its *Rock Springs* position and will in the future be contributing to the levels of contaminants emitted into the Los Angeles atmosphere since the El Paso project will necessarily require the burning of more fuel and as the market increases, so will the quantities of fuel oil burned.

As has already been discussed in another section of this opinion, I do not share what I consider to be the majority's untimely optimism with regard to the exotic sources of generation, *i.e.*, nuclear and coal. Instead, I would hold for the introduction of further quantities of natural gas and place my optimism in the rapid growth of the southern California market to accommodate the production of the exotics in the years after 1970 as well as a presently certificated long-range gas supply program. The majority commits grave error, as previously stated, in placing its total reliance on small incremental additions to the TSP and the exotics. The latter are still, for the most part in the planning stage, and are faced with an uncertain future. An injustice to the southern California consumer will result. Likewise, it is unrealistic for the majority to think that the presently existing plants will be used for peaking when the exotics come into competitive being. To a certain extent, of course, this will be true, but there is entirely too much money invested in the presently existing plants to think that they could be profitably converted to peaking in the near future.

Thus, I am convinced that although evidence did not establish levels at which the various contaminants are determined to be either "safe" or "harmful", it did establish that existing levels of air pollution are deleterious to the health of the people of the Los Angeles area. Furthermore, I am convinced that although the reduction in contaminants emitted as a result of the substitution of natural gas for fuel oil will not completely solve the overall air pollution problem, it will, nevertheless, bring about a reasonable reduction and be in consonance with the overall desires and plans of the people of Los Angeles and the Los Angeles APCD.

2. COMPETITION

It cannot be controverted that Gulf Pacific would provide additional competition and another source of supply to southern California of its long-term energy requirements. This competition should be served for it has been shown that Gulf Pacific is the least expensive project and, rather than having an adverse impact on consumers, it provides generally lower rates for utility services. Once this is established, then Gulf Pacific should be permitted to free Edison and Department from reliance for service and supply from their major competitor in the energy market. Gulf Pacific provides, in the Los Angeles area itself, competition between gas and electricity and competition for industrial service.

It has been established that utilities in southern California need lower rates to be able to compete effectively with natural gas service. Contrary to the allegations of Pacific Lighting, Gulf Pacific would not serve only two industrial customers, for those buyers cannot be separated from the eight million consumers they must serve as public utilities, with rates fully regulated by the CPUC. Significantly, that agency fully supports the Gulf Pacific project for the apparent purpose among others of permitting the electric utilities to have the benefit of assured supplies at lower costs. It is not controverted on the record that Los Angeles and Edison require assured supplies to compete most effectively for the energy market. This form of interfuel competition has been repeatedly emphasized, as in the *National Power Survey*, where it was declared, at page 12:

> The electric power industry is both a major customer for the fossil fuels which provide the heat source for almost all steam-generated electricity and a direct competitor of the fossil fuel industries for many residential and industrial uses. * * * [t]he electric power industry's share of the Nation's entire basic energy has grown steadily from approximately 11 percent in 1920 to 20 percent in 1960 and is likely to reach 30 percent or more by 1980. But electricity's share of the energy market will not increase automatically. Future growth will depend increasingly on the outcome of competition with natural gas and oil for space heating and industrial uses. The ability of the electric industry to expand its share of the market in the future will depend on whether it makes the most of its opportunities for reducing the price of its product.

In this proceeding Gulf Pacific provides Edison and Department the greatest opportunity to reduce the price of their product. The difference over present rates is more than 3 cents per Mcf, and over twenty years is more than 1.5 cents per Mcf.

As for the industrial rates it is conceded by the CPUC that they are not geared to costs, but relate to a level which is competitive with fuel oil. To reduce the costs to industry it is essential the rates be reduced by the proper allocations. Proponents of Gulf Pacific emphasize that Pacific Lighting holds down the rates to its firm customers by improper allocations of interruptible rates to the competing electric utilities, yet these disruptions of proper costing techniques would not be attractive to Pacific Lighting were Gulf Pacific in the area. The CPUC acknowledges this, citing its recent investigation of those rates, where it held that "the record in this proceeding contains numerous objections to the rates, conditions and service rendered under [the interruptible] schedule and a number of the larger customers have given notice of terminating the contracts by July 1, 1962, or July 1, 1963. It should be readily apparent that the schedule is not suitable for the purpose intended." *Southern California Gas Company*, 59 Calif. P.U.C. 11, 14 (1961). Of necessity, the CPUC permitted these rates to go into effect and then endorsed the Gulf Pacific project as a solution to the problem.

Although Gulf Pacific proposes no further industrial sales at the present time, it has declared its willingness to do so. Furthermore, its mere presence in Los Angeles clearly would be an active threat. As this Commission ruled in *Natural Gas Pipeline Co. of America*, Opinion No. 474, "It seems clear that certification of such a project as Panhandle would have a potent competitive effect in the area, [a]nd should our regulatory efforts fail to preclude recurrence of past events, the presence of a second supplier would make available the possibility of an effective remedy." There Panhandle proposed no particular sales, but its mere presence was considered an effective spur to improved service in the St. Louis area. Furthermore, the Supreme Court has declared, in ordering divestiture of El Paso's merger with Pacific Northwest Pipeline Company, although Pacific Northwest never sold gas there, "We would have to wear blinders not to see that the mere efforts of Pacific Northwest to get into the California market, though unsuccessful, has a powerful influence on El Paso's business attitudes within the state." *U.S.* v. *El Paso Natural Gas Co.*, 376 U.S. 651, 660 (1964). The Court further declared, as is obvious, that "The presence of two or more suppliers gives buyers a choice." *Id.*, at 661. There is only one supplier in southern California now, and it is the largest private gas utility in the United States.

In that latter decision the Supreme Court emphasized even in the natural gas business, that the concept of competition embodied in this nation's fundamental laws may even preempt contrary regulatory determinations. Competition, of course, has many facets. In its broadest sense the policy is that of protecting the integrity of the market place, and the thrust of this nation's laws is to protect against the dominance by a single company of a particular line of commerce, not only for the nation, but also for its various areas and regions. A healthy competitive situation is to be maintained in which sellers shall be required to exercise their best efforts in determining the terms and conditions of service and supply to consumers. Competition is emphasized to protect the consumer in his choice of products of comparable utility, here between gas and electricity. The policy assumes that competition between business generates constant incentive for improvement in the quality and prices charged for goods and services; that competition promotes increased customer awareness, a definite development in the competition between various forms of energy; and that competition more generally accommodates a relatively greater degree of economic opportunity in all sectors of the economy, including the utility sector.

There are distinct problems for a governmental agency in striking a balance between competition and regulation, but it is clear that regulation alone is not intended to be the sole touchstone. The regulatory authorities cannot initiate potential gas supply projects not direct potential gas suppliers to put together any particular combination of supply arrangements. This is so because the administrative process does not act upon the assumption it has ownership and control of the regulated industries. To the contrary, it attempts to supplement not replace management. It must do this for regulation cannot act except upon review or enforcement. While we can certificate abundant supplies to southern California, and while the rates may be established by regulation, the terms and conditions of service, in the day-to-day operations of the companies, are most difficult to control. It is at this point, where the terms of service are provided daily, that competition would be most useful, and it is for this purpose that the CPUC requests that we certificate Gulf Pacific. The CPUC has previously ruled:

> It appears from the record that beginning in 1959 [Pacific Lighting] embarked upon a program of putting under long-term contract all available Southern California gas in an effort to prevent interruptible customers from obtaining independent supplies of gas. This program had the effect of forcing the price of California-produced gas upwards. 44 P.U.R. 3d 177, 185 (Calif. P.U.C. 1962).

The necessity to prevent this stranglehold is clear. A review of rates for interruptible service by Pacific Lighting since 1954 makes this clear;

Schedule	Effective Date	Rate	Increase or Decrease
G–50	12/1/54	0.29¢	Initial Rate.
G–50	5/15/55	0.32¢	Increase.
G–50	7/15/56	0.30¢	Decrease.
G–54	9/15/59	0.358¢ (winter) 0.348¢ (summer)	Increase.
G–54	1/31/61	0.386¢ (winter) 0.376¢ (summer)	Increase.
G–54	2/15/63	0.373¢ (winter) 0.363¢ (summer)	Decrease.
G–54	7/1/64	0.359¢ (winter 0.349¢ (summer)	Decrease.

The majority attaches no significance to these figures yet the rate decreases correspond fully to the initiation of competitive supply proposals. It is made more significant by the fact that the interruptible rate has varied from 3.0 to more than 7.0 cents between the border rate and the load center rate. By certificating the TSP, the majority has effectively precluded threat of competition to Pacific Lighting until such time in the future as some of the more exotic energy sources are economically feasible. There simply will not be any more projects of the magnitude of Gulf Pacific put together in the immediate future. The California consumer will, therefore, have to bear the brunt of a market devoid of competition.

We cannot approve any project merely because it will provide competition. Clearly this could be ruinous. We must consider the overriding public interest, and since the record establishes that Gulf Pacific would provide the lowest rates at the least cost, and would not have an adverse impact upon Pacific Lighting, this Commission should proceed to the conclusion here that Gulf Pacific would be fully adequate to provide the competition which is not present in Los Angeles. It provides competition to Pacific Lighting in all its rates: as to firm rates, there will be the alternative available to the consumer of lower electric rates than using gas; as to industrial rates, the offer Gulf Pacific makes to provide such service is the inducement properly to reflect in those rates the lowest possible costs; and, to the extent Pacific Lighting might seek an improper tilt toward the industrial rate, not only would it disturb its position in the energy market, but those rates would be subject to full regulation by the CPUC which is aware of the local problems of consumers in southern California, and can preclude any misallocations of costs. The outlook with Gulf Pacific is for a lowering of all rates for energy; without it, there is lacking that certainty which is possible, at its best, when competition and regulation are permitted to supplement each other.

One further note: as we have found, it is most difficult to predict the maximum benefits to California consumers, although the preponderance of the evidence indicates the maximum benefit would result with Gulf Pacific. The alternative benefits available under Pacific Lighting's program, while smaller in scope than Gulf Pacific, would be less likely achieved in the absence of Gulf Pacific for the incentive provided merely by the proposal of that project would not likely be forthcoming again. Edison will have to turn elsewhere than the Gulf Coast.

3. BOILER FUEL AND END USE CONTROLS

The fact that the sales here proposed by Gulf Pacific would be for boiler fuel is not decisive. The Transco case did not condemn full use as here proposed; it merely held that end use is a factor properly of concern to the Commission. This Commission has frequently granted certificates for such use. *Houston Texas Gas & Oil Corporation and Coastal Transmission Corp.*, Docket Nos. G–9262 and G–9960, Opinion No. 301 (16 FPC 118), *Northern Natural Gas Co.*, Docket No. G–2409 (29 FPC 1025); *Northern Natural Gas Co.*, Docket No. CP61–132, Opinion No. 374 (28 FPC 1155); *Midwestern Gas Transmission Company and Northern Natural Gas Company*, Docket No. CP61–303, Opinion No. 400 (30 FPC 469); and *Michigan Wisconsin Pipe Line Co.*, Docket No. CP64–109 (32 FPC 737), Opinion No. 441. It is clear from the record that the southern California market is geared to a heavy use of natural gas for steam generation. This results from the long history in the area of using natural gas for this purpose, and is made all the more compelling by the fact that the area is now, or soon will be, suffering from an energy deficiency. This need must be met, and, in line with the traditional patterns of use, the electric utilities will be using natural gas as boiler fuel without regard to its source. Certainly the increased amounts proposed by El Paso and Transwestern would be used to increase the amount of gas available for boiler fuel. To deny this source of energy its traditional market by certificating less volumes than are required for long-term needs would be to force the utilities to rely upon fuel oil and other energy sources to far greater extents than before, at greater costs and with the potential of increased health hazards. Certainly coal cannot be used in the existing plants by reason of the APCD restrictions. Low sulphur fuel oil, if used, would increase energy costs by twenty percent. Far greater use of remote generating stations than is presently forecast, would require virtual curtailment by Department of $300 million in installed facilities and by Edison of $750 million in installed facilities. In view of these cost considerations involved in alternatives to adequate supplies of natural gas, the utilities should be permitted to continue their planned utilization of existing plants in Los Angeles at the lowest costs possible, which is the Gulf Pacific project. It is easy to demonstrate the result of the majority's action on end-use controls. They have decided a two-fuel economy is justified until such time as the exotics are capable of competition, and they cite no valid reasons for their action, and they make no attempt whatsoever to explain their decision to reverse the decline in fuel oil. No witness testified as to the "destruction" of the two-fuel economy. There is no evidence of gross fuel oil consumption for southern California. The decline is established fact for the last decade, and is a clear conclusion in the *National Power Survey*. All trends support this. And the sharp decline in voluntary use of fuel oil over the last two years is primarily due to the action of the APCD in restricting its use. The involuntary use by persons already connected to Pacific Lighting's system is probably inherent in long-term contracting and the necessity to utilize to some degree the storage facilities. The small cost of such facilities, however, cannot justify continued use of a higher cost fuel.

The majority thus require Edison and Department, and indeed, the CPUC, to search for other sources, for the simple reason that gas is not available under their opinion, and to the extent El Paso and Transwestern can supply it, they will be able to do so only at greater costs. This will assist in pricing natural gas out of the steam electric market, and will require Edison to meet its future requirements almost one hundred percent from other fuels. This determination to control fuel use cannot be based upon record support for improper managerial action nor can it be based upon any reliable predictions of future energy patterns. Contrary to the utilities' careful analysis, the majority relies upon a hunch.

The predictions of the *National Power Survey* have become misbegotten clairvoyance. The pattern of supply must be nuclear and coal, even though the sources are highly speculative and may be more expensive. The reversal of managerial determination to rely upon natural gas, as has traditionally been done, must be considered only as a determination by the majority that the better alternative is higher costs to consumers.

CONCLUSION

It cannot be controverted that Gulf Pacific provides the most assured supply of natural gas at the lowest possible rates. It can be accommodated fully to the present market patterns. It should be certificated. The majority's determination to proceed otherwise cannot be readily comprehended. They make an inadequate attempt to compare rolled-in rates. They do not find any specific market. They can make no finding of an adverse impact on consumers. They can make no finding that expanded consumption of fuel oil is not a threat to health. They do not fully consider the great number of extra services and unique circumstances by the producers which should justify the field prices. They overlook the fact that the CPUC favors the Gulf Pacific-Transwestern solution. In short, they deny Gulf Pacific the right to a comparative hearing by favoring a limited project which even its sponsors do not propose as the only solution on this record but rather as part of the pattern for future supply. The two proposals are not comparable for 1966 and 1967. Instead, Gulf Pacific represents a long-term solution at present levels of service whereas TSP represents a gradual decline in service. Rather than make the comparison the majority chooses to withdraw in favor of a solution of less than three years which cannot be expanded or extended economically.

If their opinion is viewed as impliedly rejecting the long-term solution of Gulf Pacific in favor of the declining supply of El Paso-Transwestern-Pacific Lighting, the only basis is that FPC regulation is preferred even though the non-jurisdictional project is lower in cost and more stable. Their opinion can only be interpreted as being in opposition to direct industrial sales and industrial pipelines since this is the second attempt of an industrial pipeline to serve an area where the comparative merits between the regulated and non-regulated sales were overwhelmingly in favor of the former. (See *Oklahoma Illinois, supra*). Such a decision flies in the face of the Congressional mandate exempting direct sales from Commission jurisdiction. It is further inconceivable that after such a ruling, the consumers of southern California will be able to look to further efforts on the part of the natural gas industry to put together additional projects comparable in scope to the ones rejected by the majority today.

At the same time they emphasize flexibility, they ignore the inherent flexibility in Gulf Pacific in favor of the highly speculative new sources of generation, disregarding the more realistic estimates of the National Power Survey as to when these sources will come into competitive being with traditional sources.

As between the rival projects and the various alternatives, we do not, indeed we cannot, consider air pollution to be decisive, but that issue is not necessary to decision here. On all other issues the comparative merits preponderate in favor of Gulf Pacific. Thus, it would provide assured supplies at the lowest rates and for the least costs of facilities. In addition, among the applicants here and probably among all comparable proposals, Gulf Pacific provides the best reserves available for the demands of one of the major markets of the nation. As the least expensive project, the benefits to consumers would be the most favorable with Gulf Pacific, and there is no possible adverse impact on Pacific Lighting for Gulf Pacific will not interfere with Pacific Lighting's necessity for load equation. In terms of added costs and inflationary trends, Gulf Pacific would supply the volumes of gas needed for the next two decades at lesser investment of facilities than would the comparable El Paso and Transwestern projects. It would be the most beneficial project available to most utility consumers in southern California, and, since the intended beneficiaries of this Commission's statutory authority are consumers of both electricity and gas, which would here be benefited by electric reductions to a larger extent than they would in their use of gas, it is clear Gulf Pacific is preferable. In addition, Gulf Pacific would accommodate fully to the unchallenged electric forecasts for the forseeable future, thus providing assured supplies to the electric utilities which have the tremendous responsibility of meeting that demand. As to boiler fuel arguments, Gulf Pacific would do no more than continue present patterns of fuel usage, with concomitant benefits to air pollution problems. Arguments as to flexibility with the alternative project overlook the admitted fact that electricity must be generated, that existing plants, involving an investment of over one billion dollars and with a service life of over forty years, will need the fuel. Yet the further consideration is also compelling, *i.e.* these companies would not readily permit the demise of such a major effort as Gulf Pacific, should conditions and predictions change drastically. At the foreseeable pace of development, there will be more than adequate electric requirements to necessitate all other possible alternatives for electric generation. In addition to its many other benefits, the Gulf Pacific project would, in the event of a national emergency, provide another much needed source of supply to the energy starved West Coast.

Even though the direct sale here proposed is above the jurisdictional in-line price, it would be amenable to continuing regulation because of our control over the pipeline and the surveillance of the California Commission and the City of Los Angeles over electric rates. The 18.5 cents rate is supported by the great number of extra services and qualities provided, in addition to the long-term warranty. The majority errs in refusing even to consider a consensus viewpoint as to the necessity for certain conditions as recommended. Since the parties involved have not indicated they would not accept conditions, it is proper that they be accorded a reasonable opportunity to be aware of those conditions.

Therefore, I would grant Gulf Pacific's application to deliver firm gas to Edison and Department, subject to a 6 percent rate of return and acceptance within 90 days. Furthermore, I would condition the certificate to require the producer contract to reflect an initial price of 18.5¢ per Mcf at 14.65 psia (18.6¢ at 14.73 psia), with escalations every four years, but not to exceed the triggering level (presently 19¢ per Mcf) or a future area rate set higher than 19¢. In the event the area price were increased, the contract should allow escalation to the new price. Deliveries would be made in the proposed manner, commenc-

ing in the summer of 1968. In addition, I would sever the Transwestern applications as recommended by the CPUC, and authorize deliveries to commence at such steps as would correspond with the present requirements of the Pacific Lighting group.

In the alternative, should the proposed conditions be rejected, I would authorize El Paso to construct the necessary facilities to start deliveries in accordance with its expanded program, once the Transwestern volumes are accommodated to the market requirements. This would adequately provide for the market requirements up to 1971 and in doing so, would realize the purpose of this proceeding, long term stability for Southern California's energy requirements. The majority's inflexible regulatory stance at the expense of the consumers in southern California is neither tenable nor legal.

For these reasons I dissent from the order issued today.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued December 16, 1965)

KURTZ, *Presiding Examiner:* This proceeding involves the proposal of Southern California Edison Company (Edison) and Department of Water and Power of the City of Los Angeles, California (Department) to have transported to their electric generating facilities in the Los Angeles basin of California certain volumes of natural gas which they have purchased from producers in the State of Texas. These volumes are in addition to the purchases of natural gas from producers in the State of California and from the local distributors of natural gas in the Los Angeles basin. The local distributors are Southern California Gas Company and Southern Counties Gas Company of California. which together with Pacific Lighting Supply Company, all subsidiaries of the Pacific Lighting Corporation, complement each other in rendering service and are hereinafter referred to as Pacific Lighting, unless otherwise designated. The transportation of the gas purchased by Edison and Department is to be performed by Gulf Pacific Pipeline Company (Gulf Pacific), a wholly-owned subsidiary of Tennessee Gas Transmission Company. On February 12, 1963, Gulf Pacific filed with the Commission an application under the Natural Gas Act for authority to transport such gas and to construct the necessary facilities. This application was supplemented on May 15, 1963.

Also involved is Pacific Lighting's opposition to the above proposal of Edison and Department. It proposes to increase its purchases of natural gas and make increased volumes available to the electric companies. To carry out this proposal, Pacific Lighting will be required to purchase additional volumes of natural gas from Transwestern Pipeline Company (Transwestern) and El Paso Natural Gas Company (El Paso) at the California-Arizona border and enlarge its existing pipeline system from the California-Arizona border to Los Angeles. Both Transwestern on January 14 and October 11, 1963, and El Paso on September 30, 1963, as amended on November 12, 1963, filed applications under the Natural Gas Act for authority to increase their sales of natural gas to Pacific Lighting at the California-Arizona border and to construct the necessary facilities. The amendment filed by El Paso on November 12, 1963, also conditionally proposes the building of a pipeline to the southern California load center and for the direct sale of gas to major consumers, including Edison and Department.

The above applications were consolidated by Commission order issued October 21, 1963. A prehearing conference was held on November 19 and 20, 1963, and

EL PASO NATURAL GAS COMPANY
MAP OF
SOUTHWESTERN UNITED STATES
NATURAL GAS PIPE LINES

pursuant to Commission order the hearing commenced on June 1, 1964, and was concluded on March 17, 1965. Final briefs were filed on August 2, 1965. The following parties, in addition to Commission's staff, filed briefs: City of Los Angeles and Department of Water and Power; Western Oil and Gas Association; Stamp Out Smog; Southern California Edison Company; California Manufacturers Association; Transwestern Pipeline Company; Humble Oil & Refining Company; Gulf Pacific Pipeline Company; El Paso Natural Gas Company; Air Pollution Control District of the County of Los Angeles; Southern California Gas Company, Southern Counties Gas Company of California and Pacific Lighting Gas Supply Company; Los Angeles County Medical Association; Permian Basin Petroleum Association; New Mexico Public Service Commission; People of the State of California and The Public Utilities Commission of the State of California; Pennsylvania Public Utility Commission; Fuels Research Council, Inc., National Coal Association and United Mine Workers of America; Public Service Commission of the State of New York; Standard Oil Company of California; San Diego Gas and Electric Company; Arizona Corporation Commission; California Gas Producers Association and Oil Producers Agency of California.

This proceeding is to determine the most desirable manner of meeting the long-term needs for natural gas in Southern California and is an outgrowth of prior attempts over a period of several years of Edison and Department to obtain additional volumes of natural gas for their electric generating plants in the Los Angeles basin to supplement their purchasing from Pacific Lighting. This need for assured volumes of natural gas is now a major problem for the electric companies due to air pollution restrictions imposed by the State of California and the Los Angeles County Air Pollution Control District and also the public concern as to the burning of fuel oil.

Southern California Edison Company

Edison is the second largest electric utility company operating in the State of California. It renders electric service in approximately 67,276 square miles in fourteen counties in central and southern California and in two counties in central Nevada. As of April 1963 the service area population was 6,088,000. In the last 10 years the population rate of increase in Edison's service area was 30 percent greater than that of California. Edison has discounted the rate of growth and forecasts for 1985 a population of approximately 14 million in its service area. Edison's electric utility operations have undergone drastic changes. Before World War II the Edison system, from the electric energy generating standpoint, was primarily dependent on hydroelectric generation for its main energy requirements supplemented by thermal generation from a single steam electric station at Long Beach. In 1940 of a total of 3,654,000,000 kilowatt-hours transmitted, only 144,000,000 or less than 4 percent was thermal generation. As late as 1945 only about 10 percent of Edison's system energy was obtained from steam plant production and about 90 percent was produced in hydroelectric plants. In contrast, in 1962, a year of nearly average water supply, steam plants supplied about 80 percent of the energy requirements and hydro plants supplied the remaining 20 percent. In 1964 hydro generation was about 12 percent. Edison currently estimates that in 1969, under average water supply conditions the hydro percentage of generation will be about 10 percent.

The change in the nature of Edison's generating resources has been the result of a combination of the tremendous growth in electric energy demands and the circumstance that essentially all of the economic hydro generating sites available to the Edison system have been utilized. Edison's energy requirements during this period increased from 3,654,000,000 kilowatt-hours in 1940 to 5,714,000,000 kilowatt-hours in 1945 to 23,900,000,000 kilowatt-hours in 1962. This is projected to increase to more than 46,790,000,000 kilowatt-hours by 1969 with the former California Electric Power Company territory. As of December 12, 1963, Edison merged with California Electric Power Company. Edison's long range forecasts disclose an energy requirement of more than 195,000,000,000 kilowatt-hours in 1985. The capacity of the five plants to which the gas is to be delivered by Gulf Pacific in 1964 was 4,091,000 kilowatts and additions are being added to increase the capacity by 1967 to 6,226,000 kilowatts. This 1967 capacity will require an average daily fuel usage of 832,000 Mcf.

Combined with this tremendous increase in electric energy demands, which had to be supplied almost entirely from new thermal electric generating sources, were the effects of the increasing concern on the part of the public about the air pollution problem in the Los Angeles basin. This concern culminated in the adoption, by the state legislature of the provisions of California Health and Safety Code and the establishment by air pollution control authorities of several of the southern California counties, of restrictive regulations governing fuel use in the southern California area. The most restrictive of these regulations affecting the operation of steam electric generating stations are embodied in Rules 62 and 62.1 of the Air Pollution Control District, hereinafter referred to, which effectively prohibit at all times during the year when gas is available the use of fuel oil, which was previously used in Los Angeles County. The electric utilities are the largest fuel users in the Los Angeles basin and the insistent demands of public opinion made indignant by an increasing air pollution problem have created public pressures on the electric companies to burn gas in their generating plants.

Department of Water and Power of the City of Los Angeles

The Department is one of the departments of the City of Los Angeles operating under the provisions of the Charter of the City. It is under the general direction of a citizens Board of five Commissioners appointed by the Mayor. The Chief Administrative Officer of the Department is the General Manager and Chief Engineer who is appointed by the Board and is responsible to it. The Department's Power System provides electric service to the entire 457.9 square mile area of the City. Some of the actions of the Department are subject to the approval of the Mayor and Council, including the fixing of rates and as to contracts obligating the Department to pay money for a period longer than 3 years.

The Department has over 1,000,000 electric customers, and is the largest municipally-owned electric utility in the United States. The net dependable capability of the Department's generating plants is nearly 2½ million kilowatts. Over 72 percent of that capacity is provided by steam electric generating plants, all located in the Los Angeles area. In the year ending June 30, 1963, the electric system generated, purchased and received from interchange nearly 10,000,000,000 kilowatt-hours. Of this amount, 84.7 percent was produced by gas and oil-fired steam electric generating plants. On June 30, 1963, depreciated assets of the electric system amounted to $768,294,000. Depreciated investment in steam electric generating plants was $231,834,000. When new units to the steam electric plants presently under construction are completed in 1967, this investment will be over $330,000,000. The balance of the Department's electric generating requirements are provided by City-owned hydroelectric plants which were developed in connection with its water supply system and by the Federally-owned Hoover hydroelectric plant on the Colorado River.

On January 1, 1963, the City had a population of approximately 2,600,000. During the 10 years 1953–62, inclusive, City population has increased at an average of 2.15 percent per annum, compounded, and is expected to continue to do so. This compares with a statewide increase of 4 percent per annum, compounded, and 5.2 percent, compounded, estimated by Edison for its service area in southern California. At the same time electric service demand has increased at a faster rate. During the same 10-year period the number of Department customers has increased at a rate of 2.75 percent, compounded, and kilowatt-hour sales at 8.05 percent, compounded. These increases compare with Edison's estimate of 5.4 percent, compounded, increase in customers and 10.4 percent, compounded, in kilowatt-hour sales. Electric service use is increasing at a faster rate than gas service use. Pacific Lighting indicates a growth rate from 1953 to 1962 of 6.2 percent per annum, compounded, in firm sales and of 5.4 percent, compounded, for total market including an 8 percent to 9 percent increase in steam electric gas fuel use.

Department's long-range forecast indicates that its half hour peak demand will increase about 190 megawatts per year in the next 20 years. This means that between 1964 and 1985, the Department will have to add 3,790 megawatts of generating capacity, or approximately 150 percent of the Department's present total system capacity. Department claims that its estimates are conservative and that this historical annual growth rate in peak demand of 6.42 percent will increase to 7 percent for the period 1963–70, will be 4.6 percent for the period 1970–80, and 3.5 percent for the period 1975–85.

While the Department does not now know what means will be used to provide this additional generating capacity, the volumes of natural gas proposed to be delivered from the Gulf Pacific project are needed for existing steam electric generating plants and the two new 325 megawatt units now under construction at the Department's Haynes Steam Electric Generating Plant. All of these plants are comparatively new and will be able to absorb, for the full 20-year life more than the full quantity of gas (117.7 percent of the contract demand quantity) available to the Department as proposed.

If the additional generating capacity (excluding proposed Malibu nuclear plant) is provided by gas and oil-fired steam electric generating units, the Department's estimated average year fuel requirements for such steam electric generation are as follows:

Equivalent Gas, Cubic Feet (1,000 Btu per cubic foot)

Year	Daily Average	Annual Total	Gulf Pacific Beginning 7/1/67 and at 117.7% CDQ	Balance as Potential Market to Pacific Lighting
	Millions	*Billions*		
1965	296.0	107.9	----	----
1966	315.0	114.9	----	----
1967	330.1	120.5	49.6	70.9
1968	323.5	118.3	102.1	16.2
1969	313.7	114.5	105.2	[1] 9.3
1970	334.0	121.8	105.2	16.6
1975	451.5	164.8	111.9	52.9
1980	573.6	209.9	112.2	97.7
1985	675.9	246.7	111.9	134.8

[1] Decrease due to assumed availability of proposed nuclear unit commencing 1968.

Gas Purchase Contracts

In an attempt to secure a reliable supply of natural gas, Edison through the Bechtel Corporation contacted Tennessee Gas Transmission Company, one of the largest natural gas companies. This resulted in the contracts here under consideration entered into in January 1963 with Humble Oil & Refining Company (Humble) and some 30 other producers[1] for the purchase of natural gas from the Katy and Pledger gas fields located in Waller, Fort Bend, Harris and Brazoria Counties, Texas. Edison also as of February 1, 1963 entered into a contract which was later amended, with Gulf Pacific for the transportation of the gas purchased in the Katy and Pledger fields. Gulf Pacific as the transporter is also a party to the gas purchase agreements. In response to the Department's second invitation for bids for a continuous year-round 20-year supply, Gulf Pacific's bid which incorporated contracts with the same producers in the Katy and Pledger fields and its transportation agreement was accepted and approved by the City of Los Angeles. The gas purchase contracts are a package arrangement and are so considered by the purchasers and the other parties to this proceeding.

The terms and conditions of all these gas purchase and sale contracts are identical in substance and are treated as a group. Each producer-seller has committed itself to deliver its proportionate share of the contract volumes committed to Edison and Department, respectively, from the Katy field. This proportion is based on the percentage of ownership of each producer-seller in the two Katy units known as Unit I and II. Humble's individual proportion of the Katy sales is 45.85 percent of the gas from Unit I and 38.42 percent of the gas from Unit II. In the Pledger field Humble is the sole seller.

The contract term is for 20 years and includes a build-up period from the first through the sixth year. The contracted daily quantities from the Katy and Pledger fields are as follows (Mcf at 14.73 psia):

	Edison	Department	Total
Contract Year:			
1	370,000	220,000	590,000
2	410,000	235,000	645,000
3	445,000	235,000	680,000
4	485,000	235,000	720,000
5	485,000	245,000	730,000
6 through 20	485,000	250,000	735,000

The contracts provide that in any year Edison and Department may take up to 117.7 percent of the contract daily quantity. This represents the following daily volumes (Mcf at 14.73 psia):

	Edison	Department	Total	Annual
Contract Year:				
1	435,490	258,940	694,430	253,466,950
2	482,570	276,595	759,165	277,095,225
3	523,765	276,595	800,360	292,131,400
4	570,845	276,595	847,440	309,315,600
5	570,845	288,365	859,210	313,611,650
6 through 20	570,845	294,250	865,095	315,759,675

---

[1] In addition to Humble Oil & Refining Company, the other producers are Amerada Petroleum Corporation; The Atlantic Refining Company; Bank of the Southwest National Association and Peter M. Frost, Co-Trustees of the Peter M. Frost Trust No. 261; Clarion Oil Company; George H. Coates; Continental Oil Company; Edwin L. Cox; C. M. Frost; J. M. Frost, Jr.; J. M. Frost, III; J. M. Frost, III, Trustee; General Crude Oil Company, Jake L. Hamon, Sam G. Harrison, Houston Bank & Trust Company; W. H. Keenan; Marathon Oil Company; Monsanto Chemical Company; Pan American Petroleum Corporation; Elizabeth M. Scherck (Individually); Elizabeth M. Scherck; C. W. Showers & Ralph Johnston, Trustees U/W of E. A. Showers; Shell Oil Company, E. A. Showers Trust, Sinclair Oil & Gas Company; Socony Mobil Oil Company, Inc.; Sun Oil Company; Sunray DX Oil Company; Texas Gulf Producing Company; Tidewater Oil Company, and Elaine S. White.

This 117.7 percent of the contract daily quantity is customarily referred to as a 100 percent load factor, since it reflects the maximum volumes of gas Edison and Department may take on an annual basis. The contract demand quantity figures represent 85 percent of the total volumes to which Edison and Department are entitled on an annual basis, so that operation at the contract demand level results in an 85 percent load factor.

Edison and Department are also entitled under the contracts with the producers for any one day to take from 0 percent up to 125 percent of the contract daily quantity, so long as they do not exceed 117.7 percent on an annual basis. Thus the maximum daily volumes which are available to Edison and Department from the producers in both fields are as follows (Mcf 14.73 psia):

	Edison	Department	Total
Contract Year:			
1	462,500	275,000	737,500
2	512,500	293,750	806,250
3	556,250	293,750	850,000
4	606,250	293,750	900,000
5	606,250	306,250	912,500
6 through 20	606,250	312,500	918,750

Edison and Department are not obligated to take or to pay for any volume of gas on any given day. They are obligated to take or pay for a minimum volume each month equal to the contract demand volume times the number of days in that month. If Edison or Department should fail to take that minimum during any month, it may be made up during the next succeeding 12 months. Both Edison and Department contemplate taking this gas at 100 percent load factor which reflects utilization of the full 117.7 percent of the contract demand quantity.

The producers will deliver the volumes of gas at two delivery points being the tailgates of the processing plants in the Katy and Pledger fields, respectively. These volumes will be delivered at pressures sufficient to enable the gas to enter Gulf Pacific's transmission line but in no event to exceed 1000 psig at Katy and 1100 at Pledger. The contract provides for a price adjustment for gas delivered below a heating value of 1000 Btu per cubic foot. The weighted average of the heating value to be delivered as calculated on a wet basis is 1025 over the 20-year period, starting with initial year, at 1029 and final year at 1022. This average is equivalent to a Btu content of 1042 on a dry basis. Humble's witness who made the calculations believes that the heating value will be slightly higher. It is not feasible to process the gas to a lower Btu content.

Blanketing all of the gas sales contracts in this case to Edison and Department, including the quantities that Gulf Pacific is entitled to purchase for its use, is Humble's guarantee to Edison and Department of full delivery of the gas contracted for from all of the producers, during the entire 20-year term at no cost to Edison or Department above their gas contract obligations.

Edison and Department have agreed to purchase the gas at 18.5 cents an Mcf on a pressure base of 14.65 psia (18.6 at 14.73 psia) which escalates one-cent every 4 years. There are no renegotiation clauses, no favored-nation clauses, no inflation clauses by which the price may be increased for the full 20-year term of the contract, except for reimbursement of 75 percent of any new or additional taxes imposed on production by the State of Texas. The allowable reimbursement is limited to a maximum of two cents an Mcf.

In support of the availability of gas from the Katy and Pledger gas fields estimates of reserves were made by Mr. Born, Director of the Reserves Department of Tennessee Gas Transmission Company, whose function is making gas reserve estimates of fields and areas in which Tennessee is interested or has gas purchase contracts. His estimate discloses that there is available to Edison and Department from these two fields 6,009,506,000 Mcf at 14.73 psia. In the Katy field the remaining recoverable reserves as of July 1, 1965, were 6,304,809,000 Mcf. After deduction of allowances for fuel and shrinkage and prior contract commitments, the remaining reserves available from the Katy field are 5,695,435,000 Mcf. In the Pledger field the reserves committed under Humble's Pledger contract are 359,378,000 Mcf of remaining recoverable reserves, and after allowance for fuel and shrinkage and prior contract commitments, the remaining reserves available are 314,071,000 Mcf. The deliverability of this committed gas to Edison and Department was made by Mr. Stamos, Supervising Engineer in the Reserves Department of Tennessee Gas Transmission Company. His scheduling of the reserves discloses that at a 95 percent load schedule the full requirements can be met for 16 years and at a 100 percent load factor (117.7 percent of the contract daily quantity) for 12 years and thereafter a buildup of additional gas will be required under the warranty agreement.

In addition, the Staff's evaluation of the Katy and Pledger reserves and deliverability therefrom are in agreement with Mr. Born and Mr. Stamos. El Paso brought out on cross-examination of Mr. Horton, Edison's President, that he had employed an outside consultant to evaluate the reserves and deliverability underlying their gas purchase contracts and his estimate showed reserves of about 6,000,000,000 Mcf with deliverability on the order of 15 to 16 years.

El Paso questions the gas supply available to Edison and Department from the Katy and Pledger fields claiming such reserves to be 3,906,610,000 Mcf with a deliverability life of 8.7 years. This estimate was made by Mr. Laird, a consulting geologist and petroleum engineer. To arrive at this estimate, the acre feet were reduced by 11 percent in the Katy field, the connate water was increased from 21.7 percent to 30 percent in the Katy field and a 70-percent recovery factor was used in certain of the reservoirs in the Katy and Pledger fields.

The acre feet difference between the estimates of Mr. Born and Mr. Laird resulted from isopachous mapping. In the Katy field, because of its large areal size and the low angle of dip present in the producing formations, there is a large portion of the field contained in what is known as the wedge area. The wedge area may be defined as that portion of the reservoir which lies between the gas-oil or gas-water contact at the top of the sand, and the gas-oil or gas-water contact at the base of the sand. The inner limit at the base of the producing sand formation establishes the point where the entire producing section becomes gas productive, and at that point the entire producing sand interval should be mapped as gas productive. When a Katy reservoir is bounded on all sides by a gas-water or gas-oil contact point, the wedge area extends completely around the field. Due to the immense size of the reservoirs in the Katy field and the large portion of those reservoirs contained in the wedge area, it is important to obtain adequate control to insure that the area is properly mapped. This control can be plotted by establishing the gas-water or gas-oil contact line at the base of the sand. Mr. Laird did not consider this control, nor did he obtain adequate control by any other means. Mr. Laird admitted that portions of the productive pay sections were not included in his estimates of acre feet. The amount of net pay section excluded on Mr. Laird's isopachous maps by the use of his method is determined by the amount of well control. Mr. Laird stated that Katy had a good well density, which gave him adequate control in the wedge area, but when asked which wells were in the wedge area, he just did not know. In support of the connate or interstitial water present in the formations of the Katy field, Mr. Laird stated:

Q. (Mr. Hargrove) Now, what specifically were the data which you used to arrive at your conclusion as to connate water percentages at Katy?

A. I used several sources of information including, first, electric log calculations made on ten different wells scattered throughout the field, including some ten separate reservoirs. I used the core analysis data by Core Laboratories and United Core, Inc., on three wells, including about ten different reservoirs. I included a report of Core Laboratories showing connate water—average connate water percentages in a number of fields producing from the Yegua. And I used a composite connate water versus permeability graph of the Tom Ball field, which produces from the Cock field—Yegua formation, the same formation that produces Katy, located about 20 miles distant from Katy, probably the closest producing field. I used all of that information. I didn't take the specific number of any one of those methods, but I had the range of data presented by all of those methods, including the testimony of the Humble engineers before the Railroad Commission as to the connate water content in the 1-B, and in the No. 2-A reservoir, with all of that mass of data I decided that 30 percent connate water was a reasonable figure to use for the Katy field.

The log analysis was not made by Mr. Laird. He felt not qualified to make such a determination and employed a Mr. Kelso for the interpretations who was not called as a witness to substantiate the determinations from the logs. Mr. Laird was not familiar with the data upon which Mr. Kelso relied in making his estimate. The core analysis, relied upon by Mr. Laird, consisted of one made in 1945, another in 1950 and a telephone conversation as to a Humble well somewhere in the Katy field. His core analysis data were based on a method which involves the use of water based cores and are considered far less reliable than the use of oil based cores or the capillary pressure method used by Mr. Born. The testimony of the Humble witnesses before the Texas Railroad Commission as to connate water of 30 to 35 percent relates to oil production in oil zones of the Katy field. The reservoirs in question have large gas caps and thin oil columns or zones. The log interpretation chart of Schlumberger Well Survey Corporation indicate a connate water value of 30 percent for an oil zone of Katy's characteristics and a connate water value of 11 percent for the gas zone. The witness, in support of the connate water saturation, felt it necessary to refer to other Yegua sands in other fields. Also, El Paso, in its brief, referred to a document issued by the Interstate Oil Compact Commission entitled "Unitized and Cooperative Projects in the United States issued September 1, 1952." The basis for these determinations is not disclosed nor is it known as to whether or not they refer to oil zones or gas zones.

Mr. Laird reduced the recovery factor from 85 percent to 70 percent in 12 reservoirs in the Katy field and in two reservoirs in the Pledger field on the grounds that a water drive was active therein. Under the witness's own formula, on his assumptions and at a reservoir pressure of 1,000 lbs., the recovery factor, as testified by him, would be 89 percent. In the Katy 4 sand series in order to obtain the 70 percent recovery factor he would have to abandon production at a pressure of 2,650 lbs. He did not know the history of production, the effectiveness of the water drive or what the terminal pressure is going to be. Mr. Born pointed out that the Katy field would be produced essentially as a volumetric reservoir and if there is some water drive effective in the late stages of depletion the abandonment pressure would be 1,000 lbs. If Mr. Stamos had given effect to a partial water drive the deliverability life would have been extended.

It is apparent from this record that the estimate of reserves and deliverability made by Messrs. Born and Stamos are reasonable.

The California Commission takes the position that the initial price of gas should not exceed 17 cents per Mcf, the contract escalations of 1-cent should occur each 5 years instead of each 4 years, and the price of gas should be tied to a 1042 Btu content. California in support of the 17-cent price cites the present guideline price as set forth in the Commission's Statement of General Policy No. 61–1. In support of the change in the escalation provision, the Commission's Regulations, Section 154.93(c) applicable to jurisdictional sales is cited. The basis for the 1042 Btu condition is the statement that the delivered gas will have such a Btu content. The Public Service Commission of the State of New York would like to have the initial price fixed at 15 cents per Mcf with a further condition that the price be modified to conform to the area rate to be established in Texas Gulf Coast Area Rate Proceeding, Docket No. AR64–2.

Staff states that the initial price of 18½ cents per Mcf named in the contracts between Edison and Department with Humble is excessive and that such price should be 16.2 cents per Mcf at 14.65 psia, and that such price should be tied to any area price developed in the future for Texas Railroad District No. 3. Further, if consideration is given to a fixed price for the life of the contract, the Staff suggests that the Commission's guideline rate established for Texas Railroad District No. 3 of 17 cents per Mcf at 14.65 psia would be reasonable.

The Staff in support of the proposed price condition, claims that the in-line price for jurisdictional sales in said District No. 3, in which the Katy and Pledger fields are located, is 16.2 cents per Mcf. This price follows the opinion of Staff witness, who relied on *Texaco Seaboard, Inc., et al.*, 29 FPC 593, issued March 27, 1963. In that case the Commission determined, for contracts entered into on July 1, 1960 (prior to the issuance of the Commission's Statement of General Policy No. 61–1 on September 28, 1960, 24 FPC 818, announcing a price level of 18 cents per Mcf for initial sales in Texas District No. 3), that the in-line price for such contracts was 16 cents. He also reviewed all jurisdictional contracts entered into between June 7, 1964 and December 31, 1963, in said District and relied on permanently certified sales from January 1, 1958 through December 31, 1963. In the witness's opinion the 16-cent level became 16.2 cents as a result of three permanent sales at 18 cents under contracts entered into for gas in District No. 3 between Natural Gas Pipeline Company of America and Humble Oil & Refining Company on September 1, 1962, Pan American Petroleum Corporation on October 16, 1962 and Tidewater Oil Company on October 16, 1962.[2] These contracts are not subject to the infirmities of the contracts for 17.5 cents to 20 cents per Mcf in the 1958–60 period referred to in the above *Texaco Seaboard* opinion.

---

[2] BY MR. HARGROVE:

Q. Now, you have described at transcript 1918 [1981]—so I can understand the mechanics of it—that prices of 17½ cents and above should be discounted, since they have either subsequently been set aside, et cetera, et cetera. My interest is in the word "discounted." Now what do you mean by "discounted?" Do you mean to disregard it entirely?

A. No, sir, I didn't disregard them entirely, but I discounted them in that I didn't give them very much weight.

Q. And this is a mental process of your own?

A. Yes, sir.

Q. Now, in considering the 18-cent price, where you said you did not feel that they should be given controlling weight, and that you did give them some weight, how much weight did you give them?

A. The Commission arrived at an in-line price of 16 cents before the policy statement. Now, these three 18-cent sales were after the policy statement, they were not litigated, there was nothing wrong with them, and I gave them some weight, enough to make my conclusion that the in-line price after the policy statement should be 16.2.

No attempt was made by Staff witness to appraise the premium features of the Humble contract.[3] He did not know of any similar contract.

On March 27, 1963, the Commission amended its Statement of General Policy No. 61-1 by substituting 17 cents per Mcf instead of 18 cents per Mcf as a price level for District No. 3 (29 FPC 590). Under the holding in the above *Texaco Seaboard* case the 17-cent price is not applicable as the Humble contract was entered into prior to the amendment (29 FPC 593, 599).

It is noted that under the initial prices set forth in the schedule in Staff's brief during the period January 1, 1958 through December 31, 1963, for natural gas sold under permanent certificates in Texas Railroad District No. 3 that the 16.2-cent price is the same as applicable to 7 sales out of a total of 94. The initial first month volume of the 7 sales is only 669,000 Mcf out of a total of 6,107,441 Mcf, being 10.96 percent of the total volume; that the higher prices ranging from 16.5 cents to 20 cents are the prices for 33.24 percent of the sales volumes, and the 20-cent price represents 24.85 percent of the sales volume.

The question here is not the determination of an in-line price for a jurisdictional sale which may be changed under Sections 4 and 5 of the Natural Gas Act, but whether the price paid for this large block of gas will effect an increase in prices to interstate purchasers. *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1, 25.

Staff's exhibit relating to jurisdictional sales, in which the contracts are designated as permanently and temporarily certificated, discloses: In the year 1958, under permanent certificates, nine initial sales were made at 20 cents per Mcf. In the year 1959, under permanent certificates, two sales were made at 18 cents, one of which was reduced from the contract price of 20 cents. In the year 1960, under temporary authority, one initial sale was made at 20 cents per Mcf, five at 18 cents per Mcf of which four were contracted for at 20 cents, and two at 17.5 cents. In the year 1961, under temporary authority, one initial sale was made at 17.5 cents per Mcf and four at 18 cents per Mcf. The 18-cent price resulted from a reduction in the contract price of 20 cents per Mcf. In the year 1962, under temporary authority, two initial sales were made at a price of 17.5 cents and one at 18 cents, and three initial sales were certified at 18 cents.

It is further noted that after January 14, 1963, the date of the Humble contract, all initial jurisdictional sales have been made at a price lower than in the Humble contract *to wit:* Two sales on January 21 and 30, 1963 at 17 cents; one on February 12, 1963 at 17.5 cents; one on March 5, 1963 at 13 cents; one on March 19, 1963 at 14.5 cents; one on March 26, 1963 at 14 cents; one on April 22, 1963 at 12 cents; one on September 10 at 12 cents and one on September 11, 1963 at 15 cents. This exhibit also discloses price variations for conditions of delivery, including variations of 0.21931 cents to 0.25 cents for dehydration charges and variations of 1 cent to 2 cents for gathering charges.

---

[3] BY MR. WOODBURY:

Q. I do understand correctly, do I not, that you do not include within your 16.2-cent maximum in-line price the premium features in the Gulf Pacific contract to which Mr. Hargrove referred?

A. I did not consider the premium features when I determined my in-line price. My in-line price was determined from the sales that are permanently certificated in Railroad District No. 3 for gas moving in interstate commerce.

* * * * * * *

Q. Do you have any position, Mr. Jones, as to whether or not the Edison Company, and the City of Los Angeles, acted prudently in agreeing to pay the prices that they agreed to pay for the Gulf Pacific arrangement, including the premium features in that arrangement?

A. I have no position on that.

Considering the fact that contracts have been entered into at higher prices, both for deliveries at the well and after gathering, prior to the Humble contract and that the subsequent contracts have been entered into at lower prices, it is apparent that the Humble contract will not force an increase in prices for gas to interstate purchasers. It should be noted that the Humble contract is not comparable with other contracts in this area. Several of the distinguishing features are as follows: the contract volumes are to be transported after the construction of the pipeline and are scheduled to meet Edison and Department's requirements; the volumes of gas involved under this package are by far the largest ever contracted for in this district and are equal to the capacity of the pipeline after the build-up period; the warranty under which the purchasers are guaranteed the contracted volumes at a specified quality and pressure for 20 years; and also the stability of price under such warranty for the 20-year period.

Transportation Contract

The gas purchased in the Katy and Pledger fields by Edison and Department will be transported by Gulf Pacific and delivered to the following steam electric generating stations:

Edison's stations	*Department's stations*
El Segundo	Harbor
Redondo	Valley
Alamitos	Scattergood
Huntington Beach	Haynes
Etiwanda	

The transportation contract is for a term of 20 years and requires Gulf Pacific to deliver to Edison and Department 117.7 percent of the contract demand quantity on an annual basis. It also makes available approximately two-thirds of the line pack available to Edison and one-third available to Department, with the result that Gulf Pacific is obligated when called upon by Edison and Department to instantly increase the rate of delivery of gas as needed to any combination of stations up to a maximum hourly delivery rate available from the pipeline, which available rate shall not be less than 150 percent of 1/24th of the maximum daily demand quantity, provided, however, such maximum hourly delivery rate of 150 percent shall not be maintained for a longer period than 30 minutes; otherwise the maximum aggregate delivery rate to which Edison and Department are entitled shall not exceed 135 percent of 1/24th of the maximum daily quantity. Such variations in takes will permit both Edison and Department to take at the 117.7 percent of the contract demand quantity, which they plan to so do.

Edison and Department for the transportation of their gas will pay Gulf Pacific for such service charges determined under a cost-of-service formula as set forth in the contracts. It is the policy of Gulf Pacific to pass on to Edison and Department all savings that can be achieved by it in operating costs and to this end has requested a ruling from the Internal Revenue as to the filing of a consolidated return with its parent, Tennessee Gas Transmission Company. The estimated 20-year average cost of transportation service is 14.46 cents per Mcf on the basis of a separate Federal income tax return and 13.86 cents per Mcf on the basis of a consolidated return.

The 20-year summary of costs for both gas and transportation service submitted by Gulf Pacific reflects the following delivered Mcf costs to Edison and Department. These costs are computed at the 100 percent load factor and a pressure base of 14.73 psia and reflect a Federal income tax computation under the 1964 Revenue Act. The portion of the following costs relating to the transportation service is subject to downward adjustment, as hereinafter pointed out.

Gulf Pacific Pipeline Company, Docket No. CP63–223

Gulf Pacific was incorporated November 28, 1962, as a Delaware corporation and is authorized to do business in the States of Texas, New Mexico, Arizona and California. It is a wholly-owned subsidiary of Tennessee Gas Transmission Company and was organized for the purpose of transporting the gas purchased by Edison and Department.

To transport the gas, Gulf Pacific will construct 1,398 miles of 36-inch pipeline from the Katy field in Texas across New Mexico and Arizona to the metropolitan area of Los Angeles, California. Other facilities include 45 miles of 20-inch line from Pledger field to the Katy field; 102 miles of delivery lines varying in size from 16 to 30 miles for delivery to the various electric generating plants; and 15 compressor stations having a total of 188,000 horsepower. The total estimated cost of these facilities is $313,923,000, which includes a contingency allowance of $14,949,000.

The pipeline is designed to transport the maximum contracted obligations. It is estimated that as to pipeline capacity, a 98 percent load factor can be maintained and the full contract volumes of 117.7 percent of the contract demand quantity on an annual basis will require the pipeline to be operated at a 96 percent capacity load factor. The pipeline will have a winter capability of delivering about 920,000 Mcf of gas per day and a summer capability of about 882,000 Mcf per day. These figures do not include line pack which is estimated for the sixth year to be about 170,000 Mcf and somewhat greater in the earlier years.

Gulf Pacific plans to finance the initial construction of the project by issuing $174,000,000 of 5 percent first mortgage bonds, $44,000,000 of 5¼ percent debentures and $73,000,000 of common stock. At the end of the third year of operation an additional $14,000,000 of 5 percent first mortgage bonds and $3,000,000 of 5¼ percent debentures will be issued. On February 1, 1963, Edison and Tennessee Gas Transmission Company entered into an agreement whereby Edison was given the option to purchase 19 percent of the common stock of Gulf Pacific, upon initial financing and of subsequent issues if any. It is contemplated that 81 percent of the common stock will be subscribed for and purchased by Tennessee. In the event that Edison exercises its option it is further agreed that Tennessee will sell and deliver to Edison and Edison will purchase from Tennessee 6 percent of the total common stock of Gulf Pacific between the beginning of the fifth year and the beginning of the ninth year of operations at the net book value per share. The option also provides for the establishment of cumulative voting and for not less than five directors on the board of Gulf Pacific.

Under Gulf Pacific's plan of financing it will have outstanding at the end of the construction period $174,000,000 first mortgage bonds, 5 percent series, due in 20 years; $44,000,000 debentures 5¼ percent series, due in 20 years; and common stock representing $73,000,000. It is expected that the debt securities will be sold at a premium sufficient to cover the expenses of sale and the common stock at a price sufficient to net the company the $73,000,000. The stock is to be subscribed to and held by Tennessee Gas Transmission Company, subject to Edison's 25 percent option. During the construction period bank loans in the amount of $254,142,000 will be obtained at a stated interest rate of 4¾ percent. It is anticipated that the interest charges on the bank loans will be at the prime rate which was at the time of hearing 4½ percent. They are to be repaid at the end of the construction period. No question has been raised as to the ability of Gulf Pacific to finance the project.

The cost-of-service formula set forth in the contracts heretofore referred to between Edison and Department with Gulf Pacific provides for a return at an annual rate of 11 percent on Gulf Pacific's equity. Equity is defined as 25 percent of the capital investment, plus working capital and the excess of the total accumulated sinking fund accrual over the total accumulated depreciation and amortization allowance.

The Staff and the Public Utilities Commission of California take exception to this allowance as being excessive. The Staff maintains the return for Gulf Pacific should be not more than a 6 percent allowance on a traditional rate base. It is California's position that a 6 percent rate of return on total capital of Gulf Pacific is eminently fair, just and reasonable. Since no rate base figure was submitted by Gulf Pacific in this proceeding, California states that for comparative purposes the rate base and total capital will be approximately the same in this instance. Gulf Pacific objects to the 6 percent return proposed by the Staff and California.

The charges which Gulf Pacific receives for the service rendered should enable it to operate successfully, to maintain its financial integrity, to attract capital, and to compensate its investors for the risks assumed. *F.P.C.* v. *Hope Natural Gas Company*, 320 U.S. 591, 605. The determination as to what is a proper rate of return to be allowed Gulf Pacific is simplified by reason of its charges being determined under a cost-of-service formula. The contracts provide that for the transportation rendered and for the availability of such transportation service, Edison and Department shall pay each month to Gulf Pacific, whether or not they shall require Gulf Pacific to transport any gas for them during such month, Edison and Department's allocated portion of Gulf Pacific's just and reasonable cost-of-service for such month. The cost-of-service includes total coverage for operating and maintenance expenses, depreciation and amortization allowances, taxes, debt service expense, and return on equity capital.

The only question presented as to rate of return is compensation to Tennessee, and possibly Edison, for the risks they will assume by the purchase of the common stock. This compensation or return, according to Gulf Pacific, should be commensurate with the returns on equity being earned by other enterprises having similar risks. The basis for the 11 percent return was a comparison of returns on equity of electric utilities, telephone companies, and 11 major pipelines which earnings included their non-jurisdictional business. Gulf Pacific contends that the important risk facing Tennessee as the holder of its common stock is that the investment will not be recouped in 20 years through the depreciation of plant and equipment allowance. This allowance is on a 28.6-year life (3.5 percent straight-line depreciation). As it is now provided for, at the end of the 20-year period the capital will consist only of common stock.

This risk is based on the assumption that no expansion will occur on the Gulf Pacific system during the 20 years, and that the transportation service for Edison and Department will terminate at the end of the present contract. This argument advanced of non-growth in Gulf Pacific's brief follows the statement made by its financial witness, who admitted that he had no basis for such a statement. It is inconsistent with other portions of Gulf Pacific's brief and the testimony of other witnesses for Gulf Pacific who pointed out the possibility of expansion of the system and the demands for gas in southern California.

If serious consideration could be given to the argument in the Gulf Pacific brief endeavoring to justify the return claimed that a "real risk" is present because additional gas might not be available to Gulf Pacific at the end of the 20-year period and also that new contracts for the sale of gas after that time might not be available, consideration would have to be given to such an affect on the economical feasibility of the project. Likewise, the Humble warranty as to its ability to furnish the gas would have to be discounted.

In the Staff's exhibit the 11 percent return on common equity of Gulf Pacific results in a return on a net rate base of 6.58 percent in the first year, and increasing to 10.86 percent in the 20th year for an average during the 20-year period of 7.68 percent. In Staff's brief this 20-year average return is calculated to be 7.26 percent. Under California's computations, based on a 6 percent return on total year-end capitalization less interest charges, the return to common equity is 8.4 percent for the first year of operation, with a high of 8.61 percent in the third year and thereafter decreasing to 5.5 percent in the 20th year, being an average for the 20-year period of 6.78 percent.

Gulf Pacific, in its Reply Brief, as to the earnings on common equity herein sought of 11 percent, refers to returns based on common equity by other pipelines under a cost-of-service formula tariff. Reference is made to four companies which have earned under a cost of service tariff for a 5-year average, 11.23 percent. The companies referred to are: American Louisiana Pipe Line Company, Chicago District Pipeline Company, Columbia Gulf Transmission Company, and Pacific Gas Transmission Company. From this comparison it is argued that the Staff's recommendation of a return that would allow only 7.26 percent on common equity invested in Gulf Pacific is unreasonable. The difficulty of going outside the record for companies to make such a comparison is that an assumption must be made as to the similarity of risks. It must be assumed that each of the companies referred to operates under a comparable cost-of-service arrangement, and that similar conditions exist as to service, capital structures and capital costs, and many other factors affecting the attraction of capital and bearing upon the value of equity securities. Even a cursory examination of data discloses as to these companies obvious differences in operations and cost formulas.

American Louisiana Pipe Line Company's cost-of-service formula provides for a 6 percent return on net investment rate base and a depreciation expense of 3.5 percent. This service is available to Michigan Wisconsin Pipe Line Company and Michigan Consolidated Gas Company. It is also engaged in making firm sales at wholesale to customers whose daily maximum requirements do not exceed 5,000 Mcf, with no provision for minimum bill.

Chicago District Pipeline Company operates under a cost-of-service formula which provides, among other things, for a 6¼ percent annual return on net investment rate base, and specifies straight-line depreciation rates including 3.1 percent on transmission plant. Service is available to Indiana and Illinois distributors purchasing gas from natural gas companies maintaining connections with Chicago District's system, which extends from connections with the systems of Natural Gas Pipeline Company of America and Midwestern Gas Transmission Company.

Columbia Gulf Transmission Company's cost formula includes a 6.21 percent adjusted return on net investment rate base and depreciation expenses at the rate of 3.5 percent. Service is limited to United Fuel Gas Company.

Pacific Gas Transmission Company's cost formula includes a 6¼ percent rate of return on net investment rate base. Depreciation expenses are computed under the remaining-life method based upon the number of years the Canadian authorities have authorized the export of gas from Canada by Alberta and Southern Gas Company, Ltd. Pacific Gas and Electric Company purchases gas under the cost formula at the California-Oregon border. The average charge was 37.05 cents per Mcf in 1963. In addition, service is available to El Paso Natural Gas Company under a cost-of-service formula of 6¼ percent return on net investment for transportation of gas into the States of Idaho, Washington and Oregon from the Canadian border. Such transportation resulted in an average charge of 2.16 cents per Mcf in 1963.

It should be noted that Gulf Pacific's financial witness agreed that many risk factors affecting the usual pipeline operations of natural gas companies considered by him were not present as to Gulf Pacific. Considering the uniqueness of the Gulf Pacific operations as to risk and particularly to the fact that its financial integrity is guaranteed by Edison and Department for a period of 20-years, the Humble warranty as to supply of gas, the growing load in southern California, the standing of its parent, Tennessee Gas Transmission Company, and of its transporters, Edison and Department, in the financial community, it is apparent that a 6 percent rate of return on a net investment rate base is reasonable and adequate at this time.

The Staff has advanced a "double leverage" theory as to the effect of the earnings of Gulf Pacific on its parent, Tennessee Gas Transmission Company, and also upon Edison in the event it exercises its option to purchase 25 percent of the common stock of Gulf Pacific. The "double leverage" theory has been referred to by the Commission in *Midwestern Gas Transmission Company*, Opinion No. 444, 32 FPC 993 at 990, issued October 13, 1964, and was therein defined as follows:

> The "double leverage" effect, which is sometimes known as "pyramiding", arises from the fact that MGT's equity capital is owned substantially by Tennessee and that Tennessee's investment in MGT must be considered to represent the investment of debt dollars and equity dollars in proportion to Tennessee's capitalization ratios. Thus, the return on MGT's equity becomes the overall rate of return on Tennessee's investment in MGT; and to the extent that Tennessee's investment represents debt capital with an imbedded cost lower than this rate of return, the return to it on that

> portion of its investment representing equity capital is increased. Moreover, as the return on equity to MGT increases, the return on Tennessee's equity invested in MGT increases geometrically * * *

In that case the Commission stated that it did not place any particular reliance on the "double leverage" theory, and pointed out that such computation demonstrates the return on equity to a subsidiary is not a measure of the return to the parent's stockholders whose funds have been invested in the subsidiary.

According to Staff's calculation a rate of return to Gulf Pacific of 6 percent under the "double leverage," would result in a return of 20.56 percent on the equity of Tennessee Gas Transmission invested in Gulf Pacific, and as to Edison 17.61 percent. To achieve this result the investment in common stock must utilize debt financing of the parent company bearing a lower interest rate than the earnings on the common stock of the subsidiary. In this case, aside from other facets, consideration cannot be given to this theory for no showing was made that the investment by Tennessee in the common stock of Gulf Pacific will be derived from borrowed funds. In fact, Staff witness concurred in the statement that Tennessee cannot use Gulf Pacific common stock as collateral for borrowing under Tennessee's bond indenture. Under Tennessee's indenture the borrowing is limited to its own physical property.

The costs shown relating to the proposed gas plant in service of Gulf Pacific appear inflated. These costs affect the transportation charges under the Gulf Pacific contract with Edison and Department. Tennessee as of December 31, 1963, claims an expenditure of $5,523,748 as being related to delivery of gas to California which amount includes questionable items and investments associated with the abandoned projects of California Gas Transmission Company and Tennessee-California as Transmission Company. On December 31, 1963, Tennessee's investment in Gulf Pacific was $526,000. The gas plant in service should only include such costs as are associated with the successful Gulf Pacific project. A determination of a proper and legitimate cost attributable to the gas plant in service of Gulf Pacific cannot be determined from the record in this proceeding. A matter of this nature invites investigation and should not lightly be passed upon. This also applies to certain other items of cost which have been questioned by the Staff and the California Public Utilities Commission which affect the charges to be made by Gulf Pacific for the transportation of gas.

Pacific Lighting

In the Pacific Lighting group of companies, Southern California Gas Company and Southern Counties Gas Company of California are engaged in the distribution of gas as public utilities in central and southern California. Their service area encompasses over 20,000 square miles with a population of approximately 10,400,000. In addition to retail service, San Diego Gas and Electric Company and Long Beach, California are served at wholesale. They also own and operate among others, transmission lines extending from the California-Arizona border near Blythe and Needles, California to the Los Angeles basin. These lines are used for the transportation of gas purchased at the border from El Paso and Transwestern. Pacific Lighting Gas Supply Company is also a public utility owning among others a transmission line extending from the California-Arizona border near Needles to the Los Angeles basin, which is used to transport gas purchased from Transwestern at the border for resale to its sister companies in the Los Angeles basin. Pacific Lighting Gas Supply Company also purchases gas produced in the State of California which is likewise resold to its sister companies. In 1964, Pacific Lighting's total supply of gas to meet the service rendered consisted of 168.7 M^{3}cf from California sources, 471.1 M^{3}cf from El Paso and 150.2 M^{3}cf from Transwestern. In addition to these purchases Pacific Lighting received from California sources 55.7 M^{3}cf for exchange and withdrew 51.4 M^{3}cf from storage (at 14.73 psia).

In 1963, Pacific Lighting purchased from El Paso under a contract demand schedule 406,293,094 Mcf of gas (at 14.9 psia with a Btu content for the gas delivered near Needles of 1080 and 1072 for the gas delivered near Blythe)[4] at a cost of 31.5 cents per Mcf. Pacific Lighting purchased an additional 16,340,797 Mcf of gas under other rate schedules at an average cost of 23.31 cents per Mcf. In 1964, Pacific Lighting's purchases from El Paso were increased to 414,220,323 Mcf under the contract demand schedule at a cost of 30.05 cents per Mcf. Also the purchases under other El Paso rate schedules were increased to 52,113,000 Mcf at an average cost of 22.48 cents per Mcf.

In 1963, Pacific Lighting's purchases from Transwestern under a contract demand schedule were 109,500,000 Mcf (at 14.73 psia) with a Btu content of approximately 1052[5] at a cost of 42 cents per Mcf, and 8,821,639 Mcf of additional gas at a cost of 21.8 cents per Mcf. In 1964, Pacific Lighting purchased 109,800,000 Mcf under the contract demand schedule at a cost of 41.8 cents per Mcf and an additional volume of 40,410,317 at an average cost of 22.4 cents.

To carry out its supply program, Pacific Lighting has entered into a contract with El Paso for an additional 250,000 Mcf of gas per day (at 14.9 psia) and with Transwestern for an additional 340,000 Mcf of gas per day (at 14.73 psia). The agreements schedule deliveries as follows:[6]

[In M^{3}cf]

Date	Transwestern (at 14.73 psia)		El Paso: Daily Contract Quantity—	
	Daily Contract Quantity	Maximum Daily Demand	at 14.9 psia	at 14.73 psia
Present Permanent Authorization	300	345	1,130	1,143
Nov. 1, 1963	350	460		
Nov. 1, 1964	450	535		
Nov. 1, 1965	535	640	1,280	1,294.7
Nov. 1, 1966			1,330	1,345.3
Jan. 1, 1967	640	640		
Nov. 1, 1967			1,380	1,395.9
Increase	340	295	250	252.9

Pacific Lighting's purchases from Transwestern are scheduled at the maximum daily volumes.

---

[4] El Paso is obligated to deliver gas with a heat content of not less than 1000 Btu per cubic foot for gas from San Juan basin and 950 Btu for gas from other sources. Total bill adjusted pro rata if average total heating value of all gas delivered falls below composite of above Btu.

[5] Transwestern is obligated to deliver gas with a minimum heat content of 1000 Btu per cubic foot.

[6] Transwestern is temporarily authorized to deliver up to an average annual quantity of 430 M^{3}cf until December 31, 1965. This higher delivery is made possible by agreement of Pacific Lighting to reduce the border delivery pressure (order amending order issuing certificate in Docket No. CP64–34, issued December 4, 1964, 32 FPC 1043). El Paso's initial delivery on November 1, 1965, was scheduled to replace an interim volume of 100 M^{3}cfd (at 14.9) authorized under Docket No. CP63–296. This interim volume is being delivered through facilities built to serve the growing requirements of El Paso's east-of-California customers. El Paso has been authorized to extend the interim deliveries up to an additional year, reduced, however, to 70 M^{3}cfd because of growth of El Paso's east-of-California market (order amending order in Docket No. CP63–296, issued March 23, 1965, 33 FPC 592).

The agreement with El Paso providing for the above additional deliveries is set forth in a letter under date of July 15, 1963, and provides that the charges for the gas shall be the same as set forth in El Paso's Rate Schedule "G". The charges on that date, at 14.9 psia, were a monthly demand charge of $2.78 per Mcf and a commodity charge of 22.48 cents per Mcf, representing a cost of 31.6 cents per Mcf at 100 percent load factor.[7]

The agreement as to the Transwestern volumes is set forth in letters between Pacific Lighting and Transwestern under dates of December 11, 1962, July 31, 1963, January 13, 1964 and September 15, 1964. Different charges are named for the different level of services, *to-wit:* (per Mcf at 14.73 psia at 100 percent load factor basis).

> 39.6 cents (11 cents per Mcf of demand; 28.6 cents Mcf commodity) at the contract demand level of 350,000 Mcf and the maximum daily demand level of 460,000 Mcf. The excess volumes over the contract demand level are priced at 22 cents per Mcf. The minimum daily take is 85 percent of contract demand.
>
> 37.2 cents (increased from 37 cents to 37.5 cents by the January 13, 1964 letter and decreased by September 15, 1964 letter, and the demand and commodity portions of the rate are not specified) at the contract demand level of 450,000 Mcf and the maximum daily demand level of 535,000 Mcf. The excess volumes over the contract demand level are priced at 21 cents per Mcf.
>
> 36 cents (increased from 35 cents by the January 13, 1964 letter and the demand and commodity portions of the rate are not specified) at the contract level of 535,000 Mcf and the maximum daily demand level of 640,000 Mcf. The excess volumes over the contract demand level remains at 21 cents.
>
> 32.7 cents (increased from 32.5 cents to 33.2 cents by the January 13, 1964 letter and decreased by September 15, 1964 letter and the demand and commodity portions of the rate are not specified) at the contract level of 640,000 Mcf and excess gas price remains at 21 cents. The minimum daily take requirement changes to 80 percent of contract demand.

All of the agreements recite that the charges for contract demand service shall not be in excess of those named and are conditioned on Transwestern being authorized to sell 100,000 Mcf of gas per day to Cities Service Gas Company.[8] In addition the prices referred to in the letter of July 31, 1963 as amended are based on an assumed gas purchase cost at 16.7 cents per Mcf. If Transwestern's sale to Cities Service Gas Company is not authorized, the 37.2 cents changes to 37.5 cents, the 36 cents changes to 36.5 cents and the 32.7 cents changes to 33.2 cents; and these prices are based on an assumed gas cost of 17 cents per Mcf on existing reserves and 16 cents per Mcf on new reserves. If Transwestern's gas purchase cost vary up or down by more than a tenth of a cent (0.1-cent) than those assumed then the sales prices named are to be adjusted to reflect such changes.

Under the above scheduled deliveries Pacific Lighting claims it will be able to meet the service proposed to be rendered. It takes the position that if there is found a need for more gas, the gas acquisition program will be accelerated to provide whatever level of service is found by the Commission to be in the public interest, including meeting 100 percent of the requirements of its firm and interruptible customers. If, however, Gulf Pacific is certified to transport the gas purchased by Edison and Department, Pacific Lighting takes the position that it will not undertake to meet the 100 percent requirements of its interruptible customers (also referred to as the "16th level") and additional volumes will not be required until 1970. In the words of Pacific Lighting's policy witness:

---

[7] The present demand charge is $2.312 and the 100 percent load factor price is 30.08 cents per Mcf.

[8] By Commission Opinion No. 472, issued August 31, 1965, 34 FPC 659, Transwestern was authorized to sell 100,000 Mcf per day of gas to Cities Service Gas Company.

> You can forget that 16th level of service if Gulf Pacific is certified. We couldn't accept a certificate or have our suppliers accept a certificate for these supplies we have in this proceeding if Gulf Pacific were certified. We would have to shoot our operations towards the most economic level. And that means the next expansion would be in 1970.

Pacific Lighting's market estimates both before and after the adoption of Rule 62.1 of the Air Pollution Control District are almost identical. Its own estimates for the years shown of market requirements, the volumes of gas under the Gulf Pacific project and loads it does not propose to serve both without and with the Gulf Pacific project in operation, are as follows (M^{3}cf):

	1964	1965	1966	1967	1968	1969	1970	1975

Load Not Proposed to be Served:								
With Gulf Pacific	75	134	245	277	303	343	403	--------
Without Gulf Pacific	68	78	90	103	113	150	205	--------

According to Pacific Lighting's schedules its estimated deliveries to Edison and Department do not even equal the volumes of gas under the Gulf Pacific project, as shown by it, in 1967 and thereafter. The following are Pacific Lighting's estimated deliveries to Edison and Department giving consideration to Air Pollution Control District Rule No. 62.1 and on the assumption that the Gulf Pacific project is not certificated.

	1964	1965	1966	1967	1968	1969	1970
Edison	135	150	162	158	170	166	159
Department	81	82	88	90	84	72	68
Total	216	232	250	248	254	238	227

In a cold year Pacific Lighting's market estimates are slightly higher and the load not to be served is shown as follows:

	1964	1965	1966	1967	1968	1969	1970
With Gulf Pacific	116	170	288	322	349	392	453
Without Gulf Pacific	115	123	134	148	160	199	256

Pacific Lighting's peak day estimate shows firm requirements in millions of cubic feet, as follows:

1964-65	3,361	1967-68	3,836
1965-66	3,513	1968-69	4,004
1966-67	3,673	1969-70	4,176

Pacific Lighting claims that without the Gulf Pacific project in operation, it will be able to meet the above firm peak day requirements through the year

1966–67 and with Gulf Pacific in operation only through 1964–65. The following deficiencies are shown in millions of cubic feet:

	1965–66	1966–67	1967–68	1968–69	1969–70
Without Gulf Pacific				47	231
With Gulf Pacific	72	204	297	426	635

This difference is the result of Pacific Lighting's freezing its takes of gas from El Paso and Transwestern, at 1,143 M^{2}cf and 410 M^{2}cf per day for the years shown. It is also noted that gas from underground storage is shown at 777 M^{2}cf for 1965–66 and increasing to 955 M^{2}cf in 1969–70. This is less than the present underground storage capability which is, as follows:

	Maximum Hourly Rate (M^{2}cf)	Maximum 24-Hour Rate (M^{2}cf)
Start of Winter Season	1,280	1,150
A Day in January	1,165	1,035

The studies of Pacific Lighting show the necessity for additional storage to be added both with and without Gulf Pacific in operation. Further, Pacific Lighting has stated that if Gulf Pacific is issued a certificate it will not need additional out-of-state gas until 1970.

Pacific Lighting's policy is to take all California produced gas first and to that end it has contracted for practically all the available gas, including that which will be available in the future so as to exclude other potential purchasers. Pacific Lighting purchases California gas for different purposes. In addition to its regular purchases, gas is purchased for firm peaks only and gas designated as "call gas" which Pacific Lighting can call on the producer to deliver on any day and subject to a specified annual volume. The "call gas" is taken in the winter months and returned at a premium in the summer months. While "call gas" is available on any day, the peaking gas is available on days of peak firm demand.

Gulf Pacific, Humble, California Gas Producers Association and Oil Producers Agency of California and the Staff point out that Pacific Lighting has understated the availability of California produced gas. Pacific Lighting has contracted for additional California gas not reflected in its estimates and increased volumes are admittedly available from other present sources. Gulf Pacific would increase the availability of California gas on a peak day in 1970 to 1,259 M^{2}cf instead of 1,033 M^{2}cf.

Transwestern Pipeline Company, Docket Nos. CP63–204, CP64–91

Transwestern, a Delaware corporation, was authorized by Opinion No. 328 issued August 10, 1959 (22 FPC 391) to construct and operate its present pipeline system which consists of a 30-inch line extending from Roswell, New Mexico, to a point on the California-Arizona border near Needles and two 24-inch lines extending from Roswell, one into the Panhandle-Hugoton basin areas of Oklahoma and Texas and the other into the Permian and Delaware basin areas of New Mexico and Texas. In addition to the sale of gas to Pacific

Lighting, Transwestern makes certain main line residential, commercial and industrial sales in Oklahoma, Texas and New Mexico and also certain sales for resale in Texas and New Mexico. These sales are in addition to the 100,000 Mcf of gas per day to Cities Service Gas Company authorized on August 31, 1965 by Commission Opinion No. 472.

Under the present applications, Transwestern seeks authority to increase its level of gas deliveries to Pacific Lighting Gas Supply Company at the California-Arizona border to 640,000 Mcf per day in the increments heretofore set forth. The evidence in support of this increase in sales to Pacific Lighting was presented on the basis that the Cities Service sale would be made and on the assumption that the sale would not be made which can now be disregarded. The additional facilities proposed increases the system design capacity of 350,000 Mcf to 640,000 Mcf per day and will consist of 98,400 additional compressor horsepower, 67.3 miles of loop line on existing laterals and 15.5 miles of line to connect the Halley gas field. The estimated cost of these facilities is $44,188,700.[9]

To finance the cost of the facilities, Transwestern proposed to issue $36 million of 5¼ percent additional first mortgage bonds. This interest rate for Transwestern's bonds reflects its position in the money market as of January 9, 1964. Under the financing proposed, Transwestern's approximate debt ratio in 1965 is 76 percent; in 1966, 75 percent; in 1967, 73 percent; and in 1968, 71.2 percent. The return on equity is estimated at 9.7 percent for 1965, in 1966 through 1968 it will be slightly under 9 percent, which Transwestern considers adequate as a result of negotiations with Pacific Lighting. It is contemplated that dividends on common stock of $2,368,000 will be paid commencing in 1966.

The contract rate heretofore set forth between Pacific Lighting and Transwestern are designed to produce a 6⅔ percent rate of return. The Staff and California take exception to certain costs included in Transwestern's cost of service studies as well as the use of a 6⅔ percent rate of return. Staff's position is that Transwestern's rates should be conditioned to reflect a 6¼ percent rate of return and its costs should be reduced to reflect a Federal income tax rate of 48 percent, the flowing through of liberalized depreciation, and that in any future rate proceeding Transwestern should be prohibited from including gas prepayments in excess of $948,621. Of this amount, $48,443 is allocated to Pacific Lighting, $19 to Cities Service and $900,159 to joint use. California wants Transwestern's rates tied to the heating value of the gas and to file rates reflecting the utilization of liberalized depreciation on a flow-through basis, require lower depreciation rates based on extended service life of plant, require a change in the method of determining depreciation to a straight-line remaining life method, require a change in rate design from all incremental cost savings being assigned to the commodity component to be spread between demand and commodity charges, to reflect a 6¼ percent rate of return in its rates instead of 6⅔ percent, and to require the flow-through of any future savings due to a reduction in costs of purchased gas to its customers.

---

[9] On January 25, 1965, during the closing days of the hearing, Transwestern filed a Second Supplement to its application in CP64–91 requesting authorization to construct additional facilities estimated to cost $1,574,000 to connect estimated additional reserves of 416,618 M^2cf in 10 gas fields adjacent to its West Texas lateral. These additional supplies of gas were contracted for with Gulf Oil Corporation. On objection, Exhibits 810 through 817 (Reserves and Availability Estimates, Flow Diagram Data, Cost Data and Prepared Testimony) relating to the Second Supplement were excluded due to the late filing which would have extended the hearing. The additional exhibits do not materially affect Transwestern's estimates in that the availability of gas to meet full requirements with warranty gas is extended one year and the rate of return would be reduced four hundredths of 1 percent in 1965 and seven hundredths of 1 percent in 1966 and 1967. Exhibits 858 through 863, the gas purchase contracts, were received as evidence of Transwestern's ability to secure additional gas. (Sec. 2.61 of the Commission's General Policy and Interpretations.)

Transwestern offered evidence as to a proper rate of return. Its consultant testified that a proper rate of return for Transwestern would be not less than 7 percent. Pacific Lighting in its study of Transwestern's cost of service study used 6¼ percent, but its witness testified that he had made no study to determine what rate of return Transwestern should be allowed. Witnesses for the Staff and California testified to the same effect. The Staff points out that in the original certificate case, the rates were computed using a 6¼ percent rate of return, thus the Commission made a "rate of return determination" and the same rate of return should be used here in accordance with the Commission's holding in *Texas Gas Transmission Corp.*, 22 FPC 378. The Commission has not made a determination of the reasonable rate of return for Transwestern. The cost of money does vary from time to time as well as the value of equity securities. The original certificate was issued 6 years ago, on August 10, 1959, and the use of the 6¼ percent rate of return at that time does not mean that such a rate is reasonable today. The *Texas Gas Transmission* case is not in point. In that case just 4 months had elapsed after a rate settlement, which is a considerable difference of time than 6 years. Transwestern does not oppose the use of the 48 percent corporate income tax rate, or the requirement to file rate changes resulting from the increase in volume of sales and as to the costs of gas. It does oppose the other suggested conditions.

Transwestern is an existing natural gas company. The conditions proposed by the Staff and California would change the character of this proceeding to one for determination of just and reasonable rates. The evidence relating to these proposed conditions is, at the most, only superficial and is not sufficient to justify the requested conditions.

Transwestern, while conceding that its supply of gas is insufficient to meet its full requirements beyond a claimed 10-year period from 1963 alleges that it will be faced in the immediate future with a problem of having to pay for gas that it cannot take. It takes the position that if certificates here sought are granted it will be able to work out the prepayment problem which it has created. Transwestern submitted a schedule of costs applicable to gas prepayments for the years 1966 through 1973 amounting to $39,594,000, which it claimed would increase its cost of service by $28,565,000, during this period. In 1963, Transwestern's total advances for gas to be purchased amounted to $849,771. Of this amount, $325,033 was payments made prior to initial delivery of gas and $524,738 was for gas to be taken over the term of a contract. In 1964, the advances were $818,039 of which $275,702 was payments prior to purchase and $542,337 for gas to be taken over the term of a contract.

The contracts under which Transwestern originally commenced service and which have given rise to the prepayment problem contain provisions requiring it to take-or-pay for specific quantities of gas based upon the reserves which by agreement of the parties are determined to be underlying the leases in the contracts. The extent of Transwestern's future prepayments are not known nor can it be determined if Transwestern will have to forfeit any of the gas as to which the prepayments are made. Transwestern has obtained deferral agreements as to a determination of reserves with many of its producers, as well as the tendering of certain gas volumes. The sale to Cities Service will substantially affect Transwestern's prepayment position and short-term sales may be made to other pipelines. Transwestern's principal supplier from its inception is the

Gulf Oil Corporation which owns better than 30 percent of its common stock and has certain directors in common. In the face of a claimed possible adverse prepayment position, Transwestern recently contracted with Gulf Oil Corporation for additional supplies, which contracts set forth take-or-pay provisions. In one instance, Transwestern changed a make-up provision in a Gulf contract from the life of the contract to a 5-year period. Transwestern's witness refused to state whether such prepayment costs would in fact be incurred. Even if incurred, before any allowance for such prepayments can be considered in a rate proceeding, a determination will have to be made as to whether or not they are prudent and proper. On the showing here made, it is doubtful if such prepayments will occur.

Transwestern has projected its requirements on the basis of 100 percent contract demand delivery in accordance with the schedule of deliveries to Pacific Lighting heretofore set forth and on the assumption of delivery to Cities Service Gas Company of 50,000 Mcf per day commencing on January 1, 1964, with 100,000 Mcf per day beginning January 1, 1966, plus its other sales and fuel requirements. In support of the above requirements, Transwestern submitted a gas reserve estimate showing 4,625,622 M^{2}cf as being dedicated to its pipeline system plus 866,580 M^{2}cf warranted by Gulf Oil Corporation. The Gulf Oil warranty dated October 7, 1963, provides that if a certificate is issued that Gulf will make up any deficiency that might occur under Transwestern's gas purchase contracts in the Worsham-Bayer Ellenburger Gas field up to 1,095,000 M^{2}cf. Of this amount, 228,420 M^{2}cf is estimated to be proved gas reserve. Based on these reserves, Transwestern submitted several availability studies based upon the physical capability of the wells to produce. The scheduling of gas under these availability studies commenced in the last 6 months of 1963 and one discloses that warranty gas will be required in the year 1968 and with such warranty gas the estimates disclose an ability to meet full requirements through the year 1973. Another schedule discloses that without the warranty gas and by a rearrangement of takes, in which the reserves are depleted at a faster rate, Transwestern will be able to meet the above requirements through the year 1971. Transwestern's showing, even considering the availability of gas under the additional contracts submitted with its Second Supplement, does not meet the Commission's standard of 12 years. (Sec. 2.61 General Policy and Interpretations).

The Staff in this proceeding takes no issue with Transwestern's "supply capabilities" due to the proximity of its system to developing gas reserves and its demonstrated ability to contract for additional reserves as disclosed by the above-mentioned 6 contracts with Gulf Oil Corporation. It does point out that some downward adjustment in the reserves estimated by Transwestern may be reasonable and that the warranty gas should not be considered. This conclusion that Transwestern's reserves are sufficient is based upon Transwestern's statement that the producers will deliver up to the capability of the wells to produce rather than upon the obligations of the producers to deliver the maximum daily contract quantities. The Staff's exhibit based upon the maximum daily contract quantities discloses a deficiency occurring in the year 1967.

Gulf Pacific and Humble take exception to Transwestern's showing as to its gas supply claiming that it is inadequate. Gulf Pacific would reduce Transwestern's reserves in 6 reservoirs by 448,028 M^{2}cf which would limit its ability to meet the projected requirements only through the year 1969. This reduction is due to the use of the pressure decline method in estimating reserves. Transwestern's witness estimated the reserves in the 6 reservoirs in question by use of the volumetric method and his estimate is at odds with the actual pressure-production performance in the fields. Transwestern's witness refused to recognize the maximum pressure reported by the operators under oath to the Texas Railroad Commission. He claimed that such pressures were not stabilized even though he had no personal knowledge that they were not. He refused to recognize that the reservoir pressure could be calculated from the shut-in wellhead pressure reported to the Texas Railroad Commission. He did not know why pressure data are reported to the Texas Commission. At the same time, as disclosed by his work papers, he used in many instances such reported figures to the Texas Commission to determine bottom-hole pressure. The failure of the witness to recognize the reported pressure resulted in his reserve being over estimated by 448,028 M^{2}cf. In addition, the availability studies are over stated by the witness's use of maximum contract demand instead of the higher maximum daily volumes which Pacific Lighting forecasts it will purchase. Included in the availability studies are reserves which will not be connected and reserves which have been released. Whether or not the producers from which Transwestern proposes to purchase the volumes in excess of contract volumes have or will install the necessary facilities is not known. Approximately 16 of the producers have contract rights to process gas on Transwestern's main line and no allowance has been made for plant fuel and shrinkage. The availability studies include gas from Warren Petroleum Corporation's Monument and Sitter Plants which depend upon additional sources of gas to be developed and connected to partly offset the declining production from currently connected sources.

It is apparent from this record that Transwestern's gas supply is not sufficient to justify the issuance of certificates of public convenience and necessity as here proposed.

El Paso Natural Gas Company, Docket No. CP64–76

El Paso, a Delaware corporation, is a natural gas company engaged in the business of producing, purchasing, transporting and selling natural gas at wholesale to distributing companies and other pipeline companies for resale, and to industries and others for their own use. The pipeline system of El Paso[10] extends from fields located in the Permian basin of west Texas and southeast New Mexico, the Texas and Oklahoma Panhandle, the San Juan basin of northwest New Mexico and southwest Colorado, and the Four Corners area of the States of Arizona, New Mexico, Utah and Colorado, through the States of Texas, New Mexico and Arizona to points of termination at the boundary between the States of California and Arizona near Blythe, California, and Topock, Arizona, and to a point of termination at the boundary between the States of Arizona and Nevada near Big Bend, Arizona.

El Paso in this proceeding proposes to increase its sales to Pacific Lighting by an additional 250,000 Mcf per day at 14.9 psia[11] in accordance with its agreement with Pacific Lighting heretofore referred to. On November 12, 1963, El Paso filed an amendment to its application indicating a willingness to deliver an additional 325,000 Mcf per day to Pacific Lighting near Needles, California, above the 250,000 Mcf per day. The schedule of additional deliveries to be 475,000 Mcf per day commencing January 1, 1966, 500,000 Mcf on November 1, 1967, and the total amount of 575,000 Mcf[12] to commence on January 1, 1968 It also submitted an alternative to this proposal. In the event Pacific Lighting should be unwilling to accept deliveries of 575,000 Mcf and upon the Commission's finding that the direct sales to customers in Los Angeles basin are required by public interest, El Paso proposes to transport the 575,000 Mcf plus 290,000 Mcf to be supplied by Transwestern from the California-Arizona border and sell the 865,000 Mcf [13] to industrial customers in the Los Angeles basin. This amendment contemplates deliveries by Transwestern as proposed by its application in this proceeding to Pacific Lighting, or in the alternative to a pipeline which El Paso would construct for the delivery of gas to the Los Angeles load center.

---

[10] The Pacific Northwest Division of El Paso's pipeline system is subject to divestiture. *U.S.* v. *El Paso Natural Gas Co.*, 376 U.S. 651 (1964).

[11] 252,875 Mcf at 14.73 psia.

[12] 581,613 Mcf at 14.73 psia.

In order to accomplish the increased sale of 250,000 Mcf per day El Paso proposes to construct approximately 47,350 horsepower at existing compressor stations; 24,000 horsepower at new compressor stations; 193 miles of pipeline looping; additional absorption, dehydration, and fractionation capacity at existing plants, and other related facilities. The total estimated cost of such facilities is $50,442,000.

To make delivery of an additional 575,000 Mcf to Pacific Lighting, El Paso proposes to construct approximately 393.3 miles of new 30-inch line in New Mexico and Arizona (the Chaco-Needles line); 190 miles of 30-inch line loop on the existing Permian-San Juan cross-over line in New Mexico and 149 miles of additional connecting lines plus gathering lines and 58,400 additional horsepower installed in existing compressor stations and 14,500 horsepower in new stations plus miscellaneous facilities. The total cost of these facilities is estimated at $134,207,000. At the request of Pacific Lighting, El Paso submitted a study for the delivery of 325,000 Mcf above the 250,000 Mcf proposed in its original application by means of additions to its existing system rather than through the Chaco-Needles line proposed in its first amendment. This alternative proposal does not take into consideration possible higher operating costs and El Paso prefers to construct the new Chaco-Needles line to any additional looping of existing lines for the 325,000 Mcf capacity over the 250,000 Mcf originally sought. To make the deliveries of the 865,000 Mcf, El Paso proposed to construct 231.5 miles of 36-inch main line, 102.4 miles of sales laterals, two 12,000 horsepower compressor stations, and miscellaneous facilities in the State of California. El Paso estimates that the capital cost to deliver 865,000 Mcf from the California-Arizona border to Los Angeles is $63,488,000.

El Paso's proposed financing depending on the particular project contemplates the sale of the following securities:

	250 M^{2}cf	575 M^{2}cf	865 M^{2}cf
Common Stock	$13,800,000	$37,350,000	$55,000,000
1st Mortgage	28,000,000	90,650,000	135,240,000
Sinking Fund Debentures	10,000,000	10,000,000	13,000,000
	51,800,000	138,000,000	203,240,000

El Paso states that if it receives a certificate to deliver an additional 250,000 Mcf per day it will reduce existing rates by ¾ of a cent when such deliveries reach 200,000 Mcf a day (November 1, 1966). If its amended application is granted a reduction of 1-cent will be made when deliveries reach an additional 500,000 Mcf per day (January 1, 1967), over the presently certificated volumes of 1,130,000 Mcf per day. On the basis of a ¾-cent reduction the rate to Pacific Lighting at 100 percent load factor would be 29.33 cents per Mcf at 14.9 psia and 29 cents per Mcf at 14.73 psia. On the basis of a 1-cent reduction, the rate to Pacific Lighting at 100 percent load factor would be 29.08 cents per Mcf at 14.9

---

[13] 871,613 Mcf at 14.73 psia.

psia and 28.75 cents per Mcf at 14.73 psia. This offer to reduce rates assumes that there will be no increase in producer prices over the prices that are set forth in its exhibits. If at the dates of the proposed reduction the producer prices are either higher or lower the rate reduction will be adjusted to reflect the changes.

With reference to the proposal to deliver 865,000 Mcf to Los Angeles, El Paso states that it will not enter into a contract for such deliveries with Edison and Department as it does not want to be in a position of having a "Mobile-type contract" and that it will not offer a fixed price over a long term under any circumstance. El Paso's estimated costs at Los Angeles using a 6⅛ percent return are computed by El Paso, as follows:

Cost at the Los Angeles Load Center

	1966	1967	1968	1969	1970
	Cents	*Cents*	*Cents*	*Cents*	*Cents*
Mcf at 14.9 psia	34.67	34.00	33.85	33.86	33.86
Mcf at 14.73 psia	34.27	33.61	33.46	33.47	33.47

The Staff contends that a further reduction of 0.28 cents per Mcf should be made by El Paso, a total of 1.03 cents per Mcf instead of 0.75 cents per Mcf at the time of the additional deliveries of 200,000 Mcf per day. This additional reduction is computed on El Paso's projected 1970 earnings and a rate of return of 6.44 percent was reduced to 6⅛ percent, which return was found reasonable in ***El Paso Natural Gas Company***, Opinion No. 366, 28 FPC 688, issued October 19, 1962. El Paso takes the position that it is offering a fixed reduction and the difference between 6⅛ percent and the resulting return is "for the imponderables, the things that we might not be able to foresee." Mr. Boyd, in speaking for El Paso stated:

> PRESIDING EXAMINER: Do I understand that it is the position of the El Paso Natural Gas Company that such a return [6⅛%] is reasonably sufficient to assure confidence in the financial soundness of El Paso and is adequate to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties?
>
> THE WITNESS: That is another way of asking me, Mr. Examiner, whether or not I consider 6⅛ to be fair and reasonable. I consider the determination of the rate of return to be a highly complex question. It is a judgment factor. It is one that changes from month to month. I can say to you that we are confident that on the rates that we have proposed that we would be able to finance, that we would be financially strong.
>
> What that situation might be in the future, what might be the cost of money, and the other factors that go into the matter of the determination of the rate of return, I cannot foresee.

El Paso's calculated return on the 250,000 Mcf expansion is as follows:

1965	1966	1967	1968	1969	1970
Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
6.26	6.35	6.29	6.45	6.33	6.44

The Staff's proposed reduction in El Paso's rates would bring the return in 1965, 1966, 1967 and 1969 below 6⅛ percent. This and certain other adjustments that Staff would make in El Paso's cost studies, as pointed out above relating to Transwestern, are matters for determination in a rate case.

El Paso claims a gas supply of 15 years under the 250,000 Mcf expansion and 13 years under the 575,000 Mcf expansion, from January 1, 1963, based upon reserves of 30,897 billion cubic feet. Exceptions to El Paso's claimed gas supply are taken by Gulf Pacific, Humble and the Staff. The Staff, while it questions certain reserve estimates takes the position that El Paso's deliverability is adequate to support its application. In certain of the El Paso gas fields, reserve estimates were made and the differences are as follows:

Remaining Recoverable Reserves—January 1, 1963

Fields	El Paso (M^{2}cf)	Gulf Pacific (M^{2}cf)	Difference (M^{2}cf)
BY GULF PACIFIC			
San Juan Basin:			
Mesaverde	6,391,988	4,940,622	(1,451,366)
Basin-Dakota	3,575,600	1,657,402	(1,918,198)
Delaware Basin:			
Cayanosa	381,900	378,774	(3,126)
Gomez	1,170,000	377,596	(792,404)
Worsham-Bayer	486,700	0	(486,700)
	12,006,288	7,354,394	(4,651,894)
BY STAFF	El Paso (M^{2}cf)	Staff (M^{2}cf)	Difference (M^{2}cf)
San Juan Basin: Basin-Dakota	3,559,400	2,767,300	(792,100)
Delaware Basin:			
Gomez-Ellenburger	1,170,100	636,600	(533,500)
Brown-Bassett	1,578,400	712,000	(866,400)
BY HUMBLE	El Paso (M^{2}cf)	Humble (M^{2}cf)	Difference (M^{2}cf)
Lea County Dry Gas:			
Blinebry	281,300	198,000	(83.300)
Jalmat	676,900	448,000	(228,900)
Eumont	448,000	288,000	(160,000)
Tubb	73,400	73,400	0
Justis	166,700	166,700	0
Crosby	67,300	37,900	(29,400)
	1,713,600	1,212,000	(501,600)

In addition to the above, Humble, Gulf Pacific, and Staff take exception to the amount of gas shown in El Paso's estimate as being available as casinghead gas production from west Texas including the Permian basin. During 1963, a total of 1,238,900 Mcf per day of residue gas was estimated to be delivered to El Paso from plants which gather primarily casinghead gas in the Permian basin. This amounts to 58.8 percent of El Paso's total gas supply from the Permian basin, and in that year the Permian basin supply amounted to 57.7 percent of El Paso's total gas supply, so that the Permian casinghead gas amounted in 1963 to 33.9 percent of El Paso's total gas supply. Since casinghead gas is produced in conjunction with the production of oil, its availability is determined by the amount of gas produced per barrel (the gas-oil ratio) and the total number of barrels of oil produced. Oil production in Texas is subject to proration, which is accomplished by the Texas Railroad Commission setting a specific number of days in each month in which a well may be produced. The so-called producing day percentage is determined by dividing the number of producing days permitted by the proration authorities by the total number of days in the month. This does not mean that oil is produced only on 8 or 10 days per month, but it does mean that the total monthly production from a well can be equal to only 8 or 10 days, or whatever the number of producing days may be, times the daily allowable of the well. Since casinghead gas can be produced only when oil is produced, it is apparent that the estimated availability of casinghead gas is dependent upon the allowed producing days. The Staff concurs with Humble, in the conclusion that El Paso has overstated the number of producing days. It is also noted for comparison that in the year 1976, Transwestern estimated for its west Texas supply, a producing day percentage of 38.9 percent, while Humble used 40.1 percent, whereas El Paso used 80.5 percent. The actual producing days permitted by the Texas Railroad Commission since the date of the estimates substantiates Humble's estimate. (Texas Commission allowable for 1964 was 28.2 percent, Humble 28.6 percent, El Paso 29.5 percent; and during the first 4 months of 1965, Texas Commission 29.1 percent, Humble 29.6 percent, and El Paso 31.2 percent). It also is evident that El Paso failed to give adequate consideration to the effects of waterflooding in the reservoirs in determining its availability of casinghead gas which is overstated.

In the San Juan basin, El Paso used an extremely high load factor for the operation of the wells and it is doubtful that such a load factor can be maintained. The San Juan estimate also depends upon an assumption that virtually all of the under developed areas in the San Juan basin will be drilled and that the deliverability from such wells will equal existing wells in the better areas of the field. El Paso objects to Gulf Pacific's use of certain pressure data including that which it reported to the New Mexico Commission designated as shut-in wellhead pressure. In addition, disagreement exists as to a number of other factors used in making up the estimate.

In the Delaware basin the difference between El Paso and Gulf Pacific as to the fields considered, rests on assumptions as to the proved area in each field and in the assumptions as to the net pay thickness of producing sands. El Paso estimated the proved area beyond usual limits and assumed 100 percent of the gross Ellenburger formation thickness as being productive in said fields. This assumption as to net pay in this formation is excessive considering the use of 70 percent for such formation in other fields based upon performance, which Gulf Pacific used.

In the Lea County dry gas fields considered, Humble used a composite pressure decline curve for estimating reserves. El Paso in four of the fields used individual well curves and a composite pressure decline curve in two of the fields. Individual well pressure curves are resorted to in fields where little or no communication between wells exists. In the Lea County fields there is good communications in the reservoir. El Paso in justification of the individual well curve method used in four of the fields was based upon the claim of the presence of liquids in the hole. In the two fields which he used a composite curve, the average liquid yield was 13 times as great as in two of the fields where individual well curves were used. The interpretation of individual well curves is subject to the particular time at which the curve is drawn and interpreted, and subsequent data frequently alters a prior prediction. Thus, it is the accepted industry practice to use a composite curve. El Paso took into consideration in its composite curves the supercompressibility factor for gas (commonly called the "Z" factor) but did not take this factor into consideration for the individual well pressure determinations. There is evidence that the reserves in these wells have reached the point of declining deliverability. Up to the year 1963, these fields had lost 108 gas wells due to abandonments, conversions to oil or shut-in. El Paso estimates more wells will be drilled, and contemplates no further net loss of wells will take place as the fields continue to decline toward final depletion. It also assumes that these wells will reach peak production in the late stages of reserve depletion when they are 80 to 100 percent depleted. As a general rule, full deliverability is maintained only up to 60 or 70 percent of reserve depletion.

El Paso in its deliverability studies assumed that its deliveries from wells in the East Panhandle field, received at the Panoma Plant, will increase from 35.5 M^2cf per day in 1963 to 102 M^2cf per day in 1977. El Paso does not control the takes from this field. It only has 398 out of 1,285 wells. Of the 398 dedicated to El Paso, 285 have been assigned limited allowables because they cannot produce the regularly prorated allowable, and of these limited allowable wells, 200 do not produce even the assigned limited allowable. It is noted that the shut-in wellhead pressure has dropped 50 pounds in the past 2 years, but El Paso has allowed only a 66-pound drop in the next 11 to 12 years.

It is clear that the weight of evidence is against the availability of gas as estimated by El Paso and its estimate cannot be accepted.

The Staff deliverability study did not give consideration to the divestiture of El Paso's Pacific Northwest Division. Further, according to Staff witness, it was not a complete deliverability study of the whole El Paso system and as to Permian basin only two reservoirs were considered for which the Staff had made reserve estimates. In the words of the witness "This is not a complete deliverability study of the whole El Paso System. That would entail looking into the reserves of 208 reservoirs and 64,000 wells."

Gulf Pacific submitted a deliverability study reflecting the estimates of El Paso's reserves made by it and Humble, including the availability of casinghead gas from west Texas. This system deliverability study disclosed that after accelerating El Paso's assumed well drilling program in the San Juan basin to the maximum in order to make up for the deficiencies that would otherwise occur, and after reducing the line pressure in the San Juan reservoirs considerably sooner than scheduled by El Paso in order to maximize deliverability, El Paso cannot meet its full estimated requirements under the 250,000 Mcf per day proposal after 1972. Under the 575,000 Mcf per day proposal, El Paso would fall short of meeting its requirements after 1970.

In evaluating El Paso's ability to obtain additional supplies of gas in the future from existing sources, it must be kept in mind that El Paso's system sells and consumes approximately 1.3 trillion cubic feet of gas annually. This means that El Paso must be able to replace this volume annually. Its estimated losses from field fuel and shrinkage alone, just in the Permian basin, are 2.8 trillion cubic feet over a 13-year period of 600,000 Mcf per day. In the El Paso supply areas there are a number of other major pipelines competing with it for new supplies, even in the San Juan basin it will be subject to competition by reason of divestiture of the Northwest Division. El Paso has already attempted to obtain gas from the Gulf Coast of Texas, the Gulf Coast of Louisiana, and even offshore Louisiana. It is also noted that El Paso has attempted to obtain additional gas through the so-called *Lo-Vaca* Project which involves a cost to El Paso of more than 29 cents per Mcf delivered at the east end of its existing system in west Texas. (*Lo-Vaca Gathering Co.*, 26 FPC 606; reversed 323 F. 2d 190; affirmed, *sub nom State of California* v. *Lo-Vaca Gathering Co.*, 379 U.S. 366). These actions are not consistent with El Paso's present assertions, in that, it appears certain, El Paso's future delivered cost of gas will increase as new sources of supply are attached to its system.

Air Pollution

It is conceded by all parties that Los Angeles has an air pollution problem. The extent to which fuel oil burning contributes to this problem is in dispute in this proceeding. The evidence here presented looking toward a reduction in fuel oil burning and an increase in gas fuel burning in the Los Angeles basin is presented by witnesses representing governmental agencies responsible for the protection of the health of the community, state and nation, *i.e.*, Air Pollution Control District of the County of Los Angeles (APCD), State of California and United States Public Health Service, and by medical doctors in the Los Angeles basin. Edison and Department support the position of the APCD that a need exists for a reduction in fuel oil burning as a means of reducing the air pollution, as well as the Los Angeles County Medical Association, Stamp Out Smog, a corporation serving as a voluntary citizens organizations. This position is also concurred in by Gulf Pacific and Humble.

In support of the claim that the substitution of gas for fuel oil now burned in Los Angeles power plants will not affect the Los Angeles air pollution problem, evidence was presented by Western Oil & Gas Association (WOGA). Standard Oil Company of California supports this position, along with the Staff, El Paso, and California Manufacturers Association. Pacific Lighting states that its existing form of service is completely compatible with the requirements of gas for air pollution control[14] and the Gulf Pacific project is not required for such purpose, however, it reluctantly takes the position that if a need is found for more gas, it desires to supply such gas.

Air pollution has now become a matter of public concern both at national, state and local levels. California, pursuant to its police power in 1947 enlarged its Health and Safety Code relating to the control and suppressions of air pollution and created Air Pollution Control Districts. This enactment found and declared that the people of the State of California have a primary interest in atmospheric purity and freedom of the air from any air contaminants and that there is pollution of the atmosphere in many portions of the State which is detrimental to the public peace, health, safety, and welfare of the people of the State. The enactment also found that in portions of the State the air is polluted with smoke, charred paper, dust, soot, grime, carbon, noxious acids, fumes, gases, odors, particulate matter, and other air contaminants; and that it is necessary, therefore, to provide for air pollution control districts in those portions of the state where regulations are necessary and feasible to reduce air contaminants in order to safeguard life, health, property and the public welfare and to make possible the comfortable enjoyment of life and property. Air Pollution Control Districts were created under this Act in each county of the State. However, before the control district can function the Board of Supervisors must hold a public hearing and adopt a resolution as to the need for such control. California State Health and Safety Code, Sections 24198, 24199, 24200, 24205. In addition to the Air Pollution Control District of the County of Los Angeles, four other counties in the Los Angeles basin have found a need for such control.

---

[14] Pacific Lighting witness, Mr. Kelsey, in response to questions concerning assumptions as to voluntary use of alternative fuel and curtailments, in the Pacific Lighting market studies, on Friday, November 6, 1964 testified:

Q. (Mr. Littell) Yes, that means, doesn't it, your tailored supply program does not provide sufficient gas to meet Rule 62.1, isn't that true?

A. Yes.

Q. That is all that means.

A. And Rule 62, also.

Q. There is not enough gas to provide for either of them?

A. It is not intended to.

On Tuesday, November 10, 1964:

Q. (Mr. Edsall) Did you intend to testify, Mr. Kelsey, that Rule 62.1 requires your customers to satisfy their fuel requirements 100 percent with natural gas, and failing to do so, are in violation of that rule?

A. No. Because the rule relieves the customers when we curtail service in the Rule 62.1 period.

The Los Angeles Air Pollution Control District (APCD) was formed in 1948 with the Los Angeles County Board of Supervisors as its governing body. Since that time it has spent over $35,000,000 of which nearly $10,000,000 has been spent on research and development. It has a staff of about 285 employees with an annual budget of approximately $3,500,000. Pursuant to its research, restrictive rules have been enacted to prevent the emission of contaminants. At the present time the Rules and Regulations of the Air Pollution Control District are composed of seven regulations, containing some 82 individual rules. As a result industry has expended nearly $108,000,000 on air pollution control equipment, which is largely non-productive.

Banning of backyard trash incinerators in 1957 has cost the County taxpayers an estimated $40,000,000 investment and an additional $30,000,000 annually. Substantial reduction in hydro-carbon emissions have been achieved as a result of these rules which affect all industry and commerce. Resulting therefrom some 4400 tons of air contaminants from stationary sources are prevented from reaching the atmosphere each day. It is estimated that stationary sources are still responsible for daily emissions of some 2,000 tons of various contaminants. The present power plants in the Los Angeles basin are a major source of pollution. When burning fuel oil, they emit into the atmosphere a daily average of 175 to 240 tons of nitrogen oxides, 475 to 575 tons of sulfur dioxides and 37 to 45 tons of particulants. With the burning of natural gas the emissions of sulfur dioxide are virtually zero. Nitrogen oxides are reduced to a level of 81 to 112 tons and particulants to a level of three to five tons. In Los Angeles about 80 percent of the pollutants are from motor vehicle emissions and 20 percent comes from industry and other sources including steam electric generating plants.

Since 1955 the Los Angeles County Board of Supervisors have sought an increase in supplies of natural gas for industrial use in Los Angeles County. In 1958, APCD adopted Rule 62 which restricted the burning of fuel oil during the five summer months, when gas was available. In 1961, this rule was extended to seven months, and in 1964 to twelve months, by Rule 62.1. The purpose of these rules is to require industry to burn natural gas exclusively. If natural gas is not available then, of course, fuel oil can be burned. The Legislature of the State of California also has restricted emissions of visible plumes which exceed a specified darkness or opacity. Edison and Department are subject to the enforcement activities by local air pollution control authorities and must obtain construction and operating permits or variances for the steam electric generating stations, such variances being on a year-to-year basis with applications for renewal and adequate showings being required to satisfy the local air pollution control authorities that the utility has been diligently seeking means of bringing its operations into compliance, such as by obtaining additional gas fuel supplies.

There is no dispute among the parties that Los Angeles suffers from so-called "photo-chemical" smog. This is a type of air pollution in which hydrocarbons, nitrogen oxides and sulfur dioxide play a part and in the atmopshere react together under the influence of sunlight causing eye irritation, obscured visibility and plant damage. It is contended by the parties opposing Edison and Department's plan to import gas that the photo-chemical smog is caused by automobiles and the Los Angeles power plants are not significantly involved in causing such smog; that the pollutants admitted by the power plants are not a meaningful measure of air pollution but rather the amount of concentrations in the atmosphere, and further, the air pollution in Los Angeles does not have any effect on the health of its inhabitants.

In support of the contention that the Los Angeles smog does not affect health, WOGA presented Dr. Hine, a physician, faculty member of the University of California School of Medicine and a consulting toxicologist. He named as some of the contaminants in the Los Angeles air, ozone and other oxidants, hydrocarbons, nitrogen oxide, carbon monoxide, sulfur dioxide, and particulate matter. In his opinion the pollutants are not of such a level as to result in disasters effecting morbidity and mortality or incite chronic diseases, especially asthma, bronchitis, emphysema and lung cancer associated with high levels of air pollution. He also stated:

> Q. Now, speaking of chronic disease and general health, are there any adverse effects on health of the general population or any specific segment thereof as a result of exposure to the air pollution as it exists in Los Angeles County?
>
> A. The answer is no if we are to consider morbidity and mortality as criteria of ill health. The answer is yes, if we are to extend the concept of health to include such nuisance conditions as eye irritation, symptoms of difficulty in breathing and enjoyment of the total environment.

Dr. Hines testified that no improvement in the air condition in Los Angeles has resulted from the adoption of Rule 62 by the APCD. He did recognize that there might be a difference of opinion among medical doctors as to the adverse effect on health of the Los Angeles basin air.

The preponderance of the evidence is against the contentions of WOGA and in favor of the benefits to be derived by the people in the Los Angeles basin by the use of gas under the boilers in the power plants therein. The record here is clear that the public wants the increased level of gas service and is ready to pay for it. The benefits not only relate to the health of the people and their welfare but also to the loss of food and fibre crops in the Los Angeles area which has been estimated to be in excess of $5,000,000 annually.

The advantages of using natural gas in the power plants instead of fuel oil is that no ash is found in the combustion of natural gas, no oxides of sulphur, nitrogen oxides are less than one-half the amount produced from fuel oil burning and the problem of opacity violating stack plumes is eliminated. The plumes are caused by aerosols which are liquid or solid particulate matter dispersed in the air.

The Los Angeles basin is unusual in that it has a limited air supply which traps and retains contaminants for long periods of time both in winter and summer. The wind flow is relatively weak and the pattern of flow is such that polluted air is accumulated in the basin. Another characteristic of the Los Angeles climate is the so-called "temperature inversion" which results in the confinement of air in the basin. This temperature inversion is present over the Los Angeles basin at some altitude below 5,000 feet on an average of more than 300 days a year. The extreme low level intervals occur most frequently during the winter season. The number of days having an inversion layer with a base less than 100 feet above ground is far greater in the period from November through March than at any other time of the year. In December and January more than two out of every three days have an inversion at this extreme low level.

It is a matter of common knowledge that the Los Angeles area is subject to severe air pollution. This Commission in its National Power Survey (1964) in reference to the national air pollution control policy pointed out that such policy leaves to the states and local agencies the primary responsibility for air pollution control with assistance in research, administration, and other aspects of control programs to be provided by the Federal government, and states:

> The Los Angeles metropolitan area has been plagued by an air pollution problem for years. Air pollution in Los Angeles is the result of contaminants produced by all sectors of its industrial and human endeavors. In addition to some 17,000 productive industries in the metropolitan area, 3 million automobiles burning 5½ million gallons of gasoline per day contribute contaminants to the air. Smog is a frequent threat, even with the controls that have been instituted. Without such controls, the situation would often be intolerable.

Public complaint as to air pollution is continuous and wide spread, including complaints directed to the operation of steam electric generating plants. These complaints include eye irritation and respiratory discomfort. The present atmospheric conditions in the Los Angeles basin do present a health problem. This is borne out by the testimony of three outstanding doctors of medicine specializing in this field, called by the APCD.

Doctor Smart, a renowned chest specialist who appeared voluntarily, without compensation and at his own personal expense, has confined his private practice since 1931 to medical diseases of the chest and is Chairman of the Medical Staff of the Good Samaritan Hospital in Los Angeles and Clinical Professor of Medicine at the University of Southern California School of Medicine, testified that the air pollution levels which presently exist in Los Angeles causes and aggravates chronic respiratory disease and even premature death. The air pollution to which he refers is the "total complex" in which there may be, and often is, an element of photo-chemical smog.

Doctor Motley, Professor of Medicine and Director of the Cardio-Respiratory Laboratory, University of Southern California School of Medicine, and Director of Research, Hospital of the Good Samaritan, Los Angeles, testified that his studies involving the effects of only ordinary levels of Los Angeles smog, discloses that Los Angeles air pollution can aggravate the severity of the chronic pulmonary disease known as emphysema. He pointed out that in the Los Angeles area there are several hundred thousand people out of approximately several million people who suffer from emphysema, and that a significant segment of the population in this area who are almost complete respiratory cripples for whom prevailing levels of air pollution could be very dangerous. This disease also affects the heart and such patients are susceptible to respiratory infection. In his opinion ozone, oxides of nitrogen and sulphur oxides and a combination thereof aggravate emphysema.

Doctor Goldsmith, the Head of the Air Pollution Medical Studies in the Bureau of Chronic Diseases of the California State Department of Public Health, expressed the opinion that there is a real hazard in the level of air pollution existing in Los Angeles and such level could produce and aggravate chronic respiratory disease, and there is evidence which indicates that the present levels of air pollution in the Los Angeles area pose serious risks to public health.

The claim is advanced that the air pollution in the electric generating plants burning fuel oil can be controlled or partially controlled by use of mechanical devices, such as a bag house, power plant burner and boiler design modifications. Edison has and is continuing its research in air pollution even to the extent of again constructing a fuel-scale prototype bag filter house for the removal of particulate matter (solid particles) from plant flue gases. The bag house has been operated intermittently since February 15, 1965. When operated the bag house recovered 99 percent of the particulate matter and somewhere between 94 and 95 percent of the SO_3 and eliminated plumes. Since 1956 Edison alone has spent more than $3,628,000 in research efforts to search out means of eliminating contaminants from the burning of fuel oil. While advances have been made they have not proved satisfactory, the most promising technical and physical means of reducing air contaminants from steam electric generating stations is to substitute natural gas for fuel oil.

The Los Angeles air pollution problem will not be eliminated by the increased use of gas under boilers but the reduction in tonnage of pollutants in the magnitude here under consideration will affect the concentration of contaminants and aid in the program of the APCD to reduce air pollution to the benefit of the people in the Los Angeles basin.

Edison and Department, regardless of the merits of any scientific controversy over the burning of fuel oil, are faced with regulatory prohibitions against the burning of fuel oil, public complaints about such burning, and advice from the medical fraternity to its patients to the effect that air pollution is harmful. These facts, alone, impose upon Edison and Department the public duty to minimize, if not eliminate, the burning of fuel oil in their steam electric generating plants in the Los Angeles basin. To this end, Edison and Department have contracted for the gas to be provded by Humble. Sixty-seven to seventy percent of all industry in southern California is in Los Angeles County and to the extent to which the Gulf Pacific project will make Pacific Lighting gas available to other industrial fuel users, will contribute to the reduction of air pollution.

The fact that air pollution exists in other areas is not grounds for denial of the Gulf Pacific project. The President, in his message of February 8, 1965, to The Congress of the United States, pointed out that air pollution is no longer confined to isolated places and referred to the health hazard present as a result of air pollution, along with loss of efficiency, reduction in property values, and raising of taxes. He referred not only to motor vehicles but also to home heating plants, municipal dumps and factories continually hurling pollutants into the air we breathe to the extent of each day almost 50,000 tons of unpleasant, and sometimes poisonous, sulfur dioxide are added to the atmosphere, along with our automobiles producing almost 300,000 tons of other pollutants. He also pointed out that in Donora, Pennsylvania, in 1948, and New York City in 1953, serious illness and some deaths were produced by sharp increases in air pollution. In New Orleans, epidemic outbreaks of asthmatic attacks are associated with air pollutants. Three-fourths of the eight million people in the Los Angeles area are annoyed by severe eye irritation much of the year. And our health authorities are increasingly concerned with the damaging effects of the continued breathing of polluted air by all our people in every city in the country. The above statements in the message to Congress coincide with the record in this proceeding. Edison and Department are to be commended in their effort to help reduce the air pollution in the Los Angeles basin. Dollars are a poor substitute for the health of the people in the Los Angeles basin.

Standard Oil Company of California favors Pacific Lighting's tailored supply program. It points out that Pacific Lighting is firmly committed to the maintenance of a two-fuel economy in southern Calfornia and the tailored supply program is intended to preserve the balance between the use of gas and oil. Both Edison and Department have for many years received a substantial portion of its thermal energy requirement from Standard in the form of fuel oil. The conditions under which fuel oil was an acceptable fuel in the Los Angeles basin have changed. No longer has a fuel user in the basin any freedom or choice between fuels either on the basis of operating characteristics or from an economic standpoint. The determination that gas should be burned in steam electric plants by the Air Pollution Control District as an aid to air pollution control, supplants Standard's position.

Adequacy of Service

The primary and major consideration presented in this proceeding is the adequacy of existing gas service. In other words, is the Texas gas purchased by Edison and Department required to serve a useful public purpose responsive to a public need? It is clear from this record that such gas is so required. Pacific Lighting has not met its responsibility to Edison and Department in furnishing gas service and as a result they have been unable to respond to the public demands for the burning of gas in their power plants in the Los Angeles basin. Both Edison and Department insist that the public convenience and necessity requires the issuance of a certificate to Gulf Pacific to engage in the transportation of the gas which they have purchased from Humble, as provided by Section 7(e) of the Natural Gas Act.

Pacific Lighting furnishes only a part of the gas requirements of Edison and Department and the gas supplied is subject to fluctuation and uncertainty. Even though Pacific Lighting's estimates of deliveries disclose a decline in service in relation to the total requirements of the electric companies, it claims the service that has been rendered and as proposed, is adequate. This claim of adequate service depends on the retention of a two-fuel economy in the Los Angeles basin, heretofore referred to, which Pacific Lighting supports. Edison and Department have not curtailed service only because they maintain a supply of oil as an alternative fuel. Under the proposal of Pacific Lighting, increased volumes of oil will of necessity have to be burned in the steam electric generating stations in the Los Angeles basin to meet the growing demands for electricity, in the face of Edison and Department's demand for additional volumes of gas in order to comply with the requirements of the APCD. In order to render the present service it is necessary for Edison and Department to have available over 11,000,000 barrels of oil storage capacity which is more than two times, on a fuel equivalent basis, than the storage that Pacific Lighting maintains. The Gulf Pacific project would not eliminate all existing oil storage facilities but their use would be curtailed to the extent that gas is available and additional facilities would not be required.

There is no question that Edison and Department can utilize in the manner proposed the gas which they seek to have transported plus additional gas, and that southern California's demand for gas will continue to grow over the years. This increase in market demand for gas will require additional supplies from out of state. The extent of this growth in demand for gas determines the impact on the future sales by Pacific Lighting, and on the demand for alternative fuels when gas is not available.

Population estimates published by the California Department of Finance show that the 14 southern California counties have increased by approximately 400,000 people per year from the years 1959 through 1963. There were 11.3 million residents in these counties as of July 1, 1963. By 1970, there will be 13.8 million people and by 1980, the population will reach 17.8 million people. Along with this increase in population, which brings an increase in total gas customers, is an increase in gas usage per customer. Personal income in southern California rose from $17.8 billion in 1953 to $30.1 billion in 1962, and is expected to increase to $46.2 billion by 1970. Likewise, value added by manufacture increased from $5.9 billion in 1953 to $10.4 billion in 1962 and is expected to increase to $16.4 billion by 1970. In addition to the rapid growth of electric load heretofore mentioned, the natural gas requirements in southern California have been estimated to be growing at an average rate of about 150 million cubic feet a day per year.

Various market estimates have been made by the parties. Gulf Pacific employed Stanford Research Institute to make an independent market survey of Pacific Lighting's total market requirements. The difference between the market estimates of Stanford Research and Pacific Lighting are as follows: (M^{3}cf)

	Total Market		Gross Steam Electric		Other Interruptible	
	Stanford	Pacific L.	Stanford	Pacific L.	Stanford	Pacific L.
1963	875	834	315	305	194	167
1964	928	893	343	337	202	175
1965	987	943	378	364	210	181
1966	1,047	1,002	414	397	218	185
1967	1,095	1,032	438	403	226	190
1968	1,126	1,071	446	421	234	195
1969	1,174	1,108	472	438	242	198
1970	1,232	1,164	508	472	250	201
1975	1,428	1,265	609	471	285	220

Based on Stanford Research market projections, Pacific Lighting will have a larger interruptible market available by the time that Gulf Pacific goes into operation in 1967 than the volumes of interruptible gas which it actually delivered in 1963 of 403 M^{3}cf. In 1964 the actual sendout was 445 M^{3}cf.

	Total Gross Interruptible Market	Gulf Pacific Load	Gross Interruptible Market Available to Pacific Lighting After Gulf Pacific
1967	664	118	546
1968	680	249	431
1969	714	262	452
1970	758	278	480
1971	788	288	500
1972	812	291	521
1973	841	292	549
1974	864	292	572
1975	893	292	601

Actual experience has demonstrated that Pacific Lighting has consistently understated its market requirements. The actual sendout has ranged up to 40 percent above its prior estimates. In the instant proceeding the actual sendout for 1963 and 1964 exceeds Pacific Lighting's estimates particularly in the interruptible market. Pacific Lighting did not make a market canvass of industrial plants that it serves to determine their fuel requirements. The gas sendout experienced in 1963 and 1964 discloses that even the estimates by Stanford Research are low. Almost 5 years of its projected growth in the classification "Other Interruptible Market" have already been realized in the first 2 years (1963 and 1964) of the projected period. The Department's load growth forecasts, used in this proceeding, are predicated on the Department's 1954 projection. It is anticipated that current forecasts now in preparation by Department will show the necessity of planning to meet even higher loads than those shown herein. Edison has kept its load growth projections current.

The above market requirements for gas do not take into consideration Edison's latest estimate of February 1965. In addition to this latest estimate the record includes Edison's forecast of load and resources of November 1963, and another as of April 1964. The April 1964 estimate included the load of California

Electric Power Company which was merged with Edison on December 31, 1963. No significant difference exists between the estimate of Stanford Research submitted in January 1964, and that made by Edison in 1963. Pacific Lighting did not use any of the above Edison estimates but relied upon its forecast of fossil fuel requirements attached to the application of Gulf Pacific which was filed February 1963, except that Pacific Lighting assumed that after 1970 Edison would meet its additional fuel requirements from nuclear or coal fired facilities. Stanford Research's projections assume approximately one-half of the incremental growth after 1970 will be met by gas and the other half by nuclear power or coal. These assumptions of Stanford Research and Pacific Lighting are not valid.

On a comparable basis a total estimated fossil fuel requirements of Edison as shown in the above forecasts and as used by Pacific Lighting are as follows:

[In M^3cf]

	Pacific Lighting	Edison's Estimates		
		November 1963	April 1964	February 1965
1966	243	257	280	278
1970	299	343	378	359
1975	299	457	505	580

Edison's San Onofre nuclear plant is scheduled to be in operation in 1968 and is considered by Edison in its estimates. Department has postponed the expected completion of its Malibu nuclear plant until 1968 or later. It will be after these plants are in operation and the results known before a final determination is made for construction of additional future nuclear plants. Even Edison's latest estimate as to the assumed future nuclear generation appears over optimistic for the reason that it lacks available sites for such plants. Opposition to nuclear plants caused Pacific Gas and Electric Company to withdraw its proposal to build the Bodega Bay nuclear plant, north of San Francisco.

Edison's latest estimate of required electric production and energy sources on which it must rely in meeting the demands of its system shows the Gulf Pacific project beginning operations in 1967 and for the years shown the assumed and uncommitted sources of electric energy are as follows:

[In M^3kwh]

	1967	1970	1975	1980	1985
Purchased	----------	3.3	2.0	2.0	2.0
Hydro	4.5	4.5	4.5	4.5	4.5
Nuclear	----------	2.4	2.7	2.7	2.7
Local Gas	4.0	2.4	2.4	2.4	2.4
Gulf Pacific	17.6	23.0	23.0	23.0	23.0
Assumed Coal	----------	6.2	13.5	13.5	13.5
Assumed Nuclear	----------	----------	4.7	4.7	4.7
Uncommitted	13.2	9.5	27.5	72.9	143.0
Total Requirement	39.3	51.3	80.3	125.7	195.8

Pacific Lighting and the Staff claim that this latest forecast of Edison's system load is unsupported. If this forecast is unsupported, then all of Pacific Lighting's industrial load is likewise unsupported as it has accepted the estimates of its other industrial customers without even knowing the basis for such estimates.

It should be noted in this regard that Pacific Lighting's forecast for 1963 for the oil companies was 3.1 billion cubic feet equivalent of fuel oil in southern

California, in contrast with 9.9 billion cubic feet equivalent of fuel oil that was reported to the APCD as having been actually burned in 1963 by the refineries alone in just Los Angeles County. The 3.1 figure was a reduction from 4.5 billion cubic feet equivalent that Pacific Lighting assumed for 1962.

Admittedly, the above forecast of February 1965 was revised upward to conform with a periodic routine review of load estimates made by Edison's planning department in the ordinary course of business. Edison like every large electric utility has a planning department. Construction decisions by Edison are predicated upon short-term load forecasts, and are not made until the latest date at which the project can be undertaken and completed in time to meet the projected load. These projections are made in the ordinary course of business and the forecasts submitted in this record are used for many other purposes including financial planning, sales planning, manpower staffing, distribution construction planning and equipment acquisition. Edison's load growth in the past decade has consistently outrun the forecasts. This experience indicates that a departure of 50 percent from earlier forecasts even over a 10-year span would not be unusual.

Similarly, the long-range forecasts, made in the ordinary course of business, extending over a much longer future time span are a necessary and routine activity of Edison's permanent staff organization. They are prepared for long-range planning studies. These long-range studies are capacity-oriented rather than time-oriented. They set general guidelines and indicate trends in the need for future generating sites, transmission line rights-of-way, substation location and general orders of magnitude for line capacities. They also serve as guidelines for financial and man power planning, as well as for many other company activities.

Edison in the matter of forecasting has tested a number of growth curves and the indication is that a curve which grows at a constant rate of growth best fits the historical data from 1946 to date. It is also mathematically indicated that, as Edison's territory is not reaching a saturation point, forecasting should be at a constant rate of growth. The high rate of growth in relation to estimates is illustrated by Edison's forecast made at the end of 1963, that in 1964 it would connect 75,000 new customers. The estimate was later raised to 85,000 and then 100,000 and it finally connected 120,000 new customers.

Edison needs additional gas over the volumes offered by Pacific Lighting. When the additions to its present plants now under construction are completed in 1967, the average fuel usage will be 832,000 Mcf per day and with the fifth year deliveries from the Gulf Pacific project of 574,000 Mcf per day, it will require above the Gulf Pacific maximum 258,000 Mcf per day. Additional sources of electrical energy will be required in 1968 and prior thereto commitments will have to be made for additional capacity. These rapidly mounting demands for electric service faced by Edison and also by Department must be met, and the issuance of a certificate to Gulf Pacific will supply a measure of relief to them in meeting such demands.

It is clear from this record that substantial additional volumes of gas are and will be required over the volumes to be furnished by Pacific Lighting and imported by Edison and Department. The future market and fuel requirements as estimated by Department and Edison as of February 1965, are reasonable and are accepted. Likewise, the future gas estimate of requirements by Stanford Research, modified by Edison's latest estimate, for southern California, is reasonable and is accepted.

Edison and Department are interested in other sources of electricity. They are canvassing the possibility of power generated from plants near the coal fields of Utah, New Mexico and Arizona; nuclear plants; and from an intertie with resources of electricity in the Pacific Northwest. Such activity is the result of their market surveys. This additional power, if it can be obtained, will not replace but supplement the generating plants in the Los Angeles basin. If they are not successful in securing these additional sources of power then their demands for gas plus the other gas requirements in southern California will require additional gas and pipeline capacity equal to the Gulf Pacific project (856 M^{2}cf per day) at least every 6 years.

Coal cannot be utilized in the existing plants which the Gulf Pacific project is designed to supply. The Los Angeles County Air Pollution Control District has made it clear that it will not tolerate coal burning in the Los Angeles basin. The engineering cost studies as to coal fired plants were compared with generating plants on new sites. Such plants cannot compete with the conventional gas fired plants at the existing generating stations. It is not contended by the coal industry that coal can or should be burned under boilers of the existing plants of Edison and Department in the Los Angeles basin area. Likewise, it has not been shown that the cost of generating electricity from nuclear plants is competitive with the cost of generating electricity at the existing plants of Edison and Department. Even Pacific Lighting's witness, as to nuclear plant costs, did not predict that after 1970 all additional generation by Edison and Department would be from nuclear or coal plants. His study was not related to the actual system of either Edison or Department.

The Staff and the Public Utilities Commission of California suggested an interconnection between the Gulf Pacific pipeline and the Pacific Lighting system for emergency service and the furnishing of gas not to exceed more than 30 days in any one year to Pacific Lighting to prevent curtailment of firm service to domestic and commercial users. No showing has been made in this proceeding of a need for such an arrangement. The record affirmatively discloses that such demands can be met by Pacific Lighting without the aid of Gulf Pacific.

There is competition between Pacific Lighting on the one hand and Edison and Department on the other for energy service to homes and buildings for cooking, water heating, space heating and air conditioning, and also for industrial uses. Edison and Department are now captive customers of Pacific Lighting for fuel in their steam electric plants in the Los Angeles basin. The restrictions on the uses of fuel oil by APCD, the cost of gas and level of gas service offered to Edison and Department by Pacific Lighting have an effect on ability to compete. Pacific Lighting is not consistent in its position as to competition, in that for its own service it argues that regulation is the answer while at the same time stressing the keen competition between its suppliers, El Paso and Transwestern, both regulated natural gas companies, which it has found "to be distinctly beneficial" as a result of alternative proposals.

Edison and Department have made it clear on this record that the interruptible service contemplated by Pacific Lighting for electric generation is unsatisfactory and their determination not to be limited to the Pacific Lighting supply arrangements as proposed by the so-called tailored supply program under which the level of service to them in relation to their requirements will decrease over the years. Pacific Lighting effectively controls the future gas supply in the Los Angeles area through the type of gas purchase contracts it has entered into with the California producers and as it is the only importer in southern California of out-of-state gas. So long as this continues Pacific Lighting can be indifferent in meeting the demands of the electric companies for desired gas service, thus, circumventing the requirement for the burning of gas in place of fuel oil in the Los Angeles basin. It is this policy of Pacific Lighting that has caused Edison and Department to take the position that if the Gulf Pacific application is not approved they will continue to seek independent gas supply in an attempt to forestall rising public opinion against their operations.

Cost Impact

Pacific Lighting takes the position that if Edison and Department are permitted, through the issuance of a certificate to Gulf Pacific, to transport the gas purchased from Humble, that it will have an adverse economic impact on its gas consumers. This position is concurred in by the Staff, El Paso and California Manufacturers Association, Transwestern and San Diego Gas and Electric Company. El Paso claims an additional impact in that it will not put into effect the reduction heretofore referred to of one-cent per Mcf. Department and Edison claim that there will be no adverse impact on the gas consumers, but rather that economic benefits will flow to them if the Gulf Pacific project is certificated. This position is concurred in by Gulf Pacific and Humble.

Pacific Lighting claims that the Gulf Pacific project will deprive it of $70,000,000 a year in revenues. It also claims that under the Gulf Pacific project, rather than service at its preferred level called the "tailored supply" and also referred to as the "optimum level," the gas consumers will suffer a financial detriment in excess of $150,000,000 in the first 10 years and the electric companies $100,000,000 during the same period, a total average of $25,000,000 a year. If Pacific Lighting were also to serve the entire market in an average temperature year (referred to as the 16th level), based on its own market forecast and cost of service, the cost to the consumer would be less with the Gulf Pacific project. It is this level of service which more nearly reflects the level contemplated by Rule 62.1 of the APCD and the level urgently needed to combat the growing air pollution problem in the Los Angeles basin. As pointed out by the Staff, Pacific Lighting's impact study discloses that at the 16th level for the 10-year period 1966 through 1975, the service would cost $23,576,000 more than at its preferred level of service with Gulf Pacific in operation and without Gulf Pacific in operation the cost would be $103,207,900. It is also noted that under Pacific Lighting's impact study with Gulf Pacific in operation, both at the preferred level and at the 16th level, a steady decline in unit revenues (per Mcf) required occurs for the 10-year period.

The Staff takes exception to Pacific Lighting's studies as being "unrealistic" and that the results of the "impact calculations are a function of the assumptions hypothesized." The Staff on the basis of Pacific Lighting's market requirements at the tailored supply level with the substitution of Gulf Pacific's forecast for the steam-electric load claims a difference of approximately 1-cent per Mcf with and without the Gulf Pacific project for the year 1970. Its studies for that year on four different cost assumptions show an increase at the load center ranging from $45,600,000 to $34,600,000 higher with Gulf Pacific.

El Paso supports Pacific Lighting's position. It also contends that the cost to it of delivery of 865,000 Mcf per day (El Paso 575,000 Mcf, Transwestern 290,000 Mcf) to the Los Angeles load center would, on an incremental basis, resolve in a savings to the gas consumers of $22,400,000 to $29,934,000 per year as compared with the Gulf Pacific project.

California Manufacturers Association did not submit any evidence and based on its own combination of studies claims that the Gulf Pacific project would cost the public $27,000,000 per year more than under the Pacific Lighting proposal and $18,500,000 per year if Pacific Lighting served at the 16th level.

Transwestern using the Staff's exhibits submitted at the hearing as a point of departure, claims that the annual adverse impact of the Gulf Pacific project would be $20,100,000 to $40,800,000 per year based on the 1968 and 1970 projections. Transwestern in its reply brief claims an impact at the Los Angeles load center on an incremental basis of $16,603,485 per year and on Transwestern's volumes alone of $10,089,330 per year.

San Diego Gas and Electric, based on Pacific Lighting's claimed impact of approximately $150,000,000, claims that its proportionate share will be $11,000,000 over the next 10 years.

Department, in evaluating the Gulf Pacific project, measuring it against the potential cost to Department of Pacific Lighting gas over the 20-year period, assumed that cost of Pacific Lighting gas could reasonably be expected to increase at an average rate of 1½ percent per year for the life of the Gulf Pacific contract. On this basis, Department could expect to save nearly $80,000,000 with Gulf Pacific, as compared to the 20-year cost of Pacific Lighting gas. Department claims that the 1½ percent is conservative when compared to historical increases. Department's cost for Pacific Lighting gas has gone up at an average of 3.6 percent annually, compounded, since 1951–52, while oil costs since 1949–50 have increased on an average of 2½ percent annually, compounded. Federal Government wholesale and consumer price indices have increased at an annual average rate from 1952 to 1964 of 5.9 percent and 5.2 percent, respectively.

It is Edison's position that it is not possible at this time to demonstrate the exact amount of savings which will accrue to Edison and its customers from the certification of the Gulf Pacific project, for these savings will be a function of the exact differential between the cost to Edison for the Gulf Pacific gas deliveries and the extent to which the alternative fuel costs to it will increase in the future over the 20-year period. Based upon its historical experience as reflected in this record and the inflationary pressures which are extant in the economy, it is Edison's conviction that the delivered cost of other gas to California over the next 20-year period will most certainly increase; and that the differential between those increased costs and the stable cost to it for the Gulf Pacific gas will likewise increase over the period. The resultant savings to Edison and to its electric customers from the Gulf Pacific project will be very substantial. Edison points out that based on claimed savings with Gulf Pacific for the year 1970 and utilizing Pacific Lighting's technique of multiplying such cost differential by its share of the Gulf Pacific volumes, the resulting savings to Edison alone for the 20-year period would exceed $300,000,000.

Each of the impact studies reflect many different and varying costs and assumed rates of return. One of the uncertainties in this proceeding as to cost comparisons is the position of the California Commission relating to the level of charges as between firm and interruptible service. Rates have never been established by the California Commission on the basis of incremental cost.

In addition to the costs of fuel to Edison and Department, other facility costs have to be considered such as facilities for the burning of fuel oil. Such costs increase with uncertainty as to the volumes of gas available and are magnified by the requirements that gas must be burned when available. This lack of ability to predict volumes of gas that will be made available requires the carrying of large inventories and commitments to purchase oil. Department's inventory for oil in 1962 exceeded $5,000,000.

Some of the cost calculations include cost of purchased gas based upon the Presiding Examiner's Initial Decision in the Area Rate Proceeding, *et al.*, Docket No. AR61–1, *et al.*, issued September 17, 1964, 34 FPC at p. 306. The decision was modified by the Commission's Opinion No. 468 on August 5, 1965, which was modified by Commission's Supplemental Opinion No. 468–A on October 4, 1965, 34 FPC 159, 1068. The effect of the Commission's Opinion on the cost of El Paso and Transwestern gas cannot be calculated from this record. El Paso on September 7, 1965, in its application for rehearing, which would be applicable to the Commission's Opinion, as modified, stated that it could not determine the applicable rate due to that portion of the order establishing quality standards and price adjustments reflecting quality differentials. It pointed out that it takes delivery of a daily average of some 2½ billion cubic feet of gas from the Permian area to all of which an analysis must apply. It further states that this volume is supplied by more than 50 major producers under rate schedules exceeding 670 in number and from hundreds of small producers each being a party with El Paso to at least one purchase contract. Further, such analysis would have to be made at some 1950 delivery points on its highly complex production and transmission system in the Permian basin.

The Bechtel Corporation at the request of Gulf Pacific undertook extensive studies concerning the question of impact, and its engineer with 40 years experience in the natural gas industry with personal familiarity with the Pacific Lighting's system from his 30 years with them as a Research Engineer, Distribution Engineer, Executive Engineer, Vice President in Charge of Engineering, Construction and Operations, and as a Director of Southern Counties Gas Company of California pointed out that with the Gulf Pacific project there would continue to be an adequate market to permit Pacific Lighting, with its existing storage, to operate without any long-term adverse impact if it were to tailor gas acquisitions to the remaining market. Pacific Lighting's witness testified that such tailoring can be readily done.

Many of the costs shown were determined from unsupported assumptions. However, it is not necessary to analyze all of the various cost estimates made, as each result depends primarily on the assumed market requirements. On the basis of the market requirements heretofore found reasonable no adverse economic impact will occur to the customers of Pacific Lighting with the certification of the Gulf Pacific project. The demands for gas in southern California are such that in addition to the importation of gas by Edison and Department, the volumes of gas proposed to be made available by Transwestern are required and could be also certified if Transwestern's supply was adequate which it is not. Thus, Pacific Lighting will suffer no impairment of its ability to serve its firm customers by the granting of the certificate to Gulf Pacific to transport the gas for Edison and Department. As to the other industrial customers, the granting of a certificate to Gulf Pacific will be a benefit to Pacific Lighting in the meeting of their demands for gas.

El Paso contends that the cost of gas to Edison and Department under the Gulf Pacific project should be compared with its incremental costs to deliver the same quantity of gas. This is not a proper comparison. The El Paso proposal is a new service the same as the Gulf Pacific project. Thus, any comparison must be based on cost to Edison and Department. Aside from its supply being inadequate, El Paso has not presented a complete project to deliver 865,000 Mcf a day. It depends upon volumes from Transwestern and that company has not filed an application to deliver gas to El Paso. While Pacific Lighting is silent as to the El Paso proposal, Transwestern gas, even if available, cannot be considered as such volumes are required by Pacific Lighting to meet its own requirements. In addition, El Paso's costs do not reflect future demands for gas off its system and the additional costs of required facilities relating thereto. Even El Paso's stated costs are uncertain by reason of its refusal to state a required rate of return. It also refuses to offer Edison and Department a contract or even quote rates which it would charge for gas. If field prices increase or income does not, in its opinion, result in a reasonable rate of return, El Paso will apply for a rate increase.

The scheduled prices to Edison and Department under the Humble gas purchase contracts are fixed for the 20-year period covered by the contracts and the transportation cost under the Gulf Pacific transportation contracts is based on a cost of service formula subject to the jurisdiction of the Federal Power Commission, and such prices can reasonably be estimated to average about 34½ cents per Mcf over the 20-year contract period. The fact that Humble has guaranteed the deliveries on each day of the full contract volumes over the entire 20-year period covered by the contracts make such average costs readily predictable because of the absence of any need to allow, as in other cases, for the cost of additional gathering facilities or higher costs of new supplies brought in to maintain deliverability.

In contrast to the Gulf Pacific project price assurances for the electric utilities, Pacific Lighting offers no assurance that the electric utilities will get the gas in the volumes proposed to be supplied, and no assurance as to what the price to them of that gas will be, if and when it becomes available. Admittedly, in the event of higher costs experienced in the future by the gas suppliers because of inflationary pressures or otherwise, future prices will increase.

The Gulf Pacific line instead of having an adverse effect will be a decided advantage to Pacific Lighting as a possible supplier of gas in competition with El Paso and Transwestern. The advantages of competition claimed by Pacific Lighting as between its present suppliers will increase to its benefit. It is noted that after the Gulf Pacific application was filed on February 12, 1963, that on November 1, 1963, El Paso stipulated and agreed to a settlement reducing its rates claimed to be reasonable at the time of filing, in four rate increases initiated on October 14, 1954, June 28, 1957, January 12, 1959 and February 23, 1960, and as a result Southern California Gas Company and Southern Counties Gas Company of California benefited by $66,637,378 in refunds. Commission Opinion approving the settlement was issued December 4, 1963, 30 FPC 1400. It is inconceivable that the awareness of the effort of Edison and Department to secure an additional source of gas supply did not have an affect on Pacific Lighting and its suppliers of gas, El Paso and Transwestern.

The argument is advanced that it is not in the public interest to have unregulated sales of gas. Congress has not made such a determination, but to the contrary. In *Panhandle Eastern Pipe Line Company* v. *Public Service Commission of Indiana, et al.*, 332 U.S. 507, 516 (1947), Justice Rutledge, for the court, stated that the omission of reference in Section 1(b) of the Natural Gas Act, to direct sales for consumptive use was not inadvertent but deliberate. In *Federal Power Commission* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 23, 24 (1961), Chief Justice Warren, for the court, pointed out that the Commission has, on many occasions, held that the transportation of gas sold directly to the consumer is in the public interest when the reasons advanced by the applicant have been sufficiently strong, and stated that the term "public convenience and necessity" connotes a flexible balancing process, in the course of which all the factors are weighed prior to final determination. Only if the Gulf Pacific project would have an adverse effect on the public without counterbalancing benefits, could it be denied. In this proceeding, it is clear that the gas purchased by Edison and Department from Humble will be beneficial to the inhabitants of the Los Angeles basin and is required by the public interest.

The California Gas Producers Association and Oil Producers Agency of California in opposition to the Gulf Pacific and El Paso projects, state:

> In sum, the California producers oppose certification or construction of either the Gulf Pacific project or El Paso's alternative amended Chaco-Needles project at the present time. Additional supplies of California produced gas are available to meet the present level of California market requirements. Two existing out-of-state pipelines—Transwestern and PG&E's Canadian line—are capable of 50% or more expansion to meet further increases in California natural gas market needs at low incremental expansion costs. If additional out-of-state supplies are to be certificated for delivery to California, the California producers ask that an orderly plan be followed, relying on the present level of supplies of California gas, and gradually expanding to full capacity the existing unfilled Transwestern and Pacific Gas Transmission pipelines now serving California before authorization is granted to construct any major new natural gas pipelines to import new volumes of out-of-state natural gas into California. In the event that either Gulf Pacific or El Paso's alternative amended Chaco-Needles proposal is certificated, the Commission must recognize the need for deferring PG&E's additional Canadian imports for several years. In addition, the Commission should provide that the initial level of any Gulf Pacific, or El Paso amended Chaco-Needles, deliveries should not exceed 375,000 Mcf per day starting in the Fall of 1967, with increases in an authorized delivery level thereafter of not more than 125,000 Mcf per day per year.

The short answer to these contentions of the California Gas and Oil Producers is that the evidence fails to support such conclusions.

Statements of position in opposition to the application of Gulf Pacific have been filed by interveners who did not participate in this proceeding, namely: Arizona Corporation Commission, New Mexico Public Service Commission, Pennsylvania Public Utility Commission, Permian Basin Petroleum Association, Public Service Commission of the State of New York, and San Diego Gas and Electric Company. The determination of the various positions is found in the foregoing decision, except for the position that the Humble gas should be reserved for the eastern and central markets of the United States. No other natural-gas company has appeared in this proceeding seeking the Humble gas or claiming the need for such gas to meet its demands. Further, there is no basis in the record for a determination that a greater need exists in the eastern and central markets for such gas than exists in southern California.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record and the briefs filed in this proceeding, it is found and concluded in addition to the findings and conclusions heretofore stated that:

(1) The long term needs for natural gas in Southern California requires the issuance of a certificate of public convenience and necessity to Gulf Pacific Pipeline Company.

(2) It is in the public interest that a certificate of public convenience and necessity be issued to Gulf Pacific Pipeline Company authorizing the transportation of gas for Southern California Edison Company and Department of Water and Power of the City of Los Angeles, for use as fuel in their steam electric generating plants located in the Los Angeles basin and such certificate outweighs any detriment that might result by its denial.

(3) Gulf Pacific Pipeline Company will be a "natural-gas company" within the meaning of the Natural Gas Act as the facilities hereinbefore referred to will be used for the transportation of natural gas in interstate commerce.

(4) Gulf Pacific Pipeline Company's proposed transportation service is both feasible and adequate and the gas supply dedicated to Southern California Edison Company and Department of Water and Power is sufficient to support the transportation as proposed.

(5) The characteristics of Gulf Pacific Pipeline Company's rate structure set forth in the contracts with Southern California Edison Company and Department of Water and Power requires modification so that the charges will be based upon a 6 percent rate of return on a net investment rate base, plus working capital, and at this time the rate of return is reasonable for Gulf Pacific Pipeline Company.

(6) Gulf Pacific Pipeline Company is a qualified applicant and is able and willing properly to do the acts and to perform the services and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) The construction and operation of the facilities proposed by Gulf Pacific Pipeline Company and the transportation of gas proposed to be made through such facilities by Gulf Pacific Pipeline Company are required by the present and future public convenience and necessity and a certificate should be issued on the terms and conditions of this Order, which terms and conditions are reasonable and required by the public convenience and necessity.

(8) The required findings under Section 7(e) of the Natural Gas Act cannot be made as to the applications of El Paso Natural Gas Company and Transwestern Pipeline Company in that neither are able nor willing properly to do the acts or perform the service proposed.

(9) The public convenience and necessity does not permit the issuance of certificates to El Paso Natural Gas Company and Transwestern Pipeline Company as applied for and their applications should be denied.

ORDER

WHEREFORE, *It Is Ordered*, subject to review by the Commission:

(A) A certificate of public convenience and necessity hereby is issued to Gulf Pacific Pipeline Company for the construction and operation of the facilities referred to above, and as more fully described in the application in this proceeding, and the transportation of natural gas in interstate commerce for Southern California Edison Company and Department of Water and Power of the City of Los Angeles, California, subject to and upon the terms and conditions of this Order.

(B) The terms and conditions attached to the issuance of the certificate of public convenience and necessity hereby issued to Gulf Pacific Pipeline Company are as follows:

(i) The gas transportation contracts between Gulf Pacific Pipeline Company and Southern California Edison Company and Department of Water and Power of the City of Los Angeles shall be modified within 30 days from the issuance of this certificate by the Commission, to provide for the earnings of Gulf Pacific Pipeline Company not to exceed a 6 percent return on its net investment rate base, plus working capital.

(ii) The general terms and conditions set forth in Paragraphs (a), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas

Act shall attach to the issuance of the certificate to Gulf Pacific Pipeline Company.

(C) The issuance of this certificate of public convenience and necessity, is without prejudice to any findings or orders which may hereafter be made by the Commission in any proceeding involving accounting, depreciation, determination of costs, rates, services, or any other matter, instituted by or against Gulf Pacific Pipeline Company, or its affiliated companies.

(D) The applications of El Paso Natural Gas Company and Transwestern Pipeline Company above referred to are hereby denied.

Alvin A. Kurtz,
Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY AND SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-352

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 26, 1966)

On May 3, 1966, United Gas Pipe Line Company (United) and Southern Natural Gas Company (Southern) (sometimes hereinafter referred to jointly as Applicants) filed in Docket No. CP66-352 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the replacement and rearrangement of existing metering facilities at an existing point of interconnection between Applicants' respective systems in West Carroll Parish, Louisiana, and the exchange and delivery of natural gas, all as more fully set forth in the joint application in this proceeding.

Pursuant to an exchange agreement, dated March 10, 1966, between Applicants, Southern, at United's request, will deliver natural gas at the West Carroll Parish interconnection in such daily quantities as United may require from time to time and, at such times as Southern delivers gas to United, United will deliver, at an existing point of interconnection between their respective systems near Kosciusko, Mississippi, corresponding quantities of gas to offset the quantities Southern is then delivering to United. Applicants state that service by United to its Delhi-Oak Grove-Lake Providence, Louisiana, area can be protected without disruption to Southern's operations by the proposed exchange project.

The application recites that United will own, operate, and maintain any and all facilities necessary to effect the exchange of gas, provided, that Southern will own any tap and flange connections that may be existing on its facilities at the West Carroll Parish interconnection. The total estimated cost of the proposed connection is $2,980, which cost will be financed by United from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 21, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the joint application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(3) The facilities hereinbefore described, as more fully described in the joint application in this proceeding, are proposed to be used in the exchange and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed exchange and delivery of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the subject facilities and the proposed exchange and delivery of natural gas by Applicants are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(7) Applicants should make the appropriate rate filings covering the subject exchange hereinafter authorized.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing joint Applicants, United Gas Pipe Line Company and Southern Natural Gas Company, to construct and operate the proposed facilities and to exchange and deliver natural gas by means of the proposed facilities and the existing facilities as hereinbefore described, all as more fully described in the joint application in this proceeding, upon the terms and conditions of this order.

(B) The certficate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the exchange and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations, within six months from the date on which this order issues.

(D) Applicants shall make the appropriate rate filings covering the exchange authorized in paragraph (A) above.

OPINION NO. 501

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62-1544, ET AL.*

OPINION AND ORDER REQUIRING REFUNDS

(Issued July 27, 1966)

Syllabus

1. Fact that producers reasonably and in good faith believed they were entitled to collect their rates without being subject to refund obligation is insufficient to avoid such obligation. P. 311.
2. Budget and planning activities in reliance upon right to retain full amounts collected will not suffice to prevent refund requirement, although special provisions for delayed repayment may be made. P. 311.
3. Burden of preparing revised tax returns is insufficient to avoid refund obligation. P. 311.
4. Argument that distributors have failed or may fail to pass refunds to consumers is no ground for defeating producers' refund obligation. P. 311.
5. Commission *adheres* to principles established in *Skelly* and subsequent line of cases, respecting unrecoupable amounts paid out in taxes and royalties. P. 312.
6. Statements of producers in their briefs having been accepted at face value, there is no need to reopen proceeding for introduction of additional evidence. P. 312.
7. In a proceeding under Section 7 of the Natural Gas Act, Commission *orders* refunds of amounts collected in excess of "in-line" price where producers initiated deliveries under unconditioned temporary authorizations.

Commissioner O'Connor *dissenting*.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

This certificate proceeding under Section 7 of the Natural Gas Act (Act) originally involved 32 separate applications by 22 producers for initial sales of natural gas in Texas Railroad Commission District No. 4 to various pipelines for resale in interstate commerce for prices ranging from 15.944¢ per Mcf to 19.795¢ per Mcf. Temporary certificates at prices not exceeding 18¢ per Mcf were issued. Refund conditions, included in the temporary certificates in eight of the dockets, would require the producer to refund any amount collected in excess of the initial price set forth in the permanent certificate. In the remaining dockets no refund conditions were imposed in the certificates.

By our Opinion No. 422 issued March 23, 1964 and Opinion No. 422-A issued May 27, 1964, 31 FPC 623, 1315, we granted permanent certificates of public convenience and necessity to the applicants. Each of these certificates was conditioned upon an initial price of 16¢ per Mcf which we found to be the "in-line" price for Texas District No. 4 at the time of execution of the contracts. In those dockets where the producers had commenced delivery pursuant to temporary certificates containing refund conditions we ordered refunds to be made. In the

---

*Additional parties set forth in Appendix A attached hereto. See order issued September 2, 1966 granting rehearing. Confirmed and motions for stay denied by Opinion No. 501-A issued December 6, 1966, 36 FPC 962. Set aside, *Sunray DX Oil Co. v. F.P.C.*, 376 F. 2d 578 (CA10-1967); Affirmed, 391 U.S. 9 (1968).

remaining dockets, where no specific refund obligation was included in the temporary certificates, we deferred decision.[1]

The refund issue in this proceeding arose out of the decision of the Court of Appeals for the District of Columbia[2] on appeal from our decision in *Skelly Oil Company*.[3] In the *Skelly* case we had determined that producers operating under unconditioned certificates should not be required to make refunds of amounts collected in excess of the determined "in-line" price. The Court of Appeals, however, reversed our decision and remanded the case with instructions to make, with the assistance of the parties, "a broader and more penetrating analysis of the factors pro and con a refund, and its amount or extent, in arriving at an equitable conclusion." (329 F. 2d 242, 249). While petitions for certiorari were denied by the Supreme Court in the *Skelly* case, similar issues were again raised in petitions for certiorari filed in *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 335 F. 2d 1004 (CA5–1964). After the Supreme Court granted certiorari in the *Callery Properties* case on March 8, 1965, our order of March 29, 1965, 33 FPC 643, in this proceeding provided that "Since it now appears that the refund issue will be reviewed and clarified by the Supreme Court we conclude that no further action can be taken in this proceeding until after the Court has issued a decision in the *Callery* case." On December 7, 1965, the Supreme Court reversed the decision of the Circuit Court of Appeals in the *Callery* case. *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 382 U.S. 223. "It is now established that the Commission had both the power and the duty to require refunds of amounts collected in excess of the 'in-line' price in the absence of a showing that it would be inequitable to require refunds of either all or part of the excess amounts collected." *Skelly Oil Company*, Opinion No. 492 (June 1, 1966, 35 FPC 849).

In Opinion No. 422 in this proceeding we summarized the standard set by the Circuit Court of Appeals in the *Skelly* case as follows:

> The Court has also stated, however, that the existence of the power to order refunds at the time of permanent certifications does not mean that its exercise is mandatory. The standard to be followed is the standard of equity, and the decision as to whether refunds should be ordered is to turn on equitable considerations. The existence of a refund requirement is one such consideration but is not controlling; the public interest factors must also be weighed and may be adequate to offset the absence of an explicit condition (*supra*, p. 639).

To permit a more detailed consideration of the equitable factors, the Commission deferred its decision on the refund issue to give the parties an opportunity to brief the issue in light of the Court's opinion in the *Skelly* case. Briefs were filed by Texaco Inc., Standard Oil Company of Texas (Sotex), George H. Coates, Lamar Hunt, Sun Oil Company, New York Public Service Commission, Pennsylvania Public Utility Commission, and by Brooklyn Union Gas Company, Long Island Lighting Company, Philadelphia Electric Company and The United Gas Improvement Company, American Petrofina Company of Texas, Jake L. Hamon, and Humble Oil & Refining Company have adopted the brief filed by Texaco Inc. Reply briefs have been filed by Texaco Inc., Sun Oil Company, Clark Fuel

---

[1] Paragraph (G) of the order accompanying Opinion No. 422.

[2] *P.S.C. of New York* v. *F.P.C.*, No. 17582, *et al.*, 329 F. 2d 242, (CADC–1964), cert. denied 377 U.S. 963, 1964.

[3] Opinion No. 362, issued August 30, 1962, 28 FPC 401, modified on rehearing by Opinion No. 362–A, 28 FPC 1065. Two dockets (Jake L. Hamon (Operator), *et al.*, No. CI61–922, and Jake L. Hamon, No. CI61–1745) were severed and settlement approved by order issued November 5, 1965, 34 FPC 1243. In three other dockets, no amounts were collected in excess of the "in-line" price.

Producing Company (Operator), *et al.*, and Jake L. Hamon. Motions for an evidentiary hearing on the question of refunds were filed by Texaco Inc., *et al.*, Sun Oil Company and Clark Fuel Producing Company.

The producers' briefs present arguments which fall into two general classifications: first, arguments directed to the Commission's authority to order refunds of amounts collected under unconditioned temporary authorizations; and, second, arguments dealing with the various equitable considerations. The cited cases have established the Commission's power to order refunds under these circumstances; the issue to be determined is whether it is equitable for us to do so.

The producer's major arguments on the equitable side may be summarized as follows:

(1) The ordering of refunds after issuing temporary certificates without refund conditions would result in entrapment, since the producers had every reason to be assured that no refunds would be required. Budgeting and planning have been carried out in reliance on the Commission's indicated policy of no refunds without refund conditions.

(2) Payments of state taxes and royalties, based on the sales price of the gas, were made without protest or provision for recoupment in reasonable reliance upon the price in the unconditioned temporary certificates. The tax overpayments will have to be assumed as a loss; and the recovery of royalties will be a very difficult and in most instances, an impossible task.

(3) The doctrine of mutuality argues against ordering refunds. Amounts collected through excessive rates during the interim period of the temporaries are offset when the producers are required to sell their gas under conditions which prohibit rate increases and thus prevent producers from even collecting subject to refund what they consider a just and reasonable rate.

(4) The distributing companies failed to refund to consumers amounts received from pipeline suppliers pursuant to Commission refund orders, and refunds to them would be windfalls.

(5) There is a need to be able to rely on the Commission's orders. The basic financial stability of the producing industry requires that producers be assured that amounts collected under filed rates without refund condition may be retained and further invested in business operations. To make the provisions of temporary certificates subject to retroactive adjustment would create a serious restraint on the alienation of producing properties and adversely affect the future financing of industry drilling programs.

It is implicit in the opinion of the Supreme Court in the *Callery* case, as well as the opinion of the Court of Appeals in the *Skelly* case, that the fact that the producers reasonably and in good faith believed that they were entitled to collect their rates without being subject to a refund obligation is insufficient, by itself, to avoid the refund obligation. To the same effect are our decisions in *Skelly Oil Company*, Opinion No. 492 (June 1, 1966), amended and confirmed Opinion No. 492-A (July 21, 1966, *supra*, p. 143); *Hawkins & Hawkins*, Opinion No. 498, (July 22, 1966, *supra*, p. 149); *Turnbull & Zoch Drilling Co.*, Opinion No. 499, (July 25, 1966, *supra*, p. 164). Nor are the budgeting and planning activities of the producers, in reliance upon their right to retain the full rates collected, sufficient to prevent refunds being required, although special provisions for delayed repayment may be made if this is shown to be necessary. The burden of preparing revised tax returns would necessarily be present in each case, and is insufficient, without more, to avoid the refund obligation.

The argument that distributors have failed or may fail to pass refunds received by them on to the ultimate consumers is not a ground for defeating the refund obligation of the producers, although it may be a ground for requiring that refunds be placed in escrow or that the producer retain them, paying interest thereon, until suitable arrangements can be made to see that refunds are flowed through to the public, either in the form of direct refunds or of lower rates. *Skelly Oil Company*, Opinion No. 492 (June 1, 1966), amended and confirmed Opinion No. 492-A (July 21, 1966); *Hawkins & Hawkins*, Opinion No. 498 (July 22, 1966); *Turnbull & Zoch Drilling Co.*, Opinion No. 499, (July 25, 1966).

It would be inequitable, however, and contrary to the cited cases for this Commission to order producers to make refunds of amounts which have been paid out in taxes or in royalties in reasonable reliance upon a prior Commission order, and which amounts cannot now be recouped. It appears from prior cases that recovery of royalties so paid out would be so expensive as to be impractical. *Skelly Oil Company*, Opinion No. 492 (June 1, 1966), amended and confirmed Opinion No. 492-A (July 21, 1966); *Hawkins & Hawkins*, Opinion No. 498 (July 22, 1966). These cases also determined that refunds of state production taxes, paid out in reasonable reliance upon a Commission order, should not be ordered except to the extent such taxes are recoupable by credit or otherwise. In all these cases it was determined that from February 1, 1964, one week after the decision of the Court of Appeals in *Skelly* that refunds might be ordered under these circumstances, no producer was entitled as a matter of equity to assume that no refunds would be ordered. To these established principles we adhere.

Accordingly, the producers listed in Appendix A hereto will be ordered to make refunds of all amounts collected in excess of 16 cents per Mcf while operating under temporary certificates, with the exception of royalty and overriding royalty payments made prior to February 1, 1964, to the extent attributable to the excess amounts collected, and with the further exception of state production taxes paid prior to February 1, 1964, to the extent attributable to the excess amounts collected, and not now recoupable by credit or otherwise.

There appears to be no need for reopening the proceedings to permit the introduction of additional evidence. The statements of the producers in their briefs have been accepted at face value for the purposes of this proceeding. The motions to reopen the proceedings will be denied.

The Commission orders:

(A) As a condition of the certificate granted in each of the dockets listed in Appendix A hereto, each certificate holder shall file within 60 days of the effective date of this order a report of the amounts collected by said certificate holder in excess of 16 cents per Mcf at 14.65 psia, less any amounts specified in ordering paragraphs (B), and (C). Interest to the date of this order shall be added at the rate of 6 percent per annum on all such excess amounts collected prior to March 1, 1960, and at the rate of 7 percent per annum on all such excess amounts collected on or after March 1, 1960, except that no interest shall be included on refunds to the extent state production taxes, paid but recoupable, are included in such refunds, and interest shall not exceed the legal rate recoverable by the certificate holder on that portion of the amount of any refund which was in fact paid over by certificate holder, not for his own benefit, to any third party prior to February 1, 1964.

(B) Each certificate holder listed in Appendix A hereto, may omit from the reports required by ordering paragraph (A) any amount by which payments made before February 1, 1964, of royalties and overriding royalties were increased by reason of the difference between the price of 16 cents per Mcf and the rates actually collected, and any amounts by which payments made before February 1, 1964, of state production taxes, not recoupable by credit or in any other manner, were increased by reason of said difference.

(C) The reports required by ordering paragraph (A) shall not include excess rates collected during any period when an increased rate in the docket in question was subject to possible refund in proceedings pursuant to Section 4(e) of the Natural Gas Act.

(D) Notwithstanding any other provision of this order, any state production taxes paid prior to February 1, 1964 by any party listed in Appendix A hereto, shall be required to be subject to the provisions of ordering paragraph (H) and the interest payments required thereby only from the time and to the extent that such excess tax payments may be recouped by credit or otherwise.

(E) Each report required by ordering paragraph (A) shall set forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest, with the reasons for differing rates of interest on different portions of the principal), the basis used for such determination, the period covered and a letter from the purchaser of the gas agreeing to the correctness of the amounts.

(F) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants who within 45 days of the issuance of this order shall so request in writing, and upon the purchaser of the gas.

(G) Each certificate holder listed in Appendix A hereto shall retain the amounts shown in the reports required under ordering paragraph (A) subject to further order of the Commission directing the disposition of those amounts. If any such certificate holder elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 5¾ percent per annum on all funds thus available from the date of the filing of the refund report to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission. If the certificate holder elects to deposit the retained refunds in a special escrow account, the certificate holder shall tender for filing on or before the date of the filing of the refund report an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be entered into between the certificate holder and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Certificate holder, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or an agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary of this Commission quarterly, certifying the amount deposited in the trust account for the quarterly period.

(H) Any certificate holder may apply to the Commission, within 15 days of any order directing payment of any or all amounts held by any certificate holder pursuant to ordering paragraph (G), for leave to make payments over a period of time in discharge of its refund obligation.

(I) The motions for a hearing for this presentation of evidence are hereby denied.

Commissioner O'Connor *dissents* for the reasons expressed in his dissents in Skelly Oil Company, *et al.*, Opinion No. 492 (June 1, 1966, 35 FPC at p. 859), and H. L. Hawkins & H. L. Hawkins, Jr. (Operator), *et al.*, Opinion No. 498 (July 22, 1966, *supra*, at p. 156).

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-365

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 27, 1966)

On May 13, 1966, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP66-365 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction, during the twelve months period commencing June 1, 1966, and the operation of certain natural gas facilities to enable Applicant to take into its pipeline system natural gas which will be purchased from producers and other similar sellers in the general area of Applicant's existing pipeline system, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $500,000, with no single project to exceed a cost of $125,000, which costs are proposed to be financed from funds on hand and funds generated from Applicant's operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 21, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Sec-

tion 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve months period commencing June 1, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Mississippi River Transmission Corporation, to construct during the twelve months period commencing June 1, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers and other similar sellers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the twelve months period commencing June 1, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7295

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued July 27, 1966)

By order issued July 8, 1966, *supra*, p. 42, in the above-entitled matter, the Commission authorized Northern States Power Company (Applicant) to issue and sell at competitive bidding $45,000,000, principal amount of First Mortgage Bonds, due 1996, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on July 27, 1966, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Lehman Brothers, Equitable Securities Corporation, Eastman Dillon, Union Securities & Co., Riter & Co., and Salomon Brothers & Hutzler, to purchase the proposed issuance of $45,000,000, principal amount of Bonds, for the price of 100.421% of principal amount, with an interest rate of 5⅞%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued July 8, 1966, in the above docket, and under the bid it proposes to accept for the Bonds the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued July 8, 1966, in the above docket.

OPINION NO. 502

SUN OIL COMPANY, ET AL., DOCKET NO. G-8592, ET AL.*

MEMORANDUM OPINION AND ORDER REQUIRING REFUNDS

(Issued July 28, 1966) *

Syllabus

In a proceeding upon the reserved refund issue and in accordance with *Skelly Oil Company, et al.*, Commission *orders* refunds of amounts collected by producers [while operating under unconditioned temporary certificates] in excess of later permanently certificated "in-line" price.

Commissioner O'Connor *dissents.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Pursuant to Opinion No. 445 in this proceeding issued October 26, 1964, 32 FPC 1183, certificates of public convenience and necessity issued for twenty-five sales of natural gas by producers in the state of Mississippi. Ordering paragraph (F) of Opinion No. 445 reserved for subsequent decision whether refunds should be ordered as a condition of the permanent certificates issued to the producers listed in Appendix A hereto. The question involved is whether, and to what extent, refunds should be ordered of amounts collected by these producers while operating under temporary certificates in excess of the "in-line" price of 20.6 cents per Mcf, later determined to be the price required by public convenience and necessity, which in-line price was the initial price made a condition of the permanent certificates.

---

*Additional parties set forth in Appendix A attached hereto. See order issued September 9, 1966 granting rehearing. Confirmed and motions for stay denied by Opinion No. 502-A issued December 8, 1966, 36 FPC 1003.

These producers requested temporary certificates on the ground of emergency. Such certificates were issued without specific refund condition for their benefit without a hearing to determine the price required by public convenience and necessity. When that price was finally determined after full opportunity for all interested parties to be heard, it was found that the price collected by the producers under the temporary certificates granted for their benefit exceeded the proper price at which permanent certificates were issued. In these circumstances we have held that the producers should be required in all equity to refund the excess amounts collected, unless there are countervailing equities outweighing the fact that the producers have received more than they were entitled to and have done so because they were permitted, at their own request, to make deliveries of gas before a full proceeding could be had to determine the proper price. *Skelly Oil Company*, Opinion No. 492 (June 1, 1966, 35 FPC 849), amended and confirmed Opinion No. 492-A (July 21, 1966, *supra*, p. 143); *Hawkins & Hawkins*, Opinion No. 498 (July 22, 1966, *supra*, p. 149); *Turnbull & Zoch Drilling Co.*, Opinion No. 499 (July 25, 1966, *supra*, p. 167); *Amerada Petroleum Corporation*, Opinion No. 501 (July 27, 1966, *supra*, p. 309).

The producers here were given full opportunity to submit briefs and statements of facts and evidence which might bear upon the equities. They set forth no equities which we have not dealt with in the cases cited. Accordingly, they will be ordered to make refunds of all amounts collected in excess of 20.6 cents per Mcf, with the exception of royalty payments made prior to February 1, 1964, and attributable to the excess amounts collected, and with the further exception of state production taxes paid prior to February 1, 1964, which are not recoupable by credit or otherwise, and which were attributable to the excess amounts collected. In accordance with the settlement approved by our order of October 1, 1964, Sun Oil Company will be required to make refunds only of amounts collected on or after that date.

The Commission orders:

(A) As a condition of the certificate granted in each of the dockets listed in Appendix A hereto, each certificate holder shall file within 60 days of the effective date of this order a report of the amounts collected by said certificate holder in excess of 20.6 cents per Mcf at 15.025 psia, less any amounts specified in ordering paragraphs (B), (C) and (D). Interest to date of this order shall be added at the rate of 6 percent per annum on all such excess amounts collected prior to March 1, 1960, and at the rate of 7 percent per annum on all such excess amounts collected on or after March 1, 1960, except that no interest shall be included on refunds to the extent state production taxes, paid but recoupable, are included in such refunds, and interest shall not exceed the legal rate recoverable by the certificate holder on that portion of the amount of any refund which was in fact paid over by certificate holder, not for his own benefit, to any third party prior to February 1, 1964.

(B) Each certificate holder listed in Appendix A hereto, may omit from the reports required by ordering paragraph (A) any amount by which payments made before February 1, 1964, of royalties and overriding royalties were increased by reason of the difference between the price of 20.6 cents per Mcf and the rates actually collected, and any amounts by which payments made before February 1, 1964, of state production taxes, not recoupable by credit or in any other manner, were increased by reason of said difference.

(C) Sun Oil Company may omit from the reports required by ordering paragraph (A) any amounts collected prior to October 1, 1964.

(D) The reports required by ordering paragraph (A) shall not include excess rates collected during any period when an increased rate in the docket in question was subject to possible refund in proceedings pursuant to Section 4(e) of the Natural Gas Act.

(E) Notwithstanding any other provision of this order, any state production taxes paid prior to February 1, 1964 by any party listed in Appendix A hereto, shall be required to be subject to the provisions of ordering paragraph (H) and the interest payments required thereby only from the time and to the extent that such excess tax payments may be recouped by credit or otherwise.

(F) Each report required by ordering paragraph (A) shall set forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest, with the reasons for different rates of interest on different portions of the principal), the basis used for such determination, the period covered and a letter from the purchasers of the gas agreeing to the correctness of the amounts.

(G) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants who within 45 days of the issuance of this order shall so request in writing, and upon the purchaser of the gas.

(H) Each certificate holder listed in Appendix A hereto shall retain the amounts shown in the reports required under ordering paragraph (A) subject to further order of the Commission directing the disposition of those amounts. If any such certificate holder elects to commingle these retained funds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 5¾ percent per annum on all funds thus available from the date of the filing of the refund report to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission. If the certificate holder elects to deposit the retained refunds in a special escrow account, the certificate holder shall tender for filing on or before the date of the filing of the refund report an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be entered into between the certificate holder and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Certificate holder, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or an agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement of its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary of this Commission quarterly, certifying the amount deposited in the trust account for the quarterly period.

(I) Any certificate holder may apply to the Commission, within 15 days of any order directing payment of any or all amounts held by any certificate holder pursuant to ordering paragraph (H), for leave to make payments over a period of time in discharge of its refund obligation.

Commissioner O'Connor *dissents* for the reasons stated in his dissents in the cases cited in the majority opinion herein.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-49; UNITED FUEL GAS COMPANY, RP66-2; COLUMBIA GULF TRANSMISSION COMPANY, RP66-22

ORDER DENYING PETITION FOR REHEARING OF ORDER AFFIRMING ISSUANCE OF SUBPOENAS DUCES TECUM DENYING MOTION FOR RECONSIDERATION OF ORDERS PERMITTING INTERVENTION AND DENYING REQUEST FOR ORAL ARGUMENT

(Issued July 29, 1966)

The Columbia Companies,[1] on June 29, 1966, filed a document containing three requests: (1) a petition for rehearing of the order issued June 13, 1966, 35 FPC

---

[1] Atlantic Seaboard Corporation (Seaboard), United Fuel Gas Company (United Fuel), Columbia Gulf Transmission Company (Columbia Gulf), The Manufacturers Light and Heat Company (Manufacturers), The Ohio Fuel Gas Company (Ohio Fuel), Kentucky Gas Transmission Corporation (Kentucky Gas), and Home Gas Company (Home), collectively, "Columbia Companies".

974, in these consolidated proceedings which modified and affirmed the Presiding Examiner's issuance on May 8, 1966, of certain subpoenas duces tecum to the Columbia Companies; (2) a motion for reconsideration of orders issued herein on August 26, 1965, 34 FPC 593, and January 27, 1966, 35 FPC 158, permitting the Electric Companies[2] to intervene in these proceedings involving the restructured rates proposed by the three Respondents; and (3) a request for oral argument on these issues. The Columbia Companies on June 24, 1966, filed a motion for stay of subpoenas pending their petition which is the subject of this order. The Electric Companies, on June 30, 1966, filed an answer to the motion for stay.

The contentions of the Columbia Companies are essentially those urged in the full-day's hearing before the Presiding Examiner and in the pleadings filed in their appeal from the Examiner's issuance of the subpoenas. Our order issued June 13, 1966, makes specific reference to the three issues raised by the Electric Companies, and sets forth our conclusion, after consideration of all the contentions of all parties, that the data requested in the subpoenas are relevant and material to those issues. No useful purpose would be served to again discuss these contentions. Columbia Companies make two references to the language in our order which we believe we should comment on.

Columbia Companies argue that our order authorizes a "fishing expedition" because it found that the requested data are relevant and material to issues which "may" be raised by the parties in these consolidated proceedings. The use of the permissive "may" is not intended to indicate that the Electric Companies may subsequently find an issue and raise it in hearing, but that with respect to the issues specified in the order, they may or may not present evidence in hearing depending upon what their examination and evaluation of the data and material shows. Our order does not compel them to raise the specified issues nor does it dictate how the Electric Companies shall present their case.

Columbia Companies also contend that the cut-back in deliveries by United Fuel to Manufacturers and the further arrangements to be made by Manufacturers and Ohio Fuel, referred to in footnote 6 of the order issued June 13 is not a logical basis for "implication" that there is an issue in these proceedings of pooled gas supply. In effect Columbia Companies urge that before subpoenas are issued we should hold a hearing and decide whether the Columbia Companies operate on a "pooled gas supply" basis. Such separate proceedings would not eliminate requests for data on the basis of which other parties may seek to present evidence and could only result in further delaying these rate proceedings. Absent a full record we are not called upon to determine that Columbia Companies do operate a pooled gas supply or the effect of such operation on cost allocations and rate design, which is one of the issues raised by the Electric Companies. The area of inquiry is a proper one and the data requested are relevant and material to that issue and the other issues referred to in our prior order. See *Tennessee Gas Transmission Company*, 22 FPC 1049.

Columbia Companies also seek reconsideration of our orders granting the Electric Companies leave to intervene in these proceedings. This issue has been fully dealt with in our orders issued August 26, 1965, wherein we permitted intervention by Appalachian Power Company in Docket No. RP65–49; September 27, 1965, 34 FPC 971, wherein we denied reconsideration of the August 26 order; and January 27, 1966, wherein we permitted intervention by the Electric Companies in these consolidated proceedings. We are of the view that the request for further reconsideration is without merit. Likewise there appears to be no merit in Columbia Companies' request for oral argument on these procedural matters, particularly since they had such opportunity before the Presiding Examiner and the record of that full day's argument has been considered by us.

---

[2] Appalachian Power Company, Wheeling Electric Company, Ohio Power Company, and Kentucky Power Company (Electric Companies).

The Commission finds:

The petition and motions of Columbia Companies for rehearing and reconsideration of the Commission's orders issued herein on June 13, 1966, on August 26, 1965, and on January 27, 1966, set forth no new facts and no principles of law which were either not fully considered by the Commission when it issued such orders, or which now having been considered, warrant any change or modification of those orders, and said petition and motions should be denied.

The Commission orders:

The petition and motions filed by the Columbia Companies on June 29, 1966 for rehearing and reconsideration of the Commission's order issued herein on June 13, 1966, modifying and affirming the issuance of subpoenas duces tecum, and the orders issued herein on August 26, 1965 and on January 27, 1966, granting leave to the Electric Companies to intervene, and Columbia Companies' motion for oral argument hereby are denied.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-49; UNITED FUEL GAS COMPANY, RP66-2; COLUMBIA GULF TRANSMISSION COMPANY, RP66-22

ORDER DENYING APPLICATION FOR RECONSIDERATION

(Issued July 29, 1966)

The Electric Companies[1] on July 7, 1966, filed an "Application for Rehearing"[2] of the Commission's order issued June 22, 1966, 35 FPC 1058, which denied Electric Companies' motion to dismiss so much of the tariff filings in these dockets as require any further consideration of the Winter Service Rate Schedules of United Fuel Gas Company and Atlantic Seaboard Corporation, two of the three Respondents in these consolidated proceedings.[3]

Our examination of the application indicates that it is in large part a restatement of arguments previously advanced by Electric Companies and adequately covered by our order issued June 22. While further extensive discussion of these contentions would not serve any useful purpose, we believe some further comment may be appropriate.

Electric Companies contend that denial of their motion to dismiss created a serious gap in the Commission's regulatory control. The order issued June 22 (p. 1060), provides opportunity for all parties to present evidence as to "whether the establishment of a separate rate for service from storage is in the public interest or is otherwise just and reasonable." That procedure is fully compatible with our regulatory control and specifically provided in Section 4(e) of the Act, which, in part, states:

---

[1] Appalachian Power Company, Wheeling Electric Company, Ohio Power Company and Kentucky Power Company (Electric Companies).

[2] An application for rehearing of an interlocutory order, such as the order complained of, may not properly be filed (Section 1.30(e)) of the Commission's Rules of Practice and Procedure [18 CFR 1.30(e)]. The instant tender has been considered as a motion for reconsideration pursuant to Section 1.12 of the Rules.

[3] The proposed Winter Service Rate Schedules were included in proposed restructured tariffs which became effective subject to hearing and refund on May 16, 1965, and November 1, 1965, respectively in these proceedings.

> Whenever any such new schedule is filed the Commission shall have authority * * * to enter upon a hearing concerning the lawfulness of such rate, charge, classification or *service* * * *.

The Electric Companies in their application ask the following direct question:

> It is also pertinent to inquire, if the Winter Service is never certificated, under which provisions of the Act will a customer be able to request the Commission to require the Columbia Companies to extend Winter Service to it?

The short answer is that the customer does not have to request the Commission to extend the Winter Service to it. Pursuant to the tariff, the Winter Service Rate Schedule is available only to a customer who is taking contract demand service. Under the proposed tariff the customer can choose to take the volume of gas Columbia Companies have been certificated to deliver to him either entirely under the available contract demand rate schedule or in combination with the available Winter Service Rate Schedule.

The Commission finds:

The motion filed by Electric Companies on July 7, 1966, for reconsideration of the Commission's order issued herein June 22, 1966, sets forth no new facts and no principles of law which were either not fully considered by the Commission when it issued such order, or which now having been considered, warrant any change or modification of said order, and said motion should be denied.

The Commission orders:

The motion of Electric Companies filed July 7, 1966, for reconsideration of the Commission's order issued herein on June 22, 1966, hereby is denied.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL MAINE POWER COMPANY, DOCKET NO. E-7290

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued July 29, 1966)*

Central Maine Power Company (Central Maine) filed an application with the Federal Power Commission on May 9, 1966, seeking an order pursuant to Section 203 of the Federal Power Act authorizing it to acquire all of the electric utility properties and other assets of Maine Consolidated Power Company (Maine Consolidated) and of its wholly-owned subsidiary, Phillips Electric Light and Power Company (Phillips).

Central Maine is incorporated in the State of Maine and qualified to do business in that state with its principal place of business at Augusta, Maine, and is engaged primarily in the generation, transmission, distribution and sale of electric energy in a service area of about 9,000 square miles in central and southern Maine.

Maine Consolidated and Phillips are incorporated under the laws of the State of Maine with their principal place of business office at Farmington, Maine, and operate an electric utility system serving approximately 7,000 customers in portions of Somerset and Franklin Counties. Neither Maine Consolidated nor Phillips have any generating facilities. The territory they serve is located next to, or within, the northern and western parts of the Central Maine system. Currently, Maine Consolidated purchases all of its requirements and those of Phillips from Central Maine under a contract filed with the Federal Power Commission. According to the application their rates in general are higher than those now charged by Central Maine.

---

*Rehearing denied by order issued September 23, 1966, 36 FPC 661.

According to the application, Central Maine proposes to acquire net assets of $1,690,717. Central Maine proposes to exchange that number of shares of its common stock which when multiplied by its closing price on the New York Stock Exchange on the effective date of the acquisition, equals $1,525,000 for all the capital stock of Maine Consolidated, and will pay $729,651 in cash for the redemption of Maine Consolidated's bonds, for a total consideration of $2,254,651. Upon acquisition of the capital stock, Central Maine will cause Maine Consolidated to be dissolved and liquidated. An acquisition adjustment of $563,934 will be created by the transaction. However, Central Maine's request to amortize the acquisition adjustment to operating expense has not been justified and the adjustment should therefore be amortized to Account 425, Miscellaneous Amortization, and the period of amortization should be limited to five years.

Central Maine represents that the integration of the relatively small electric utility systems of Maine Consolidated and Phillips into the larger integrated system of Central Maine will result in assuring a plentiful supply of electric energy in the territories now served by Maine Consolidated and Phillips. Central Maine states that upon acquisition of Maine Consolidated, the general accounting will be carried on at Central Maine's general office in Augusta, and the billing will be handled on Central Maine's new computer. It is expected that system engineering and quantity purchasing will cut down the cost of the territory's operation.

As a result of the transaction, Central Maine estimates that residential customers will experience a reduction of $39,000 per year, commercial customers $28,000 per year, and municipal customers $1,000 per year. Power customers will have an increase of $23,000 per year primarily due to the fact that Central Maine's rates are on a demand basis, whereas Maine Consolidated uses a flat block rate. This increase will be phased in over a period of 10 years. The first year customers experiencing an increase of over $3.00 per month will get a credit adjustment of 90% of the increase. This adjustment will be reduced by 10 percent of the increase each succeeding year so that full billing will take place in the tenth year.

Written notice of the application has been given to the Public Utilities Commission of Maine and to the Governor of that State. Notice was also published in the Federal Register on May 21, 1966 (31 F.R. 7416), stating that any person desiring to be heard or to make any protest with reference to said application should on or before June 20, 1966, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received. The Public Utilities Commission of Maine approved the transaction by an order issued June 1, 1966.

The Commission finds:

(1) Central Maine, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Com-

mission as heretofore described and set forth in the Commission's order issued June 2, 1965, *Central Maine Power Company*, Docket No. E–7215 (33 FPC 1157).

(2) By the proposed transaction, Central Maine will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Maine Consolidated and Phillips, other persons, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Central Maine, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Central Maine of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Central Maine shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees and the acquisition adjustment of $563,934 shall be amortized to Account 425, Miscellaneous Amortization, over a period not to exceed five years.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

OPINION NO. 494–A

CHATTANOOGA GAS COMPANY v. EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP65–3

MEMORANDUM OPINION AND ORDER DENYING REHEARING AND MOTION FOR STAY OF OPINION NO. 494

(Issued July 29, 1966)

Syllabus

Commission *clarifies* prior Opinion and Order and *denies* application for rehearing and motion for stay.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

On July 1, 1966, East Tennessee Natural Gas Company (ETN) filed an application for rehearing of our Opinion No. 494 and order issued June 8, 1966, 35 FPC 902, which reduced the maximum daily contract demand contained in the service agreement between ETN and Chattanooga Gas Company (Chattanooga). For the most part ETN's application restates the points previously raised in its briefs and adequately considered and disposed of in our Order. However, in denying ETN's application the following comments and clarifications are appropriate.

ETN states that the reason underlying the modification of the 40,000 Mcf per day limitation contained in the service agreement was that Chattanooga "* * * could purportedly purchase gas cheaper from another supplier * * *."[1] This was not the reason for lowering the contract demand limitation. As our Opinion clearly stated, the modification was necessary so that the Commission could "* * * review the full range of public interest considerations bearing on 8,000 Mcf of the total incremental gas supply required by the Chattanooga market."[2]

ETN also contends that our holding adversely affects its revenues. Although ETN's monthly demand charge to Chattanooga is based upon the actual maximum takes during the preceding 12-month period, the billing demand may not exceed the daily delivery obligation contained in the service agreement. Since Chattanooga's takes first exceeded 40,000 Mcf on January 31, 1966, the 40,000 Mcf limitation sets a ceiling on the billing demand for the subsequent year. ETN argues that the lowering of the limitation to 33,958 Mcf prohibits ETN from collecting the 40,000 Mcf billing demand based on the 1966 takes. Our Opinion did not intend such a result.

Chattanooga first exceeded the 40,000 Mcf limitation on January 31, 1966, due to the 1966 blizzard and accompanying transportation breakdown which prohibited replenishment of its peak-shaving supplies. Its billing demand under the existing service agreement for the next 12 months is, therefore, the 40,000 Mcf. ETN has two alternatives in effectuating the required revisions ordered in Opinion No. 494 without adverse effect on its revenues. ETN can file a new service agreement under its G–1 rate schedule implementing the modified contract limitation and eliminating the sole supplier provision to be effective January 31, 1967. In the alternative ETN can file for Commission approval a partial-requirements rate schedule as discussed in Opinion No. 494, with a minimum bill provision if desired, and a new service agreement thereunder reflecting the required changes to be effective January 31, 1967 or on the first day Southern Natural Gas Company (Southern) begins delivering gas to Chattanooga pursuant to Opinion No. 493, issued June 8, 1966, 35 FPC 917, whichever is later. Either alternative will assure ETN against any economic loss and should also compensate ETN for any greater demand costs occasioned by its increased purchases of gas from Tennessee Gas Pipeline Company as a result of Chattanooga's increased takes during the past winter.

On July 11, 1966, ETN tendered for filing a supplement to its "Gas Sales Contract" dated August 1, 1959, with Chattanooga, purportedly in compliance with ordering paragraphs (C) and (D) of the order accompanying our Opinion No. 494. The supplement provides for a reduction in the maximum daily demand from the present 40,000 Mcf to the prescribed 33,958 Mcf (and for elimination of the sole supplier provision appearing in Article I at page 3 of the contract. Further, ETN construes the supplement as requiring Chattanooga to take or pay for 67 percent of its annual entitlement of gas under the currently effective billing demand. The 67 percent figure is based on Opinion No. 493 (issued concurrently with Opinion No. 494) which permitted Southern to enter the Chattanooga market. In the absence of contrary action by the Commission, the supplement would automatically become effective on August 11, 1966.

ETN's filing must be rejected. Although ordering paragraph (C) called for a supplement to the presently filed service agreement, Section 154.63(d)(2) of the Regulations under the Natural Gas Act, dealing with changes in executed service agreements, provides that "Agreements intended to effect a change or revision of an executed service agreement shall be in the form of a superseding executed service agreement only. Service agreements shall not contain any supplement * * * ." ETN is also in error in attempting to impose a minimum commodity charge in the existing service agreement under its present G–1 rate schedule. This can be done, if at all, only under a partial-requirements rate schedule and service agreement previously discussed and as provided for in ordering paragraph (D) of Opinion No. 494.

---

[1] ETN's Application for Rehearing at pp. 3–4.

[2] Opinion No. 494 at p. 905.

ETN also filed a motion to stay Opinion No. 494 and order pending action on rehearing and judicial review. The motion is denied. Opinion No. 494 and order as clarified in this Opinion and order will not cause irreparable injury as alleged by ETN.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the application for rehearing filed by ETN present no facts or legal principles which would warrant any change or modification in the Commission Opinion No. 494 except as specified below.

(2) The time for the submission of compliance filings in accordance with ordering paragraph (C) of Opinion No. 494, as amended, should be extended for 90 days beyond the date of this Opinion and Order denying rehearing.

(3) ETN's supplement to the service agreement is not the proper method for implementing the changes ordered in Opinion No. 494 and Order.

(4) ETN's motion for stay should be denied.

The Commission orders:

(A) The application for rehearing of Opinion No. 494 filed by ETN on July 1, 1966, is denied.

(B) The effective date of the changes required by Opinion No. 494 and order is January 31, 1967.

(C) The supplement filed by ETN on July 11, 1966, in purported compliance with the requirements of ordering paragraph (C) of the order accompanying Opinion No. 494 is rejected.

(D) Ordering paragraph (C) of the order accompanying Opinion No. 494 is changed to read:

> (C) Within 90 days after the date of Opinion No. 494–A and Order ETN shall file, subject to the approval of the Commission, either (1) a new service agreement under its G–1 rate schedule embodying the changes ordered in Opinion No. 494 to be effective January 31, 1967, or (2) a partial-requirements rate schedule and a new service agreement thereunder reflecting the changes ordered in Opinion No. 494 and order, said service agreement to be effective January 31, 1967, or the first day Southern delivers gas to Chattanooga pursuant to Opinion No. 493 issued June 8, 1966, whichever is later. If a partial-requirements rate schedule is filed, ETN may include therein a provision for a minimum commodity bill.

(E) The motion for stay of Opinion No. 494 is denied.

(F) The following changes, in the nature of errata, are made to Opinion No. 494:

> (1) Delete the words "constituted" and "was" in line 7 on p. 906.
>
> (2) Delete the period in the third line of the fourth full paragraph of p. 906 and insert in lieu thereof a comma.
>
> (3) Delete the capital "S" of the word "Since" in the third line of the fourth full paragraph and insert in lieu thereof a small "s".

[Editor's note. Corrections (2) & (3) made in the printed page].

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF JONESBORO, ILLINOIS AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-381; VILLAGE OF COBDEN, ILLINOIS AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-382

FINDINGS AND ORDERS DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 29, 1966)

On May 20, 1966, the City of Jonesboro, Illinois (Jonesboro), filed in Docket No. CP66-381 an application and supplement thereto filed June 17, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Eastern Transmission Corporation (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Jonesboro to provide a new point of delivery for Jonesboro's present allocation of natural gas for Jonesboro's existing distribution system and for delivery of the natural gas requirements of the facilities proposed to be constructed by the Village of Cobden, Illinois, all as more fully set forth in the application.

Jonesboro, presently owns and operates a natural gas distribution system. Gas is purchased from Respondent and transported to Jonesboro through the low pressure distribution facilities owned and operated by the City of Anna, Union County, Illinois. Texas Eastern was authorized in Docket No. G-2573 to render the service to Jonesboro and to Anna. The systems serving the two communities have been in operation since 1956.

Jonesboro states that the establishment of a new point of delivery is necessary because the present method of transportation of gas through the low pressure facilities of the City of Anna, Illinois, is unsatisfactory and inadequate to meet the growing demands and to assure sufficient volumes and pressures on peak days. Jonesboro further states that the proposal would make it possible to make natural gas service available to ultimate consumers in the Village of Cobden and along the proposed transmission pipeline, all of which are now without natural gas. The Village of Cobden has filed an application pursuant to Section 7(a) of the Natural Gas Act in Docket No. CP66-382.

Jonesboro proposes to interconnect a lateral pipeline with Respondent's pipeline near the point where it crosses Illinois State Highway No. 127. From this point of connection, Jonesboro proposes to construct a 4-inch high pressure lateral extending northward along said highway a distance of approximately four miles to the existing town border station presently located at the east side of the City of Jonesboro. Jonesboro also proposes to serve prospective customers along its proposed lateral. This service will be rendered from Jonesboro's existing maximum day allocation of 628 Mcf.

The total estimated cost of the facilities to be constructed by Jonesboro is $71,000, which will be financed from funds on hand in the City's Gas Fund.

On May 26, 1966, Respondent was duly advised of the application filed in Docket No. CP66-381, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on June 9, 1966 (31 F.R. 8142). No protest, petition to intervene or request for hearing has been filed in this proceeding.

On June 27, 1966, Respondent filed an answer to the application in Docket No. CP66–381 and indicated therein it had no objection to the entry of an order requiring it to establish the requested connection of its facilities and provide the requested service.

On May 20, 1966, the Village of Cobden, Illinois (Cobden), filed in Docket No. CP66–382 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Eastern Transmission Corporation (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be established by Cobden and to sell and deliver to Cobden its natural gas requirements, all as more fully set forth in the application.

The natural gas requirements during the first three years of proposed operations are estimated to be as follows:

	First year	Second year	Third year
Annual (Mcf)	42,800	49,900	57,700
Peak day (Mcf)	416	486	566

Cobden proposes to construct and operate a natural gas distribution system to serve the prospective customers in the Village of Cobden and vicinity and along its proposed high pressure transmission pipeline. The proposed 3-inch transmission lateral will be installed by Cobden along U.S. Highway No. 51 extending approximately five miles from Cobden to the meter station to be located on the east side of the City of Jonesboro, Illinois, at the present site of Jonesboro's existing town border station.

Cobden states that it has entered into a contract with the City of Jonesboro under which Jonesboro will transport Cobden's natural gas from Respondent's pipeline to Cobden's meter station through new transmission facilities to be constructed by Jonesboro, pursuant to authorization sought by Jonesboro in its application filed May 20, 1966, in Docket No. CP66–381.

On May 26, 1966, Respondent was duly advised of the application filed in Docket No. CP66–382, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on June 7, 1966 (31 F.R. 8034). No protest, petition to intervene or request for hearing has been filed in this proceeding.

On June 27, 1966, Respondent filed an answer to the application in Docket No. CP66–382 and indicated therein it had no objection to the entry of an order requiring it to establish connection of its facilities and provide the requested service.

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 11, 1947, in Docket No. G–880 (6 FPC 171).

(2) Jonesboro and Cobden are legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Texas Eastern to establish physical connection of its transmission facilities with the facilities proposed to be established by Jonesboro and to sell to Jonesboro up to the maximum daily volumes heretofore allocated to Jonesboro under a superseding service agreement and to sell up to 566 Mcf to Cobden with transportation of

said natural gas by Jonesboro to a point of delivery at Cobden's meter station located on the east side of the City of Jonesboro under a service agreement to be executed with Texas Eastern in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and to deliver the same to Jonesboro for the account of Cobden.

(4) The requirement that Texas Eastern serve Jonesboro and Cobden as hereinafter ordered, will not place an undue burden upon Texas Eastern, require Texas Eastern to enlarge its transportation facilities, or impair Texas Eastern's ability to render adequate service to its existing customers.

(5) Jonesboro and Cobden should be prepared to receive natural gas from Texas Eastern for distribution as proposed, within one year from the date of the issuance of this order.

The Commission orders:

(A) Texas Eastern Transmission Corporation is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Jonesboro as herein described, and to sell to Jonesboro up to the maximum daily volume heretofore allocated to Jonesboro under a superseding service agreement, and to sell up to 566 Mcf of natural gas daily to Cobden under a service agreement to be executed by Cobden with Texas Eastern in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the applications in the proceedings and to deliver the same to Jonesboro for the account of Cobden. Such service shall be rendered pursuant to Texas Eastern's presently filed appropriate rate schedule.

(B) Texas Eastern shall report to the Commission in writing the date of commencement of service to Applicants within 10 days thereof.

(C) Jonesboro and Cobden shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN INDIANA PUBLIC SERVICE COMPANY, DOCKET NO. E-7296

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued July 29, 1966)

Northern Indiana Public Service Company (Applicant) filed an application on May 31, 1966 seeking an order pursuant to Section 203 of the Federal Power Act authorizing it to acquire the electric system facilities owned by the City of Nappanee, Indiana and operated by the Nappanee Utilities Company (Nappanee).

Applicant is incorporated under the laws of the State of Indiana with its principal place of business at Hammond and is engaged in the generation, purchase, sale at wholesale and distribution of electric energy in 21 counties in northern Indiana.

Nappanee operates electric generation and distribution facilities serving Nappanee and surrounding rural territories serving approximately 2,300 customers.

According to the application, the facilities to be acquired consist of all the electric production plant and all the electric distribution plant including a 12,300 kw generating plant. For these facilities, Applicant proposes to pay $1,401,496. The original cost of the facilities less depreciation, is estimated at $1,326,459. This will result in the creation of an acquisition adjustment of $75,037 which Applicant proposes to write off by a debit to earned surplus.

The Nappanee system is presently isolated electrically from any other electric utility system. However, it is surrounded by the Applicant's system, and the Applicant proposes to construct two 69 kv lines, one extending west to Nappanee and one extending north to Nappanee, from its existing system. The transaction will not result in an increase in charges in electric service for any customer since present customers of Nappanee will have the option of remaining under the present Nappanee rates or changing to Applicant's standard rate schedules. Applicant represents that it has the capacity and ability to render more efficient service and to expand the system now owned by Nappanee, and Applicant further represents that Nappanee will be able to finance much needed internal improvements from proceeds of the sale and that its tax base will be expanded.

Written notice of the application has been given to the Public Utilities Commission of Indiana and to the Governor of that State. Notice was also published in the Federal Register on June 14, 1966, (31 F.R. 8322), stating that any person desiring to be heard or to make any protest with reference to said application should on or before June 30, 1966, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10).

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the States of Ohio and Illinois and consumed in the State of Indiana, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy consumed wholly by the transmitter. Applicant, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Nappanee, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC POWER & LIGHT COMPANY AND PORTLAND GENERAL ELECTRIC COMPANY, DOCKET NO. E-7291

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued July 29, 1966)

Pacific Power & Light Company (Pacific) filed on May 12, 1966, joined on June 3, 1966 by Portland General Electric Company (Portland) an application for authority for each to acquire certain electric distribution facilities of the other pursuant to Section 203 of the Federal Power Act.

Pacific is incorporated under the laws of the State of Maine and is qualified to transact business in the States of Oregon, Washington, California, Montana and Idaho with its principal place of business at Portland, Oregon. It is engaged primarily in the business of generating, purchasing, transmitting, selling at wholesale, and distributing electric energy.

Portland is incorporated under the laws of the State of Oregon and operates an electric system serving in the cities of Portland, Salem, Oregon City, Hillsboro, 42 other incorporated cities and towns, and surrounding territory in the State of Oregon.

The proposed exchange of properties results from an Ordinance (No. 120617) passed by the City Council of Portland on June 30, 1965. This ordinance designated certain areas within the City of Portland as Underground Wiring Control Districts with the purpose of eventually having all utilities underground rather than overhead within these Districts. The ordinance further designated areas within the Districts to be served exclusively by Pacific and Portland.

Following negotiation as to the consideration for the properties involved, Pacific and Portland signed an agreement on March 25, 1966, specifying which facilities would be exchanged, the considerations therefor, and the procedures for the exchange. Pacific proposes to transfer to Portland distribution facilities with an original cost of $1,240,400 and depreciated original cost of $938,718. These facilities serve 348 commercial customers and 22 residential customers. Portland proposes to transfer to Pacific distribution facilities with original cost of $1,366,217 and depreciated original cost of $1,062,864. These facilities serve 251 commercial customers and three residential customers. In addition to the exchange of properties, Pacific will pay to Portland the amount of $161,105. The total consideration will create an acquisition adjustment of $36,959 on the books of Pacific. This acquisition adjustment will be eliminated by a debit to Account 435, Miscellaneous Debits to Surplus. The total consideration received by Portland will result in a profit of $36,959 which Portland will record on its books as a credit to Account 434, Miscellaneous Credits to Surplus.

None of the customers involved in the exchange will experience a change in rates as the retail rate schedules of both Pacific and Portland have been identical in this area for many years.

Applicants represent that the proposed acquisition will be consistent with the public interest in that it will promote the installation of underground facilities in the core area of the City of Portland in the most economical and effective manner and will eliminate areas where there are now duplicating systems.

Written notice of the application has been given to the Oregon Public Utility Commissioner, Wyoming Public Service Commission, Washington Utilities and

Transportation Commission, California Public Utilities Commission, Montana Board of Railroad Commissioners, and Idaho Public Utilities Commission and to the Governors of each of those states. Notice has also been given by publication in the Federal Register on June 9, 1966 (31 F.R. 8145), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before June 27, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Pacific, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company* (27 FPC 620).

(2) Portland, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the State of Washington and consumed in the State of Oregon, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy consumed wholly by the transmitter. Portland, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(3) By the proposed transaction Pacific will merge or consolidate its facilities subject to the jurisdiction of the Commission with part of those of Portland, and Portland will merge or consolidate its facilities subject to the jurisdiction of the Commission with part of those of Pacific, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed acquisition of facilities by Pacific and the proposed acquisition of facilities by Portland all as described above, on the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Pacific and the proposed acquisition by Portland of the electric facilities referred to above and as described in the application are authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Pacific and Portland shall record the proposed transactions herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions herein authorized and approved are consummated within 90 days from the date of issuance of this order

(D) the foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS OIL & GAS CORPORATION,[1] DOCKET NOS. G-17288 AND RI62-540

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, REQUIRING REFUNDS, SEVERING AND TERMINATING PROCEEDINGS

(Issued July 29, 1966)

On June 10, 1966, Texas Oil & Gas Corporation (Texas Oil) filed an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Pipeline Company, a division of Tenneco Inc. (Tennessee) by Texas Oil in the Placedo Field, Victoria County, Texas (Texas Railroad Commission District No. 2) under its FPC Gas Rate Schedule No. 1, and in the North Lissie Field, Colorado County, Texas, (Texas Railroad Commission District No. 3) under its FPC Gas Rate Schedule No. 42. The effective rates, being collected subject to refund, under Rate Schedule Nos. 1 and 42 are 15.33333¢ and 15.95016¢ per Mcf of natural gas at 14.65 psia, respectively.[2]

Texas Oil proposes to amend its contracts to provide for a rate of 15¢ per Mcf of natural gas at 14.65 psia for the remaining terms of the contracts, and to eliminate all escalation provisions therefrom, except the tax reimbursement provisions. It also proposes to refund to Tennessee all monies charged and collected, subject to refund, above the settlement rates, either by itself or its predecessor, with applicable interest computed to the date of issuance of this order. The refund amount will be approximately $39,000, exclusive of interest, and Texas Oil's current annual revenue from these sales will be reduced by $4,800. Tennessee and its jurisdictional pipeline customers are obligated to flow-through the refund monies.

Texas Oil's proposal is consistent with the provisions of the Second and Ninth Amendments to the Commission's Statement of General Policy No. 61-1 (18 CFR 2.56) and we shall approve the same.

However, we desire to make it clear that acceptance of Texas Oil's offer of settlement shall not be construed as approval of any future increased rates that may be filed by Texas Oil under the subject rate schedules in accordance with its reservation of the right to file increases to cover possible future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Texas Oil rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Texas Oil on May 31, 1966, is consistent with the Statement of General Policy No. 61-1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement filed with the Commission by Texas Oil on June 10, 1966, is approved in accordance with the provisions of this order.

(B) Texas Oil shall file, within 30 days from the date of issuance of this order, notices of change in rates under its FPC Gas Rate Schedule Nos. 1 and

---

[1] Successor to Salt Dome Production Company.

[2] Rate Schedule No. 42 is subject to a 0.21931¢ dehydration charge deduction which is applicable to the settlement rate.

42 to reflect the settlement rates of 15¢ per Mcf of natural gas at 14.65 psia, subject to any contractual deductions, and executed contractual amendments in accordance with the terms of its settlement proposal and as approved herein. The notices of change and contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Texas Oil shall compute the difference between the rates collected subject to refund and the settlement rate for the subject sales with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to Tennessee, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from Tennessee agreeing to the correctness of such amounts, and it shall refund the same to Tennessee ten days after filing the letter from Tennessee and ten days thereafter shall file a release from Tennessee acknowledging receipt of such monies.

(D) Upon notification by the Secretary of the Commission that Texas Oil has complied with the terms and conditions of this order, the subject proceedings shall terminate, and Docket Nos. G-17288 and RI62-540 shall be severed from the Texas Gulf Coast area rate proceeding Docket No. AR64-2, all without further order of the Commission.

(E) The acceptance by the Commission of Texas Oil's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Texas Oil and is without prejudice to claims or contentions which may be made by Texas Oil, the Commission staff, or any affected party hereto, in any proceedings.

OPINION NO. 493-A

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-270; SOUTHERN NATURAL GAS COMPANY, CP64-259, CP64-314; EAST TENNESSEE NATURAL GAS COMPANY, CP65-66; TENNESSEE GAS TRANSMISSION COMPANY, CP64-165; CITY OF BUFORD, GEORGIA, CP65-11, CP65-20; CITY OF SUGAR HILL, GEORGIA, CP65-10, CP65-19; CITY OF AUSTELL, GEORGIA, CP65-74

MEMORANDUM OPINION AND ORDER CLARIFYING AND AMENDING OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING AND MOTION FOR STAY

(Issued July 29, 1966)

Syllabus

1. Contention that failure to file exceptions to Examiner's decision should not be taken as waiver of objections is *rejected*—whether, as claimed, objections would have been duplicative, it was incumbent on pipeline to take exceptions individually on points of disagreement. P. 337.
2. Motion for stay *denied* for failure to meet criteria set forth in *Virginia Petroleum Jobbers Association.* P. 338.
3. Commission *amends* and *clarifies* prior Opinion and order; *denies* motion for stay and applications for rehearing.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

Applications for rehearing of our Opinion No. 493 and order issued June 8, 1966, 35 FPC 917, have been filed by the Knoxville interveners, jointly by East

Tennessee Natural Gas Company (East Tennessee) and Tennessee Gas Pipeline Company (Tennessee Gas), and by Southern Natural Gas Company (Southern). East Tennessee and Tennessee Gas also filed a motion for stay pending final action on their application for rehearing and, in the event rehearing is denied, until the conclusion of judicial review. Answers in opposition to the motion for stay were filed by Chattanooga Gas Company (Chattanooga) and Southern.

By Opinion No. 493 we denied East Tennessee's application for a certificate of public convenience and necessity in Docket No. CP65–66 and Tennessee Gas' companion application to amend the certificate issued to it in Docket No. CP64–165 and granted the competitive application of Southern in Docket No. CP64–314 to sell and deliver up to 29,000 Mcf per day to Chattanooga. In addition, we remanded to the Examiner for further proceedings the competitive proposals of Southern and Transcontinental Gas Pipe Line Corporation (Transco) to provide additional service to Atlanta Gas Light Company (Atlanta Gas) in the Atlanta, Georgia area.

The reasons underlying the actions taken in Opinion No. 493 and the conditions attached to the certificate issued Southern for service in the Chattanooga market area, as well as the factors leading to the denial of East Tennessee's application, are set out in full in the Opinion. Our examination of East Tennessee's rehearing application indicates that a number of the issues are little more than restatements of arguments previously advanced by it and adequately covered in the Opinion. A rediscussion of these points would serve no useful purpose. We direct our attention, therefore, to the remaining matters.

East Tennessee makes a point of the fact that it did indicate its willingness to supply all firm gas to Chattanooga for resale to Farmers Chemical. However, the proposal was not made until well after the hearings had begun and, on evaluation, was inferior when compared to Southern's application and the advantages inherent therein. On balance we found that Southern's proposal was in the greater public interest. We affirm that determination.

East Tennessee contends that we erred in holding that certification of Southern's proposal would enhance Chattanooga's competitive position and improve its ability to reduce its rates. In support it has included a computation showing an annual saving of $2,865 to Chattanooga if its entire requirements were purchased from East Tennessee. Because the East Tennessee proposal was not for a 100 percent firm gas supply, it was necessary to consider both that proposal and the service proposed to be rendered by Southern at comparable load factors in order to determine the relative price advantage. On this basis the rate which would have been charged by East Tennessee would be higher than the rate under Southern's OCD–3 rate schedule.

The computation submitted by East Tennessee is based on 100 percent firm service to Chattanooga. As set out in the Opinion, this service was not proposed by East Tennessee in its application. During the hearing the Examiner specifically inquired of East Tennessee's attorney whether, in presenting evidence regarding 100 percent firm service, the company was attempting to amend its application. East Tennessee replied that they were not making an offer of an amendment to their application and that they were continuing to offer service on a basis of 65 percent firm and 35 percent interruptible gas.[1] As we have found, this service would not meet the needs of Chattanooga and Farmers Chemical.

East Tennessee's proposal for a reduction of 2 cents per Mcf was based on the part firm-part interruptible service offered in its application. The exhibits and testimony submitted regarding the reduction based on 100 percent firm service were inadequately supported and their introduction appears to have been little more than a last minute attempt by East Tennessee to bolster its application. Moreover, the reductions were not offered by East Tennessee on a system-wide basis but only to its Zone 1 and Zone 2 customers. No explanation was given for excluding the Zone 3 customers from a reduction and there was no showing that the failure to effect a comparable reduction in its Zone 3 would not have resulted in a discriminatory rate treatment.[2]

---

[1] Transcript, Vol. 32, pp. 3382–3388.

The reduction of 2 cents per Mcf proposed by East Tennessee was considered by us at the time of our decision. For the reasons stated in the Opinion, as further stated herein, we concluded that the offer was not sufficiently decisive as to warrant certification of East Tennessee's proposal. We are convinced that the issuance of a certificate to Southern for the service proposed by it in its application is required by the public convenience and necessity.

East Tennessee also disagrees with our conclusion that it can substantially replace its interruptible sales to Chattanooga with sales to other customers. It argues that it is presently selling all the interruptible gas it can possibly sell on non-curtailment days and that the only volumes it could replace are those sold to Chattanooga for the Farmers Chemical market on days of partial curtailment. The continued growth in East Tennessee's interruptible gas sales, as most recently set out in the July 7, 1966, *supra*, p. 20, order in Docket No. G–2268 increasing the authorized interruptible deliveries to Bowaters Southern Paper Company (Bowaters) from 9,000 Mcf per day to 26,500 Mcf per day, enforces our conclusion that East Tennessee should experience little practical difficulty in finding new markets to replace the sales previously made to Chattanooga for Farmers.

Tennessee contends that its failure to file exceptions to the Examiner's decision should not have been taken as a waiver of its objections to his denial of its application. Whether, as claimed, its objections would have been duplicative of East Tennessee's exceptions, it was incumbent on Tennessee Gas to take exception individually on the points with which it disagreed.

The Knoxville interveners point out that a part of East Tennessee's application involved a request for certificate authorization to continue certain firm gas sales to Bowaters and the Aluminum Company of America (Alcoa) which have been made without a certificate since 1964. The rates found just and reasonable in Opinion No. 488, 35 FPC 534, were derived through the use of sales volumes and allocation factors including the firm gas deliveries to Bowaters and Alcoa. Furthermore, the evidence shows that the firm industrial deliveries are not being made through the utilization of capacity from Zone 3 pending the build up of those sales to the estimated third year requirements. Accordingly, we believe that it is in the public interest to certificate these firm gas sales to a maximum of 11,505 Mcf peak day and 3,924,608 Mcf annually for Alcoa and 3,356 Mcf peak day and 1,224,940 Mcf annually for Bowaters as reflected in Exhibit No. 102, Schedule 2, Page 2. In all other respects the order denying the certificate in Docket No. CP65–66 will be affirmed.

The Knoxville interveners also request that the Commission find that the present facilities of East Tennessee are capable of meeting the firm coincidental peak day requirements of all its customers as estimated for 1968. On May 25, 1966, we issued public notice of a new application filed by East Tennessee in Docket No. CP66–375 seeking authority to build $1.7 million in facilities to meet its claimed 1966–67 winter needs. The facts concerning the need for those facilities are under investigation in that docket. Since the finding herein sought by Knoxville would constitute a prejudgment of that application, the request must be denied.

---

[2] On July 25, 1966, East Tennessee submitted a revised computation showing additional savings under the rates prescribed in our recent Opinion No. 497. Although not part of the application for rehearing as originally filed, we have given consideration to this material. It is, however, subject to the same defects regarding the failure to offer the requisite level of firm service and the fact that the reduction would not be system-wide as have been found objectionable with regard to the initial computation.

The application for rehearing filed by Southern is addressed to the portion of the Opinion dealing with the Atlanta market. While it states that it has no objection to the holding of the additional proceedings, it urges the Commission, in the remanded proceedings, to permit it to amplify the existing record wherever the record now appears, inadequate. In this connection it requests the deletion of certain findings in the Opinion allegedly prejudicial to its position.

In the reopened proceedings Southern will have a full opportunity to present such new evidence as may be relevant to any proposed new project as well as the proposals now pending for consideration. Our discussion in the Opinion was intended to explain our interim disposition of the applications and the Commission's thinking thereon based on the evidence presently of record. It was not intended to be prejudicial to any position the parties may wish to advocate at the reopened hearing or to constitute a prejudgment of any of the material that may be introduced in the reopened hearings. Since the findings made will not prevent any party from securing a full and fair hearing, there is no basis for their deletion from the Opinion.

In its motion for stay East Tennessee alleges that it will lose a substantial portion of the revenues previously derived from the service to Chattanooga unless the authority granted Southern is delayed. The criteria followed by us in passing on requests for stay of our Opinions are set out in *Virginia Petroleum Jobbers Assn.* v. *F.P.C.*, 259 F. 2d 921 (CADC–1958). The tests include (1) the probability that the applicant for stay will prevail on the merits; (2) irreparable injury to the applicant; (3) whether the stay will substantially harm other interested parties; and (4) where does the public interest lie? Although East Tennessee alleges irreparable injury in the event that our decision is overturned, we are unable to see where such injury as it may sustain could not readily be recompensed under the existing powers of the Commission. Although East Tennessee has not even addressed itself in its motion to the remaining criteria, we may observe that the potential for harm to the public from a delay in the construction of Southern's facilities occasioned by a stay outweighs, in its seriousness, any possibility for injury to East Tennessee. The motion for stay will be denied.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 493 and accompanying order except as specified below.

(2) The motion for stay of Opinion No. 493 and accompanying order filed July 1, 1966, by East Tennessee Natural Gas Company and Tennessee Gas Pipeline Company, a Division of Tenneco Inc., should be denied.

The Commission orders:

(A) Ordering paragraph (F) of the order accompanying Opinion No. 493 is amended to read:

> (F) East Tennessee Natural Gas Company is hereby granted a permanent certificate of public convenience and necessity authorizing East Tennessee to transport and deliver up to 11,505 Mcf of natural gas on peak days and 3,924,608 Mcf annually to the Aluminum Company of America, and up to 3,356 Mcf on peak days and 1,224,940 Mcf annually to Bowaters Southern Paper Corporation, on a firm basis (all at 14.73 psia); in all other respects the application in Docket No. CP65–66 is denied.

(B) The applications for rehearing filed jointly by East Tennessee Natural Gas Company and Tennessee Gas Pipeline Company, and individually by Southern Natural Gas Company and Knoxville, *et al.* are denied.

(C) The motion for stay filed jointly by East Tennessee Natural Gas Company and Tennessee Gas Pipeline Company is denied.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES OF ALTENBURG AND FROHNA, MISSOURI AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-342

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 1, 1966)

On April 28, 1966, the Cities of Altenburg and Frohna, Missouri (Applicants), filed in Docket No. CP66-342 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Respondent) to establish physical connection of its transmission facilities with the facilities to be constructed by the City of Frohna and to sell and deliver natural gas to the City of Frohna for resale and distribution therein and for resale to the City of Altenburg for resale and distribution therein, all as more fully set forth in the application.

Altenburg and Frohna propose to construct and operate natural gas distribution systems within their own borders and Frohna proposes to construct and operate approximately 3.22 miles of 2-inch transmission line between Frohna and a point on Respondent's pipeline, all in Perry County, Missouri. Applicants propose that Frohna will receive natural gas from Respondent at the delivery point on Respondent's pipeline from which point the gas will be transported to Altenburg and to Frohna. Altenburg will be charged for its gas at the cost of the gas to Frohna plus a transportation charge to be determined on the basis of an annual carrying charge in proportion to volumes of gas delivered to and used by each community. The estimated cost of the distribution system to be constructed by Altenburg is $58,000, and the estimated cost of the distribution system and transmission line to be constructed by Frohna is $84,000.

Applicants' estimated peak day and annual natural gas requirements for the first three years of operations are as follows:

	Mcf		
	First year	Second year	Third year
Altenburg:			
Peak day	115	138	172
Annual	10,200	12,100	15,200
Frohna:			
Peak day	149	162	183
Annual	22,230	23,160	29,650

On June 6, 1966, Respondent filed an answer and stated that it does not object to the granting of the application provided that it is ordered to establish physical connection of its transmission facilities with those to be constructed by the City of Frohna and to sell and deliver to Frohna the entire combined third year peak day gas requirements of both communities.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

The Commission finds:

(1) Applicants, the Cities of Altenburg and Frohna, Missouri, are municipal corporations organized and existing under the laws of the State of Missouri and

are legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in their respective communities.

(2) Respondent, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its natural gas transmission system with the facilities proposed to be constructed and operated by the City of Frohna and to sell and deliver natural gas to the City of Frohna for resale and distribution therein and for resale to the City of Altenburg for resale and distribution therein as hereinafter ordered and conditioned.

(4) The requirement that Respondent sell and deliver natural gas to the City of Frohna will not place an undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities proposed to be constructed and operated by the City of Frohna and to sell and deliver to the City of Frohna up to 355 Mcf of natural gas per day for resale and distribution therein and for resale to the City of Altenburg for resale and distribution therein, all as hereinbefore described and as more fully described in the application in this proceeding.

(B) The City of Frohna shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) The City of Frohna shall execute a service agreement with Respondent in accordance with the Regulations under the Natural Gas Act.

(D) Respondent shall report to the Commission in writing the date of commencement of service within ten days thereof.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MORRIS R. ANTWELL, D/B/A HOBBS PIPE AND SUPPLY COMPANY, ET AL., DOCKET NO. RI60-99, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, REQUIRING REFUNDS AND TERMINATING PROCEEDINGS AS TO CONTRACTUAL ISSUES

(Issued August 1, 1966)

On March 1, 1966, the Commission issued an order in *Amerada Petroleum Corporation, et al.*, Docket No. G-16117, *et al.*, 35 FPC 285, approving a settlement proposal of certain contractual issues involved therein, and prescribing refunds. The proposal was filed by forty-three producer respondents, one of which was West Lake Natural Gasoline Company (West Lake). In accordance with the Commission's order, West Lake made refunds to its purchaser, El Paso Natural Gas Company (El Paso), to whom it sells natural gas under West Lake's FPC Gas Rate Schedule No. 1 from its South Lake Trammell Gasoline Plant, Nolan County, Texas.

---

[1] The additional Respondents, and proceedings herein are set forth in the Appendix hereto.

On June 6, 1966, Respondents herein jointly filed an offer of settlement of the proceedings involving proposed rate increases for their sales of natural gas to West Lake, which were suspended by the Commission, and collected subject to refund for approximately the same period of time involved in West Lake's settlement.[2] Respondents are paid by West Lake at a rate equal to 50% of whatever rate it charges El Paso.[3]

The Commission's order in *Amerada* required West Lake to reduce its rate for the period involved herein from 13.9836¢ to 12.8385¢ per Mcf. Therefore, the proposed settlement rate of Respondents of 6.41928¢ reflects the same reduction in their proposed increases on a percentage basis in accordance with the terms of their contracts with West Lake. Additionally, Respondents propose to make refunds to West Lake in the same proportion of the amounts collected subject to refund as West Lake did in accordance with our our order approving the *Amerada* settlement. This will recompense West Lake for that portion of the refunds it has made to El Paso which the Respondents herein charged and collected from West Lake subject to refund for the period involved. West Lake shall therefore be permitted to retain such refunds from Respondents. The total amount of refunds to West Lake will be approximately $8453.54, inclusive of applicable interest. On June 15, 1966, West Lake filed a statement with the Commission confirming the refund calculations submitted by Respondents.

We believe the settlement proposal of the contractual issues involved herein is in the public interest, and we shall approve the same. These proceedings, however, will remain open pending the determination of the justness and reasonableness of the subject settlement rates. Our action is also without prejudice to any action that may be required as a contractual matter in the event West Lake's settlement rate is further reduced in Docket No. G–19156 for the period involved here.[4]

Our action herein shall not be construed as constituting approval of any past or future rate increases, if any, that may have been, or may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any proceedings, including area rate or similar proceedings, involving the justness and reasonableness of each of the Respondents' rates and rate schedules.

The Commission finds:

The proposed settlement of the contractual issues involved in the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal, and the appendix thereto, filed by Respondents on June 6, 1966, is in the public interest, and it is appropriate in carrying out the provisions of the Natural Gas Act that it be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The settlement of the contractual issues in these proceedings on the basis of the settlement proposal filed by Respondents on June 6, 1966, is approved and made effective subject to the terms and conditions herein.

(B) The applicable settlement rates set out in the Appendix hereto are approved, and each Respondent, within 45 days from the issuance of this order, shall file appropriate supplements to its FPC Gas Rate Schedules reflecting the contract settlement rate in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act. The effective date of each such settlement rate shall be the date specified in the Notice issued by the Commission permitting each of the applicable proposed increased rates involved in these proceedings to become effective, subject to refund.

---

[2] On June 23, 1966, Sun Oil Company filed its joinder in the proposal.

[3] The contracts also contain certain minimum rate provisions.

[4] Under the Amerada order, West Lake's contract settlement rate is subject to a determination as to its justness and reasonableness.

(C) Each of the Respondents shall within 30 days of the issuance of this order refund to West Lake the amount of monies set forth in column (F) of the Appendix hereto, which includes applicable interest through April 30, 1966, and shall within 45 days of the issuance of this order file a statement from West Lake acknowledging receipt of such monies.

(D) Upon notification by the Secretary of the Commission to each of the Respondents that it has complied with the terms and conditions of this order, the proceedings concerning each of them shall be deemed terminated as to the contractual issues involved, without further order of the Commission.

(E) This order is without prejudice to any findings or order which have been made or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by each of the Respondents, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against each of the Respondents, or any other companies, persons or parties affected by this order, and is not in any manner determinative of the justness and reasonableness of the settlement rates involved herein.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-367

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 1, 1966)

On May 16, 1966, Central Illinois Public Service Company (Applicant) filed in Docket No. CP66-367 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its natural gas transmission facilities with the facilities to be constructed by Applicant, to construct a measuring and regulating station and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Villages of Alsey and Glasgow, Scott County, Illinois, and their environs, all as more fully set forth in the application.

Applicant proposes to construct, own, operate and maintain a 4-inch and 2-inch gas distribution main extending from a point of proposed connection with the gas transmission main of Respondent approximately one-half mile north of the Village of Alsey to the Villages of Alsey and Glasgow, and to construct, operate and maintain gas distribution systems in the Villages of Alsey and Glasgow and their environs.

The estimated volumes of natural gas required to supply the Villages' annual and peak day requirements for the initial three years of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	16,720	24,347	28,775
Peak day (Mcf)	160	232	278

Natural gas service to Applicant will be made under Respondent's G-2 Rate Schedule, FPC Gas Tariff Original Volume No. 1.

Applicant was granted a certificate of public convenience and necessity from the Illinois Commerce Commission, effective April 5, 1966, to construct the aforementioned facilities and to serve customers in the Villages of Alsey and Glasgow and their environs in Scott County, Illinois.

Due notice of the filing of the application was published in the Federal Register on June 3, 1966 (31 F.R. 7924). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G-200 and G-207 (3 FPC 273).

(2) Applicant is a public utility company in the State of Illinois and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 278 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 278 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KASKASKIA GAS COMPANY AND MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-63

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 1, 1966)

On August 25, 1965, Kaskaskia Gas Company (Applicant), filed in Docket No. CP66-63 an application as supplemented on March 7, and May 12, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission Corporation (Respondent) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in the community of Huey, Illinois, and environs, all as more fully set forth in the application and supplements thereto.

Applicant proposes (1) to construct a natural gas distribution system in Huey and approximately 0.28 mile of 2-inch lateral transmission line, and (2) to receive deliveries of gas for Huey at a point on Respondent's main transmission line in Marion County, Illinois, approximately 0.28 mile south of Huey. The Illinois Commerce Commission, on February 8, 1966, issued an order authorizing Applicant to serve the Huey area.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for Huey in the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	3,800	5,700	8,000
Peak day (Mcf)	36	54	77

The estimated cost of Applicant's proposed construction is $31,000, and will be financed by the issuance of common stock and a bank loan.

On August 26, 1965, Respondent was duly advised of the application filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on September 10, 1965 (30 F.R. 11655). No protest, petition to intervene[1] or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Respondent, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020).

(2) Applicant, Kaskaskia Gas Company, an Illinois corporation having its principal place of business in Salem, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 77 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair its ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Huey, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Mississippi River Transmission Corporation is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 77 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

---

[1] Petition to intervene filed September 27, 1965, was withdrawn by Illinois Power Company on May 18, 1966, and became effective June 18, 1966, by Commission approval on June 21, 1966.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-326

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 1, 1966)

On April 14, 1966, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-326 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, relocation and operation of certain natural gas facilities in Midland, Upton and Schleicher Counties, Texas, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes the following:

(1) To construct and operate a new 2,000 horsepower unit at the Florey Compressor Station to compress volumes of gas received from the Spraberry Compressor Station;

(2) To construct and operate 0.7 mile of 12-inch tie-over between the present 16-inch line from Andrews Compressor Station and the 30-inch discharge line at Florey. Applicant states that this tie-over line will permit delivery of Andrews County gas into the discharge of the Florey Station as well as the suction as presently operated;

(3) To relocate a 1,320 horsepower unit from the Plymouth Compressor Station to the Spraberry Station. Applicant states that this unit together with a presently installed 1,350 horsepower unit at Spraberry will be utilized to compress gas received from the Eldorado Station. Further, Applicant states that the proposed relocation will not result in any abandonment of service and that the remaining horsepower at the Plymouth Station will be sufficient to compress estimated volumes of gas delivered to that station, and

(4) Certain piping modifications at the Eldorado Station resulting in split suction at this station.

The total estimated cost of Applicant's proposals is $1,165,800, which cost will be financed from cash on hand.

Applicant states that the proposed construction, relocation and operation of facilities will increase the capacity of Northern's East Leg System in its Permian Basin supply area for the transportation of additional gas purchase commitments.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and

the construction, relocation and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction, relocation and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Northern Natural Gas Company, to construct, relocate and operate the subject facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed, relocated and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WARREN PETROLEUM CORPORATION (OPERATOR), ET AL., DOCKET NO. G-20478, ET AL.; LONE STAR GAS COMPANY, RP60-4; CITIES SERVICE GAS COMPANY, RP65-21; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP65-25

ORDER RELEASING REFUNDS IN PART

(Issued August 1, 1966)

Lone Star Gas Company (Lone Star), filed on February 1, 1966, in the above-styled proceeding, a Motion for Reconsideration and Modification of "Order Requiring Report of Intended Disposition of Refunds and Releasing Refunds in Part". The motion is directed specifically to paragraphs (C) and (F) of the Commission's order issued December 30, 1965, 34 FPC 1616, which among other things, directed Warren Petroleum Corporation, Kerr-McGee Corporation and Texaco Inc. (WKT) to make refunds, and to retain certain amounts refundable to Lone Star under Docket Nos. RI63-486, RI63-460 and RI64-69 (the "RI" dockets), pending further order of the Commission.

The amounts which WKT were ordered to refund are those resulting from the difference between a final settlement rate of 14.0¢ and an initial proposed increased rate of 16.8¢ per Mcf suspended in G–20478, *et al.* This amount Lone Star had advised[1] the Commission it would flow-through to Natural in accordance with its refund obligation order in Docket No. RP60–4.[2] The amounts which WKT were ordered to retain reflect the difference between the 16.8¢ rate and a subsequently proposed 17.9¢ rate, which Lone Star claims it should be permitted to retain. Lone Star's claimed right to retain the amounts relating to the increase from 16.8¢ per Mcf to 17.9¢ per Mcf has been the subject of continuing discussions between representatives of Lone Star and the Commission Staff.

By letter of June 22, 1966, Lone Star requested the Commission to release that portion of the amounts retained by WKT which is attributable to Lone Star's non-jurisdictional sales. A release of refundable amounts which are applicable to non-jurisdictional operations of a natural gas company is in keeping with our announced purposes regarding flow-through of refunds. In Texas Eastern Transmission Corporation, Docket No. RP66–12, the Commission stated:

> In keeping with our purpose heretofore expressed, we should note that upon a proper showing by Texas Eastern that any portion of the refunds being retained by its suppliers is applicable to its non-jurisdictional sales we shall direct the suppliers to release and pay such amounts to Texas Eastern.

Available data and Lone Star's letter of June 22, 1966, indicate that of the amount of $284,493.78 being retained by WKT pursuant to our order, $185,205.71 is allocable to Lone Star's non-jurisdictional sales. We are of the view that release of the latter amount to Lone Star is appropriate. Our action herein is not intended to limit any authority which we may otherwise exercise, nor any position which Lone Star may take, in respect of the amount of $99,288.07 which WKT is hereby ordered to retain.

The Commission orders:

(A) WKT shall release and pay over to Lone Star within 30 days of the date of this order the amount of $185,205.71, together with any earnings on this amount held in escrow from June 3, 1965, to the date of this order.

(B) Pending further order of the Commission, WKT shall retain the remaining amounts refundable to Lone Star in accordance with paragraphs (D) and (E) or (F) of the Commission's order issued June 3, 1965.

(C) Within 60 days of the date of this order WKT shall file a report as evidence that it has complied with paragraphs (A) and (B) of this order and setting forth the amount paid showing principal and interest and the amount retained showing principal and interest.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN GAS COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66–389

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 1, 1966)

On May 26, 1966, Wisconsin Gas Company (Applicant) filed in Docket No. CP66–389 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell and deliver to Applicant up to 973 Mcf of natural gas per day for resale and distribution in the communities of Pulaski and Krakow, Wisconsin, and their respective environs, all as more fully set forth in the application in this proceeding.

---

[1] By letter dated December 14, 1965.

[2] See order issued December 1, 1961, 26 FPC 790.

Pursuant to its "10-cent formula", Respondent will construct 4.4 miles of 4-inch transmission pipeline extending from a point on Respondent's Marinette Lateral to a measuring station also to be constructed by Respondent. Applicant proposes to construct and operate the remaining 8.2 miles of the required lateral transmission line for Krakow and Pulaski as well as the necessary distribution systems for the two communities proposed to be served.

The total estimated third year peak day and annual requirements for Krakow and Pulaski are 973 Mcf and 143,363 Mcf, respectively.

The total estimated cost of Applicant's proposed facilities is $353,456, which cost will be financed from cash on hand and short-term borrowings.

Applicant states that it has received the necessary authorizations from Pulaski and Krakow and from the Public Service Commission of Wisconsin.

On June 17, 1966, Respondent filed an answer to the subject application stating that it had no objection to the requested order.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 10, 1966 (31 F.R. 8203). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Respondent, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant, Wisconsin Gas Company, is a public utility organized under the laws of the State of Wisconsin and is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver to Applicant, under a service agreement to be executed by Applicant and Respondent, in accordance with the Commission's Regulations, up to 973 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully set forth in the application in this proceeding.

(4) The requirement that Respondent serve Applicant as hereinafter ordered will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Pulaski and Krakow, and their respective environs, within one year from the date of issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 973 Mcf of natural gas per day to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's

Regulations. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TOWN OF ARTESIA, MISSISSIPPI AND SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-403

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 2, 1966)

On June 7, 1966, the Town of Artesia, Mississippi, (Applicant), filed in Docket No. CP66-403 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant from Respondent's West Point Armory branchline volumes of natural gas up to 155 Mcf daily for resale and distribution in the Town of Artesia, all as more fully set forth in the application.

Applicant proposes to construct a distribution system together with automatic regulators and odorizers and approximately 0.833 mile of 3-inch high pressure transmission pipeline.

The proposed physical connection with Respondent will consist of a metering and regulator station installed by Respondent at a point in Lowndes County, Mississippi, approximately ¾ mile east of the corporate limits of Artesia, Mississippi.

The total estimated volumes of natural gas involved to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	8,902	10,943	12,728
Peak day (Mcf)	110	134	155

The total estimated cost of Applicant's proposed construction is $87,000, which will be financed through the issuance of Natural Gas System Revenue Bonds.

Respondent filed an answer in this proceeding on July 5, 1966, stating it had no objection to the granting of the requested order for service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 24, 1966 (31 F.R. 8844). No protest, petition to intervene, or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) Applicant, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations up to 155 Mcf per day for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in the Town of Artesia, Mississippi, within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant, as requested, will not impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Southern Natural Gas Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant up to 155 Mcf of natural gas daily under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, as hereinbefore described, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE ATLANTIC REFINING COMPANY, DOCKET NO. G–9283, ET AL. AND UNITED FUEL GAS COMPANY, DOCKET NO. RP65–22

ORDER REJECTING APPLICATION FOR REHEARING AND DENYING REQUEST FOR RECONSIDERATION

(Issued August 2, 1966)

United Fuel Gas Company (United Fuel) on June 24, 1966, filed an application for rehearing and reconsideration of the Commission's "Order Releasing Refunds in Part" issued May 24, 1966, 35 FPC 763 in The Atlantic Refining Company, Docket Nos. G–9283 and G–9284, *et al.* That order, in carrying out the procedure outlined in our prior order in those proceedings[1] which approved the settlement of Atlantic's rate proceedings, directed the release of the portions of Atlantic's refund which would flow through to the limits of our jurisdictional reach and ordered the retention of the remainder.

---

[1] Order Approving Rate Settlement Proposal, Severing and Terminating Proceedings and Prescribing Refunds, *The Atlantic Refining Company,* Docket Nos. G–9283 and G–9284, *et al.,* issued October 8, 1964, 32 FPC 933.

In its present application United Fuel advances the same contentions and arguments presented in its application for rehearing filed May 21, 1965, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.* Our order issued June 14, 1965, 33 FPC 1263, in those proceedings rejected United Fuel's[2] application for rehearing and denied the request for reconsideration and fully set forth the basis for our action.

We believe that the views expressed in the aforementioned order issued June 14, 1965 are fully dispositive of the contentions.reiterated by United Fuel in its application herein. The determination and conclusion set forth in that June 14 order, which are herein incorporated by this reference apply with equal weight to the instant application.

The Commission orders:

(A) United Fuel's application for rehearing of our order issued May 24, 1966, hereby is rejected.

(B) United Fuel's pleading classified as a request for reconsideration hereby is denied.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP66–368

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 2, 1966)

On May 16, 1966, Florida Gas Transmission Company (Applicant) filed in Docket No. CP66–368 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the twelve months period commencing July 1, 1966, and the operation of gas purchase facilities to enable Applicant to take into its certificate main pipeline system natural gas which will be purchased from producers or other similar sellers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $1,000,000, with no single project to exceed a cost of $250,000, which costs will be financed from internally generated funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

---

[2] The order also disposed of the similar application filed by Texas Eastern Transmission Corporation.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G-9262 and G-9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e), and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve months period commencing July 1, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Florida Gas Transmission Company, to construct during the twelve months period commencing July 1, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers or other similar sellers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e), and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the twelve months period commencing July 1, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ACCOUNTING FOR FEES PAID PURSUANT TO PART 159 BY NATURAL GAS PIPELINE COMPANIES IN CONNECTION WITH CERTIFICATE AND OTHER APPLICATIONS, DOCKET NO. R-307

ORDER NO. 325

AMENDING UNIFORM SYSTEM OF ACCOUNTS PRESCRIBED FOR NATURAL GAS COMPANIES

(Issued August 2, 1966)*

Following a formal rulemaking proceeding initiated by a notice of proposed rulemaking in Docket No. R-282, the Commission, on January 5, 1966, issued Order No. 317 in which it promulgated Part 159 of its Regulations under the Natural Gas Act prescribing fees to be paid by natural gas pipeline companies in connection with applications for certificates and certain other authorizations. 35 FPC 30, 31 F.R. 430, 18 CFR, Part 159.

Although the regulation thus promulgated prescribed, in § 159.4, the accounting treatment to be followed in recording the fees, the order did not amend the specific accounts in the Uniform System of Accounts which were directed to be used. Consequently, we are now incorporating the accounting treatment there prescribed as a new Gas Plant Instruction in the system of accounts and revising the texts of the particular accounts involved in this matter to reflect the accounting treatment prescribed with respect to these fees.

The Commission finds:

(1) It is necessary and appropriate for the administration of the Natural Gas Act that the amendments set forth in this order be made to the Uniform System of Accounts Prescribed for Natural Gas Companies of all classes.

(2) Since the amendments herein prescribe accounting treatment of fees established after notice and opportunity to be heard, further notice under section 4 of the Administrative Procedure Act is unnecessary.

The Commission, acting pursuant to the authority of the Natural Gas Act, as amended, particularly sections 8 and 16 thereof (52 Stat. 825, 830; 15 U.S.C. 717g, 717o), *orders:*

(A) The Uniform System of Accounts prescribed for Class A and Class B natural gas companies by Part 201, Subchapter F of Chapter I, Title 18 of the Code of Federal Regulations, is amended by—

(1) adding to the Gas Plant Instructions the following new paragraph 16:

"Part 201 Uniform System of Accounts Prescribed for Natural Gas Companies (Class A and Class B) * * *

Gas Plant Instructions

* * * * * * *

16. *Fees for applications filed with the Commission.*

A. Fees for applications involving construction of property shall be accounted for as follows:

---

*Published in the Federal Register on August 9, 1966 (31 F.R. 10605).

(1) All fees paid prior to the final disposition of the certificate application shall be charged to account 186, Miscellaneous Deferred Debits.

(2) If the certificate is granted and accepted, the amounts recorded in account 186 shall be clear to account 107, Construction Work in Progress—Gas, and subsequently cleared to the appropriate plant accounts.

(3) If the certificate requested is not granted or is not accepted by the applicant, the fees recorded in account 186 shall be cleared to account 928, Regulatory Commission Expenses.

(4) All amounts paid after the Commission has granted the certificate shall be recorded in account 107, Construction Work in Progress—Gas, and subsequently cleared to the appropriate plant accounts.

B. All amounts paid related to certificate applications involving the acquisitions of facilities including those acquired by merger or pooling of interests shall be charged to account 928, Regulatory Commission Expenses.

C. All other fees for applications not involving construction or acquisition of facilities shall be charged to account 928, Regulatory Commission Expenses.

(2) Adding to Account 107, Construction work in progress—Gas, the following Note:

107 Construction work in progress—Gas

* * * * * * *

NOTE: This account to include certificate application fees paid to the Federal Power Commission as provided for in gas plant instruction 16.

(3) revising paragraph A of Account 186, Miscellaneous deferred debits, to read as follows:

186 Miscellaneous deferred debits

A. This account shall include all debits not elsewhere provided for, such as miscellaneous work in progress, construction certificate application fees paid prior to final disposition of the application as provided for in gas plant instruction 16A, and unusual or extraordinary expenses not included in other accounts which are in process of amortization, and items the final disposition of which is uncertain.

(4) adding to Account 928, Regulatory commission expenses, the following under "Items":

928 Regulatory commission expenses

* * * * * * *

ITEMS

* * * * * * *

3. All application fees except those involving construction certificate applications which have been approved. (See Gas Plant Instruction 16.)"

(B) The Uniform System of Accounts prescribed for Class C natural gas companies by Part 204 of said Subchapter F is amended by—

(1) adding to the Gas Plant Instructions the following new paragraph 14:

"Part 204 Uniform System of Accounts Prescribed for Natural Gas Companies (Class C) * * *

* * * * * * *

Gas Plant Instructions

* * * * * * *

13. *Fees for applications filed with the Commission.*

A. Fees for applications involving construction of property shall be accounted for as follows:

(1) All fees paid prior to the final disposition of the certificate application shall be charged to account 183, Other Deferred Debits.

(2) If the certificate is granted and accepted, the amounts recorded in account 183 shall be cleared to the appropriate plant accounts.

(3) If the certificate requested is not granted or is not accepted by the applicant, the fees recorded in account 183 shall be cleared to account 928, Regulatory Commission Expenses.

(4) All amounts paid after the Commission has granted the certificate shall be recorded in account 107, Construction Work in Progress—Gas; and subsequently cleared to the appropriate plant accounts.

B. All amounts paid related to certificate applications involving the acquisition of facilities including those acquired by merger or pooling of interests shall be charged to account 928, Regulatory Commission Expenses.

C. All other fees for applications not involving construction or acquisition of facilities shall be charged to account 928, Regulatory Commission Expenses.

(2) adding to Account 107, Construction work in progress—Gas, the following Note:

107 Construction work in progress—Gas

* * * * * * *

NOTE: This account to include certificate application fees paid to the Federal Power Commission as provided for in gas plant instruction 14.

(3) adding to Account 183, Other deferred debits, the following, after Item A(5):

183 Other deferred debits

A. This account shall include the following classes of items:

* * * * * * *

(6) All fees related to certificate applications involving construction paid prior to the final disposition of the certificate application. If the certificate is granted and accepted, the amount recorded in this account shall be credited with the amount applicable thereto and charged to the appropriate plant accounts. If the certificate requested is not granted or is not accepted by the applicant, the fees recorded in this account shall be cleared to account 928, Regulatory Commission Expenses.

(4) adding to Account 928, Regulatory commission expenses, the following, under "Items":

928 Regulatory commission expenses

* * * * * * *

ITEMS

* * * * * * *

3. All application fees except those involving construction certificate applications which have been approved. (See Gas Plant Instruction 14.)"

(C) The Uniform System of Accounts prescribed for Class D natural gas companies by Part 205 of said Subchapter F is amended by—

(1) revising present Gas Plant Instruction 2 to read as follows:

"Part 205 Uniform System of Accounts Prescribed for Natural Gas Companies (Class D) * * *

* * * * * * *

Gas Plant Instructions

* * * * * * *

2. Components of Construction Cost

The cost of construction of property chargeable to the gas plant accounts shall include, where applicable, fees for construction certificate applications paid after grant of certificate, the cost of labor, materials and supplies, transportation, work done by others for the utility, injuries and damages incurred in construction work, privileges and permits, special machine service, interest during construction and such portion of general engineering, administrative salaries and expenses, insurance, taxes and other analogous items as may be properly includible in construction costs.

(2) adding to the Gas Plant Instructions the following new paragraph 7:

Gas Plant Instructions

* * * * * * *

7. *Fees for applications filed with the Commission.*

A. Fees for applications involving construction of property shall be accounted for as follows:

(1) All fees paid prior to the final disposition of the certificate application shall be charged to account 183, Other Deferred Debits.

(2) If the certificate is granted and accepted, the amounts recorded in account 183 shall be cleared to the appropriate plant accounts.

(3) If the certificate requested is not granted or is not accepted by the applicant, the fees recorded in account 183 shall be cleared to account 776, Regulatory Commission Expenses.

(4) All amounts paid after the Commission has granted the certificate shall be recorded as a component of construction cost.

B. All amounts paid related to certificate applications involving the acquisition of facilities including those acquired by merger or pooling of interests shall be charged to account 776, Regulatory Commission Expenses.

C. All other fees for applications not involving construction or acquisition of facilities shall be charged to account 776, Regulatory Commission Expenses.

(3) adding to Account 183, Other deferred debits, the following, after Item A(5):

183 Other deferred debits

* * * * * * *

(6) All fees related to certificate applications involving construction paid prior to the final disposition of the certificate application. If the certificate is granted and accepted, the amount recorded in this account shall be credited with the amount applicable thereto and charged to the appropriate plant accounts. If the certificate requested is not granted or is not accepted by the applicant, the fees recorded in this account shall be cleared to account 776, Regulatory Commission Expenses.

(4) adding to Account 776, Regulatory commission expenses, the following, after Item C:

776 Regulatory commission expenses

* * * * * * *

D. This account shall include all application fees except those involving construction certificate applications which have been approved. (See Gas Plant Instruction 7.)" (Secs. 8, 16, 52 Stat. 825, 830; 15 U.S.C. 717g, 717o)

(D) The amendments herein prescribed shall be effective September 2, 1966.

(E) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-228

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 2, 1966)

On June 6, 1966, Panhandle Eastern Pipe Line Company (Petitioner) filed in Docket No. CP66-228 a petition to amend the Commission's order, issued April 29, 1966, 35 FPC 653, in said docket, by authorizing the construction and operation of a supply pipeline extension through Ellis and Woodward Counties, Oklahoma, all as more fully set forth in the petition to amend in this proceeding.

The order of April 29, 1966, authorized Petitioner to construct and operate a supply pipeline extending from its existing Elk City line through Dewey and Ellis Counties, Oklahoma, and terminating in Hemphill County, Texas. Said extension is to enable Petitioner to take gas supplies contracted for in Hemphill and Ellis Counties.

Petitioner states herein that, subsequent to the filing of its original application in this proceeding, it has entered into gas purchase contracts with Atlantic Richfield Company, J. M. Huber Corporation and Shell Oil Company for the sale of gas produced in the Gage and Tangier fields in Ellis and Woodward Counties. Accordingly, Petitioner requests that the order of April 29, 1966, be amended to authorize the construction and operation of an additional supply extension in order to take gas purchased under these new contracts. Petitioner also states that the proposed additional extension will further stimulate the development of additional supplies of gas in this area.

Specifically, Petitioner proposes to construct approximately 31.7 miles of 6-inch to 12-inch line northward through Ellis and Woodward Counties from a point on the supply line heretofore authorized in this docket but not yet constructed. The total estimated cost of the proposed facilities is $941,000, which cost will be financed from general corporate sources.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 30, 1966 (31 F.R. 9032). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 29, 1966, in Docket No. CP66-228 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 29, 1966, in Docket No. CP66-228 is amended by authorizing Petitioner to construct and operate the proposed additional supply pipeline extension through Ellis and Woodward Counties, Oklahoma, as hereinbefore described and as set forth in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF SHELBINA AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-329; CITY OF CLARENCE AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-330

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALES OF NATURAL GAS

(Issued August 2, 1966)

On April 18, 1966, the City of Shelbina, Missouri, filed in Docket No. CP66-329 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the City of Shelbina and to sell and deliver to the City of Shelbina volumes of natural gas for resale and distribution in the City of Shelbina, all as more fully set forth in the application.

The community of Shelbina is located in Shelby County in northeastern Missouri, approximately 40 miles west of Hannibal, Missouri, has a population of approximately 2,067, and is situated approximately 43 miles north of Respondent's main transmission line in Missouri.

The City of Shelbina proposes to construct and operate a natural gas distribution system within its borders and a 4-inch lateral transmission line approximately 5 miles in length, extending west from the City border to an interconnection with a common 6-inch transmission line to be jointly owned by the City of Shelbina and the City of Clarence, Missouri. The City of Shelbina proposes that deliveries of its gas requirement be made at the point of interconnection with Respondent's main transmission line and that said gas be transmitted through the jointly-owned transmission line to a point of interconnection with Shelbina's 4-inch lateral for further transmission by Shelbina to the City of Shelbina. The application states that 68 percent of this jointly-owned transmission line would be owned by Shelbina, and 32 percent by the City of Clarence. The proposed transmission line would be approximately 38 miles in length.

The total estimated volumes of natural gas involved to meet the City of Shelbina's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	245,426	269,490	291,889
Peak day (Mcf)	1,576	1,792	1,971

The total estimated cost of the City of Shelbina's proposed transmission and distribution facilities is $960,000, which will be financed through the issuance of Gas Revenue System Bonds.

On April 18, 1966, the City of Clarence, Missouri, filed in Docket No. CP66-330 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the City of Clarence and to sell and deliver to the City of Clarence volumes of natural gas for resale and distribution in the City of Clarence, all as more fully set forth in the application.

The community of Clarence is located in Shelby County in northeastern Missouri, approximately 50 miles west of Hannibal, Missouri, has a population of approximately 1,103, and is situated approximately 46 miles north of Respondent's main transmission line in Missouri.

The City of Clarence proposes to construct a natural gas distribution system within its borders and a 3-inch lateral transmission line approximately 8 miles in length, extending east and south from its border to an interconnection with a common 6-inch transmission line to be jointly owned by the City of Clarence and the City of Shelbina, Missouri.

The City of Clarence proposes that deliveries of its gas requirements be made at the point of interconnection with Respondent's main transmission line and that said gas be transmitted through the jointly owned transmission line to a point of interconnection with the City of Clarence's 3-inch lateral for transmission to the City of Clarence.

The total estimated volumes of natural gas involved to meet the City of Clarence's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	84,498	93,442	104,637
Peak day (Mcf)	791	887	997

The total estimated cost of the City of Clarence's proposed transmission and distribution facilities is $525,000, which cost will be financed through the issuance of Gas Revenue System Bonds.

On April 19, 1966, Respondent was duly advised of the applications filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on May 5, 1966 (31 F.R. 6758 in Docket No. CP66–330 and 31 F.R. 6759 in Docket No. CP66–329). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The City of Shelbina and the City of Clarence are legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by the City of Shelbina and the City of Clarence and to sell and deliver to said Cities under a service agreement to be executed by said Cities with Respondent in accordance with the Commission's Regulations, up to 997 Mcf per day of natural gas for distribution and resale to the City of Clarence and 1971 Mcf per day for distribution and

resale to the City of Shelbina as hereinbefore described and as more fully described in the respective applications filed in these proceedings.

(4) The requirement that Respondent serve the Cities of Shelbina and Clarence, Missouri, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) The Cities of Shelbina and Clarence should be prepared to receive natural gas from Respondent for distribution in their respective cities within one year from the date of issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with its facilities proposed to be constructed and operated by the Cities of Shelbina and Clarence as herein described, and to sell and deliver up to 997 Mcf of natural gas daily to the City of Clarence and 1971 Mcf daily to the City of Shelbina under service agreements to be executed by the respective cities with Respondent in accordance with the Commission's Regulations. Such service shall be rendered pursuant to Panhandle Eastern's currently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to the respective cities within 15 days after such service begins.

(C) Applicants shall be prepared to receive gas service from Respondent within one year from the date of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SHOPPING CENTERS ASSOCIATION OF NORTHERN OHIO v. CLEVELAND ELECTRIC ILLUMINATING COMPANY, DOCKET NO. E-7233

ORDER PERMITTING WITHDRAWAL OF COMPLAINT AND TERMINATING PROCEEDING

(Issued August 2, 1966)

On June 23, 1965, Shopping Centers Association of Northern Ohio, and its individual members (Shopping Centers) comprising 24 shopping centers served by the Cleveland Electric Illuminating Company filed a "Petition for An Order". Thereafter this matter was continued from time to time.

On July 18, 1966, Shopping Centers filed a notice of withdrawal of its "Petition for An Order" pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure. On July 21, 1966, Intervenor, The Public Utilities Commission of Ohio, filed its "Consent to Withdrawal of Petition".

In support of its Notice of Withdrawal, Shopping Centers states that "since the Petition was filed, negotiations between the Association, its members, and Cleveland Electric Illuminating Company have resulted in agreements for the disposition of electrical facilities of the individual members with the result that the issues presented by the Petition will be moot." Earlier, by letter of July 12, 1966, counsel for the Cleveland Electric Illuminating Company advised the Commission that "* * * the parties have resolved the controversies between them, including settlement of money claims, damages, value of property subject to purchase, privileges of submetering, and general claims of liability, if any, and related matters."

The Commission finds:

Good cause has been shown to permit Shopping Centers to withdraw its "Petition for An Order."

The Commission orders:

Withdrawal of the "Petition for An Order" in the above-captioned matter hereby is permitted and Docket No. E-7233 is closed.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-408

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 2, 1966)

On June 9, 1966, Transcontinental Gas Pipe Line Corporation (Applicant), filed in Docket No. CP66-408 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the rendition of additional natural gas service to South Jersey Gas Company (South Jersey), an existing customer, in the amount of 7,000 Mcf of gas per day under Applicant's Rate Schedule CD-3, all as more fully set forth in the application.

On January 20, 1966, Applicant requested authorization in Docket No. CP66-23 for the construction, installation and operation of additional facilities over a three-year period commencing with the 1966 construction season, and for the rendition of, *inter alia*, additional pipeline service during the 1966-67 winter heating season of 96,127 Mcf per day to 37 customers. On May 26, 1966, the Commission granted Applicant temporary authorization in Docket No. CP66-233 (and in Docket No. CP65-181) to construct and operate certain of the facilities proposed therein and to render non-competitive service to existing customers during the 1966-67 winter. South Jersey, one of Applicant's existing resale customers, is included in Docket No. CP66-233 (and in the aforementioned temporary authorization issued therein) for an additional volume of 4,000 Mcf per day of gas under Applicant's Rate Schedule CD-3.

South Jersey has now advised Applicant, however, that it has a need for an additional 7,000 Mcf per day of CD-3 gas, 3,000 Mcf of which, is imperatively required *commencing not later than July 1, 1966.* On June 29, 1966 the Commission granted Applicant temporary authorization in this proceeding. South Jersey states that gas is needed not only to meet substantially increased current demands on the South Jersey system but, more critically because of such increased demands, to permit South Jersey to make returns of gas to underground storage for use in the coming winter.

No additional facilities are required in order to render the service proposed herein.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 29, 1948, in Docket No. G–704 (7 FPC 24).

(2) The proposed sale and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application, in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the sale and delivery of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of such Regulations.

(C) The service authorized herein shall be commenced as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 30 days of the date on which this order issues.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN GAS COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66–388

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 2, 1966)

On May 26, 1966, Wisconsin Gas Company (Applicant) filed in Docket No. CP66–388 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company

(Respondent) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 321 Mcf of natural gas per day to Applicant for resale and distribution in the Villages of Auburndale and Milladore, all in the State of Wisconsin, as more fully set forth in the application.

Applicant proposes to construct and operate distribution facilities in the aforementioned communities. Applicant also proposes that Respondent construct two measuring stations, one each for Auburndale and Milladore, and 4-inch transmission lines, each extending 0.2 mile from Respondent's system to the said Villages, pursuant to Respondent's "ten-cent formula".

The total estimated volumes of natural gas necessary to meet Applicants' annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	17,180	36,020	51,283
Peak day (Mcf)	85	219	321

The total estimated cost of Applicant's proposed distribution facilities is $112,828, which cost will be defrayed from cash on hand and short-term commercial bank loans.

Applicant has obtained necessary franchises to supply natural gas in said communities and on August 23, 1965, the Wisconsin Public Service Commission granted Applicant a certificate to construct and operate the necessary facilities and to sell gas therein.

On June 17, 1966, Michigan Wisconsin filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to extend its facilities, establish connection of its facilities and provide the requested service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 10, 1966 (31 F.R. 8202). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G-669.

(2) Applicant, Wisconsin Gas Company, a Wisconsin corporation having its principal place of business in Milwaukee, Wisconsin, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to sell and deliver natural gas to Applicant, under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 321 Mcf per day for the Villages of Auburndale and Milladore for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the named communities, and their environs, within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant as hereinafter ordered will not impair Respondent's ability to render adequate service to its existing customers.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described and to sell and deliver to Applicant up to 321 Mcf of natural gas per day for the Villages of Auburndale and Milladore under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein one year from the issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLUEBONNET GAS CORPORATION, DOCKET NO. CP66-157

FINDINGS AND ORDER AMENDING ORDER TO EXTEND TIME

(Issued August 3, 1966)

On July 8, 1966, Bluebonnet Gas Corporation (Bluebonnet) filed in Docket No. CP66-157 a motion to extend to January 1, 1967, the time within which to construct and place in operation the facilities authorized by the Commission's order issued January 4, 1966, 35 FPC 22, in the subject docket, all as more fully set forth in the motion in this proceeding.

The order of January 4, 1966, authorized Bluebonnet, among other things, to construct and operate certain facilities necessary to take gas purchased from Vernon J. Main, Jr. (Main) in Bayou White Field, Pointe Coupee Parish, Louisiana. Said order also provided that authorized facilities should be constructed and placed in operation by April 4, 1966. Subsequently, the time was extended an additional three months.

Bluebonnet states that Main has not as yet built the requisite gathering facilities for the delivery of gas. Main has had difficulty with his well and other producers in the area have not yet found sufficient production which, together with Main's gas, would warrant construction of the necessary gathering facilities. Bluebonnet states that it is hopeful that by January 1, 1967, a sufficiently large quantity of gas will be available, and, accordingly, requests an extension of time to that date.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 4, 1966, in Docket No. CP66-157 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 4, 1966, in Docket No. CP66-157 is amended to extend to January 1, 1967, the time within which the authorized facilities shall be constructed and placed in actual operation, all as hereinbefore described and as set forth in the subject motion.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP66-296 AND MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP66-348

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued August 3, 1966)

On March 21, 1966, Colorado Interstate Gas Company (Colorado Interstate) filed in Docket No. CP66-296 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities for the transportation and sale of natural gas on a short-term basis to Mountain Fuel Supply Company (Mountain Fuel), all as more fully set forth in the application.

Colorado Interstate proposes to construct approximately 3,100 feet of 6-inch pipeline extending from a point on its Wyoming 22-inch pipeline in the West Half of Section 35, Township 18 North, Range 107 West, Sweetwater County, Wyoming, to the proposed point of delivery in the Northwest Quarter of Section 26, Township 18 North, Range 107 West, Sweetwater County, Wyoming, together with a meter station to be located at the point of delivery. By use of said facilities, Colorado Interstate proposes to sell and deliver to Mountain Fuel, on an interrupted basis, such daily volumes of gas as Mountain Fuel may require for a term of three years from the date of first delivery. Mountain Fuel has agreed to purchase, take or pay for a minimum volume of 1,000,000 Mcf of gas per year at a rate of not more than 10,000 Mcf per day and to pay a rate of 18 cents per Mcf of gas for all volumes delivered by Applicant.

Colorado Interstate has concurrently filed herewith, as initial Rate Schedule X-28 of its Second Revised Volume No. 2, the agreement with Mountain Fuel for the sale of gas proposed herein and requests the tariff filing be made effective concurrently with issuance of certificate authority for the proposed facilities and sale.

The total estimated cost of Colorado Interstate's proposed construction is $38,746, which cost will be financed from current working funds.

On May 2, 1966, Mountain Fuel Supply Company (Mountain Fuel) filed in Docket No. CP66-348 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of the metering facilities necessary to receive gas on a short term basis from Colorado Interstate Gas Company (Colorado) at Mountain Fuel's gas regulating station at Green River, Wyoming, all as more fully set forth in the application.

Mountain Fuel states that the facilities proposed to be constructed and operated, consisting of a regulator, valves, pipe, fittings and an orifice meter, are only a minor addition to its existing facilities. The additional short term gas supply will give it greater operating flexibility, increase its reserve life index, and provide added reliability to its service in the event of interruption of its other sources of supply.

Pursuant to a letter agreement between Mountain Fuel and Colorado Interstate, Mountain Fuel will purchase, take or pay for a minimum of 1,000,000 Mcf of gas per year from Colorado Interstate's gas supply which is temporarily in excess of its system requirements. The aforementioned facilities are necessary to implement said agreement.

Mountain Fuel will transport the short term gas supply through its presently certificated transmission facilities to its existing market area, and does not contemplate service to any new market area.

The total estimated cost of Mountain Fuel's proposed facilities is $6,100, which will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 15, 1940, in Docket No. G–154 (2 FPC 288).

(3) The proposed construction and operation of facilities, transportation, and sale of natural gas, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities, the transportation, and sale of natural gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Colorado Interstate and Mountain Fuel are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Colorado Interstate's and Mountain Fuel's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations applicable to each and paragraph (f) applicable only to Colorado Interstate.

The Commission orders:

(A) Certificates of public convenience and necessity are issued to Colorado Interstate and Mountain Fuel authorizing the construction and operation of facilities, and the transportation, and sale of natural gas as more fully described in the applications in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Colorado Interstate's and Mountain Fuel's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations applicable to each and paragraph (f) only to Colorado Interstate.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) Colorado Interstate's proposed Rate Schedule X-28 of its Second Revised Volume No. 2 is accepted for filing effective on the date of issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61-92

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FOR FILING REVISED TARIFF SHEETS

(Issued August 3, 1966)

On May 24, 1966, El Paso Natural Gas Company (Applicant) filed in Docket No. CP61-92 an application to amend the order of the Commission issued in said docket on January 11, 1965, 33 FPC 34, which order authorized Applicant to construct and operate certain facilities and to deliver natural gas to Northern Natural Gas Company (Northern), on an exchange basis, at points in Ochiltree County, Texas, as a part of the previously authorized exchange under Applicant's Rate Schedule Z-1, FPC Gas Tariff, Third Revised Volume No. 2. By the instant filing, Applicant requests the further amendment of the certificate to authorize the construction and operation of approximately 0.25 mile of 4½-inch O.D. pipeline and a measuring and regulating station which are necessary to connect a recently developed well (Key-Richardson 2-71 Well) in Ochiltree County, Texas, all as more fully set forth in the application to amend.

Applicant states that it now has additional quantities of gas available for delivery to Northern which are to be produced from the well denominated as Key-Richardson 2-71. Northern and Applicant have agreed, by letter agreement dated March 30, 1966, to supplement Exhibit B to Applicant's Rate Schedule Z-1, FPC Gas Tariff, Third Revised Volume No. 2, by addition of the aforementioned well. This agreement provides for delivery by Applicant to Northern, on an exchange basis under Rate Schedule Z-1, of natural gas attributable to Applicant's interest in such well.

El Paso has tendered revised tariff sheets to its FPC Gas Tariff, Third Revised Volume No. 2 (Third Revised Sheet Nos. 22-F and 22-G) which incorporate into its Z-1 Rate Schedule a new Exhibit B to reflect the proposed deliveries from this new gas well. El Paso requests these tariff sheets be made effective on a date coincident with the issuance of the authorization requested herein. The total cost of the proposed facilities is estimated at $6,750 and will be financed from working funds.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 7, 1966 (31 F.R. 8032). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 11, 1965, in Docket No. CP61–92 be further amended as hereinafter ordered, and El Paso's revised tariff sheets to its FPC Gas Tariff, Third Revised Volume No. 2 (Third Revised Sheet Nos. 22–F and 22–G) which incorporate into its Z–1 Rate Schedule a new Exhibit B to reflect the proposed deliveries for the new gas well be accepted for filing effective on the date of issuance of this order.

The Commission orders:

(A) The Commission's order issued January 11, 1965, in Docket No. CP61–92 is further amended so as to authorize the construction and operation of approximately 0.25 mile of 4½-inch O.D. pipeline extending from the Key-Richardson 2–71 Well located in the NE/4 of Section 71, Block 13, T&NO Rd. Survey, Ochiltree County, Texas, to a point of connection with Applicant's existing facilities interconnecting with Northern Natural Gas Company's system in the SE/4 of Section 57, Block 13, of Ochiltree County, Texas.

(B) In all other respects said order shall remain in full force and effect.

(C) El Paso's revised tariff sheets to its FPC Gas Tariff, Third Revised Volume No. 2 (Third Revised Sheet Nos. 22–F and 22–G) be accepted for filing effective on the date of issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC.,
DOCKET NO. CP66–351

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 3, 1966)

On May 2, 1966, Kansas-Nebraska Natural Gas Company, Inc. (Applicant), filed in Docket No. CP66–351 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction of approximately 11.0 miles of 6-inch pipeline between Newman Grove and Norfolk, Nebraska, to parallel an existing 6-inch pipeline, and (2) for permission and approval for the removal of approximately 25.5 miles of 6-inch and 8-inch pipeline between Mitchell and Northport, Nebraska, all as more fully set forth in the application.

Applicant acquired the line proposed to be abandoned in (2) above on its merger with North Central Gas Company (merger approved in Docket No. CP63–89, on December 20, 1962, 28 FPC 1079). North Central had previously used such line as a transmission line and had utilized a parallel 12″ and 16″ line as storage. After takeover, Applicant began using both lines to transport increased volumes from sources in eastern Wyoming to its Nebraska market area. Due to the construction characteristics of the smaller line and its deteriorated condition, operating pressure was reduced to 100 psia and the line was subsequently used to serve rural customers in the area of the line. No rural customers are served off of the 25.5 mile portion proposed to be reclaimed.

The line described in (1) will loop approximately 11.0 miles of 6-inch, old, reconditioned pipeline, that was installed in 1951 between Newman Grove and Norfolk, Nebraska. In view of the age of this pipeline it is necessary to operate the section at a lower pressure than it has been operated in the past. The most economical means of replacing the capacity that will be lost by lower operating pressure is to parallel this 11.0 miles of 6-inch pipeline with a new 6-inch pipeline.

The total estimated cost of Applicant's proposed construction is $115,000, which will be financed from current working capital.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The facilities proposed to be abandoned by Applicant as hereinbefore described and as more fully described in the application are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by Applicant is permitted by the public convenience and necessity and permission and approval thereof should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities by Applicant as hereinbefore described and as more fully described in the application are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application are granted.

(B) A certificate of public convenience and necessity is issued to Kansas-Nebraska Natural Gas Company, Inc., authorizing the construction and operation of facilities as hereinbefore described, all as more fully described in the application.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-358

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued August 3, 1966)

On May 9, 1966, Panhandle Eastern Pipe Line Company (Applicant), filed in Docket No. CP66-358 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and sell to the Louisburg Gas Company three short segments of terminal lateral pipelines of Applicant's Louisburg lateral system, all as more fully set forth in the application.

Applicant seeks authority to abandon and sell the following lateral pipeline facilities to the Louisburg Gas Company:

(1) that portion of the lateral pipeline facility located to the south and on the downstream side of the existing Louisburg town border station, consisting of approximately 3,146 feet of 4-inch pipeline, together with drips, anodes, valves and miscellaneous fittings appurtenant thereto;

(2) that portion of the lateral pipeline facility located to the west of the existing Louisburg town border station, consisting of approximately 562 feet of 6-inch pipeline, together with drips, anodes, valves and miscellaneous fittings appurtenant thereto, and together with the five existing farm taps;

(3) that portion of the lateral pipeline facility located to the north and on the downstream side of the existing pressure regulator located just east of the existing Louisburg town border station, consisting of approximately 2,085 feet of 2-inch pipeline, together with drips, anodes, valves and miscellaneous fittings appurtenant thereto, and together with the three farm taps which serve four customers.

Applicant states that the sale of the above described facilities will result in a more economical operation for each company and that the expense of the physical changeover of the facilities, if any, will be negligible. Applicant further states that the granting of the requested authorization will involve no changes in gas deliveries or rates. Farm tap customers will be served by Louisburg Gas Company.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Panhandle Eastern Pipe Line Company (Applicant), a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The facilities proposed to be abandoned by sale as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described by sale to Louisburg Gas Company, as more fully described in the application in this proceeding, is granted to Applicant.

(B) Upon completion of the abandonment and sale Applicant shall within 10 days advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above, filing with the Commission in writing and under oath, an original and four conformed copies of the notice of abandonment and sale showing the date thereof.

(C) The abandonment and sale of the facilities shall be completed within one year of the date of issuance of this order.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. CP62-124

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 3, 1966)

On March 22, 1966, South Texas Natural Gas Gathering Company (Petitioner) filed in Docket No. CP62-124 a petition, as supplemented on May 9, 1966, to amend the order issued in said docket on February 7, 1962, 27 FPC 327, by authorizing the construction and operation of facilities in lieu of those authorized in said order, all as more fully set forth in the petition.

In the order of February 7, 1962, Petitioner was authorized to construct and operate certain natural gas facilities for the transportation and sale of natural gas to Transcontinental Gas Pipe Line Corporation (Transco). Among the authorized facilities was a 1,280-horsepower compressor station at Station S-11 on Petitioner's system. Changed operating conditions subsequent to the issuance of the order of February 7, 1962, and before the construction of the compressor facilities at Station S-11 made the construction of the authorized facilities at that point unnecessary. A change in the pattern of purchases on Petitioner's system and the decision of a producer from whom Petitioner purchases gas to compress its gas prior to delivery to Petitioner require Petitioner to construct and operate compression facilities at a point approximately 16 miles downstream from Station S-11. Petitioner proposes to install a 2,000-horsepower compressor station at Station S-8 on its system.

The cost of the proposed facilities is $250,000 to be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issued February 7, 1962, in Docket No. CP62-124 should be amended as hereinafter ordered.

The Commission orders:

The order issuing a certificate of public convenience and necessity to Petitioner on February 7, 1962, in Docket No. CP62-124, 27 FPC 327, is amended by authorizing the construction and operation of a 2,000-horsepower compressor station at Station S-8 in lieu of the authorized facilities at Station S-11; and in all other respects said order shall remain in full force and effect.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-38

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 3, 1966)

On July 18, 1966, Southern Natural Gas Company (Petitioner) filed in Docket No. CP66-38 a petition to amend the order issued November 3, 1965, 34 FPC 1236, issuing a certificate of public convenience and necessity to Petitioner in said docket by extending the time for the completion of construction of the authorized facilities. Said order required that the subject facilities should be completed and placed in actual operation within four months from the date thereof; and on February 8, 1966, the time was extended by the Secretary of the Commission until September 2, 1966. Petitioner states that it has encountered unexpected difficulties in obtaining necessary rights-of-way for the subject facilities and that it will be unable to complete construction by September 2, 1966. Petitioner requests that the time be extended to January 1, 1967.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issued November 3, 1965, in Docket No. CP66-38 should be amended as hereinafter ordered.

The Commission orders:

The order issuing a certificate of public convenience and necessity on November 3, 1965, in Docket No. CP66-38 is amended by extending the time for completion of facilities authorized therein to and including January 1, 1967; and in all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-327

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 3, 1966)

On April 15, 1966, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP66-327, as supplemented on May 27, 1966, an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the twelve-months period commencing from the date on which this order issues and the operation of minor lateral and field facilities to enable Applicant to take into its certificated pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to enable Applicant to establish additional connections in fields from which Applicant is already authorized to receive gas where it is not possible to construct facilities under the exemption provided by Section 2.55(d) of the Commission's Rules, to provide necessary booster compressor facilities in such fields and to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $2,000,000, and no single project will exceed a cost of $500,000, which costs will be financed by cash on hand or, alternatively, by short-term bank loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G-1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve-months period commencing from the date on which this order issues and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct during the twelve-months period commencing from the date on which this order issues the proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the twelve-months period commencing from the date on which this order issues and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-362

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 4, 1966)

On May 12, 1966, El Paso Natural Gas Company (Applicant), filed in Docket No. CP66-362 an application pursuant to Sections 7(b) and 7(c) of the Natural

Gas Act for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in replacement of those proposed to be abandoned, all as more fully set forth in the application.

Applicant, in the interest of public safety, proposes to modify the design and configuration of a certain segment of its San Juan Mainline System situated in the vicinity of the City of Flagstaff, Arizona. The area traversed by Applicant's system has undergone a substantial change in character as a result of the growth and development of the said city since the time the aforesaid facilities were originally installed, thereby increasing the potential hazards associated with the operation of such high pressure pipelines.

Applicant proposes:

1. The removal and salvage of approximately 7.8 miles of 24-inch and 30-inch O.D. pipeline extending from the Flagstaff Compressor Station on the San Juan mainline; and approximately 3.3 miles of 34-inch O.D. pipeline consisting of three segments of 1.2 miles, 1.4 miles and 0.7 mile respectively, looping the aforesaid 24-inch O.D. pipeline.

2. To construct and operate 7.8 miles of 34-inch pipeline, and necessary appurtenances, traversing the same location. The 3.3 miles of 34-inch O.D. heavier wall pipeline are to replace the existing 34-inch line.

Applicant states that no reduction or abandonment of service will result from the project.

The total estimated cost of Applicant's proposed construction is $2,405,653, which cost will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on July 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket No. G-242 (3 FPC 85).

(2) The facilities proposed to be abandoned by Applicant as hereinbefore described and as more fully described in the application are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by Applicant is permitted by the public convenience and necessity and permission and approval thereof should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities by Applicant as hereinbefore described and as more fully described in the application are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application are granted.

(B) A certificate of public convenience and necessity is issued to El Paso Natural Gas Company, authorizing the construction and operation of facilities as hereinbefore described, all as more fully described in the application.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC GAS TRANSMISSION COMPANY, DOCKET NOS. CP65-213, CP65-214 AND CP65-215

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued August 4, 1966)

On June 15, 1966, the Commission issued Opinion No. 495 in this proceeding, 35 FPC 1003. A certificate of public convenience and necessity was thereby issued to Pacific Gas Transmission Company (PGT) authorizing it to import from Canada an additional 100,000 Mcf of natural gas commencing on or about November 1, 1966, and an additional 100,000 Mcf of natural gas commencing on or about November 1, 1967 for transportation and sale to the Pacific Gas and Electric Company (PG&E) in California. Applications for rehearing of Opinion No. 495 and its accompanying order were filed July 8, 1966 by the State of Texas (Texas), July 11, 1966 by Texas Independent Producers and Royalty Owners Association, West Central Texas Oil and Gas Association, and Permian Basin Petroleum Association (collectively called TIPRO, *et al.*), and July 12, 1966, by California Gas Producers Association, Oil Producing Agency of California, and Jade Oil and Gas Company (collectively called California Producers). The applicants reiterate the positions taken by them before the Commission decision embodied in Opinion No. 495.

Texas urges that the record establishes the inadequacy of the Canadian gas supplies, including possible limitation on exports by the Canadian government. Texas further argues that the Commission erred because a portion of the

Canadian gas is sold under contracts containing price escalation clauses, and in failing to subpoena testimony to establish that gas could be furnished from West Texas more cheaply than the Canadian gas.

TIPRO, *et al.*, also argue the Commission erred in failing to subpoena the testimony referred to and in allowing price escalation provisions in Canadian contracts. TIPRO, *et al.* contend the record shows that cheaper and more dependable gas will be available to Northern California and that the Commission erred in finding a market exists for the sales to PG&E. TIPRO, *et al.*, further argue that there is no present need to utilize the present PGT pipeline facilities to full capacity, and that, in any event, certain conditions proposed by the Commission staff to limit price escalation should have been adopted.

California Producers urge the Commission erred in failing to consider (1) PG&E's estimated cut-backs of California-produced gas to provide a market for the Canadian gas, (2) the impact of certification of the then-pending Gulf Pacific project on PG&E's available supplies, (3) the impact upon the Mandatory Oil Import Program, and (4) the availability of alternative supplies from other pipelines.

All these matters were fully argued by the applicants and considered by the Commission prior to its determination in Opinion No. 495, and no useful purpose would be served by further discussion of them.

The Commission finds:

The assignments of error and grounds for rehearing present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 495 and accompanying order.

The Commission orders:

The above-described applications for rehearing of Opinion No. 495 and its accompanying order are denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-144

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 5, 1966)

On April 18, 1966, Colorado Interstate Gas Company (Petitioner), filed in Docket No. CP65-144 a petition to amend the certificate of public convenience and necessity issued in said docket on March 10, 1965, 33 FPC 519, requesting that the authority granted by said certificate for the construction and operation of a meter station on Petitioner's Fourway-to-Kit Carson 20-inch main line for delivery of natural gas to El Paso Natural Gas Company (El Paso) be rescinded, all as more fully set forth in the petition to amend.

Petitioner states that it was granted authority in the instant docket to make deliveries of natural gas to El Paso at two delivery points on Petitioner's Fourway-to-Kit Carson 20-inch main line in Moore County, Texas, and that one of these delivery points is an existing interconnection between Petitioner and Northern Natural Gas Company (Northern). Petitioner is delivering gas to Northern for El Paso's account at this delivery point. Petitioner further states that the other authorized delivery point is a proposed interconnection between

Petitioner's Fourway line and El Paso's 18-inch Panoma line and that this interconnection has not been constructed.

The petition to amend states that the authorized proposed interconnection between Petitioner's and El Paso's pipelines has not been required to meet the delivery requirements for the sale of gas to El Paso and thus the proposed interconnection has not been constructed. Petitioner states that it has delivered gas to El Paso through the existing interconnection with Northern for approximately one year and actual operations have proven that the proposed second delivery point is not required. Accordingly, Petitioner requests that the authority granted in the instant docket for the construction and operation of a meter station at the proposed interconnection between Petitioner's Fourway Line and El Paso's Panoma line be rescinded.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 5, 1966 (31 F.R. 6759). No protest, petition to intervene or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 10, 1965, in Docket No. CP65–144 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 10, 1965, in Docket No. CP65–144 is amended so as to delete therefrom and rescind the authorization to construct and operate a delivery point and proposed interconnection between Petitioner's Fourway line and El Paso's 18-inch Panoma line in Moore County, Texas.

(B) Petitioner shall file with the Commission within 30 days after the issuance of this order a superseding original Sheet 101 to its Rate Schedule X–22, reflecting the requested deletion of the delivery point.

(C) In all other respects said order shall remain in full force and effect.

(D) The amendment authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

GREAT LAKES GAS TRANSMISSION COMPANY, DOCKET NOS. CP66–110, CP66–111 AND CP66–112; MICHIGAN WISCONSIN PIPE LINE COMPANY, CP66–109; MIDWESTERN GAS TRANSMISSION COMPANY, CP66–119, CP66–120 AND CP66–121; NORTHERN NATURAL GAS COMPANY, CP66–212; NORTHERN NATURAL GAS TRANSPORTATION COMPANY, CP66–213, CP66–214 AND CP66–215

ORDER DENYING MOTION TO OMIT INTERMEDIATE DECISION PROCEDURE

(Issued August 5, 1966)

On June 28, 1966, Great Lakes Gas Transmission Company, *et al.* (Great Lakes) filed a motion pursuant to Section 1.30 of the Commission's Rules of

Practice and Procedure for omission of the intermediate decision of the Examiner in the above-captioned proceeding.

Great Lakes states that the purpose of omitting the Examiner's decision is to expedite the proceeding so that construction of facilities can be commenced immediately for scheduled completion by fall to avoid a "severe shortage of gas" which confronts the consumers of eastern Canada during the coming winter heating season. Great Lakes estimates that the eastern Canada market will require a "minimum of 23 billion cubic feet" commencing November 1, 1966.

Statements and responses in support of applicant's motion to omit were filed by the Michigan Public Service Commission, Michigan Wisconsin Pipe Line Company, *et al.*, Union Gas Company of Canada, Midwestern Gas Transmission Company, County of Wayne, Michigan, Consumers' Gas Company and St. Lawrence Gas Company, Inc., Public Service Commission of Wisconsin, Wisconsin Gas Company, Northern and Central Gas Company Limited, Wisconsin Natural Gas Company, Wisconsin Michigan Power Company, and Wisconsin Fuel & Light Company. Northern Natural Gas Company and Northern Natural Gas Transportation Company joined in the motion to omit, but argued that neither Great Lakes nor the eastern Canadian distributors had demonstrated that, "eastern Canadian requirements for the 1966–1967 heating season are of an emergency character."

A response was filed in opposition to Great Lakes' motion by Panhandle Eastern Pipe Line Company and Trunkline Gas Company alleging that due to the complex nature of the proceedings and the highly complicated and contested issues being considered, the Commission should be afforded the benefit of the Examiner's decision.

Staff counsel has neither joined nor concurred in the request for waiver of the intermediate decision, nor objected thereto.

The present case presents many complex considerations as to market, costs, supply, etc. of the type which necessarily must be ruled upon in a competitive hearing. Consequently, the Commission considers that a decision by the examiner who has heard the evidence relating to these matters will be of considerable value to it in reaching a proper solution to the questions and arguments presented during the hearings. Accordingly, the motion to omit will be denied.

Without now passing upon the extent of any emergency which might justify a temporary authorization of all or part of the construction proposed by any of the parties hereto (or any other means for meeting such an emergency)—and the present pleadings indicate that the showing of both need and method of temporarily meeting it should be elaborated on in greater detail—it is clear that an appropriate temporary authorization is the only procedure which could promise any sure relief. For even assuming we waive the examiner's decision it is not at all clear that a final decision could be reached by the end of the year.

The Commission finds:

It does not appear to be in the public interest to grant Great Lakes' motion for omission of the Examiner's decision. The due and timely exercise of the Commission's function does not imperatively require the omission.

The Commission orders:

The motion by Great Lakes, *et al.*, for omission of intermediate decision herein is denied.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–255 (PHASE II)

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 5, 1966)

On May 6, 1966, Northern Natural Gas Company (Petitioner) filed in Docket No. CP64–255 (Phase II) a petition to amend the order issued June 2, 1965, accompanying Opinion No. 463, 33 FPC 1163, issuing a certificate of public convenience and necessity to Applicant by authorizing the construction and operation of facilities in lieu of the facilities therein authorized and by deleting a condition precedent, all as more fully set forth in the petition.

The order of June 2, 1965, authorizes, *inter alia*, the construction and operation of 0.5 mile of 4-inch lateral pipeline from a point on Applicant's 8-inch pipeline to the Marquette, Michigan, Town Border Station No. 2 for service to Michigan Gas and Electric Company (MG&E). As a result of a reappraisal of the requirements and distribution pattern of MG&E, Applicant and MG&E have agreed upon a new and more suitable site for the location of the town border station; and accordingly, Applicant proposes to construct and operate 2.2 miles of 6-inch lateral pipeline at a cost of $44,420. The cost of the proposed facilities exceeds the cost of the authorized facilities by $36,520.

The order of June 2, 1965, also authorizes Applicant to construct and operate a branch line for the sale and delivery of gas to Lake Superior District Power Company (Lake Superior). A portion of the gas would be resold by Lake Superior to the municipal power plant in Bessemer, Michigan. As a condition precedent to the effectiveness of such authorization Applicant is required to submit to the Commission the contract for the sale by Lake Superior as evidence of the fact that there is a market for the gas which will produce sufficient revenue to justify Applicant's investment in the branch line. In the instant petition Applicant shows that the third year incremental revenue from the operation of the branch line without the sale of gas for the power plant considerably exceeds the incremental cost of service and that, therefore, there is no question of the line's economic feasibility. Applicant requests that the condition be deleted from the order.

After due notice no petition to intervene, notice of intervention or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order accompanying Opinion No. 463, 33 FPC 1163, issued June 2, 1965, should be amended as hereinafter ordered.

The Commission orders:

The order accompanying Opinion No. 463, 33 FPC 1163, issued June 2, 1965, is amended by authorizing the construction and operation of 2.2 miles of 6-inch pipeline in lieu of that originally authorized for service to MG&E at the Marquette, Michigan, Town Border Station No. 2 and by deleting from paragraph (B)(ii) the requirement that Applicant submit a contract of Lake Superior for the sale of gas for use in the municipal power plant in Bessemer, Michigan, as a condition precedent to the effectiveness of the certificate with respect to authorization to construct the particular branch line; and in all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-366

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 8, 1966)

On May 16, 1966, Central Illinois Public Service Company (Applicant), filed in Docket No. CP66-366 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Village of Vergennes, Jackson County, Illinois, and environs, all as more fully set forth in the application.

Applicant proposes to construct, own, operate, and maintain approximately 2.4 miles of 2-inch gas transmission line extending from a proposed connection with Respondent.

Applicant also proposes to construct, own, operate and maintain a gas distribution system to serve said Village of Vergennes and environs.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the first 3 full years of operation of the proposed facilities are:

	First year	Second year	Third year
Annual (Mcf)	4,689	7,320	8,988
Peak day (Mcf)	54	81	100

The total estimated cost of Applicant's proposed transmission and distribution facilities is $54,850, which cost will be financed from internally generated funds.

Respondent was duly notified by letter of the Commission dated May 18, 1966, of the filing of the application by Applicant for an order directing it to provide the requested connection and service. The Respondent filed an answer to the application on May 31, 1966, stating it had no objection to the requested connection and service if limited to the requested third year requirement of 100 Mcf per day.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on June 3, 1966 (31 F.R. 7924). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America (Respondent), a Delaware corporation having its principal place of business in Chicago, Illinois, is a

"natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) Applicant, Central Illinois Public Service Company, an Illinois corporation having its principal place of business in Quincy, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 100 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the Village of Vergennes in Jackson County, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Respondent is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Central Illinois Public Service Company as herein described, and to sell and deliver up to 100 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for transportation, distribution and resale in the Village of Vergennes and environs in Jackson County, Illinois, as hereinbefore described. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission, in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CITY OF EUGENE, OREGON, BY AND THROUGH ITS EUGENE WATER & ELECTRIC BOARD, PROJECT NO. 2242

ORDER APPROVING REVISED PROJECT EXHIBIT K MAPS AND FIXING ANNUAL LAND CHARGES

(Issued August 8, 1966)

On January 4, 1965, as supplemented on January 24, 1966, the City of Eugene, Oregon, by and through its Eugene Water & Electric Board, filed application for Commission approval of revised Exhibit K maps defining the final boundaries of Project No. 2242, known as the Carmen-Smith Project, located on the McKenzie River and its tributary, Smith River, in Lane and Linn Counties, Oregon, and affecting lands of the United States within the Willamette National Forest.

The revised exhibits show that the project works, other than transmission line right-of-way, occupy 473.18 acres of National Forest lands, and that the project transmission line occupies a 70-foot wide and 10.75 miles long right-of-way on National Forest lands. Thus, for the first time since the effective date of the license for the project, namely, December 1, 1958, we are able to fix in the license the annual charges for such occupancy.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Willamette National Forest, has advised that the project boundary shown on the revised exhibit maps is satisfactory.

The licensee filed as part of the aforementioned application a copy of an agreement with the Forest Service, required to be entered into by Article 30 of the license covering specific measures for (a) fire prevention and control, (b) protection of forest lands and resources, (c) relocation and replacement of Forest Service improvements and facilities insofar as affected by the project, and (d) planning or participation in construction of project roads. The agreement covers the cooperation by the licensee with the Forest Service in the development of recreation, required by Article 31 of the license. Commission approval of the agreement is not required by the license.

The Commission finds:

(1) The following described revised Exhibit K maps conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit K: Third Revision, Sheet 1 (FPC No. 2242–31), Sheet 2 (FPC No. 2242–32), Sheet 3 (FPC No. 2242–33) and Sheet 4 (FPC No. 2242–34).

(2) The amount of annual charges to be paid under the license for recompensing the United States for the use, occupancy, and enjoyment of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised Exhibit K maps described in finding (1) above are hereby approved as part of the license for Project No. 2242.

(B) Article 28 of the license is hereby modified to read as follows:

Article 28: The Licensee shall pay to the United States the following annual charges, effective as of December 1, 1958:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations. The authorized installed capacity for such purpose is 120,000 hp;

(ii) for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $1,135.63, and

(iii) for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands used for transmission line right-of-way only, $60.20.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY, DOCKET NO. E-7245

ORDER AMENDING PRIOR ORDER PROVIDING FOR INVESTIGATION AND HEARING; GRANTING MOTIONS IN PART AND DENYING MOTIONS IN PART

(Issued August 8, 1966)

On September 16, 1965, 34 FPC 860, the Commission issued an order herein directing an investigation and hearing as to the lawfulness of the rates and charges of Illinois Power Company (Illinois Power) for wholesale electric service to the Villages of Fithian, Ladd, Ogden, Oglesby, and Sawyerville, Illinois, Cedar Point Light and Water Company, and Central Illinois Electric and Gas Company (CIE&G). On October 25, 1965, Illinois Power filed a motion and answer thereto, denying that the Company's rates and charges to the seven aforenamed customers are subject to this Commission's jurisdiction under the Federal Power Act. It requested, in the alternative, that this proceeding be terminated, that the question of lawfulness of the rates and charges to Illinois Power's seven wholesale purchasers be deferred pending a final Commission decision as to the Company's claims that this Commission lacks jurisdiction over its wholesale rates and charges, or that there be a separation of the hearing in this proceeding into jurisdictional and rate issues.

On April 12, 1966, Illinois Power filed an amended motion and answer in which it requests additionally that this proceeding be terminated with respect to the rates and charges for service to Sawyerville and CIE&G.

This order denies Illinois Power's motions insofar as they seek termination of this proceeding as to its service to CIE&G and a prior determination of the jurisdictional issue or separation of the jurisdictional and rate issues, and grants Illinois Power's motion to terminate this proceeding regarding its wholesale rate to Sawyerville. Additionally, this order requires Illinois Power to furnish cost and revenue data using 1965 rather than 1964 as the test year; and sets a date for the prehearing conference to be held herein.

Illinois Power's request that the Commission vacate its order of September 16, 1965, for lack of jurisdiction is premised largely upon factual allegations that should be established at a hearing. Moreover, notwithstanding Illinois Power's claims that a small part of its total system revenues are derived from wholesale sales, prior determination of the jurisdictional issue would result in considerable delay of any rate relief to the wholesale customers concerned in the event that the Company's rates and charges are found to be unlawful. Therefore, we believe that all issues in this proceeding should be tried concurrently.

Since the Commission's initial order herein, Illinois Power's direct sale to CIE&G (Illinois Power's Rate Schedule FPC No. 31) has been replaced by an interchange arrangement among Illinois Power, CIE&G, and the Commonwealth Edison Company (Illinois Power's Rate Schedule FPC No. 34).[1] Therefore, the hearing in this proceeding should include as an issue the question of the lawfulness of Illinois Power's Rate Schedule FPC No. 34. In addition, the Commission by order issued July 15, 1966, *Illinois Power Company*, Docket No. E-7282, 36 FPC 59, approved, pursuant to Section 203 of the Federal Power

---

[1] Also designated as CIE&G's Rate Schedule FPC No. 2 and Commonwealth Edison Company's Rate Schedule FPC No. 8.

Act, the acquisition and merger of the Sawyerville electric system with its own facilities by Illinois Power. Accordingly, Illinois Power's rates to Sawyerville no longer should be subject to our order of investigation and hearing.

To permit the use of the most recent cost of service data (complete 1965 test year costs were not available at the time of our initial order) we shall modify our order of September 16, 1965, to require the Company to furnish such data reflecting 1965 costs of rendering service to the six wholesale purchasers remaining. Additionally, we shall set a specific date for a prehearing conference to facilitate an orderly scheduling of service of testimony and disposition of other prehearing matters.

The Commission further finds:

It is necessary and appropriate for purposes of the Federal Power Act, particularly Sections 205, 206, 208, 301, 307, 308 and 309 thereof, that the Commission's order for investigation and hearing issued September 16, 1965, be amended so as to exclude from the scope of the hearing ordered therein the question of the lawfulness of Illinois Power's rate schedule for wholesale service to Sawyerville and to include the issue of the lawfulness of Illinois Power's Rate Schedule FPC No. 34, require Illinois Power to submit cost of service data reflecting 1965 test year costs, and set a definite date for a prehearing conference in this proceeding.

The Commission orders:

(A) Paragraph (A) of the Commission's order issued September 16, 1965, is hereby amended to exclude from the scope of the hearing ordered therein the issue of the lawfulness of Illinois Power's rate schedule for wholesale electric service to Sawyerville and include the issue of the lawfulness of Illinois Power's Rate Schedule FPC No. 34.

(B) Paragraph (E) of the Commission's order issued September 16, 1965, is hereby amended to require Illinois Power, within 45 days from the date hereof, to submit a special report setting out cost and revenue data using 1965 as the test year, showing Illinois Power's costs of rendering service to each of the six purchasers remaining subject to the Commission's aforesaid hearing order.

(C) A prehearing conference shall be held before a presiding examiner at 10 a.m. (EDST) on October 4, 1966, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C. 20426, for purposes as specified in the Commission's Rules of Practice and Procedure.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

MISSOURI NATURAL GAS COMPANY, DOCKET NO. CP66-384 AND MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-385

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 8, 1966)

On May 23, 1966, Missouri Natural Gas Company (Applicant), filed in Docket No. CP66-384 an application as supplemented on June 16, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order directing Mississippi

River Transmission Corporation (Respondent) to establish a physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 364 Mcf of natural gas per day for resale and distribution in the unincorporated community of Selma, in Jefferson County, Missouri, all as more fully set forth in said application.

Applicant states that Selma has a population of approximately 650 inhabitants and estimates the natural gas requirements of the community during the first three years of proposed operations in Docket No. CP66–384 to be as follows:

	First year	Second year	Third year
Annual (Mcf)	17,697	23,829	30,128
Peak day (Mcf)	214	289	364

Applicant proposes in Docket No. CP66–384 to construct and operate approximately 15,000 feet of 4-inch pipeline lateral and a distribution system to serve Selma. Such facilities will connect with Respondent's 12-inch line No. A–151 at the point where Respondent's line crosses U.S. Highway No. 61. The estimated cost of the proposed construction is $175,500.

On May 23, 1966, Missouri Natural Gas Company (Applicant), filed in Docket No. CP66–385 an application as supplemented on June 14 and 30, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission Corporation (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the City of Leadwood, St. Francois County, Missouri, and its environs, all as more fully set forth in said application.

Applicant proposes in Docket No. CP66–385 to construct, own and operate distribution facilities within the City of Leadwood. Applicant states that such facilities will connect with Respondent's existing, but essentially unused, pipeline which passes along the southern edge of Leadwood, where it formerly served the total requirements of a St. Joseph Lead Company.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations in Docket No. CP66–385 are stated to be:

	First year	Second year	Third year
Annual (Mcf)	24,835	32,669	36,668
Peak day (Mcf)	323	425	476

The estimated cost of Applicant's proposed construction is $203,500.

On June 2, 1966, Respondent was duly advised of the applications filed in these proceedings, and due notice of the filings and opportunity for hearings thereon has been given by publication in the Federal Register on June 9, 1966 (31 F.R. 8144) in Docket No. CP66–384 and on June 9, 1966 (31 F.R. 8145) in Docket No. CP66–385. No protest, petition to intervene or request for hearing has been filed in this proceeding.

Respondent by answer filed in each docket on July 7, 1966, supports Applicant's request for service.

The Commission finds:

(1) Respondent, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020).

(2) Applicant, a Missouri corporation having its principal place of business in Farmington, Missouri, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under service agreements to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 364 Mcf per day for Selma and 476 Mcf per day for Leadwood for distribution and resale therein, as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair its ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Selma and Leadwood, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Mississippi River Transmission Corporation is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 364 Mcf per day for Selma and 476 Mcf per day for Leadwood to Applicant under service agreements to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described.

(B) Respondent shall report to the Commission in writing the dates of commencement of service to Applicant for said communities within 10 days thereof.

(C) Applicant shall be prepared to receive service for said communities as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. CP66–360 AND CP66–361

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 8, 1966)

On May 12, 1966, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66–360 an application, as supplemented on June 6, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of additional natural gas for sale on a firm basis to The New Jersey Zinc Company in Depue, Bureau County, Illinois, all as more fully set forth in the application as supplemented.

On May 12, 1966, Applicant filed in Docket No. CP66-361 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities in Bureau County, Illinois, for use in serving the additional requirements of The New Jersey Zinc Company and Illinois Power Company, all as more fully set forth in the application.

In its application filed in Docket No. CP66-360 Applicant proposes to sell an additional 2,000 Mcf of gas per day on a firm basis to The New Jersey Zinc Company, an existing direct industrial customer, for use in its expanded facilities in Depue, Bureau County, Illinois. The increased requirements will be met from Applicant's presently authorized mainline capacity. No additional facilities are proposed in Docket No. CP66-360.

In its application filed in Docket No. CP66-361 Applicant proposes to construct and operate approximately 3.7 miles of 20-inch pipeline looping its existing Depue 4-inch lateral from a point of connection with its 24-inch mainline to a new delivery point to Illinois Power Company at the junction of Applicant's Depue lateral with a new 16-inch pipeline to be constructed by Illinois Power Company, all in Bureau County, Illinois. The facilities will be utilized initially to serve the additional requirements of the New Jersey Zinc Company and to increase by 5,400 Mcf per day deliveries to Illinois Power Company.

After due notice no petition to intervene, notice of intervention or protest to the granting of the applications has been received.

At a hearing held on August 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, as supplemented, and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the applications in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities and the transportation of natural gas by Applicant are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificates issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly

the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity are issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities and to transport natural gas as hereinbefore described, all as more fully described in the applications in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The construction of facilities authorized herein shall be completed and placed in actual operation and the transportation of natural gas shall commence within six months from the date of this order as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act.

(D) The certificate issued in Docket No. CP66-360 shall not entitle The New Jersey Zinc Company, to whom firm deliveries are authorized herein, to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) The certificate issued in Docket No. CP66-361 shall not entitle Illinois Power Company to any priority to additional gas for meeting any future increases in its requirements at the expense of other firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-377

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 8, 1966)

On May 18, 1966, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66-377 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring station, appurtenant facilities and approximately 8.57 miles of 30-inch pipeline extending from its proposed 36-inch Dyer Road pipeline, which latter line was authorized, but is not yet constructed, by the Commission's order issued on May 27, 1966, in Docket No. CP66-169 (Phase I). Applicant's proposals are all more fully set forth in the application in the instant docket.

Applicant will construct and operate the proposed lateral line in order to provide a new delivery point for an existing customer, Northern Indiana Public Service Company (Northern Indiana). The new delivery point will be located at the Illinois-Indiana state line in the northeast corner of Kankakee County, Illinois, approximately 17 miles south of existing points of delivery to Northern Indiana.

Applicant now delivers gas to Chicago District Pipeline Company (Chicago District) for the account of Northern Indiana. Chicago District transports and delivers such gas to Northern Indiana at the Indiana-Illinois state line near Hammond and Munster, Indiana. Applicant states that Northern Indiana has advised that if increases in delivery volumes of natural gas as proposed in Docket No. CP66-169 * are delivered at the existing delivery points at Hammond and Munster, Northern Indiana will be required to construct a larger diameter high pressure pipeline through the congested metropolitan area of Hammond and Gary. The application indicates that in addition to the expense of such a project, further concentration in this single area of large volume deliveries to Northern Indiana is a threat to continuity of service. Applicant states that there would be a serious interruption or curtailment to Northern Indiana's customers in the Gary-Hammond area in the event of operational loss of any of Northern Indiana's facilities or those of Chicago District used for delivery to Northern Indiana.

The estimated cost of construction of the facilities necessary for the proposed new delivery point is $1,178,816, which cost will be financed from funds on hand.

Gas delivered through the proposed new lateral line will be subject to a facility charge under the provisions of Applicant's proposed FPC Gas Rate Schedule F-1. Said rate schedule provides for a facility charge when Applicant constructs new laterals at the request of a buyer.

No increase in peak day deliveries is contemplated in the instant proceeding.

On June 13, 1966, Northern Indiana filed a petition to intervene in support of the subject application.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding, all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

---

*38,961 Mcfd of the total proposed increase of 68,587 Mcfd in Docket No. CP66-169 already have been authorized by the order of May 27, 1966, in Phase I, 35 FPC 828.

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(6) Applicant should file with the Commission its statement of lateral line policy and its proposed FPC Gas Rate Schedule F-1 and related service agreement in conformance with data submitted in the application in this proceeding.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

(D) Applicant shall file with the Commission its statement of lateral line policy and its proposed FPC Gas Rate Schedule F-1 and related service agreement in conformance with data submitted in the application in this proceeding.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-321

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FOR FILING PROVISIONAL RATE SCHEDULE

(Issued August 8, 1966)

On April 7, 1966, Northern Natural Gas Company (Applicant) filed an application in Docket No. CP66-321 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity, requesting authority to construct and operate a pipeline tap on its 24-inch "A" line in Ochiltree County, Texas, to deliver natural gas to Consolidated Utilities, Inc. (Consolidated) for resale as irrigation pump fuel. Supplements to such application were filed by Applicant on May 17, and June 1, 1966.

The natural gas which Applicant proposes to deliver to Consolidated will be natural gas produced, transported and consumed within Texas. Applicant, however, has filed the application pending the final judicial determination of the so-called *Florida Parishes Case*, Commission Opinion Nos. 401 and 401-A, *United Gas Pipe Line Company*, 30 FPC 560, 31 FPC 1152; affirmed *sub nom. Louisiana Public Service Commission* v. *F.P.C.*, 359 F. 2d 525.[1]

Under the terms of the contract between Applicant and Consolidated dated January 20, 1966, Applicant proposes to deliver up to a maximum of 3,000 Mcf of natural gas per day which will not be subject to interruption except during the period beginning on October 27 and ending March 27 of the following year.

---

[1] Petition for certiorari filed July 1, 1966, by Louisiana Public Service Commission, *et al.* Action pending in U.S. Supreme Court.

Estimated peak day and annual deliveries during the third year of service are 600 Mcf and 70,000 Mcf, respectively.

The proposed basic rate for the natural gas to be delivered is 25 cents per Mcf. The minimum monthly bill will be $10.00 for each delivery point established by Applicant.[2] Article III of the contract between Applicant and Consolidated dated January 20, 1966, contains automatic price adjustment clauses which Applicant has agreed not to make effective pending final determination of the jurisdictional question.

For the purpose of this proceeding we will accept the contract between Applicant and Consolidated as a provisional rate schedule pending the final determination of the jurisdictional issue presented.

The estimated cost of the pipeline tap to be constructed by Applicant is $155.00. Applicant will be reimbursed by Consolidated for the cost of the installation.

After due notice, no petition to intervene, notice of intervention or protest to the application has been filed.

At a hearing held on August 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, as supplemented, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The proposed construction and operation of facilities, and the sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, and exhibits, as supplemented, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant authorizing the construction and operation of facilities, and the sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, as supplemented and exhibits filed in this proceeding, upon the terms and conditions of this order.

---

[2] Applicant contemplates installing additional delivery points under budget type sales authorizations.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above is granted subject to the following conditions:

(1) Natural gas deliveries to Consolidated authorized herein shall not exceed 3,000 Mcf daily.

(2) The price of the natural gas fixed at 25 cents per Mcf shall not be escalated under the automatic price adjustment provision of Article III of the Contract between Applicant and Consolidated dated January 20, 1966.

(D) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(E) The contract between Applicant and Consolidated dated January 20, 1966, filed in the proceeding as Exhibit I to the application is accepted for filing pursuant to Commission Regulation 154.52 as a Provisional Rate Schedule for an interim period pending decision of jurisdictional issue.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PACIFIC GAS AND ELECTRIC COMPANY, DOCKET NO. E-7298

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued August 8, 1966)

Pacific Gas and Electric Company (Applicant), incorporated under the laws of the State of California and qualified to do business in that state, with its principal place of business at San Francisco, California, filed an application with the Federal Power Commission on June 7, 1966, as subsequently amended and supplemented, seeking an order, pursuant to Section 203 of the Federal Power Act, authorizing Applicant to acquire and to merge or consolidate with its own facilities an electric utility system owned and operated by Cecil J. McIntyre, Kenneth D. McIntyre, and Doris E. Scruggs, who as individuals and as a co-partnership do business under the firm name and style of Indian Valley Light and Power Company (Indian Valley). The principal place of business of Indian Valley is in the Town of Greenville, Plumas County, California.

Applicant is engaged in the generation, purchase, transmission, distribution and sale of electric energy throughout most of northern and central California, including 46 of California's 58 counties. Applicant furnishes retail electric service to approximately 2,286,978 residential, commercial, industrial, agricultural and municipal customers in 197 incorporated cities, more than 300 unincorporated communities (each of 250 or more estimated population), and an extensive rural area.

Indian Valley is engaged in the purchase, distribution, and sale at retail of electric energy in Plumas County, California. Indian Valley serves approximately 836 residential, commercial, industrial, and municipal customers.

Indian Valley does not generate any electric energy. Indian Valley purchases all its electric supplies at wholesale from Applicant. The facilities which Applicant seeks to acquire constitute all the electric facilities utilized by Indian Valley in serving its customers. The electric facilities owned and operated by Indian Valley are located in Plumas County and they include a substation, poles, conductors, transformers, switching devices, meters, street lighting installations, and certain parcels of land utilized for substation and pole yard purposes. As of December 31, 1965, the depreciated original cost of Indian Valley's electric plant was $220,303. For the 12 months ended December 31, 1965, Indian Valley received a total of $240,822 in electric operating revenues.

Under the terms of an agreement dated January 13, 1966 between Indian Valley and Applicant, as amended by their agreement dated May 9, 1966, copies of which were filed as exhibits to the application, Indian Valley proposes to sell and Applicant proposes to purchase all electric facilities of Indian Valley for a consideration of $590,000 payable in cash, subject to certain adjustments. Applicant will assume certain liabilities and credits of Indian Valley, including customer deposits, customer advances for construction, and contributions in aid of construction. The application represents that the amount of the consideration is the result of arm's-length bargaining. The consideration would have been $572,373 as of December 31, 1965. The net assets, including electric plant in service at depreciated original cost, of Indian Valley to be acquired by Applicant totaled $206,870 as of December 31, 1965. A cash payment of $572,373 by Applicant for Indian Valley's net assets of $206,870 would result in the creation of an electric plant acquisition adjustment of $365,503 on the books of Applicant as of December 31, 1965. The entire amount of any acquisition adjustment created by the proposed transaction will be eliminated by Applicant by a debit to Account 435, Miscellaneous Debits to Surplus, according to the application.

The electric service areas of Indian Valley and Applicant are adjacent to each other in Plumas County and their respective electric systems are interconnected at the points where Applicant makes wholesale deliveries of electric power and energy to Indian Valley. Upon consummation of the proposed transaction the electric facilities currently owned and operated by Indian Valley will become part of the interconnected and integrated electric system owned and operated by Applicant for serving northern and central California. Applicant will utilize the facilities acquired from Indian Valley to provide electric service to the present customers of Indian Valley.

Applicant represents that under the rates it proposes to make effective most of the present customers of Indian Valley will receive rates lower than they are now receiving and the remainder of such customers will receive no increase in rates.

Written notice of the application has been given to the Public Utilities Commission of the State of California and to the Governor of that State. Notice of the application was also published in the Federal Register on June 21, 1966 (31 F.R. 8607), stating that any person desiring to be heard or to make any protest with reference to the application should on or before July 8, 1966 file with the Federal Power Commission, Washington, D.C, 20426, a petition or protest: No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Public Utilities Commission of the State of California, by order dated June 14, 1966, authorized Indian Valley and Applicant to consummate the proposed transaction in the manner as described above.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued March 13, 1958, *Pacific Gas and Electric Company* (19 FPC 326).

(2) By the proposed acquisition of the electric facilities of Indian Valley, as described above, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Indian Valley, another person, within the meaning and subject to the requirements of Section 203 of the Act.

(3) The proposed acquisition and merger or consolidation of the electric facilities of Indian Valley by Applicant, as recited above, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Act for the reasons set forth above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the electric facilities of Indian Valley by Applicant, as described above, is hereby authorized and approved upon the terms and conditions as set forth in the application, subject to the provisions of this order.

(B) Applicant shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, particularly the provisions of Account 102, Electric Plant Purchased or Sold, Account 114, Electric Plant Acquisition Adjustments, and appropriate Electric Plant Instructions, thereof.

(C) Any acquisition adjustment created by the transaction herein authorized shall be eliminated by a debit to Account 435, Miscellaneous Debits to Surplus.

(D) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(E) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TEXACO INC., DOCKET NO. CI64–475

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 8, 1966)

On December 17, 1964, Texaco Inc. (Petitioner) filed in Docket No. CI64–475 a petition to amend the order issuing a certificate of public convenience and necessity in said docket on May 6, 1964, 31 FPC 1125, by modifying certain delivery conditions, all as more fully set forth in the petition to amend.

Petitioner's contract of October 10, 1963,[1] with Texas Gas Transmission Corporation (Texas Gas), the purchaser, provides that Petitioner will deliver contract volumes at the delivery point at a ratio of up to 17 percent of the total annual volumes from the area defined as the "Southern Louisiana Area," which is subject to the tax jurisdiction of the State of Louisiana, to 83 percent from the area defined as the "Offshore Federal Domain." By an amendment dated February 11, 1964, Petitioner and Texas Gas agree that Petitioner may deliver varying quantities of gas from the Southern Louisiana Area and the Offshore Federal Domain in order to provide flexibility in Petitioner's field operations. The amendment does not change either the price provisions of the basic contract or the Commission's order issuing the certificate. All gas sold from the Southern Louisiana Area will continue to be sold at 20.625 cents per Mcf during the period that the settlement[2] remains in effect, and all gas produced from the Offshore Federal Domain will continue to be sold at 19.0 cents per Mcf for the same period of time. The amendment provides that the weighted average price per Mcf for combined deliveries from the Southern Louisiana Area and the Offshore Federal Domain to be paid by Texas Gas during any month of any contract year through December 31, 1967, shall not exceed 19.8 cents per Mcf.

Petitioner also requests that the order issuing the certificate be clarified to reflect the fact that Petitioner has the right to make up gas paid for but not taken during the first five contract years during the next five-year period.

After due notice a petition for leave to intervene was filed and withdrawn by the Memphis Light, Gas & Water Division, City of Memphis, Tennessee, and a notice of intervention was filed and withdrawn by the Public Service Commission of the State of New York.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate to Petitioner in Docket No. CI64–475 should be amended as hereinafter ordered.

The Commission orders:

(A) Pursuant to its FPC Gas Rate Schedule No. 343, as supplemented, Petitioner is authorized to deliver varying quantities of natural gas from the Southern Louisiana Area and the Offshore Federal Domain provided that the weighted average delivered price to Texas Gas does not exceed applicable levels specified in Supplement No. 3 to said rate schedule. As provided in said rate schedule, as supplemented, all gas produced from the Southern Louisiana Area and the Offshore Federal Domain shall be at prices applicable to each area. During the period in which the settlement prices are in effect, the price of all volumes of gas delivered from the Southern Louisiana Area shall be 20.625 cents per Mcf and the price of all volumes of gas delivered from the Offshore Federal Domain shall be 19.0 cents per Mcf.

(B) During the first five contract years, or until November 1, 1969, Texas Gas shall take or pay for the total sum of the daily minimum quantities determined at the end of the five-year period and does not have to pay for any gas not taken during the five-year period until the end of such period. Thereafter,

---

[1] Texaco Inc. FPC Gas Rate Schedule No. 343.

[2] An offer of settlement was submitted by Petitioner on February 27, 1964, and supplemented on March 17, 1964. The Commission accepted the terms and conditions of the settlement in the order issuing the certificate to Petitioner.

Texas Gas has the right to make up any gas not taken during the previous five-year period in the next five years. After November 1, 1969, Texas Gas must take or pay for a yearly volume equal to the minimum quantity times the number of days in the year, with a make-up period of five years.

(C) The amendment dated February 11, 1964, is accepted for filing to be effective on the date of this order and is designated as Supplement No. 3 to Texaco Inc. FPC Gas Rate Schedule No. 343.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CONSOLIDATED GAS SUPPLY CORPORATION, DOCKET NO. CP66-250

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 9, 1966)

On May 16, 1966, Consolidated Gas Supply Corporation (Petitioner) filed in Docket No. CP66-250 a petition to amend the Commission's order issued March 28, 1966, 35 FPC 421, in said docket, by authorizing the construction and operation of one 30-inch and one 24-inch pipeline river crossing of the Ohio River in lieu of the dual 24-inch river crossing heretofore authorized in this proceeding, all as more fully set forth in the petition to amend.

The order of March 28, 1966, authorized, among other things, the construction and operation of 25 miles of 30-inch transmission pipeline extending from the existing Hastings Compressor Station, Wetzel County, West Virginia, to a proposed new delivery point in Monroe County, Ohio, for The East Ohio Gas Company, together with a related dual 24-inch river crossing of the Ohio River.

Petitioner states that the authorization requested by the subject petition would result in a saving of $72,000, in the total estimated cost of construction authorized by the March 28, 1966, order. This saving results primarily from the elimination of two 30-inch and four 24-inch scraper traps at the river crossing and the replacement of four 24-inch valves with two 16-inch valves. This is made possible because it is now proposed that the 24-inch crossing will be maintained as an emergency line only, not requiring scraper traps, and the 30-inch line will extend the entire distance to the Monroe County delivery point. A portion of the anticipated savings result also from a minor change of location of the river crossing which will permit a shorter crossing.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 27, 1966, (31 F.R. 7645). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 28, 1966, in Docket No. CP66-250 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 28, 1966, in Docket No. CP66-250 is amended by authorizing the construction and operation of one 30-inch and one 24-inch pipeline river crossing of the Ohio River in lieu of the dual 24-inch river crossing heretofore authorized in this docket, all as hereinbefore described and as set forth in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

OPINION NO. 503

DUKE POWER COMPANY, DOCKET NO. E-7266

OPINION AND ORDER DETERMINING JURISDICTION OVER ACQUISITION OF FACILITIES

(Issued August 9, 1966)*

Syllabus

1. Term "those of any other person" as characterized in Section 203(a) of the Federal Power Act is broader than term "public utility"; thus "person" suggests that facilities to be acquired could be non-jurisdictional distribution facilities. P. 401.
2. Essentially, Section 203 is designed to ensure that growth of operating utilities be economic and render adequate service to public. P. 401.
3. Section 203 insures that transfers of utility property to, as well as from, jurisdictional companies will be in public interest, particularly from standpoint of economy and coordination of facilities—it makes little difference whether property transferred is jurisdictional or not. P. 402.
4. In case of acquisitions, Commission by regulation limited necessity to file Section 203 applications to mergers or consolidations with facilities of another person having a value in excess of $50,000. P. 403.
5. Although the statute does not impose a $50,000 limitation for acquisition of facilities as it does for disposition, there is no reason why Commission cannot impose such a limitation by regulation. P. 403.
6. With respect to mergers, Commission does not displace state commission jurisdiction. P. 404.
7. While accounting authority is an important part of Commission's regulatory authority over public utilities, there are other interests to be served in approving a merger, such as preservation of financial standing of acquiring company and the physical coordination of facilities. P. 404.
8. For the purposes of Section 203, it can make little difference whether facilities to be acquired are nonjurisdictional because they are distribution facilities or because they are owned by an instrumentality of the state. P. 405.
9. Section 203 grants Commission jurisdiction over acquisition by a "public utility" of any electric facilities even though owned and operated by an entity such as Clemson University, which is not itself subject to Commission jurisdiction. P. 405.
10. In a proceeding for a declaratory order, Commission *determines* it has jurisdiction over acquisition of facilities.

---

*Rehearing denied September 28, 1966, 36 FPC 702. Reversed, *Duke Power Co. v. F.P.C.*, 401 F. 2d 930 (CADC–1968).

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

BLACK, *Commissioner*:

In this proceeding Duke Power Company seeks a declaratory order that it need not seek Commission approval of its acquisition of the electric power distribution facilities of Clemson University located in Pickens and Oconee Counties, South Carolina, pursuant to the provisions of Section 203 of the Federal Power Act. The issues are whether we have jurisdiction under Section 203 over the acquisition of facilities by a public utility (1) where the facilities are distribution facilities and (2) where the facilities are owned by a state agency that is exempt from regulation under Section 201(f) of the Power Act. Because of the importance of the first question Duke requests that the decision not be made on the basis of Section 201(f).

Duke Power Company, a North Carolina corporation with its principal place of business in Charlotte, North Carolina, is primarily an electric utility. It serves portions of North Carolina and South Carolina and admits that it is a public utility within the meaning of Part II of the Federal Power Act. Clemson was established under the law of South Carolina, is wholly owned by South Carolina and is operated as an agency of the State for educational purposes. As such it is exempted from our jurisdiction by Section 201(f) of the Power Act.

Before the acquisition Clemson owned, operated and maintained facilities for distributing electric power to certain residential and commercial customers (mostly professors, administrators and employees) living near the campus. All of Clemson's electric power requirements were purchased by Clemson on a wholesale basis from Duke, and Clemson has never owned or operated any facility for the purpose of generating or transmitting electric power other than through its distribution facilities. Duke delivered electric power to Clemson at 4,160 volts at the "Clemson College" substation. The substation and the step-down transformers are, and before the acquisition were, owned by Duke Power Company.

Clemson's distribution facilities were sold to Duke pursuant to an agreement dated June 30, 1964, as authorized by the Public Service Commission of South Carolina by order No. E-937 in Docket No. 12,619 on October 7, 1965. The price paid for the electric distribution facilities and certain water distribution facilities amounts to $279,068. Of this amount Duke has allocated $118,696 to net investment in electric plant and $64,858 to electric plant acquisition adjustments. In this proceeding we are, of course, not determining the correctness of this allocation of the purchase price, but we do, for the purposes of this order, accept the statement that the electric facilities acquired by Duke are of a value in excess of $50,000.

Upon Duke's filing formal entries to record the above transaction, the Secretary of the Commission called Duke's attention to Section 33.1(2) of our Regulations regarding the applicability of Section 203 and requested that Duke file an application with respect to the transaction. Section 33.1(2) reads as follows:

> (2) The merger or consolidation, directly or indirectly of the facilities of a public utility with those of any other person having a value in excess of $50,000. This includes the acquisition by a public utility of the electric facilities of any other person whether or not such person is otherwise subject to the provisions of Part II of the Federal Power Act (including municipalities and companies not engaged in the interstate transmission or sale of electric energy).

By letter of November 1, 1965 (as supplemented by a letter of December 16, 1965) Duke set forth the facts as outlined above and requested that the Commission issue a declaratory order disclaiming jurisdiction over the transaction. On February 14, 1966, 35 FPC 230, the Commission issued an order initiating proceedings for a declaratory order, accepting the letters of November 1 and December 16, 1965 as a factual record, and calling for the exchange of briefs. Accordingly, briefs and reply briefs were filed by Duke and our staff arguing the legal questions.

Section 203(a) provides as follows:

> Sec. 203(a) No public utility shall sell, lease, or otherwise dispose of the whole of its facilities subject to the jurisdiction of the Commission, or any part thereof of a value in excess of $50,000, or by any means whatsoever, directly or indirectly, *merge or consolidate such facilities* or any part thereof with *those of any other person*, or purchase, acquire, or take any security of any other public utility, without first having secured an order of the Commission authorizing it to do so. Upon application for such approval the Commission shall give reasonable notice in writing to the Governor and State commission of each of the States in which the physical property affected, or any part thereof, is situated, and to such other persons as it may deem advisable. After notice and opportunity for hearing, if the Commission finds that the proposed disposition, consolidation, acquisition, or control will be consistent with the public interest, it shall approve the same. [emphasis supplied]

There is no dispute that Duke by acquiring the electric facilities of Clemson would "merge or consolidate" its facilities with other facilities, and this has been the Commission's interpretation. *Pennsylvania Electric Co.*, 9 FPC 91, 95–97.[1] There is no dispute that "such facilities" refers to "facilities subject to the jurisdiction of the Commission." The critical word here is "those", and, as a pure matter of grammar, it is ambiguous. It could mean "jurisdictional facilities", or it could mean just "facilities." The statute characterizes the owner of "those" facilities as including "any other person" rather than just another "public utility". As noted in the *Pennsylvania Electric* case, 9 FPC at p. 98, this term is broader than the term "public utility". It could include a company which is not a public utility because all of its facilities are intrastate or distribution facilities and therefore exempt under Section 201(b) of the Act. It might also include a state agency which is exempt from regulation under Section 201(f) of the Act, as discussed below. Thus the word "person" suggests that the facilities to be acquired could be nonjurisdictional distribution facilities. The legislative history supports this conclusion.

Section 203 as part of the Federal Power Act, 16 U.S.C. § 791a–825r, was enacted along with the Public Utility Holding Company Act of 1935, 15 U.S.C. § 79, *et seq.*, both of which comprised the Public Utility Act of 1935, 49 Stat. 803, and were manifestations of congressional concern over past abuses of the holding company system. As the Senate Committee said, the Federal Power Commission was to have "authority to keep the same kind of check upon the creation of spheres of influence among operating companies that the Securities and Exchange Commission has over holding companies under title I".[2]

Essentially Section 203 is designed to ensure that growth of the operating utilities be economic and render adequate service to the public. The National Power Policy Committee on Public Utility Holding Companies, whose report was transmitted to Congress by the President in urging enactment of the 1935 legislation, said that new acquisitions should not be allowed unless they result in economy and efficiency, and unless the prices bear a proper relation to the capital prudently invested.[3]

---

[1] Aff'd on other grounds *Pennsylvania Electric Co.* v. *F.P.C.*, 188 F. 2d 763 (CA3–1951).

[2] Sen. Report No. 621, 74th Cong., 1st Sess., p. 50.

In his testimony in support of the bills that became the Federal Power Act, Mr. Dozier A. Devane, then Solicitor of the Federal Power Commission, pointed to some of the practical reasons for Section 203. The section, he said, went further than to prevent loading down the industry with unnecessary facilities. It was to prevent speculation in utility properties and to insure that they be bought and sold in the public interest.[4] He further pointed out that under the Holding Company Act the utility systems, as then constituted, would be dismembered. There would be "a realinement in the industry and steps should be taken now to protect the public against an uneconomic realinement."[5] He foresaw that the companies would integrate into strong regional systems and that such integration would result in great savings because capacity could be used more efficiently. In this connection the provision in the bill encouraging coordination of facilities was to be viewed together with Section 203 "which requires Commission approval for the purchase and sale of operating properties."[6]

Finally, the Senate Committee summed up the purposes of Section 203 as follows:[7]

> This section furnishes an essential check upon the development of the industry along uneconomic lines. It complements title I of the bill by directing the Commission to prevent transfers or consolidations of property which would impair the ability of public utilities to render adequate service or impede, or tend to impede, the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

At the time of these comments Section 203(a) provided that the Commission should approve the merger "unless it determines that the proposed—merger or consolidation would impair the ability of the public utility or public utilities affected to render adequate service, or would impede or tend to impede, the coordination in the public interest of facilities subject to the jurisdiction of the Commission." The Conference report[8] changed the standard to "consistent with the public interest", but did not change the objectives of Section 203.

The legislative history also shows that Congress in enacting the 1935 legislation was concerned with the break-up and realignment of all facets of the holding company systems. Section 203 was, therefore, designed to insure that transfers of utility property to, as well as from, the companies subject to our jurisdiction would be in the public interest, particularly from the standpoint of economy and coordination of facilities. In this context it makes little difference whether the property transferred is jurisdictional or nonjurisdictional.

---

[3] The Committee said: The Commission should have complete control over the acquisition of new securities and properties by holding companies and others in holding-company systems in the course of reorganizations and rearrangements of properties. New acquisitions should not be allowed unless the applicant can clearly demonstrate a resultant economy and efficiency from the connection of naturally related and interdependent properties. The Commission should have power to prevent acquisitions at prices which do not bear a proper relation to the capital prudently invested in the underlying utility properties, or if the acquisition would tend to create monopoly or restraint of trade in the exercise of control of public-utility companies. Sen. Report No. 621, 74th Cong., 1st Sess., p. 59.

[7] Senate Report No. 621, 74th Cong., 1st Sess., p. 50.

[8] House Report No. 1903, 74th Cong., 1st Sess., p. 74, 75.

Although in the present proceeding Duke has acquired only seven miles of distribution line and 418 service connections to be supplied from its system in the same way they had before the acquisition and although it is apparent that the effect on the interstate movement of power or on the financial stability of Duke will be inconsequential, these are not grounds for holding that we do not have jurisdiction over the acquisition of distribution facilities. We may presume, as past history shows to be the case, that most such transactions "will be consistent with the public interest", and often very beneficial.

We are aware, of course, that Section 203 does not grant us authority over all transactions that could affect the interstate flow of power, the coordination of interstate facilities or the financial stability of the participating parties. It does not cover the sale of distribution or generating facilities by a public utility but this possible limitation on the reach of the section[9] does not mean that the provision with respect to acquisitions should likewise be limited contrary to its purposes as shown by the legislative history. As noted in the *Pennsylvania Electric* case, 9 FPC at 95, Congress confined our jurisdiction with respect to dispositions, where its probable purpose was the preservation of the integration and coordination of jurisdictional facilities.

We are aware also that the Commission has changed its view of its jurisdiction several times in the past. At first it held it did have jurisdiction. *Portland General Electric Co.*, 1 FPC 709, 773 (1938, 1939); *Public Service Electric and Gas Co.*, 1 FPC 748 (1938). After some intermediate stages the Commission more recently has held that it had jurisdiction "to regulate the acquisition of electric facilities by a public utility irrespective of the legal status of the seller", which in this case was a municipality. One of the more definitive intermediate cases was *Pennsylvania Electric Co., supra.* In that case the Pennsylvania Electric Company acquired the facilities of three small electric utilities. After discussing the construction of Section 203, as referred to above, the Commission held that the acquisition of the local distribution facilities was subject to its jurisdiction in furtherance of the Congressional purpose of securing the integration and coordination of facilities and preventing corporate and financial abuses.

Duke argues that the interpretation followed in the *Pennsylvania Electric* case, would force us into a dilemma by requiring us to take jurisdiction of every acquisition of non-jurisdictional electric facilities by public utilities including every meter and every pole. While it may be that Section 203 would literally extend to such situations, this interpretation is not dependent on the nature of the facilities since the same argument could be made with respect to meters and poles which were associated with (and would remain associated with) jurisdictional facilities.

In the case of acquisitions we have by regulation (Section 33.1(2) quoted above) limited the necessity to file applications pursuant to Section 203 to mergers or consolidations with facilities of another person having a value in excess of $50,000. Although the statute does not impose a $50,000 limitation for acquisition for facilities as it does for disposition, there is no reason why we cannot impose such a limitation by regulation. Section 309 of the Act provides that the Commission shall have power to issue regulations "as it may find necessary or appropriate to carry out the provisions of this Act."

---

[9] It should be noted that any purchase of the distribution or generating facilities of one public utility by another would under the present interpretation be covered by the second clause of Section 203(a), thus making possible the rejection of any uneconomic acquisition. It is true that sales of distribution facilities to a person exempted under Section 201(f) would not be covered, but Congress may have felt that there were other adequate controls over uneconomic purchases by such entities.

Duke makes the broader contention that if our Section 33.1(2) of our Regulations were upheld it would open a vast new field of Federal regulation and would severely impose upon the rights of the states to regulate public utility matters. We think both fears are unfounded. As indicated, *supra*, the position of the Commission for most of the period since the enactment of Section 203, including significantly, the period directly following[10] enactment was that we had jurisdiction over the acquisition of non-jurisdictional facilities. At no time during these several periods in which we asserted jurisdiction have the proceedings on mergers been numerous, usually not more than a dozen or two a year, and only rarely have they involved contested issues or a hearing. With respect to mergers this Commission does not displace state commission jurisdiction. Unlike our jurisdiction over sales at wholesale in interstate commerce, which is exclusive, state approval of a given transaction is often required by state law as well as our approval. This is part of the accommodation of State and Federal interests provided for in the Federal Power Act.

Duke further argues that through our authority over accounts we have an adequate means of discharging our regulatory responsibilities without the use of Section 203. Duke refers to the provisions of our Uniform System of Accounts with respect to recording acquisitions and the filing of proposed journal entries.[11] It seems plain that while our accounting authority is a very important part of our regulatory authority over public utilities, there are other interests to be served in approving a merger as discussed above such as the preservation of the financial standing of the acquiring company and the physical coordination of facilities. Thus an improvident acquisition might cause financial damage to the acquiring company or impair its ability to integrate and coordinate its facilities with the acquired facilities or with those of another company to the detriment of its ability to serve the public. Accounting authority is applicable only after the fact, to record what has taken place, but Section 203 is available before the event to prevent transactions or to modify transactions that otherwise might not conform to the purpose of Congress in enacting the Section.

Finally, Duke argues that the facilities in this case are not subject to our jurisdiction because Clemson University is exempt from our jurisdiction under Section 201(f) of the Power Act providing as follows:

> (f) No provision in this Part shall apply to, or be deemed to include, the United States, a State or any political subdivision of a State, or any agency, authority, or instrumentality of any one or more of the foregoing, or any corporation which is wholly owned, directly or indirectly, by any one or more of the foregoing, or any officer, agent, or employee of any of the foregoing acting as such in the course of his official duty, unless such provision makes specific reference thereto. [49 Stat. 847; 16 U.S.C. 824]

---

[10] Substantially contemporaneous administrative construction is relevant as to the meaning of a statute. *United States* v. *American Trucking Ass'ns, Inc.*, 310 U.S. 534, 549. *Fawcus Machine Co.* v. *United States*, 282 U.S. 375, 378. *White* v. *Winchester Country Club*, 315 U.S. 32, 41. *Whitcomb Hotel* v. *California Employment Com'n*, 24 Cal (2d) 753, 151 P (2d) 233, 235. *United States* v. *Harrison and Grimshaw Construction Co.*, 305 F. 2d 363, 368 (CA10), certiorari denied, 371 U.S. 920.

[11] It further argues that if accounting requirements are included in an order approving a merger the utility will be, in effect, denied a hearing because contractual time limitations will require it to accept the accounting requirements imposed by our staff. The parties are specifically granted opportunity for a hearing, and whether this might prevent consummation of the transaction is a matter for negotiation between them. It would, of course, be possible in appropriate circumstances for the Commission where the merger was clearly desirable and there was a time limit involved to approve the merger and defer to separate proceedings a determination of the proper accounting.

Duke's argument misses the point. The question is not whether Clemson needs authority to sell, but whether Duke, an admitted public utility, needs authority to acquire. We may note that Duke does not argue that Clemson is not a "person" within the meaning of Section 203, nor could it in the light of *United States* v. *Public Utilities Commission of California*, 345 U.S. 295, 312, holding that the exclusion of a "municipality" from the term "person" would be completely at variance with the purpose of the statute. Clearly, for the purposes of Section 203 it could make little difference whether the facilities to be acquired are non-jurisdictional facilities because they are distribution facilities or because they are owned by an instrumentality of the state.

In conclusion, it is our opinion that Section 203 grants us jurisdiction over the acquisition by a "public utility" of any electric facilities even though they be entirely distribution facilities and even though they are owned and operated by an entity, such as Clemson University, which is not itself subject to our jurisdiction.

The Commission further finds:

(1) Duke, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as described and set forth in the Commission's order issued August 1, 1962, *Duke Power Company*, Docket No. E-7041 (28 FPC 255).

(2) Clemson is a person within the meaning of Section 203 of the Act and, until their transfer to Duke, owned and operated electric distribution facilities of a value more than $50,000.

(3) By acquiring the facilities of Clemson referred to in (2) above Duke merged or consolidated its facilities with those of another person without having secured an order of the Commission authorizing it to do so as required by Section 203 of the Federal Power Act and Section 33.1 of our Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-6

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 9, 1966)

On June 13, 1966, El Paso Natural Gas Company (Petitioner), filed in Docket No. CP66-6 a petition to amend the order issued in said docket on September 24, 1965, 34 FPC 965, and amended on January 24, 1966, and May 31, 1966, 35 FPC 134, 836, requesting the deletion of certain conditions as set forth in the initial order and amendment thereto, all as more fully set forth in the petition to amend.

By the order issued in the instant docket on September 24, 1965, as amended, Petitioner was authorized, *inter alia*, to sell and deliver natural gas to The Washington Water Power Company (Water Power) for resale and distribution in the community of Wallace, Idaho, and to Intermountain Gas Company (Intermountain) for resale and distribution in the communities of Ketchum and Iona, Idaho, and their respective environs.

Petitioner states that it is advised that Water Power and Intermountain have been granted franchises for the aforesaid communities in conformity with the condition set forth in ordering paragraph (D) of the subject order. Petitioner requests that the volumetric condition set forth in amending order paragraph (A) of the order issued on May 31, 1966 and the franchise condition in ordering paragraph (D) of the order issued September 24, 1965, be deleted.

The natural gas proposed to be sold and delivered to Intermountain for resale and distribution in Iona, Idaho, is to be utilized for residential and commercial purposes and to its knowledge no industrial consumption is involved. Petitioner further states that in view of this situation it believes that a volumetric condition in this instance is inappropriate and, in all probability, was not intended. Accordingly, Petitioner requests that the Commission delete said volumetric condition.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 30, 1966 (31 F.R. 9031). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's orders issued September 24, 1965, and May 31, 1966 in Docket No. CP66-6 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 31, 1966, amending the Commission's order issued September 24, 1965, in Docket No. CP66-6 is amended so as to delete therefrom the volumetric condition contained in paragraph (A) thereof; and the Commission's order issued September 24, 1965, is amended so as to delete therefrom the condition contained in paragraph (D) thereof requiring franchises by Water Power and Intermountain.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. G-669

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 9, 1966)

On May 30, 1966, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) filed in Docket No. G-669, as supplemented on June 30, 1966, a motion to amend further the Commission's order issued November 30, 1946, 5 FPC 953, in said docket, as amended, by authorizing the construction, relocation and operation of certain natural gas facilities in Wisconsin, all as more fully set forth in the motion to amend in this proceeding.

The order of November 30, 1946, authorized, among other things, the construction and operation of 3.9 miles of 8-inch transmission line extending from the take-off point of Michigan Wisconsin's de Pere lateral to Green Bay for the delivery and sale of natural gas to Wisconsin Public Service Corporation for distribution and resale in Green Bay.

Michigan Wisconsin states that due to population growth the pipeline is now located in a residential area which is relatively densely populated and that municipal officials have urged the relocation of such line. Further, Michigan

Wisconsin states that the 8-inch line does not have sufficient capacity to meet the estimated 1966–67 peak hour requirements and, that, because of the population density, looping of the existing line is not feasible. Therefore, Michigan Wisconsin proposes to install and operate a new meter station and 2.9 miles of 16-inch pipeline to substitute for the existing 3.9 miles of 8-inch line.

The estimated cost of construction of the proposed facilities is $286,490, which cost will be financed from funds on hand. The 3.9 miles of 8-inch line and the existing meter station will be removed and salvaged.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 9, 1966 (31 F.R. 8144). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued November 30, 1946, in Docket No. G–669, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued November 30, 1946, in Docket No. G–669, as amended, is further amended by authorizing Michigan Wisconsin to construct, relocate and operate the subject facilities, all as hereinbefore described and as set forth in the motion to amend in this proceeding.

(B) The authorization granted in paragraph (A) above shall be without force and effect unless the fees prescribed by Section 159.2(b) and Section 159.2(d), if any, of the Regulations under the Natural Gas Act have been paid in accordance with the requirements thereof.

(C) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP66–404

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT AND ACCEPTING FOR FILING NOTICE OF CANCELLATION OF SERVICE AGREEMENT

(Issued August 9, 1966)

On June 7, 1966, Montana-Dakota Utilities Co. (Applicant), filed in Docket No. CP66–404 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and service, all as more fully set forth in the application.

Applicant proposes to abandon the following service and facilities:

(1) the sale of gas for resale to Ernest R. Jensen, d/b/a, Byron Gas Service, serving the community of Byron, Wyoming, and environs under Rate Schedule G–1, FPC Gas Tariff Original Volume No. 4, and

(2) the sales and metering facilities serving said Ernest R. Jensen, d/b/a and located in the N½, S33, T56N, R97W, Big Horn County, Wyoming.

Applicant states that Ernest R. Jensen, d/b/a, Byron Gas Service has secured a local supply of gas adequate to meet his needs at a lesser rate than that charged by Applicant and does not desire further service from Applicant. Applicant states that the proposed abandonment of service will not have any adverse effect on Applicant's remaining customers by reason of the loss of revenue.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued April 16, 1943, in Docket No. G-282 (3 FPC 968).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities and service is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Notice of Cancellation of Applicant's contract dated April 4, 1966, with Ernest R. Jensen relating to service under the Applicant's Gas Tariff (Sheet Nos. 4 and 21) be accepted for filing effective on the date of this order.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities and service hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant, Montana-Dakota Utilities Co.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities and service as authorized in paragraph (A) above within ten days of such abandonment.

(C) Notice of cancellation of Applicant's Service Agreement with Ernest R. Jensen dated April 4, 1966, is accepted for filing effective on the date of this order.

(D) Applicant shall file Revised Sheet Nos. 4 and 21 to its FPC Gas Tariff Original Volume No. 4 showing elimination of Ernest R. Jensen as a customer.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-196

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 9, 1966)

On June 16, 1966, Northern Natural Gas Company (Petitioner) filed in Docket No. CP65-196 a petition to amend the order issued in Docket No.

CP65–196 on May 25, 1966 (Opinion No. 491, 35 FPC 790) in which Petitioner was authorized to construct and operate certain natural gas facilities to initiate natural gas service to 131 communities in Iowa, Minnesota, Nebraska and Wisconsin. Petitioner requests herein authority to revise the mainline facilities authorized therein, all as more fully set forth in the petition to amend.

Prior to Commission authorization to provide initial gas service to these 131 communities, Petitioner filed an application in Docket No. CP66–206 to provide increased gas requirements of its present customers during the 1966–67 heating season. Since both projects were scheduled for construction in 1966, Petitioner states it would be possible to realize economies in construction by using larger compression units and larger diameter looplines. To take advantage of such economies, Petitioner designed the mainline facilities in Docket No. CP66–206 with sufficient capacity for the requirements in both dockets.

The Commission order issued in Docket No. CP66–206 required Northern to file to amend any order issued in Docket No. CP65–196 to reflect the appropriate facilities changes.

Listed below is a summary of the facilities which Northern proposes to delete and those it proposes to construct:

Certificated (to be deleted) Docket No. CP65–196	*Proposed facilities*
11.0 miles 30-inch at Ogden	9.1 miles 30-inch at Clifton
7.6 miles 30-inch at Mullinville	7.5 miles 36-inch at Mullinville
2,000 H.P. at Ogden	3,165 H.P. at Ventura
4,000 H.P. at Beatrice	

The cost of the proposed revised facilities is estimated to be $2,949,200, as compared to a cost of $3,567,700, excluding interest and overheads, estimated for the facilities for which Petitioner now seeks to delete from the subject order.

Due notice of the filing of the petition to amend and opportunity for hearing has been given by publication in the Federal Register on June 30, 1966 (31 F.R. 9032). No protest or petition to intervene has been filed in this proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued May 25, 1966, in Docket No. CP65–196 granting Northern certain certificate authorizations, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 25, 1966, in Docket No. CP65–196 is amended so as to (1) delete therefrom authorization to construct and operate 11 miles of 30-inch at Ogden, 7.6 miles of 30-inch at Mullinville, 2,000 H.P. at Ogden and 4,000 H.P. at Beatrice, and, (2) to authorize Applicant to construct, install and operate 9.1 miles of 30-inch at Clifton, 7.5 miles of 36-inch at Mullinville and 3,165 H.P. at Ventura, all as hereinbefore described and as set forth in the subject petition to amend.

(B) In all other respects said order shall remain in full force and effect.

(C) The amendment authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in paragraphs (b) and (f) of Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-359

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 9, 1966)

On May 9, 1966, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-359 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Northern Illinois Gas Company (Northern Illinois) for resale to municipalities and communities located in Pike, Adams, Hancock, and Henderson Counties, Illinois, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposed to construct and operate measuring and regulating facilities and a mainline tap near its Pleasant Hill Compressor Station in Pike County. Applicant and Northern Illinois have entered into a gas sales contract, dated April 15, 1966, whereby Applicant agrees to sell and Northern Illinois agrees to purchase certain volumes of gas under applicant's proposed FPC Gas Rate Schedule LS-2.

Northern Illinois' estimated third year peak day and annual requirements to be purchased from Applicant are 500 Mcf and 170,000 Mcf, respectively.

The total estimated cost of the proposed facilities is $38,000, which cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G-200 and G-207 (3 FPC 273).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

(6) In accordance with the Commission's Regulations under the Natural Gas Act, Applicant should make an appropriate rate filing covering the natural gas service hereinafter authorized.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) In accordance with the Commission's Regulations under the Natural Gas Act, Applicant shall make an appropriate rate filing covering the natural gas service authorized in paragraph (A) above.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

POWER AUTHORITY OF THE STATE OF NEW YORK, PROJECT NO. 2000

ORDER AUTHORIZING SALE OF PARCELS OF PROJECT LANDS

(Issued August 9, 1966)

On March 16, 1966, Power Authority of the State of New York, licensee for Project No. 2000, located on the St. Lawrence River, State of New York, filed a request for Commission authorization to sell twelve parcels of lands within the project boundary, totaling approximately 720 acres, which had been acquired by the licensee during construction of the project for excavation, borrow and other construction purposes. Permission was also requested to delay the filing of revised Exhibit K drawings showing the lands until consummation of the sale and completion of detailed surveys for the lands. The parcels involved are located in Lisbon, Waddington, Louisville and Massena Townships, St. Lawrence County, New York.

The lands are not required for recreational development in connection with the project, and are not required for other project purposes. The Conservation Department, Thousand Islands State Park Commission, has advised that it is not interested in developing any of the parcels for park purposes.

The Commission finds:

It is not inconsistent with the public interest to authorize the sale of the project lands herein involved as hereinafter provided.

The Commission orders:

Power Authority of the State of New York is hereby authorized to effect the sale of the parcels of Project No. 2000 lands herein involved: *Provided, however,* That the licensee incorporate in any agreement or instrument affecting such disposal a covenant or condition insuring that the use of such lands will not endanger health, create a nuisance, or otherwise be incompatible with overall project recreational use in accordance with paragraph (C) of the Commission's Order No. 313, issued December 27, 1965, 34 FPC 1546: *Provided, further,* That the licensee file, within two years from the date of issuance of this order, for Commission approval, revised Exhibit K drawings accurately describing the revised project boundary.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-332

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 9, 1966)

On April 21, 1966, Texas Gas Transmission Corporation (Applicant), filed in Docket No. CP66-332 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in Henderson County, Kentucky, and the sale of natural gas, as more fully set forth in the application.

Applicant seeks authority to construct and operate one two-inch side valve and a meter station near Anthoston, Kentucky, for the establishment of a new delivery point for Western Kentucky Gas Company (Western), an existing customer of Applicant. The natural gas to be delivered through the proposed delivery point is for resale by Western to the Community of Anthoston, Henderson County, Kentucky. Annual and peak day deliveries associated with the service to Anthoston are estimated to be 8,233 and 102 Mcf of gas respectively at 15.025 psia. No increase in the Contract Demand of Western is proposed for this service.

The total estimated cost of Applicant's proposed facilities is $5,700, which will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on August 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a

"natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G-855 (7 FPC 213).

(2) The proposed construction and operation of facilities, and the sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities, and the sale of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Texas Gas Transmission Corporation, authorizing the construction and operation of facilities, and the sale of natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, and the sale of natural gas authorized in paragraph (A) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

WISCONSIN PUBLIC SERVICE CORPORATION, PROJECT NO. 2476

ORDER ISSUING LICENSE (MINOR)

(Issued August 9, 1966)

Application was filed on June 19, 1964, by Wisconsin Public Service Corporation (Applicant) of Milwaukee, Wisconsin, for a license under the Federal Power Act (Act) for constructed minor Project No. 2476, known as Jersey Hydroelectric Station, located on the Tomahawk River, a headwater tributary of the Wisconsin River, in the City of Tomahawk, in Lincoln County, Wisconsin. No lands of the United States are affected by the project.

According to the application, a project was constructed in 1888 and completely rebuilt in 1929 at this site.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of the Interior, in reporting on the application, has advised that the project, as presently operated, does not affect adversely the fish and wildlife resources of the area and no fishways or other specific measures are requested at this time. However, the Department recommended that any license for the project be made subject to terms and conditions in the interests of fish and wildlife and free public access to project lands and waters, which we include in attached Form L-12.

The Department of Health, Education, and Welfare has reported that the project will not affect adversely water supply, water pollution control, or vector control, and no special conditions were recommended for inclusion in any license for the project.

The Conservation Department of the State of Wisconsin has advised that past operation of the project has been satisfactory from the fishery standpoint and no changes in operating procedures were recommended. However, the Department recommended that public landing sites be developed at the project as required by Article 4 of attached Form L-12 and special Article 12 herein.

Electrically, Applicant's Jersey Hydroelectric Station connects with Applicant's 46 kv system at the 2,000 kw Tomahawk plant, Wisconsin, licensed as Project No. 1940. The latter plant connects with Applicant's 115 kv and 138 kv interconnected transmission system which transfers substantial amounts of energy over Applicant's 69 kv circuit between Applicant's Marinette substation in Wisconsin and Applicant's Menominee substation in Michigan, via the Pound substation. The energy from these substations flows either way depending upon system needs. Applicant's interconnected transmission system also is directly connected with Wisconsin Michigan Power Company's system which, according to information furnished the Commission by the latter company, shows large transmissions of electric energy across the Wisconsin-Michigan state lines.

The license herein granted shall have an effective date of May 1, 1965, the first day of the month in which the Supreme Court of the United States affirmed the Commission's findings and order asserting licensing authority over Taum Sauk Project No. 2277 by virtue of the effect of the hydroelectric project on the interests of interstate commerce by its utilization of headwaters of a navigable stream to generate electric energy for an interstate power system (381 U.S. 90), and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.* (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which related to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) Jersey Hydroelectric Station, Project No. 2476 affects the interests of interstate commerce.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 680 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d), 10(f); 11; 12; 14; except insofar as the power of condemnation is reserved; 15, 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Wisconsin Public Service Corporation (Licensee) of Milwaukee, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of May 1, 1965, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2476, located on Tomahawk River, Wisconsin, and affecting the interests of interstate commerce, subject to the terms and conditions of the Act, insofar as not expressly waived herein, which Act is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2476 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) a dam (804 feet long and 15 feet high) composed of (a) a 62-foot concrete powerhouse section, (b) a 151-foot concrete sluice-way and tainter gate section, (c) two earth embankments 330 feet long and 261 feet long, respectively; (2) a 709-acre reservoir (surface elevation 1451.03 feet); (3) a concrete block powerhouse (62 feet long, 26 feet wide, and 16 feet high) containing three generating units with a total installed capacity of 512 KW and three water wheels with a total capacity of 692 horsepower; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-12 (May 1, 1966) entitled "Terms and Conditions of License for Constructed Minor Project Affecting the Interests of Interstate or Foreign Commerce" (35 FPC 875), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall, within one year from the date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall conform to the requirements of 18 CFR 4.41, *Exhibit R* of the Commission's regulations under the Act, and shall include plans, following consultation with the Wisconsin Conservation Department, for reasonable flow releases at all times downstream from the dam and for public landing sites.

Article 13. The Licensee shall pay to the United States the following annual charge effective as of May 1, 1965:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, an annual charge of $34.00.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-130

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 10, 1966)

On July 20, 1966, Mississippi River Transmission Corporation (Petitioner) filed in Docket No. CP66-130 a petition to amend the order of the Commission issued in said docket on June 6, 1966, 35 FPC 892, which order authorized the construction and operation of certain natural gas facilities and the acquisition and operation of the facilities of Storage Corporation, a wholly-owned subsidiary, including interests in and related to the St. Jacob Storage Field, Madison and St. Clair Counties, Illinois, all as more fully set forth in the petition to amend.

Paragraph (H) of the subject order states that, "No part of the acquisition cost of the St. Jacob Storage Field is to be included in any future rate base calculation until a final determination is made regarding the success or failure of the project."

Petitioner submits that the above condition may preclude it from advancing its theory of proper ratemaking treatment of its investment in the event subsequent development proves the project area or a part thereof not to be suitable for storage.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP66–130 on June 6, 1966, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Mississippi River Transmission Corporation in Docket No. CP66–130 on June 6, 1966, is amended by deleting therefrom the language contained in paragraph (H) and substituting therefor the following language: "Nothing contained herein shall be deemed to constitute a determination of the treatment to be accorded in any future rate proceeding to the costs incurred prior to July 1, 1965, in connection with the St. Jacobs Storage Field."

(B) In all other respects said certificate shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66–50

ORDER ISSUING TEMPORARY CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 10, 1966)*

On August 13, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed an application to construct 14.1 miles of 8-inch loop line and 1.25 miles of 4-inch pipe to deliver up to 3,000 Mcf per day on an interruptible basis to a refractory products plant to be built by H. K. Porter Co., Inc. at Fulton, Missouri. The City of Fulton was subsequently allowed to intervene and filed an application under Section 7(a) of the Natural Gas Act seeking gas from Panhandle to serve Porter from the City's municipal distribution system. A formal hearing has been held in this matter and an initial decision was issued by the presiding examiner on June 21, 1966. Briefs are still to be filed before a final decision can be rendered by the Commission.

On June 30, 1966, Panhandle requested temporary authorization to construct a 1.25 mile 4-inch lateral pipeline and to transport natural gas to H. K. Porter Company's refractories plant at Fulton for a period terminating October 31, 1966.

The City of Fulton, Missouri, intervenor in this proceeding, replied in opposition to Panhandle's proposed construction on July 7, 1966, and, requested an order directing Panhandle to supply temporarily natural gas to the City for resale to the H. K. Porter Co., Inc. Porter, intervenor, responded on July 12, 1966, supporting Panhandle's application. On July 15, 1966, Panhandle replied in opposition to City's request.

Panhandle and Porter allege an urgent requirement for natural gas to initiate production of refractory products at the new plant. The City states that its existing distribution facilities are adequate to deliver gas to Porter's plant without construction of any new facilities, and that it is willing to transport Panhandle's direct sale gas to the Porter plant on a temporary basis. Panhandle alleges that it is capable of supplying and transporting the volumes of gas required by the plant. Therefore, the Commission will issue an order granting a temporary certificate to Panhandle to transport gas in interstate commerce for direct sale. Such gas is to be delivered into the facilities of the City of Fulton, Missouri for transportation to the Porter plant. Porter and the City should make temporary arrangements with respect to the transportation of the gas.

---

*See order issued October 6, 1966 on reconsideration, 36 FPC 721.

The Commission finds that, under the circumstances of this proceeding and as alleged by the parties, an emergency exists as contemplated by Section 7 of the Natural Gas Act.

The Commission orders:

(A) A temporary certificate of public convenience and necessity is issued to Panhandle Eastern Pipe Line Company authorizing the transportation and delivery of up to 3,000 Mcf per day of natural gas for a direct sale to H. K. Porter Co., Inc.

(B) Panhandle shall deliver up to 3,000 Mcf per day of natural gas into the facilities of the City of Fulton, Missouri for transportation to the Porter plant.

(C) The application for temporary authority to construct and operate 1.25 miles of new pipeline facilities is denied.

(D) The temporary certificate issued herein shall remain in effect pending the final determination of the applications in this proceeding.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ORDER DENYING APPLICATIONS AND MOTIONS FOR REHEARING, FOR RECONSIDERATION, FOR STAY, AND FOR ADDITIONAL EXTENSIONS OF TIME

(Issued August 11, 1966)

On July 5, 1966, 36 FPC 12, this Commission issued an order in this proceeding permitting certain producers of natural gas in southern Louisiana and offshore thereof to file briefs and statements of facts relevant to the question of whether they should be required to make refunds of excessive amounts collected while operating under temporary certificates without specific refund conditions. On application by Pan American Petroleum Corporation (Pan American) for rehearing, by order issued July 21, 1966, 36 FPC 147, we denied reconsideration but granted an extension of time to August 29, 1966, within which to file the briefs and statements. On July 22, 1966, an application was filed by General American Oil Company of Texas (General American) applying for the same relief as was refused Pan American, and adopting Pan American's statement in support of the applications for such relief. On the same day applications were filed by U.S. Oil of Louisiana, Inc. (U.S. Oil) and E. Cockrell, Jr., applying for rehearing or reconsideration of the order of July 5, 1966, on the same grounds stated in the prior application of Pan American. In the alternative U.S. Oil and Cockrell moved to stay the July 5 order pending the court's determination of a motion for stay of said order now before it. If the court should refuse a stay, U.S. Oil and Cockrell ask that (if reconsideration is not granted and their motions for stay are denied) the time for filing briefs and statements be extended to sixty days from the time of the court's denial of stay.

On July 25, 1966, Freeport Oil Company (Freeport) filed an application similar to those of U.S. Oil and Cockrell, and an application adopting that of Pan American was filed by Placid Oil Company, Margaret Hunt Hill, Trustee for Hassie Hunt Trust, H. L. Hunt and Hunt Oil Company (collectively referred to as Placid, *et al.*).

As was said in the order issued July 21, 1966, an application for rehearing of the order of July 5 will not lie. Treating these applications as motions for reconsideration, they must be denied. We adhere to our determination in the order of July 21, 1966, that the Commission had both jurisdiction and power to issue the order of July 5, 1966. We reject again the contention that the July 5 order constituted an abuse of discretion. We note that General American is one of the applicants here contending that the burden of preparing briefs and statements is too heavy to impose where it is possible that the labor may be wasted if the courts should overturn the 20-cent in-line price. General American filed such a statement and brief August 11, 1964, approximately three weeks after Opinion No. 436 and order issued July 23, 1964, 32 FPC 254, first provided for such filing. Our experience with numerous producers in other proceedings of this kind does not indicate the burden is as heavy as applicants here contend. This contention was also made by Pan American in its prior application. In the order of July 21, 1966, the Commission said (page 149):

> Nor are we convinced that the burden upon Pan American is so great as to justify delaying these proceedings until the in-line price has been passed upon by the Courts. In at least five similar proceedings involving numerous large and small producers, those filing briefs and statements have been able to do so within the time prescribed (in some cases much less), and it has in no way been indicated that the burden upon them was as excessive as Pan American would represent. No computation of refunds is required; no refunds are ordered; the only burden upon Pan American is the statement of the facts of its case and the presentation of a legal brief. We do not think this burden so great as to justify an administrative delay of many months.

We adhere to the views expressed in the order of July 21. Accordingly, reconsideration will be denied.

In our order of July 21 we granted an extension to August 29, 1966, not only to Pan American but to all producers in this proceeding. We think no adequate ground for stay or further extension has been shown. The motions for stay and requests for additional extension of time will be denied.

The Commission orders:

The applications of General American Oil Company of Texas and of Pacid Oil Company, *et al.*, for rehearing upon order issued July 5, 1966, and alternatively, for extension of time prescribed therein, and the applications of U.S. Oil of Louisiana, Inc., E. Cockrell, Jr. and Freeport Oil Company for rehearing or reconsideration of the July 5, 1966, order or, in the alternative, motion for stay, or, in the further alternative, request for extension of time, are in all respects denied, except insofar as extensions of time for filing briefs and statements have already been extended to August 29, 1966, by order of this Commission issued July 21, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

VILLAGE OF BLUFORD, ILLINOIS AND TRUNKLINE GAS COMPANY, DOCKET NO. CP66–350

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 12, 1966)

On May 2, 1966, the Village of Bluford, Jefferson County, Illinois (Applicant), filed in Docket No. CP66–350 an application and supplement thereto on July 13, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in Bluford and vicinity, Markham City and Keenes and along the proposed transmission line, all as more fully set forth in the application and supplement thereto.

Applicant proposes to interconnect a lateral pipeline with Respondent's pipeline near the point where said pipeline crosses Illinois State Highway No. 15 and from this point of connection to construct a 3-inch high pressure lateral extending westward along said highway a distance of approximately 5½-miles to the town border station to be located at the east side of Applicant. Applicant also proposes to construct a complete distribution system to serve all prospective customers in Bluford and vicinity, including the adjoining unincorporated area known as Markham City, and along the proposed transmission line, including the Village of Keenes.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	34,799	44,275	53,969
Peak day (Mcf)	399	538	678

The total estimated cost of Applicant's proposed transmission and distribution facilities is $290,000, which will be financed through the issuance of gas revenue bonds.

On June 2, 1966, Respondent filed an answer to the application which indicated Respondent had no objection to Applicant's request for a facilities connection and service up to 678 Mcf per day. Respondent requests that Applicant be required to receive service within 9 months of the date of this order.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register May 18, 1966 (31 F.R. 7263). No protest, petition to intervene or requests for hearing has been filed in this proceeding.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 678 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Respondent serve Applicant as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the Villages of Bluford, Keenes, the area described as Markham City and environs, Illinois, and within nine months from the date of issuance of this order.

The Commission orders:

(A) Trunkline Gas Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell up to 678 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Trunkline in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in the proceeding. Such service shall be rendered pursuant to Trunkline's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within nine months from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CASCADE NATURAL GAS CORPORATION, DOCKET NO. CP66–371

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 12, 1966)

On May 16, 1966, Cascade Natural Gas Corporation (Applicant) filed in Docket No. CP66–371, as supplemented on August 5, 1966, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the twelve-months period commencing on the day this order issues and operation of certain facilities necessary to attach new supplies of natural gas to enable Applicant to maintain authorized delivery obligations to its customer, Mountain

Fuel Supply Company, all as more fully set forth in the application in this proceeding.

The application, as originally filed, was a "budget-type" application under Section 157.7(b) of the Regulations under the Act. However, Applicant's supplement of August 5, 1966, sets forth specific facilities to be constructed under the requested authorization at a cost of $1,475,000 and indicates that certain other unspecified gas purchase facilities will be constructed at a cost of $325,000. In effect, the subject filing is an application combining a request for certificate authorization subject to the provisions of Section 157.14 of the Commission's Regulations as well as for a "budget-type" authorization under Section 157.7(b) of the Regulations. Accordingly, authorization for facilities to be constructed at an estimated cost of $1,475,000 will be considered as being subject to Section 157.14 of the Regulations and authorization for the facilities to be constructed at an estimated cost of $325,000, will be considered as being subject to Section 157.7(b) of the Regulations.

Specifically, Applicant proposes to construct and operate the following facilities:

Section 157.14 facilities.

(1) 12 miles of 4-inch line, dehydrators, valves and metering facilities, Conoco Wells, Elk Springs and Winter Valley Fields, Moffat County, Colorado;

(2) 9 miles of 4-inch line, valves and metering facilities, Chevron Wells, Mam Creek Field, Garfield County, Colorado;

(3) 5 miles of 3 and 4-inch line, valves and metering facilities, Sun Wells, Divide Creek Field, Garfield County, Colorado;

(4) 13 miles of 3, 4 and 6-inch line, dehydrators, valves and metering facilities, Conoco Wells, Dragon Trail Field, Rio Blanco County, Colorado;

(5) 340 compressor horsepower and appurtenant facilities, Dragon Trail Field, Rio Blanco County, Colorado, and

(6) 1320 compressor horsepower and appurtenant facilities, Rio Blanco County, Colorado.

Section 157.7(b) facilities.

Various unspecified "budget-type" field facilities.

The total estimated cost of all facilities proposed under the subject filing will be financed from funds on hand, cash generated from normal operations and internal sources.

With respect to the Section 157.7(b) facilities, Applicant requests waiver of the cost limitations imposed by Section 157.7(b)(1) of the Regulations. Such waiver will enable Applicant to attach new supplies of gas without delays resulting from the processing of individual certificate applications.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cascade Natural Gas Corporation, a Washington corporation having its principal place of business in Seattle, Washington, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof

by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) With respect to the proposed facilities subject to Section 157.7(b) of the Commission's Regulations, it is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the aforesaid Regulations.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f), and, with respect to the proposed facilities subject to Section 157.14 of the Regulations, paragraphs (c)(1), (c)(3) and (c)(4) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve-months period commencing with the date on which this order issues and the total expenditures for facilities subject to Section 157.7(b) of the Regulations should be limited to a maximum of $325,000, with no single project to exceed a cost of 25 per cent of said maximum amount.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 157.7(b)(1) of the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Cascade Natural Gas Corporation, to construct and operate the proposed facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding. Any natural gas supplies attached as a result of this authorization shall be taken only from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) With respect to the facilities subject to Section 157.7(b) of the Commission's Regulations, Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f), and, with respect to the proposed facilities subject to Section 157.14 of the Regulations, paragraphs (c)(1), (c)(3) and (c)(4) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the twelve-months period commencing with the date on which this order issues and the total expenditures for facilities subject to Section 157.7(b) of the Regulations are limited to a maximum of $325,000, with no single project to exceed a cost of 25 per cent of said maximum amount.

(E) Applicant's request for waiver of the cost limitations imposed by Section 157.7(b)(1) of the Commission's Regulations is granted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

THE DETROIT EDISON COMPANY AND CONSUMERS POWER COMPANY, DOCKET NO. E-7234

ORDER AMENDING PRIOR ORDER OF INVESTIGATION AND HEARING

(Issued August 12, 1966)

Subsequent to the initiation of this proceeding Commission staff requested an enlargement of the issues, a deferral of further hearings pending staff investigation of the operations, books and records of Respondent companies, The Detroit Edison Company (Detroit), and Consumers Power Company (Consumers), and a revision of procedural rulings covering service of testimony and cross-examination of various witnesses. This order grants staff's requests.

This proceeding was instituted by order of investigation and hearing issued July 20, 1965, 34 FPC 83. Among other things, that order directed a public hearing to find and determine whether Respondents are each a "public utility" within the meaning and subject as such to the regulatory requirements of the Federal Power Act. To date, a number of hearing sessions have been held. By ruling of June 20, 1966, the Presiding Examiner, Martin E. Rendelman, fixed the time for service of prepared testimony of Respondent companies' witnesses, of staff's witnesses and cross-examination of all witnesses, at various times commencing August 12, 1966 and continuing through October 24, 1966.

Staff's requests are embodied in a Motion To The Commission For Enlargement of Proceeding filed July 29, 1966. By joint Answer of Respondents filed August 8, 1966, Detroit and Consumers support the staff and urge that staff's motion be granted. Intervenor, Michigan Public Service Commission, by answer filed August 10, 1966, states that it has no objection to staff's motion. No other parties appear of record.

In substance, staff seeks to include among the issues to be resolved in this proceeding all questions concerning this Commission's regulatory jurisdiction pursuant to the Federal Power Act over the wholesale electric sales, services, rates, charges, classification, rules, regulations, contracts and practices of Respondents. Staff advises that in the course of the hearing as now scheduled, questions have arisen as to the scope of the proceeding fixed by the Commission's July 20, 1965 order. Respondent companies dispute the inclusion of any wholesale rate and service jurisdictional questions as a part of this proceeding as fixed by that order.

Paragraph A of this order lists wholesale for resale electric transactions of Edison and Consumers, respectively. Neither Company has submitted any rate schedules for wholesale electric service. Whether they are obligated to do so are matters which should be resolved. Pursuant to Sections 201, 205 and 206 of the Federal Power Act we herein amend our earlier order as requested by staff and Respondents to include those questions within the procedural scope of this proceeding.

Additionally, this order defers further hearings in this matter to accommodate investigations and conferences among the parties. Staff's motion advises that discussions among respective counsel for the parties show "* * * Respondents are prepared to cooperate immediately with staff during the pendency of this proceeding in a review and investigation of the Companies' operations in the light of this Commission's substantive regulatory requirements. If, by reason of this proceeding, Respondents are determined to be subject to the Commission's regulatory jurisdiction, full compliance with the Commission's substantive regulatory requirements would be accomplished as of or shortly after the termination date of this matter. * * *"

Other representations contained in staff's motion reveal that all jurisdictional questions affecting Respondents, arising as a consequence of this proceeding, may be resolved upon the basis of further investigation and analysis of Respondents' operations without need for any additional formal hearings. If resolved, staff's motion contemplates that this proceeding would be terminated by subsequent Commission order.

In the event these matters are incapable of resolution in that manner staff and Respondents now propose to submit their differences for Commission decision upon the basis of a stipulated record, or failing stipulation, upon the basis of further factual hearings to be commenced following the submittal of prepared testimony. Staff and Respondents propose to exchange their respective prepared written testimony, with all exhibits attached, as follows: January 15, 1968, simultaneous service of all further direct testimony and February 15, 1968, simultaneous service of all reply testimony. Staff and Respondents propose to undertake any cross-examination commencing March 1, 1968.

In our opinion deferral of additional hearings in this proceeding as requested by staff and Respondents will lead to resolution of all jurisdictional issues herein raised and to overall effective implementation of the Commission's substantive regulatory requirements at the earliest practical time. The proposed revised order of procedure should be adopted.

Simultaneously, with the filing of its Motion For Enlargement of Proceeding staff filed a motion with the Presiding Examiner for a 60-day continuance of all dates for service of prepared testimony and further hearing as those dates are now reflected in the Examiner's Ruling of June 20, 1966. Under that Ruling, Respondent companies and staff are scheduled to serve prepared testimony at various times commencing August 12, 1966. Staff filed its Motion for Continuance with the Examiner in the event Commission action was not taken with respect to staff's Motion For Enlargement of Proceeding prior to August 12, 1966. Respondent companies joined in staff's motion to the Examiner by joint answer filed August 5, 1966. On August 3, 1966, staff's motion was referred to the Commission by the Examiner.

In view of the action taken herein in regard to staff's motion for enlargement of proceeding and deferral of further hearings, we find it unnecessary to pass upon staff's motion to the Examiner for continuance and the joint Answer of Respondents thereto.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly, but not in limitation of the foregoing, Sections 201, 205, 206, 208, 301, 307, 308 and 309, that the Commission find and determine in the above-entitled matter whether the sales and services of Detroit and Consumers at wholesale for resale to the respective entities as set forth in Paragraph (A) below are sales and services at wholesale in interstate commerce subject to the jurisdiction of this Commission under the provisions of the Federal Power Act for which Detroit and Consumers must file appropriate rate schedules in the manner provided in Part 35 of the Commission's Regulations under that Act; that the public hearing in the above-entitled matter be deferred to January 15, 1968; and that a revised order procedure be adopted.

The Commission orders:

The Commission's order issued July 20, 1965 in the above-entitled matter is hereby amended by the addition of the following paragraphs (E), (F) and (G).

(E) The public hearing in this matter in addition to matters referred to above shall find and determine whether the following sales and services of Detroit and Consumers, respectively, are subject to this Commission's regulatory jurisdiction pursuant to the provisions of Sections 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

Detroit:
- Village of Clinton, Michigan
- Consumers Power Company
- City of Croswell, Michigan
- City of Detroit, Michigan
- Thumb Electric Coop.
- City of Wyandotte, Michigan

Consumers:
- Alpena Power Co.
- Bay City, Michigan
- City of Charlevoix, Michigan
- Village of Chelsea, Michigan
- City of Coldwater, Michigan
- Detroit Edison Co., The
- City of Eaton Rapids, Michigan
- Edison Sault Electric Co.
- City of Harbor Springs, Michigan
- City of Hillsdale, Michigan
- City of Holland, Michigan
- City of Lansing, Michigan
- City of Marshall, Michigan
- Northern Mich. Elec. Coop.
- City of Petoskey, Michigan
- Village of Portland, Michigan
- Rogers City Power Co.
- Southeastern R.E.C.
- Wolverine Electric Coop.
- Village of Union City, Michigan

(F) The public hearing in this matter is deferred to January 15, 1968, unless this proceeding is terminated theretofore by further order of the Commission.

(G) In the event the above-entitled proceeding is not terminated on or before January 15, 1968, and the issues herein are not presented for Commission consideration upon the basis of a stipulation Detroit, Consumers, staff and any other party shall exchange their respective prepared written testimony, with all exhibits attached, on all issues raised herein as follows: January 15, 1968, simultaneous service of all further direct testimony; and February 15, 1968, simultaneous service of all reply testimony. Cross-examination of this testimony shall commence March 1, 1968.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

KASKASKIA GAS COMPANY AND MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-224

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 12, 1966)

On January 13, 1966, Kaskaskia Gas Company (Applicant) filed in Docket No. CP66-224 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission Corporation (Respondent) to establish physical connection of its facilities with the facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the unincorporated area of Salem Township, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 0.95 mile of 3-inch and 3.4 miles of 2-inch transmission pipeline, tap lines to consumers and the necessary regulating, odorizing and heating facilities. The proposed tap of Respondent's line would be constructed at a point on the portion of the line which traverses the township and within the area of Applicant's proposed service.

The estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the Salem Township area in the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	11,600	15,700	17,900
Peak day (Mcf)	126	163	181

The estimated cost of Applicant's proposed construction is $70,000 and will be financed by the issuance of common stock and mortgage bonds.

On February 17, 1966, Respondent filed an answer to the application stating it is willing to serve the natural gas requirements of Applicant, but that its ability to so serve is dependent upon the Commission's certificate authorization in Docket No. CP62-243. On July 1, 1966, 36 FPC 1, the Commission issued its order in Docket No. CP62-243 authorizing the capacity increase applied for.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on January 29, 1966 (31 F.R. 1219). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) Applicant, Kaskaskia Gas Company, an Illinois corporation having its principal place of business in Salem, Illinois, is a corporation legally authorized

to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations up to 181 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair Mississippi's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Salem Township of Marion County, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Mississippi River Transmission Corporation is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Kaskaskia Gas Company, as herein described, and to sell and deliver up to 181 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale in the Salem Township area of Marion County, Illinois, as hereinbefore described.

(B) Mississippi shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66–372

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 12, 1966)

On May 17, 1966, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66–372 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional daily contract quantity of 16,000 Mcf of natural gas to Iowa Illinois Gas and Electric Company (Iowa Illinois) an existing customer of Applicant, all as more fully set forth in the application.

By letter dated March 4, 1966, Iowa Illinois requested an additional daily contract quantity of 16,000 Mcf of gas from Applicant commencing December 1, 1966, primarily to meet increased firm requirements of residential and space heating customers in the markets which it serves in Iowa and Illinois.

The increased volumes of natural gas will be sold to Iowa Illinois under Applicant's CD–1 Rate Schedule from its existing unallocated capacity.

No new facilities will be required as a result of the proposed additional service.

Due notice of the filing of the application was published in the Federal Register on June 1, 1966 (31 F.R. 7771). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation, having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The proposed sale of increased volumes of natural gas hereinbefore described, as more fully described in the application in this proceeding, is to be a sale for resale in interstate commerce subject to the jurisdiction of the Commission and is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of increased volumes of natural gas, as proposed in the application, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the sale of increased volumes of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The sale of increased volumes of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CITY OF POTOSI, MISSOURI AND MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-162

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 12, 1966)

On November 24, 1965, the City of Potosi, Missouri (Applicant) filed in Docket No. CP66-162 an application as amended on December 17, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission Corporation (Respondent) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the City of Potosi, Missouri, and in the community of Frankclay, Missouri, and environs, all as more fully set forth in the application and amendment thereto.

Applicant proposes to construct, own, and operate a natural gas distribution system in Potosi and the necessary gas distribution facilities in Frankclay. Applicant also proposes to construct and operate a 4½-inch lateral transmission line approximately 15 miles in length extending westward from a point of interconnection at Desloge, Missouri, with Respondent's main transmission line to the city-gate of Potosi. Applicant states that this lateral facility will pass in close proximity to Frankclay.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the City of Potosi and the community of Frankclay, Missouri, in the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	116,290	131,460	138,920
Peak day (Mcf)	1,165	1,320	1,405

The estimated cost of Applicant's proposed construction is $520,000, and will be financed by the issuance of gas revenue bonds.

On November 29, 1965, Respondent was duly advised of the application filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on December 11, 1965 (30 F.R. 15334). No protest, petition to intervene or request for hearing has been filed in this proceeding.

Respondent filed an answer in the proceeding on January 3, 1966, stating it is willing to serve the natural gas requirements of Applicant, but that its ability to so serve is dependent upon Commission's certificate authorization in Docket No. CP62-243. On July 1, 1966, the Commission issued its order in Docket No. CP62-243 authorizing the capacity increase applied for.

The Commission finds:

(1) Respondent, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) Applicant, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 1,405 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair its ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the City of Potosi, Missouri, and Frankclay, within one year from the date of the issuance of this order.

The Commission orders:

(A) Mississippi River Transmission Corporation is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 1,405 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. RP67-3

ORDER APPROVING PROPOSAL TO REDUCE RATES AND ACCEPTING REVISED TARIFF SHEETS FOR FILING

(Issued August 12, 1966)

Transcontinental Gas Pipe Line Corporation (Transco) on July 20, 1966, filed an "Agreement As To Rates" (Agreement), together with cost of service and revenue data for the year 1965, as adjusted, proposing, among other things, general reductions in its tariff rates aggregating approximately $8,300,000 annually based upon estimated 1966 billing quantities. Transco at the same time tendered for filing revised tariff sheets[1] to its FPC Gas Tariff, Volume Nos. 1 and 2 reflecting the reduced rate levels to become effective as of the first of the month in which the Commission issues a final, non-appealable order approving all the terms of the Agreement.[2]

The reductions in rates reflected in the Agreement (Article II), result primarily from Transco's proposal to discontinue use of deferred tax accounting and to flow through the benefits of liberalized depreciation and the reduction of its rate base by the accumulated deferred income taxes in Account 282, to its customers. In addition to the aforementioned immediate rate reductions, the Agreement also provides for:

---

[1] The list of revised tariff sheets is attached hereto as Appendix A.

[2] By letter filed August 8, 1966, Transco advised that it is not scheduled to issue its final bills for July deliveries until the week of August 8, and if the rate filing is unconditionally approved during that week then it is willing to make its reduced rates effective as of July 1, 1966.

(i) reductions in rates, in accordance with the formula detailed in Article IV, if Transco's annualized weighted average cost of purchased gas is reduced by at least one-tenth of one cent below the base cost per Mcf of 17.8¢, or such base cost adjusted downward to reflect any reductions previously made under Article IV;

(ii) flow-through, in the manner set forth in Article V, of all supplier refunds received by Transco after the effective date of the reduced rates proposed in Article II of the Agreement;

(iii) flow-through, in the manner provided in Article V(B), of supplier refunds Transco has received and any similar refunds it may hereforth receive, attributable to gas purchases prior to the effective date of the reduced rates proposed in Article II, which Transco has heretofore claimed it has a right to retain under the provisions of its prior settlement agreements.

As a condition to the effectiveness of the Agreement or any of its provisions the Commission is requested to give concurrent approval to the following accounting procedures (Article III):

(i) discontinuance of deferred tax accounting and adoption of flow-through accounting with respect to reduction in income taxes resulting from use of liberalized depreciation;

(ii) grant of waiver of the requirements of paragraph A of Account 282 and continued use of other requirements of that account on a vintage year basis with respect to facilities constructed prior to the effective date of the reduced rates, and

(iii) in the event liberalized depreciation is eliminated from the Internal Revenue Code, any increase in income taxes resulting therefrom shall be charged against the amount accumulated in Account 282.

Following publication of notice of the filing, six comments were received. Five of those comments[3] indicate that the parties do not object to the proposal submitted by Transco. Generally, those comments either reserve the right to question the manner of computation of average cost of purchased gas relating to future rate reductions, or reserve a position taken in a pending proceeding. We are of the view that those reservations are consistent with the provisions of Article VI of the Agreement.

The single objection to the proposal was made jointly by Atlantic Seaboard Corporation and The Manufacturers Light and Heat Company (Columbia Companies), pipeline customers of Transco. Answer to that objection was filed by Transco on August 8, 1966.

The Columbia Companies do not object to the rate reduction to them as customers of Transco. They state that their protest is directed to the absence of sufficient information in the filing to support the proposed rate design, and the absence of information whether any weight is given to rate design principles used by the Staff in the pending restructured tariff proceedings involving the Columbia Companies.

We conclude that the objection of the Columbia Companies is without merit.

The thrust of the protest filed by the Columbia Companies appears to be that Transco's rates are too heavily weighted in the demand component as against the commodity component. Since the Columbia Companies purchase from Transco at approximately 100 percent load factor, the relative design of Transco's demand and commodity rates would make no difference to the Columbia Companies as customers. Thus, their objection appears to be related to the competition between Transco and Seaboard for the markets which are the subject matter of the proceedings in Docket No. CP65-102, *et al.* The record in those proceedings, as to Transco, was made upon the basis of Transco's rates which were effective at the time its evidence was presented in 1965, and that record is now closed. Transco in its answer states that it will stand upon that record as the basis for its request to serve the competitive markets, and it does not expect the decision in CP65-102 to take into consideration subsequently filed changes in rates.

---

[3] Filed by The Philadelphia Gas Works Division of U.G.I., Philadelphia Electric Company, Long Island Lighting Company, Public Service Electric and Gas Company, and Consolidated Edison Company of New York, Inc., distribution customers of Transco.

In effectuating its proposal, Transco has reduced the demand component of its rates by 17¢ per Mcf and the commodity component by 0.5¢ per Mcf. These reductions maintain the historical pattern of Transco's demand and commodity rates. Clearly, the Columbia Companies' objection relates to the existing historical pattern of Transco's rates rather than to the proposed reductions, and seems to imply that their competitive position would be improved if Transco's historically approved rate structure were to be redesigned. As heretofore noted, the record in the competitive certificate case is now closed. Further, Transco in its answer alleges that "the stark fact is that Transco's rates are lower whatever the rate design and whether before or after the effectiveness of the instant filing."

Columbia Companies have made no showing of any benefit to the customers of Transco from a hearing on rate design at this time. On the contrary, we believe it would not be appropriate or in the public interest to delay the substantial rate reductions and refund flowing to Transco's customers from its proposal.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets listed in Appendix A to this order may become effective on July 1, 1966, as hereinafter provided.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Transco's Agreement to flow-through refunds and further reduce rates, in accordance with the provisions of that Agreement, are in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are hereby waived subject to the terms and conditions of this order and the revised tariff sheets listed in Appendix A attached hereto are accepted for filing to become effective as of July 1, 1966.

(B) Transco's Agreement filed on July 20, 1966, is approved and made effective as proposed therein, and as modified by Transco's letter filed August 8, 1966, subject to the terms and conditions of this order.

(C) Transco shall comply with each of the provisions of the Agreement relating to refunds and future rate reductions.

(D) Prior to distribution of any refunds required by the provisions of the aforementioned Agreement, Transco shall file a report with the Commission setting forth the amount to be refunded to each customer and the billing determinants used in computing such refunds. A copy of that report shall be served on each customer and interested State commissions. Transco shall retain the amounts to be refunded pending further action by the Commission, prescribing the disposition of such refunds.

(E) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims which may be made by the Commission, Transco, the Commission Staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Transco or any other persons or parties affected by this order.

Commissioner O'Connor *concurring* in the result stated that he reserves for future consideration his views with respect to the accounting treatment.

WISCONSIN GAS COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-387

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 12, 1966)

On May 26, 1966, Wisconsin Gas Company (Applicant) filed in Docket No. CP66-387 an application, as supplemented on July 14, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to construct certain natural gas transmission facilities, to establish physical connection of its transmission facilities with facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the cities of

Adams, Markesan, Montello, Princeton and Wautoma, Wisconsin, and several villages in central Wisconsin, all as more fully set forth in the application.

Applicant proposes to construct and operate distribution systems and portions of lateral pipelines to serve 25 cities and villages in central Wisconsin in the counties of Green Lake, Marquette, Waushara, Fond du Lac, Adams and Waupaca. The specific communities proposed to be served, in addition to the aforementioned cities, are as follows: the villages of Coloma, Endeavor, Fairwater, Fremont, Friendship, Hancock, Kingston, Lohrville, Marquette, Neshkoro, Oxford, Plainfield, Redgranite, Westfield and Wild Rose, and the unincorporated villages of Dalton, Manchester, Packwarkee, Pine River and Poy Sippi.

On July 14, 1966, Applicant filed a supplement to the instant application, stating that all the communities named in the application, except the village of Fremont, have issued franchises or local authorizations permitting Applicant to transact therein its gas utility business, and that Applicant has been so authorized by the Public Service Commission of Wisconsin. By said supplement, Applicant requests that Respondent be directed to establish all the delivery and transmission facilities outlined in the application to serve the other 24 communities and further requests that Respondent be required to serve Fremont when Applicant supplements its application by filing a copy of the Fremont franchise.

Accordingly, the Commission will defer any action with regard to the community of Fremont pending the filing of a supplement by Applicant showing receipt of the Fremont franchise, at which time the Commission will take appropriate action.

The total estimated annual and peak day volumes necessary to meet the natural gas requirements of the aforementioned 24 communities are 918,193 Mcf and 5,221 Mcf, respectively.

The total estimated cost of Applicant's proposed construction exclusive of Fremont is $3,010,580, which cost will be financed by cash on hand and by short term bank loans.

Respondent filed an answer to the instant application on June 17, 1966, stating that it was agreeable to the issuance of the requested order.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on June 10, 1966 (31 F.R. 8202). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Respondent, Michigan Wisconsin Pipe Line Company, a Delaware corporation, with its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant is a public utility company in the State of Wisconsin and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 5,221 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 5,221 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application, as supplemented.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62–265

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On June 13, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP62–265, as supplemented on July 12, 1966, a petition to amend further the Commission's order issued May 16, 1963, 29 FPC 984, in said docket, as amended, 30 FPC 16, by authorizing Petitioner to operate certain facilities presently installed, the construction and operation of which were not authorized by the order of May 16, 1963, as amended, all as more fully set forth in the petition to amend in this proceeding.

The order of May 16, 1963, as amended, authorized Petitioner to construct and operate certain facilities and to sell and deliver natural gas to California-Pacific Utilities Company for transportation to and resale and general distribution in Grants Pass, Oregon, and fifteen other southern Oregon communities.

In conformity with the order of May 16, 1963, as amended, Petitioner filed with the Commission its statement of cost of authorized facilities. Said statement showed that seven submerged river crossings were installed instead of five such crossings as originally authorized, and that 126.9 miles of 10¾-inch pipeline had been installed instead of the 121.6 miles as originally proposed and authorized. Petitioner states that unexpected difficulties with terrain and right-of-way difficulties resulted in the installation of the additional mileage of 10-inch pipe. Conflict with a right-of-way for a railroad and highway resulted in Petitioner having to install the two additional river crossings.

Accordingly, Petitioner, at the request of the Commission, filed the subject petition to amend in order to conform the original certificate authorization with the actual installations of facilities.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 30, 1966 (31 F.R. 9031). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 16, 1963, in Docket No. CP62-265, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 16, 1963, in Docket No. CP62-265 is further amended by authorizing Petitioner to operate facilities presently installed, the construction and operation of which were not authorized by the order of May 16, 1963, as amended, all as hereinbefore described and as set forth in the petition to amend in this proceeding.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-153

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On May 27, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP65-153 a petition to amend the order issued in said docket on March 10, 1965 (33 FPC 519), requesting the deletion therefrom of authorization to construct and operate the Fourway delivery point facilities in Moore County, Texas, all as more fully set forth in the petition to amend.

By order issued in the instant docket on March 10, 1965, Petitioner was granted authorization necessary to implement the purchase and receipt of natural gas from Colorado Interstate Gas Company (Colorado) at two points situated, respectively, at the existing interconnection of Colorado's facilities with the facilities of Northern Natural Gas Company (Northern) in Moore County, Texas (Northern delivery point), and at the intersection of Colorado's facilities with the facilities of Petitioner in Moore County, Texas (Fourway delivery point), for a limited term continuing through February 29, 1968. No additional facilities were required by either party at the existing Northern delivery point. At the Fourway delivery point, interconnection and metering facilities were required and were authorized by the subject order.

Petitioner states that Colorado has made deliveries to Northern for Petitioner's account at the Northern delivery point as authorized by the subject order, but that deliveries have not been made at the Fourway delivery point and are not contemplated at such point. Petitioner further states that facilities authorized to be constructed and operated by both Petitioner and Colorado at such point have not been installed since operating experience has proved such additional delivery point, originally proposed to permit flexibility of operation, to be unnecessary.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 15, 1966 (31 F.R. 8387). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 10, 1965, in Docket No. CP65-153 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 10, 1965, in Docket No. CP65-153 is amended so as to delete therefrom the authorization to construct and operate facilities at the Fourway delivery point.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66-401

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On June 6, 1966, Lone Star Gas Company (Applicant) filed in Docket No. CP66-401 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of natural gas facilities for the sale of natural gas to direct customers, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate the necessary connecting pipeline and metering facilities for direct sales of natural gas to consumers for oil field operations located in areas outside of the franchise area of any local distributor. Applicant states that a maximum of 20 such consumers are proposed to be served under the authorization requested by the instant application.

The total cost of facilities proposed will not exceed a maximum of $20,000, with no single project to exceed a cost of $1,000. Total deliveries to any one consumer will not exceed a maximum of 100,000 Mcf of natural gas per year, and no gas will be sold for boiler fuel purposes, as defined by Section 157.7 (c)(9) of the Commission's Regulations under the Act.

The estimated cost of facilities will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G-442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation

of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $20,000, with no single project to exceed a maximum of $1,000. Total deliveries to any one consumer should not exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Lone Star Gas Company, to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities for the direct sale of natural gas to field customers as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $20,000, with no single project to exceed a maximum of $1,000. The total deliveries to any one customer are limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations and, further, the certificate is granted upon the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66–260

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 15, 1966)

On February 4, 1966, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66–260, as supplemented on March 21, 1966, an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of two 30-inch pipeline crossings of the Missouri River to replace existing crossings and for permission and approval to abandon in place certain existing crossings of said river, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant states that its main transmission system crosses the Missouri River between Howard and Cooper Counties, Missouri, and that at the present time the river crossings at this point consist of the following: (a) Line 100 utilizing six 10-inch lines, (b) Line 200 utilizing four 12-inch lines, (c) Line 300 consisting of a single 26-inch line and (d) Line 400 consisting of a single 30-inch line. Applicant proposes that following the completion of the two new 30-inch crossings Line 100 crossing will be abandoned in place and Line 300 crossing will be retained for standby purposes.

Specifically, upon installation of the two new crossings, Applicant proposes to route the Line 100 flow into the existing Line 200 crossing and to route the Line 200 flow into one of the proposed 30-inch crossings. The Line 300 flow will be routed into the other proposed 30-inch crossing. No change will be made with regard to the Line 400 flow.

Applicant states that numerous leaks have been experienced in Line 100 and that the most recent inspections of said line show that it is badly eroded. Line 300 has also been eroded and can not be depended upon for service except on a standby basis. The proposed new crossings will, therefore, assist Applicant to continue rendering dependable service from its main transmission system.

The total estimated cost of Applicant's proposed facilities is $2,388,000, which cost will be financed from general sources available to Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G–200 and G–207 (3 FPC 273).

(2) The proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the

transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned, as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(8) Applicant, as a condition to the abandonment authorization hereinafter granted, should comply with the rules, regulations and orders of the Department of the Army issued pursuant to the Rivers and Harbors Act of 1899.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within seven months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, are granted.

(E) Applicant shall advise the Commission of the date of the aforesaid abandonment within ten days of the date thereof.

(F) Applicant, as a condition to the abandonment authorization granted by paragraph (D) above, shall comply with the rules, regulations and orders of the Department of the Army issued pursuant to the Rivers and Harbors Act of 1899.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CITY OF SITKA, ALASKA, PROJECT NO. 2230

ORDER APPROVING PROJECT EXHIBITS AND FIXING ANNUAL LAND CHARGES

(Issued August 15, 1966)

On February 26, 1959, City of Sitka, Alaska, licensee for Project No. 2230, filed for Commission approval Exhibits J and K showing the location of lands of the United States to be occupied by the transmission line extending between the project powerhouse and a substation in the City of Sitka connecting with the licensee's distribution system. The exhibits were filed pursuant to Article 33 of the license for the project which is located on Blue Lake and Medvetcha River on Baranof Island, First Judicial Division, Alaska, and affects lands of the United States within the Tongass National Forest and other lands of the United States.

The aforementioned exhibits show that the transmission line occupies 0.95 mile of 100-foot wide right-of-way, 1.93 miles of 200-foot wide right-of-way, and 1.51 miles of 200-foot wide right-of-way, on lands of the United States, with a resultant annual charge for such occupancy in the amount of $62.64, which should be made effective as of April 1, 1958, the effective date of the license.

While Exhibit K drawings (FPC Nos. 2230-22, -24, and -25) showing the lands of the United States occupied by project works other than the transmission line have been approved as part of the license for the project, no annual charges for such occupancy have been determined and fixed in the license. The drawings show that the non-transmission line project works occupy a total of 785.81 acres of lands of the United States, with a resultant annual charge for such occupancy in the amount of $1,885.94 which also should be made effective as of April 1, 1958.

Since our February 10, 1959, 21 FPC 208, order amending the license, 19 FPC 579, in which we last described the project works then comprising the project, we have by several subsequent orders approved revised project exhibits showing additional changes in the project works which have not been reflected in the license. Accordingly, we are in paragraph (C) herein describing the project as it presently exists.

By Commission order issued February 10, 1959, we authorized several changes and additions in the project works, including relocation of the powerhouse to a site downstream on the Medvetcha River near tidewater, which increased the designed net head from 195 to 267 feet and changed the characteristics of the generating equipment. Although the order required (Article 31) the licensee to file for Commission approval a revised Exhibit M showing the generating equipment characteristics, our records show that no such exhibit has been received to date. Hence, we are by paragraph (E) requiring the filing of the exhibit within one year from the date of issuance of this order.

The Commission finds:

(1) The following described exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit J (FPC No. 2230-4) which has been superseded, should be eliminated from the license for the project:

Exhibit J: (FPC No. 2230-26) General Map of Area-Transmission Line

Exhibit K: (FPC No. 2230-27, through -30) Detail-Map-Transmission Line Right-of-Way

(2) The amount of annual charges to be paid under the license for recompensing the United States for the use, occupancy, and enjoyment of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The Exhibits J and K mentioned in finding (1) above as conforming to the Commission's rules and regulations are hereby approved as part of the license for Project No. 2230, and superseded license Exhibit J (FPC No. 2230-44) mentioned in the same finding, is hereby eliminated from the license for the project.

(B) *PARAGRAPH I* of our aforementioned February 10, 1959, order is hereby deleted from the order.

(C) Project No. 2230 presently consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more generally shown and described by certain exhibits which formed part of the application for license or amendment thereof and which are designated and described as follows:

Exhibit J: (FPC No. 2230-3 and -26) General Maps of Area
Exhibit K: (FPC No. 2230-22) Upper Tunnel, Dam Site, Intake
(FPC No. 2230-24) Penstock and Tunnel
(FPC No. 2230-25) Tunnel and Conduit
(FPC Nos. 2230-27 through -30) Transmission Line Right-of-Way

(ii) project works consisting of a single arch concrete dam with overflow spillway at elevation 342 feet and top of parapet wall on dam at elevation 351 feet located approximately 400 feet downstream from the outlet of Blue Lake on Medvetcha River, which raises the water surface of Blue Lake from its normal elevation and increases the surface area from 490 acres to approximately 1,215 acres and provides about 150,000 acre feet of storage and has provisions for the future increase in height of dam to 365 feet m.s.l., which would increase the water surface to 1,295 acres, the total storage to 176,500 acre feet; a fixed wheel intake gate; a conduit consisting of two concrete lined tunnels and unlined tunnels of 1,478 feet and 5,518 feet in length; an 18-inch Howell-Bunger valve in the conduit at a point where the conduit crosses the Medvetcha River; a penstock 337 foot long of 8 foot diameter steel pipe with provisions for a water main outlet to the Alaska Lumber & Pulp Company, Inc.; a surge tank; a concrete powerhouse containing an initial installation of two 5,250 horsepower Francis type turbines connected to two 3,000 kw generators with provision for future installation of a third unit; a substation; a transmission line to Sitka; and other appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license or amendment thereof and which are designated and described as follows:

Exhibit L: (FPC No. 2230-19) Dam sections
(FPC No. 2230-20) Rating Curves and Tunnel details
(FPC No. 2230-21) Diversion and Intake Structure
(FPC No. 2230-31) Spillway Plan and Sections
(FPC No. 2230-32) General Plan of Dam—Left Half

(FPC No. 2230-33)	General Plan of Dam—Right Half
(FPC No. 2230-34)	Sections of Dam
(FPC No. 2230-35)	Foundation and Abutment Grouting, 1st Stage
(FPC No. 2230-36)	Powerhouse Site Plan
(FPC No. 2230-37)	Powerhouse Architectural Floor Plan
(FPC No. 2230-38)	Powerhouse—Architectural South and East Elevations
(FPC No. 2230-39)	Powerhouse—Architectural North and West Elevations
(FPC No. 2230-40)	Powerhouse Architectural Longitudinal Sections
(FPC No. 2230-41)	Powerhouse Architectural Cross Sections
(FPC No. 2230-42)	Powerhouse—Structural Plan Below El. 1483; and

Exhibit M: Six sheets entitled, "General Description of Equipment"

(D) Subparagraphs (2) and (3) of Article 34 of the license are hereby modified effective as of April 1, 1958, to read as follows:

(2) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line purposes, $1,885.94;

(3) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands for transmission line purposes, $62.64.

(E) The licensee shall submit, in conformity with the Commission's rules and regulations a revised "Exhibit M" within one year from the date of issuance of this order.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION AND TRUNKLINE GAS COMPANY, DOCKET NO. CP66-335

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On April 25, 1966, Transcontinental Gas Pipe Line Corporation (Transco) and Trunkline Gas Company (Trunkline), collectively referred to as Applicants, filed in Docket No. CP66-335 an application together with a supplement thereto on June 24, 1966, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of the facilities necessary to establish an emergency interconnection between their respective pipeline systems at an existing exchange point in Beauregard Parish, Louisiana, all as more fully set forth in the application.

Pursuant to the terms of letter agreement dated April 13, 1966, Applicants propose that Trunkline construct, own and maintain a metering station and approximately 75 feet of 8-inch O.D. interconnecting pipeline extending from the existing tap and side valve assembly on its 20-inch Lakeside Lateral pipeline to said metering station and that Transco construct, own and maintain approximately 350 feet of 8-inch interconnecting pipeline extending from the valve assembly on its 30-inch pipeline to the metering station.

Transco and Trunkline propose to construct and operate the emergency interconnection at an existing point of exchange between the facilities of Transco and Trunkline where Trunkline's 20-inch Lakeside Lateral pipeline crosses Transco's dual 30-inch mainline pipelines in Township 7 South, Range 8 West, Section 14, Beauregard Parish, Louisiana.

The present facilities permitting an exchange of gas up to 30,000 Mcf per day were originally authorized by Commission order issued June 5, 1961, 25 FPC 1106, in Docket No. CP61–230 which put into effect a short term exchange arrangement contemplated favorably by the Commission in its Opinion No. 339 and accompanying order issued November 29, 1960, in Docket No. CP60–22, *et al.*, 24 FPC 1020. The use of the exchange facilities was continued as a result of a transportation arrangement between Transco and Trunkline authorized by Commission order issued September 8, 1961, in Docket No. CP61–300, 26 FPC 475. Approval to abandon the transportation service by Transco was granted by Commission order issued August 25, 1965, in Docket No. CP65–369, 34 FPC 584.

It is now proposed, by the present application, to convert the existing exchange point to an emergency interconnection by constructing additional facilities which will permit an increase in the amount of gas that may be exchanged during emergency conditions. The total cost of such additional facilities is estimated to be $24,553 of which Transco's share is estimated to be $6,000 and Trunkline's share is estimated to be $18,553. The cost of the proposed facilities will be financed by the respective companies from funds on hand.

The existing exchange facilities authorized in Docket No. CP61–230 consist of a 4-inch valve and 375 feet of 6-inch interconnecting pipeline installed by Transco and a 4-inch valve and dual 4-inch meter run installed by Trunkline. With the exception of Trunkline's 4-inch valve which will be utilized as a part of the emergency interconnection, Transco and Trunkline propose to salvage and return to storage their respective existing facilities. Upon receipt of the authorization requested herein, Transco and Trunkline will file the letter agreement which is attached as Exhibit X–1 to the application as a special rate schedule to their respective FPC Gas Tariffs.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 29, 1948, in Docket No. G–704 (7 FPC 24).

(3) The proposed emergency exchange and delivery of natural gas between Transco and Trunkline, the construction of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed emergency exchange and delivery of natural gas, construction of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The facilities proposed to be abandoned by Applicants, as hereinbefore described and as more fully described in the applications filed in the proceeding are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(6) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(7) Transco and Trunkline are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Transco's and Trunkline's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is jointly issued to Transco and Trunkline in this proceeding authorizing the emergency exchange and delivery of natural gas, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder is conditioned upon Transco's and Trunkline's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and ready for operation within three months of the date of this order as required by Section 157.20(b) of the Regulations.

(D) Permission for and approval of the abandonment by Transco and Trunkline of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted.

(E) Transco and Trunkline shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (D) above within ten days of such abandonment.

(F) Transco and Trunkline shall make appropriate rate filings in accordance with the provisions of the Commission's Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNION ELECTRIC COMPANY AND ELECTRIC ENERGY, INC., DOCKET NO. E-7299

ORDER AUTHORIZING SALE AND ACQUISITION OF FACILITIES

(Issued August 15, 1966)

Union Electric Company (Union) filed an application with the Federal Power Commission on June 27, 1966 seeking authority pursuant to Section 203 of the Federal Power Act to sell certain terminal facilities to Electric Energy, Inc. (EEI). On July 7, 1966, EEI joined in the filing of Union's application.

Union is incorporated in the State of Missouri and is qualified to do business in the States of Missouri, Illinois and Iowa with its principal business office at St. Louis, Missouri. It is engaged primarily in the generation, transmission, distribution and sale of electric energy in a service area that includes the City of St. Louis and ten counties in Missouri; five counties in Illinois and four counties in Iowa.

EEI was organized in 1950 to construct a 4-unit electric generating station near Joppa, Illinois, and to supply a substantial portion of electric energy requirements of a project of the Atomic Energy Commission (AEC) near Paducah, Kentucky. The common stock of Electric is held by the following companies (sponsoring companies) in the percentages specified: Central Illinois Public Service Company, 20%; Illinois Power Company, 20%; Kentucky Utilities Company, 20%; and Union, 40%.

The facilities in question are the line terminal devices of a 161 kv line owned and operated by Union and extending from EEI's Joppa plant to an interconnection with Union's transmission system near Cape Girardeau, Missouri about 40 miles away. Union constructed this line in 1962 to facilitate the transmission of its share of Joppa's surplus energy over AEC's requirements into its own transmission system. The sponsoring companies are entitled to surplus power from the Joppa plant over and above that required to meet the contract requirements of AEC. In the past few years AEC has drastically reduced its demand on the output of the Joppa plant. Originally this demand was 735,000 kw of the 1,000,000 kw of the plant's capacity. Effective July 1, 1964, AEC reduced this demand by 175,000 kw and reduced it further by 325,000 kw effective June 15, 1966. These reductions of AEC's demand increased the capacity available to the sponsoring companies from 265,000 kw to 765,000 kw. Union presently owns certain terminal facilities located on the property of EEI which heretofore have been utilized for the principal benefit of Union but due to the increase in energy available to the sponsoring companies will now be used for the benefit of the other sponsoring companies as well as Union. As a result of this change in the function of these terminal facilities Union agreed to sell the terminal facilities to EEI. The consideration for the transfer is $226,927 which equals the depreciated original cost thereof as of June 15, 1966.

According to the application the proposed sale of the terminal facilities will give ownership and control to EEI of all facilities on its property required for the sale of power generated at the Joppa plant, and will place it in a uniform position with respect to the get-away facilities of all its customers. Union represents that it will benefit from the transaction because it will no longer have to bear the expense of operating and maintaining facilities required by

EEI to serve Union's 306,000 kw entitlement after June 15, 1966, and will be in the same position as all other customers of EEI.

Written notice of the application has been given to the Missouri Public Service Commission, the Illinois Commerce Commission, the Iowa State Commerce Commission and to the Governors of those States. Notice of the application was also published in the Federal Register on July 12, 1966 (31 F.R. 9466), stating that any person desiring to be heard or to make any protest with reference to the application should on or before July 25, 1966, file with the Federal Power Commission, Washington, D.C. 20426, a petition or protest. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Union, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the State of Missouri and consumed in the States of Iowa and Illinois, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy consumed wholly by the transmitter. Union, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) EEI, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the State of Illinois and consumed in the States of Kentucky and Missouri, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy consumed wholly by the transmitter. EEI, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(3) By the proposed transaction, Union will dispose of part of its facilities, subject to the jurisdiction of the Commission which have a value in excess of $50,000 and EEI, in acquiring such facilities, will merge or consolidate its facilities, subject to the jurisdiction of the Commission with those of Union, another person, all within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed sale of facilities by Union and the proposed acquisition of these facilities by EEI, as described above, upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed sale by Union and the proposed acquisition by EEI of the aforementioned facilities, all as described above, are authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) The Applicants shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-363

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On May 12, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-363 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities to be utilized for the sale and delivery of additional quantities of natural gas to Beacon Oil and Refining Company (Beacon), an industrial customer, as more fully set forth in the application.

Applicant proposes the replacement of minor metering, regulating and appurtenant facilities near Milepost 9.85 on its 6-inch Henderson, Texas, pipeline, located in the John Runnels Survey, Abstract 679, Rusk County, Texas.

Applicant is presently delivering an annual volume of approximately 90,000 Mcf of gas to Beacon for use in Beacon's lease operations in Henderson Field, Rusk County, Texas, under the budget authorization granted by order of the Commission issued in Docket No. CP66-52 on October 1, 1965, 34 FPC 1065, and pursuant to a contract between the parties which is on file with the Commission as Applicant's Industrial Contract No. 712. By the instant application, Applicant proposes to transport and deliver to Beacon up to 1,000 Mcf of gas per day. The estimated annual delivery is 350,000 Mcf which exceeds the limitation of 100,000 Mcf per year contained in the Docket No. CP66-52 order.

The estimated cost of the facilities to be constructed is $4,195, which will be financed out of current working funds.

Due notice of the filing of the application was published in the Federal Register on May 27, 1966 (31 F.R. 7648). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b) and (c) of Section 155.1 and paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities and to transport and deliver up to 1,000 Mcf of natural gas per day as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b) and (c) of Section 155.1 and paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 90 days from the date on which this order issues.

(D) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66–392

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On May 26, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66–392 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation and delivery of natural gas to Columbian Carbon Company (Columbian) for use by the latter in its Research Plant, Ouachita Parish, Louisiana, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate a positive meter station and appurtenant facilities on its Jackson-Sterlington line in Ouachita Parish. The application indicates that Columbian's third year maximum day and annual requirements from Applicant are 1,000 Mcf and 328,500 Mcf, respectively. Columbian will utilize natural gas as fuel for steam engine boilers and for process heating and drying.

Applicant and Columbian have entered into a contract, dated April 26, 1966, providing for the proposed sale of gas. The average rate for gas sold to Columbian under such contract is estimated to be 25.2 cents per Mcf.

Total estimated cost of the proposed facilities is $5,220, which cost will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, by October 1, 1966.

(D) This certificate shall not entitle the industrial customers to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED NATURAL GAS COMPANY, DOCKET NO. CP66-414

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On June 14, 1966, United Natural Gas Company (Applicant) filed in Docket No. CP66-414 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain underground storage facilities at the Ellisburg Storage Pool in Potter County, Pennsylvania, all as more fully set forth in the application.

Applicant proposes to inject an additional 2,900,000 Mcf of Base Storage Gas and add a 1,000 horsepower compressor unit at its Ellisburg Compressor Station. Applicant states that the additional base gas and horsepower will increase its deliverability from the present 14,000 Mcf per day to 32,000 Mcf per day. Applicant further states that the proposed facilities are needed to meet the peak day requirements of its wholesale and retail customers beginning with the 1966-1967 winter season.

The total estimated cost of the proposed additional base gas is $1,100,000, and the construction of the proposed additional 1,000 horsepower compressor unit is estimated to cost $400,000. The reimbursable joint cost, payable to Tennessee Gas Pipeline Co., a division of Tenneco Inc., and Consolidated Gas Supply Corporation, joint owners of the Ellisburg Storage Pool, is $61,100 raising the total cost of the project to Applicant to $1,561,100. Applicant proposes to finance this project from funds on hand and from funds to be obtained by issuing notes and for stock at face or par value to its parent corporation, National Fuel Gas Company.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G-328 (3 FPC 959).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, United Natural Gas Company, authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) Applicant shall complete construction of the additional compressor horsepower as well as the injection of additional base storage gas by December 1, 1966, as provided in paragraph (b) of Section 157.20 of the Commission's Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

VALLEY GAS TRANSMISSION, INC., DOCKET NO. CP66-410

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1966)

On June 9, 1966, Valley Gas Transmission, Inc. (Applicant) filed in Docket No. CP66-410 an application pursuant to Section 7(c) of the Natural Gas

Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the twelve-months period commencing with the date on which this order issues and the operation of certain natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas adjacent with said system.

Applicant requests waiver of the cost limitations imposed by Section 157.7 (b)(1) of the Commission's Regulations under the Act so that it may be afforded greater flexibility in attaching reserves without delays resulting from the processing of individual certificate applications. The total cost of the proposed facilities will not exceed $250,000, with no single project to exceed a cost of $50,000, which costs will be financed from cash on hand, cash generated from normal operations, internal sources and from financing already arranged.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1960, in Docket No. G-19618 (25 FPC 233).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve-months period commencing with the date on which this order issues and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $250,000, with no single project to exceed a cost of $50,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 157.7(b)(1) of the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Valley Gas Transmission, Inc., to construct during the twelve-months period commencing with the date on which this order issues the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the twelve-months period commencing with the date on which this order issues and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $250,000, with no single project to exceed a cost of $50,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 157.7(b)(1) of the Commission's Regulations under the Natural Gas Act is granted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NOS. G-4438 AND CP66-395

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND CANCELLING DOCKET NUMBER

(Issued August 16, 1966)

On May 31, 1966, Arkansas Louisiana Gas Company (Petitioner) filed in Docket No. G-4438 a petition to amend the certificate of public convenience and necessity issued in said docket on October 18, 1956, and amended on April 9, 1963, and January 4, 1966, 35 FPC 17, so as to reflect the deletion of fourteen wells located in the Ruston Field, Lincoln Parish, Louisiana, from its service agreement with Southwest Gas Producing Company, Inc. (Southwest), all as more fully set forth in the petition to amend.

As a part of the instant filing, in Docket No. CP66-395, pursuant to Section 7(b) of the Natural Gas Act, Petitioner has requested permission and approval to abandon that portion of its natural gas service which is delivered from the above-described fourteen wells to Southwest under Petitioner's FPC Gas Rate Schedule XFS-3. In view of the aforementioned petition to amend, Petitioner's filing in Docket No. CP66-395 will be construed as coinciding therewith and accordingly, Docket No. CP66-395 will be cancelled.

Petitioner proposes to continue to sell and deliver natural gas to Southwest under Rate Schedule XFS-3 from other wells covered by the contract which are not connected to Petitioner's gathering system.

On September 23, 1963, Petitioner submitted for filing the Sixth Revised Sheet No. 60 to its FPC Gas Tariff, Original Volume No. 2, containing proposed increased rates for sales to Southwest. By order issued October 30, 1963, the proposed increases in rates were suspended in Docket No. RP64-6, and by order issued August 18, 1964, in Docket No. RP64-6 the proposed increased rates were made effective subject to refund as of June 24, 1964. The authorization hereinafter granted in Docket No. G-4438 should not be construed as relieving Petitioner from refunding any amounts collected in excess of the rates determined to be just and reasonable in Docket No. RP64-6.

Due notice of the filing of the petition was published in the Federal Register on June 17, 1966 (31 F.R. 8507). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. G-4438 on October 18, 1956, be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Arkansas Louisiana Gas Company in Docket No. G-4438 on October 18, 1956, and amended by orders issued on April 9, 1963 and January 4, 1966, is further amended by deleting therefrom authorization to operate and sell natural gas in interstate commerce from fourteen wells located in Ruston Field, Lincoln Parish, Louisiana, as hereinbefore described and as more fully described in the petition to amend.

(B) In all other respects said certificate, as amended, shall remain in full force and effect.

(C) Docket designation CP66-395 is cancelled.

(D) The authorization herein granted in Docket No. G-4438 shall not be construed to relieve Petitioner from refunding any amounts collected in excess of the rates determined to be just and reasonable in Docket No. RP64-6.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

SHELL OIL COMPANY

ORDER DENYING APPLICATION FOR REHEARING

(Issued August 16, 1966)

Shell Oil Company (Shell) on July 28, 1966, filed an application for rehearing of the letter-order issued by the Commission on July 1, 1966. That order affirmed the rejection by letter dated April 5, 1966, of the rate reduction supplements tendered on February 16, 1966, by Shell with respect to its FPC Gas Rate Schedule Nos. 16, 33, 34, 40, 41 and 95 in purported compliance with the provisions of paragraph (E) of Opinion No. 468, 34 FPC 159, as amended.

Shell's proposed supplements reflect rates at the "new" gas-well gas area base rate ceilings determined in Opinion No. 468, as amended. All of the acreage involved here was dedicated under contracts dated prior to 1961, and sales under each of these rate schedules were certificated and deliveries had commenced prior to January 1, 1961. Shell contends, however, that it is entitled to the "new" gas rate, in lieu of the "old" gas rate, because it is now selling gas from the subject acreage under renegotiated amendatory agreements which superseded the original contracts and allegedly were executed after January 1, 1961.

Under Opinion No. 468, as amended, gas sold pursuant to contracts dated prior to January 1, 1961, is considered "old" gas. It is thus clear that gas sold from acreage dedicated under the original contracts involved here is "old" gas. "Old" gas does not become "new" gas solely because the original contracts have been superseded by amendatory agreements. We therefore reject Shell's contention that its gas is "new" gas.

In view of our ruling above, there is no need to discuss the question raised by Shell as to the date of the amendatory agreements which is similar to that involved in Opinion No. 484, 35 FPC 40, in connection with a sale by Socony.

Shell also contends in the alternative that the Commission's rejection of the proposed supplements constitutes a prejudgment of the outcome of the Show Cause proceeding instituted against Shell and others by order issued August 5, 1965, in Docket No. AR61-1, *et al.*, 34 FPC 424. Shell presumably is referring to the Section 4(e) proceedings involving the subject rate schedules which were not consolidated in Opinion No. 468 and are therefore included in the show cause order. The Section 5(a) determinations made in Opinion No. 468, to be effective as of September 1, 1965, apply, *inter alia*, to Shell's sales involved here. The effect of such Section 5(a) action was to create locked-in periods prior to September 1, 1965, for those Section 4(e) proceedings relating to sales in Permian not disposed of by Opinion No. 468. The action taken by us here relates to the Section 5(a) determinations made in Opinion No. 468. It does not purport to cover the non-consolidated Section 4(e) proceedings and thus does not involve prejudgment of the issues involved in such proceedings.

The Commission orders:

For the reasons set forth above, the application for rehearing filed by Shell on July 28, 1966, is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS PIPELINE COMPANY, DOCKET NO. CP66–307; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66–308; SINCLAIR OIL & GAS COMPANY (OPERATOR), ET AL., DOCKET NO. CI66–410

ORDER DENYING APPLICATION FOR REHEARING

(Issued August 17, 1966)

On July 18, 1966, Brooks Gas Corporation (Brooks) and Brooks Pipe Line Co. (a wholly owned subsidiary) applied, pursuant to Section 19(a) of the Natural Gas Act and Section 1.34 of the Commission's Rules of Practice and Procedure for rehearing and reconsideration of a temporary certificate issued to Sinclair Oil & Gas Company (Sinclair) by the Commission's letter–order of May 19, 1966, as amended June 17, 1966, 35 FPC 754, 1046.

Brooks contends that the Commission erred in issuing a temporary certificate to Sinclair. Brooks alleges that since Sinclair "must accept status as a pipeline" as a condition of receiving the temporary certificate it was improper to grant such a certificate on the basis of considerations applicable to producers as specified in Section 157.28 of the Commission's Regulations under the Natural Gas Act.

At the outset, it may be noted that in its application for a temporary certificate dated March 18, 1966, Sinclair in addition to stating that it was being drained stated that its gas wells in the Eldorado and Ft. McKavitt Fields which initially will supply gas to the Eldorado Processing Plant are presently shut-in and shut-in royalties are being paid monthly. In short, Sinclair sets forth the prima facie facts constituting an emergency within the meaning of Section 157.28 of the Regulations, including economic hardship resulting from payment of shut-in royalties, as well as potential drainage.

Brooks has attached an affidavit to its application for rehearing challenging the possibility that drainage exists or will occur. Brooks contends that if any temporary service should be performed in the Eldorado Field it should be performed by *Brooks* and not Sinclair, since the former already has a pipeline in the Eldorado Field serving Northern Natural Gas Company (Northern). It is apparent that Brooks is resisting any certification of Sinclair to sell gas from the Eldorado Field to any purchaser other than Brooks either on a temporary or permanent basis.

Finally Brooks contends that it is entitled to resolution of the factual dispute it has raised concerning drainage on a complete record after hearing, before drainage is made the basis for the exercise of the Commission's jurisdiction to grant a temporary certificate "to a would-be competitor."

We can briefly dispose of the contention that Sinclair must "accept status as a pipeline", a contention which is clearly in error. Paragraph 6 of the letter–order dated June 17, 1966, merely provides that Sinclair should amend its application to request authorization for the construction and operation of facilities necessary for the transportation of gas in order to make the requested sales. No determination can be made prior to the hearing, which has been separately ordered, as to whether the ownership of these facilities would make Sinclair a pipeline within the meaning of our Rules.

Brooks goes on to argue that nothing in the Natural Gas Act or in the Commission's Regulations provides any authority for permission to grant temporary certificate for construction of pipeline facilities on the basis of drainage or a claim of drainage. This contention, however, overlooks the fact that the temporary authorization runs to Sinclair as a *producer*, and the Commission is not precluded from granting an otherwise justified temporary authorization to Sinclair as an independent producer merely because pipeline facilities are required to make the emergency sale. As the court pointed out in *Public Service Commission* v. *F.P.C.*, 327 F. 2d 893, "it was necessary for the Commission to adjust its emergency criteria to the nature of gas production rather than to the nature of gas transportation. We assume Congress contemplated from the beginning that the Commission's jurisdiction extended to independent producers, although it set forth no clear criteria to govern the issuance of temporary certificates to them. But we are not required to assume also that it contemplated limiting such certificates to pipelines, even if the restrictive language of Section 7 applies only to pipelines. No provision in the Act is to the effect that temporary certificates may be issued only to pipelines; and Section 16, certainly when read with Section 7, supports their issuance to independent producers under emergency conditions defined by Regulation § 157.28(c)."

The allegations contained in Sinclair's application for a permanent certificate clearly indicate the necessity for facilities to transport the gas to its processing plant. The Commission has authorized producers to construct and operate any required facilities subject to the jurisdiction of the Commission, *i.e.*, facilities which will be used for the transportation of gas in interstate commerce and which are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act. See, *Hassie Hunt Trust*, 33 FPC 866, *Standard Oil Company of California*, 27 FPC 1153, and *The Superior Oil Company*, 32 FPC 241.

With respect to Brooks' contention that it is entitled to a resolution of the factual dispute "on a complete record" as to drainage, we believe that Brooks misconceives the authority of the Commission to issue temporary certificates under the Natural Gas Act and the nature of the Commission's Regulation 157.28(c) implementing that authority. As the Court of Appeals held in *Public Service Commission* v. *F.P.C.* (*supra*) upholding the validity of the Regulation, "the power to issue temporary certificates is not limited to facilities to assure maintenance of adequate service or to serve particular customers." The Court further indicated that the problems placed under Commission administration, with consequent Commission responsibilities, call upon the courts to give the Act a scope reasonably necessary to permit the agency to perform its tasks consistently with the provisions and purposes of the legislation. In that case, there was, *inter alia* a challenge to the failure of the Commission to determine the period of emergency in the certificate; nevertheless, the Court held that since temporary authorizations may validly be issued to independent producers it is not unreasonable for the Commission to continue them in effect until, considering its administrative problems it can cope with the particular cases on the basis of records which enable it to do so intelligently. Finally, the Court upheld the authority of the Commission to have adopted Regulation 157.28(c).

To demand, as Brooks does, a trial on the issue of drainage, is in effect to destroy the very purpose of the emergency certificate provisions of the Natural Gas Act. While it is true that temporary certificates are issued on the basis of *ex parte* statements of fact contained in applications for such emergency certificates,[1] it is apparent that the Commission could adopt no reasonable alternative to accepting a prima facie statement of the nature of the emergency and, as indicated above, its regulation as to the facts which spell out emergency situations has been sustained. To grant the trial of an issue such as drainage in advance of formal hearing would destroy any viable administrative basis for issuing temporary authorizations due to an emergency. As Judge Fahy pointed out, Section 16 of the Natural Gas Act demonstrates a realization by Congress that the Commission would be confronted with unforeseen problems of administration, including emergencies, and it should have a basis for coping with such confrontation.

To evaluate the affidavit submitted in support of Brooks' application for rehearing would in turn require an invitation to Sinclair to submit a *counter* affidavit.[2] Both affidavits being submitted *ex parte*, nothing short of a trial could fairly resolve the issue—and, as indicated above—would not merely create a problem of administration but would, in effect, emasculate the Commission's emergency authority.

Finally, the application for rehearing overlooks the allegation of economic hardship set forth in Sinclair's request for a temporary certificate. The Commission's Regulation recognizes that emergencies may include, drainage, economic hardship resulting from the payment of shut-in royalties, etc. These different bases for an emergency certificate are set forth as *alternative* possibilities and, we feel that the temporary certificate issued to Sinclair can be sustained on either one of the two bases alleged in its application. Even if, arguendo, Brooks were entitled to a factual determination on the question of drainage, Sinclair's alternative ground of economic hardship resulting from the payment of shut-in royalties would be sufficient to justify the grant of a temporary certificate. Consequently, we find that there is no basis for rescinding the temporary certificate issued to Sinclair or for setting a hearing on the issue of drainage as requested by Brooks.

We have given this case and the many pleadings relating thereto the most careful consideration throughout the various stages through which it has progressed. Nothing in the present application persuades us that we were in error in granting the temporary certificate rather than in taking the only alternative which was before us on June 11, 1966—namely, a denial of any temporary resolution of the problem. We realize that Brooks on rehearing now attests its willingness to itself arrange for the temporary transportation of the gas involved in the application on terms which allegedly would remove the temporary emergency. This belated offer cannot negate the effectiveness of our earlier determination. Even if Brooks had made a timely offer, we would not be compelled to maintain its position of sole purchaser in the Eldorado Field for the period of the temporary authority since we have made clear that Sinclair is constructing its facilities at its own risk.

These proceedings have been set for early hearing and the determination we have made to issue a temporary certificate will not prejudice or predetermine the final outcome of the proceedings. In the event the final determination of the proceedings is adverse to Sinclair then it will have to bear the loss of the investment it has made in facilities.

---

[1] Section 7(c) of the Act explicitly provides that the Commission "may issue a temporary certificate * * * without notice or hearing, pending the determination of an application for a (permanent) certificate * * *".

[2] Skelly Oil Company has filed a pleading in response to the application for rehearing indicating that if given a chance, it could and would file pleadings factually disputing Brooks on the drainage question.

The Commission orders:

The instant application by Brooks having been considered as an application for rehearing is hereby denied; and further considered as an application for a formal hearing on the factual basis for the issuance of the temporary certificate to Sinclair is likewise denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PACIFIC GAS AND ELECTRIC COMPANY, PROJECT NO. 2106

ORDER APPROVING REVISED PROJECT EXHIBIT K AND ADJUSTING ANNUAL LAND CHARGES

(Issued August 17, 1966)

On April 12, 1965, Pacific Gas and Electric Company, licensee for major Project No. 2106, filed for Commission approval a revised Exhibit K map showing the present project boundaries. The project is located on the McCloud and Pit Rivers in Shasta County, California, and affects lands of the United States within the Shasta-Trinity National Forest.

The revised Exhibit map shows an addition of 98.82 acres of lands included within the project boundary, of which 6.32 acres are National Forest lands required for the project spillway, and 12.52 acres are National Forest lands required for construction purposes. The inclusion in the license of the additional lands of the United States will increase the amount of annual charges for the occupancy of such lands.

By letter dated March 21, 1966, the Chief, Forest Service, advised that it offers no objection to Commission approval of the revised Exhibit K map. In a subsequent letter from the Service, dated June 22, 1966, we are advised that the licensee was conducting exploratory drilling for the revised left abutment of the Iron Canyon dam on the National Forest lands herein involved in January, 1965. In view of the date of such occupancy, we are making the increased annual land charges effective as of January 1, 1965.

The Commission finds:

(1) Revised Exhibit K-4A (FPC No. 2106-62) conforms to the Commission's rules and regulations and should be approved as part of the license for Project No. 2106, and license Exhibit K-4A (FPC No. 2106-49) which is superseded, should be eliminated from the license for the project.

(2) The increased amount of annual charges for recompensing the United States for the occupancy of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised Exhibit K map described in finding (1) above is hereby approved as part of the license for Project No. 2106, and the license exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(B) Subparagraph (ii) of Article 28 of the license is hereby modified to read as follows:

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line purposes only, $2,671.95, effective as of January 1, 1965.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER APPROVING REVISED PROJECT EXHIBIT L DRAWINGS

(Issued August 17, 1966)

On March 7, 1966, Pacific Power & Light Company, licensee for the Klamath Basin Project No. 2082, located on the Klamath River, California and Oregon, filed for Commission approval revised Exhibit L drawings showing the "as built" modifications to the Iron Gate development of the project.

The modifications were authorized by Commission order issued July 14, 1965, 34 FPC 65, which called for the construction of a terminal structure at the Iron Gate spillway to dissipate the energy of a peak flood, and the raising of the dam crest by five feet to increase the capability of the Iron Gate development to pass safely larger flood flows. The drawings also reflect minor changes in the original designs in the structures involved resulting from structural and foundation conditions observed during construction of the modifications. The revised plans shown on the drawings have been reviewed and found to be satisfactory.

The Corps of Engineers has reported that the revised drawings of the project structures are satisfactory insofar as the interests of navigation are concerned.

The Commission finds:

The following-described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the license Exhibit L drawings mentioned herein as being superseded should be eliminated from the license:

IRON GATE DEVELOPMENT

Exhibit L sheet No.	FPC No.	Title	Superseding FPC No.
L-10A revised	2082-178	Dam crest modifications	2082-174
L-15A revised	2082-179	Spillway modifications	2082-175

The Commission orders:

The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2082, and the license Exhibit L drawings mentioned in the same finding as being superseded are hereby eliminated from the license.

OPINION NO. 504

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER DETERMINING TAX REIMBURSEMENTS AND PROVIDING FOR REFUNDS

(Issued August 17, 1966)[*]

Syllabus

1. Although Commission has authority to interpret provisions in gas sales contracts filed as rate schedules, policy is to defer action on contract questions when matters are submitted promptly to state courts for resolution. P. 465.
2. Since producers have failed during six to eight year period of controversy to initiate action in state court, there is no justification for Commission to further defer interpretation of contracts filed as rate schedules. P. 465.
3. Where producers and pipeline have no dispute over interpretation of tax reimbursement and their agreement will terminate litigation, Commission accepts and gives effect to such agreement since it otherwise has no precedential effect. PP. 466, 480, 481.
4. Where there is no contractual requirement for pipeline to reimburse producers-sellers for any part of severance tax, motion to dismiss is sustained and filings for increase in tax reimbursement are disallowed. P. 477.
5. In a proceeding arising under Section 4 of the Natural Gas Act, Commission *determines* amount of tax reimbursement and *provides* for refunds.

J. P. Hammond, *William H. Emerson* and *William P. Hardeman* for Pan American Petroleum Corporation

Kenneth Heady, *John R. Rebman* and *Stanley L. Cunningham* for Phillips Petroleum Co.

J. Evans Attwell for Austral Oil Company Incorporated, H. S. Cole, Jr., *et al.* and Nicklos Oil & Gas Company (Operator), *et al.*

---

[1] These dockets were severed and terminated after conclusion of the hearing by order issued March 14, 1966, 35 FPC 385.

[*] Initial decision appears on p. 467.

W. H. Drushel, Jr. for Austral Oil Company Incorporated and Nicklos Oil & Gas Company

Sherman S. Poland and *Bernard A. Foster, Jr.* for Arkansas Louisiana Gas Company

William T. Kilbourne and *Herbert W. Varner* for The Superior Oil Co.

Charles E. McGee and *John T. Ketcham* for Sinclair Oil & Gas Company

William W. Bedwell for Mississippi River Transmission Corp.

H. H. Hillyer, Jr. and *R. M. Merriman* for R. R. Frankel

Christopher T. Boland, George Meiburger, Robert O'Koch and *William E. Feldhaus* for Texas Gas Transmission Corporation

Hugh J. Morgan, Jr. for Southern Natural Gas Company

Jack D. Head, Joseph F. Weiler and *Keith M. Pyburn* for Texas Eastern Transmission Corporation

J. Harry Mulhern, Edward S. Kirby and *James R. Lacey* for Public Service Electric & Gas Co. of New Jersey

William J. LeBuhn and *Leland F. Cadenhead* for Trunkline Gas Company

Robert W. Maris and *William T. Coleman, Jr.* for Philadelphia Gas Works, Division of the United Gas Improvement Company

Morton L. Simons for Long Island Lighting Company

James O'Malley, Jr., Ronald D. Jones and *Leon A. Allen, Jr.* for Consolidated Edison Company of New York, Inc.

Thomas B. Barnes, Jr., V. P. McDevitt, Samuel G. Miller, Henry Sullivan and *Donald Blanken* for Philadelphia Electric Company

F. Ben James, Jr. for T. L. James & Company, Inc.

John W. Williams for the Staff of the Federal Power Commission

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This case, which comes before us on exceptions to the initial decision of the presiding examiner issued May 4, 1966, involves basically the issue of what amount of tax reimbursement, if any, is owing by four pipeline purchasers of natural gas[2] to the eighteen producer-sellers of natural gas listed in the caption, under the terms of various types of provisions in the parties' contracts setting forth their respective obligations for paying production, severance and gathering taxes enacted by the State of Louisiana. The case was initiated by the filing by the producers of proposed increased rates reflecting the amounts of tax reimbursement they claim from the pipeline purchasers. We permitted such increased rates to become effective subject to refund, and thereafter, by order issued July 22, 1965, [unreported] provided for a hearing on the dispute over the proper amount of tax reimbursement. After pre-hearing conferences, a one-day hearing was held on January 4, 1966.

The above issue arises from the fact that a Louisiana gathering tax of 1 cent per Mcf enacted in 1954, and increased to 2 cents in 1958, was challenged as unconstitutional under the Louisiana constitution. Pending court decision on the question, the Louisiana legislature, effective December 1, 1958, suspended the 2-cent gathering tax and increased the severance tax by a like amount. This Louisiana tax legislation was intended to assure the continuance of revenues pending determination of the lawfulness of the gathering tax. In 1959, in *Bel Oil Corp.* v. *R. W. Fontenot, Collector of Revenue*, 117 So. 2d 571, the Louisiana Supreme Court held that the gathering tax was invalid under the State Constitution.

---

[2] The pipelines are Southern Natural Gas Company (Southern), Mississippi River Transmission Corporation (Mississippi), Trunkline Gas Company (Trunkline), and Transcontinental Gas Pipe Line Corporation (Transco).

The action of the state legislature has given rise to various arguments by the producers on the one hand in favor of larger tax reimbursements from the pipelines, and by the pipelines on the other hand, favoring smaller or no tax reimbursements. The arguments vary, depending on the particular terms of the several contractual provisions.

In his decision, the examiner discussed the several contractual provisions in ten separate categories, and determined that various or no amounts of tax reimbursement are due by the pipelines to the producers under the contracts, as more fully set forth in his decision. Three sets of exceptions were filed to his decision by staff, Southern, and jointly by David Crow, Trustee, *et al.*, L. E. Smith, *et al.*, and H. T. Shalett and David Crow, challenging the examiner's decision in only a few respects.

We have considered the examiner's decision and exceptions thereto with care and have concluded that such decision is correct in all material respects and should be adopted as our decision, except for one matter which should be modified as discussed hereinbelow.

Considering first a preliminary matter, producers David Crow, Trustee, L. E. Smith, H. T. Shalett and David Crow (Docket Nos. G–17714, RI60–355, G–17679, RI60–356 and RI60–393) contend that the present controversy involves a matter of contract interpretation which they intend to submit to the courts of Louisiana, and argue that such courts are competent to resolve such contract disputes while the FPC is not. They ask that this Commission, in order to avoid a possible conflict with the court's decision, find that it has no power to construe a Louisiana gas contract.

Staff and Southern in their opposing exceptions contend that it is basic law that, since the parties' contracts are also their FPC rate schedules, the Commission may properly interpret them to determine their correct application, citing such authorities as *Shell Oil Co.* v. *F.P.C.*, 263 F. 2d 223 (CA3–1959), rev., *sub nom.*, *Texas Gas Transmission Corp.* v. *Shell Oil Company*, 363 U.S. 263, aff'd on remand, 292 F. 2d 149; *The Pure Oil Co.* v. *F.P.C.*, 299 F. 2d 370 (CA7–1962); *Shell Oil Co.* v. *F.P.C.*, 334 F. 2d 1002 (CA3–1964); *Pan American Petroleum Corp.* v. *F.P.C.*, 322 F. 2d 999 (CADC–1963). Staff and Southern also point out that these producers originally took the position that the Commission could properly interpret the contracts to determine their correct application as rate schedules.

Under these judicial decisions we have authority to interpret provisions in the parties' contracts filed with us as rate schedules. It is our general policy, however, to defer action on such contract questions when these matters are submitted promptly to the state court for resolution.[3] The producers have failed during the six to eight year period of the subject controversy to initiate action in state court. We find no justification at this late date for us further to defer action herein.

The principal objection to the examiner's decision comes from Southern, one of the pipeline purchasers under several of the contracts. Southern excepts to the examiner's holding that The Hunter Company is entitled, under the provisions of its contract with Southern involved in Docket No. G–17543, to reimbursement of 1.5 cents for the 2-cent severance tax made effective by the Louisiana legislature as of December 1, 1958 (this 2-cent tax was additional to a previously existing 0.3-cent severance tax). Southern takes the position, with which the Commission's staff agrees, that instead of 1.5 cents per Mcf tax reimbursement, under the pertinent provisions of the contract Hunter is entitled to only 0.75 cents per Mcf tax reimbursement.

---

[3] See *Pan American Petroleum Corporation, et al.*, Docket No. RI63–481, *et al.*, orders issued October 9 and December 3, 1964, 32 FPC 966, 1394.

Southern reasons that on the date of the 1954 Hunter-Southern contract, the total amount of taxes in effect on the production, severance or gathering of gas was 1.3 cents (0.3 cent severance tax and 1-cent gathering tax). It states that when the severance tax was increased by 2 cents per Mcf by the Louisiana legislature effective December 1, 1958, the total amount of taxes in effect on the production, severance or gathering of gas became 2.3 cents, an increase of 1 cent over the taxes in effect on the date of the Hunter-Southern agreement. Southern points out that its contract with Hunter quoted below clearly states that "in the event * * * the total amount of all taxes payable * * * in respect of the production, severance or gathering of gas delivered hereunder shall be increased above the total amount of such taxes as the same are in effect on the date of this agreement, then three-fourths (¾) of such increase shall be payable by Buyer and one-fourth (¼) of such increase shall be payable by Seller, and the party who shall pay such increase shall be entitled to reimbursement from the other party in the proportion set forth above." Consequently, says Southern, Hunter is entitled to reimbursement from Southern for ¾ths of the 1-cent increase in the total amount of all taxes payable—*i.e.*, to tax reimbursement from Southern of 0.75 cent per Mcf, not 1.5 cents per Mcf, as claimed by Hunter and found by the examiner.

Staff reaches the same result as Southern with respect to Southern's tax reimbursement obligations to Hunter under the contractual provision referred to above.

We are in agreement with Southern and staff on this issue. It seems clear that under the express language of the contract quoted above, when the severance tax was increased by 2 cents per Mcf by the Louisiana legislature effective December 1, 1958, Southern was obligated to pay ¾ths of the 1-cent increase in taxes over the 1.3 cents tax base in effect on the date of the contract. Accordingly, the correct amount of tax reimbursement is 0.75 cent per Mcf, as contended by Southern and staff.

Finally, staff excepts to the examiner's approval of agreements by producers and Transco in six dockets,[4] to the effect that the tax reimbursement to be paid by Transco is 1.75 cents per Mcf. Staff says that the proper amount is 1.5 cents since the contract provisions are similar to those in Arkansas Louisiana's contract with Austin E. Stewart, G-17699, which the examiner found call for 1.5 cents tax reimbursement. Staff contends that agreement by buyer and seller on the amount of tax reimbursement is not binding on the Commission, which has primary jurisdiction to make such determination.

It is noted that, while the contract provisions are similar, they are not identical. Neither the producers nor Transco have disputed the interpretation of this provision, thus their agreement will terminate further litigation on this subject. Since it otherwise has no precedential effect, we will accept and give effect to such agreement. Accordingly, we will affirm the examiner on this issue.

The Commission finds:

(1) The initial decision of the presiding examiner issued in this case on May 4, 1966 should be modified as hereinabove set forth and as so modified should be adopted by the Commission as of the date of issuance of this opinion.

(2) Except to the extent hereinabove granted, the exceptions filed to the examiner's decision should be denied.

---

[4] David Crow, Trustee, G-17669; Cyprus Oil Company (Operator), *et al.*, G-17533; Tidewater Oil Company, G-17668; Tidewater Oil Company (Operator), *et al.*, G-17599; Willard E. Walker, G-17662; and Ted Weiner, *et al.*, G-17670.

The Commission orders:

(A) The producer-sellers of natural gas whose filings for increased rates are the subject of the examiner's decision issued herein on May 4, 1966, and of this opinion, will refund with applicable interest to the date of payment, all tax reimbursements collected by them from the pipeline-purchasers in excess of the amounts determined herein and in the examiner's decision to be properly reimbursable by the respective purchasers of such natural gas under the applicable rate schedules.

(B) The producer-sellers of natural gas referred to in paragraph (A) above shall within 60 days from the date of issuance of this opinion, file new supplements for the periods involved, where appropriate, reflecting the amounts of tax reimbursement determined herein and in the examiner's decision to be properly reimbursable to them by the pipeline-purchasers of natural gas.

(C) The initial decision of the presiding examiner issued herein on May 4, 1966, is modified as above set forth and as so modified is adopted by the Commission as its decision in this case, effective as of the date of issuance of this opinion. Exceptions to the examiner's decision are denied except to the extent hereinabove set forth.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON FILINGS INVOLVING CHANGES IN RATES UNDER THE NATURAL GAS ACT RESULTING FROM ACTS OF THE LEGISLATURE OF THE STATE OF LOUISIANA LEVYING AND ASSESSING TAXES UPON THE SEVERANCE AND GATHERING OF NATURAL GAS

(Issued May 4, 1966)

FRAZEE, *Presiding Examiner:* Each of the respondents in this proceeding filed a notice of a change in rates under Section 4 of the Natural Gas Act. The proposed rates were suspended because of conflicting interpretations between the respective sellers and the purchasers regarding tax reimbursement provisions in the producers (Sellers) rate schedules for jurisdictional sales of natural gas in Louisiana. The controversies originate in the action of the Louisiana State Legislature suspending the collection of a two cents per Mcf gas gathering tax and increasing the gas severance tax by an equal amount—two cents per Mcf—both effective on December 1, 1958.

In an order issued July 22, 1965, the Commission consolidated into a single proceeding all of the controversial rate schedules and fixed a date for hearing for the limited purpose of resolving the conflicting interpretations of the tax reimbursement provisions of these rate schedules.

Arkansas Louisiana Gas Company (Ark-La), Southern Natural Gas Company (Southern Natural), Mississippi River Transmission Corporation (MRTC), Trunkline Gas Company (Trunkline), Transcontinental Gas Pipe Line Corporation (Transco), Texas Gas Transmission Corporation (Texas Gas), Philadelphia Electric Company (Phila), Public Service Electric and Gas Company (Public Service), Philadelphia Gas Works Division of The United Gas Improvement Company (Phila Gas Works), and the Pennsylvania Public Utility Commission (Penn PUC) were permitted to intervene.

Prehearing conferences were held on September 8, 1965 and October 8, 1965. The formal hearing was convened and concluded on January 4, 1966. At the September 8, 1965, prehearing conference the Staff, for the convenience of all parties, offered Exhibit No. 1 which contains verbatim extracts of the applicable tax reimbursement provisions of respondents' rate schedules, including a list for each of the various verbatim extracts showing the purchaser of the gas,

---

[1] Omitted—See Footnote 1, *supra*, p. 463.

the respondent or respondents having the same contract tax reimbursement provisions, the docket numbers and respondents' rate schedule numbers involved herein, and the dates of the various contracts. Exhibit Nos. 2 through 7 and Exhibit No. 9 contain stipulations between various parties indicating their interpretations in cents per Mcf of gas of the various amounts of tax reimbursement due under the rate schedules here under consideration. No other evidence was received and there was no testimony of witnesses. The entire matter was submitted in the briefs of the parties.

LOUISIANA SEVERANCE AND GATHERING TAXES

A chronological background on the State of Louisiana's taxation of natural resources reads as follows:

1. Section 21 of Article 10 of the Louisiana Constitution of 1921, as amended, provides in part: "Taxes may be levied on natural resources severed from the soil or water, to be paid proportionately by the owners thereof at the time of severance; * * * No severance tax shall be levied by any Parish or other local subdivision of the State."

"No further or additional tax or license shall be levied or imposed upon oil, gas or sulphur leases or right, nor shall any additional value be added to the assessment of land, by reason of the presence of oil, gas or sulphur therein or their production therefrom * * *"

2. Act No. 24 of the Second Extra Session of 1935 levied 0.2 cents per Mcf severance tax on natural gas.

3. Act No. 119, Section 2, Para. No. 8, of the 1936 session, approved by the Governor on July 6, 1936, increased the gas severance tax to 0.3 cents per Mcf.[2]

4. Act. No. 11 of the 1948 session, approved by the Governor on June 7, 1948 (L.R.S. 47:671, et seq.) levied a gas gathering tax of 1.0 cent per Mcf.[3]

5. Act No. 45 of the 1954 session, approved by the Governor on June 22, 1954, sought to amend the definiton of the term "gathering tax" so as to impose the payment of the gathering tax on the producer rather than on the pipeline purchaser of the gas.

6. Act No. 8 of the 1958 session, approved by the Governor on June 16, 1958, levied an additional 1.0 cent per Mcf gathering tax[4] to become effective on August 1, 1958, and continuing through and including July 31, 1960.

7. Act No. 3 of the Extra Session of 1958, suspended the 2.0 cents per Mcf of gas gathering tax effective on December 1, 1958, pending a determination of its constitutionality. (L.R.S. 47:671, *et seq.*, and 47:678, *et seq.*)

8. Act No. 2 of the Extra Session of 1958, increased the gas severance tax from 0.3 cent per Mcf to 2.3 cents per Mcf effective December 1, 1958. (L.R.S. 47:632, *et seq.*)

A court test of the constitutionality of Act No. 3 of the Extra Session of 1958 was instituted in the matter of the *Bel Oil Corporation, et al.* v. *Rufus W. Fontenot, Collector of Revenue,* (1959) 238 La. 1002, 117 So. 2d 571, to recover the gas gathering taxes collected under its provisions. There the Court said:

> The statute providing for the levy of the tax here sought to be recovered declares, in part, that "In addition to all other licenses and taxes levied and assessed in the State of Louisiana, there is hereby levied upon every

---

[2] The rate of this tax remained unchanged until December 1, 1958. The Act was amended, however, to change the volumes on which the tax should be computed.

[3] Since this tax was levied on the gatherer of the gas, it normally would be paid by the pipeline purchasing the gas.

[4] This brought the total gathering tax to 2.0 cents per Mcf of gas. Act No. 11, 1948 session levied 1.0 cent and Act No. 8, 1958 session levied 1.0 cent for a total of 2.0 cents per Mcf.

> person engaged in gathering gas produced in this state, an excise license or privilege tax, for the privilege of engaging in such business, at the rate of one cent (1¢) per thousand (1,000) cubic feet * * * of gas gathered" (R.S. 47:671), and defines "gathering gas" to mean "transporting gas, after its severance, from the well to the first meter at or near the well" (R.S. 47:673, as amended by Act 45 of 1954, Sec. 1).

Then, at page 573, the Court went on to say:

> We think that under the clear language of the Constitution, "No further or additional tax or license shall be levied or imposed upon oil, gas or sulphur leases or right," no room for doubt is left; the levy under attack is another tax upon gas leases or rights, and as such comes squarely under the quoted prohibition. In fact, although denominated a "gas gathering" tax, the levy covers a process which forms an integral part of severing the natural resource or reducing it to possession,[8] and as such must be struck down, since the Legislature has levied the severance tax authorized by Article 10, Section 21; see R.S. 47:631-646, titled the General Severance Tax.
>
> [8] Following adoption of the Constitution of 1921 the Legislature, by its Act 140 of 1922, levied a tax upon all natural resources severed from the soil, in terms referring to Section 21 of Article 10. In a suit involving an attack on the constitutionality of the said Act 140 as exceeding the rate of State taxation on property fixed by Section 3 of Article 10 of the Constitution, this Court observed that "A severance tax, even though it is measured by the value of the property severed, is not a property tax; it is an excise tax upon the privilege of severing; just as an inheritance tax, even though measured by the value of the property inherited, is not a property tax, but an excise tax, on the right of inheriting." *Gulf Refining Co. of Louisiana* v. *McFarland,* 154 La. 251, 255, 97 So. 433, 434, 264 U.S. 573, 44 S. Ct. 402, 68 L. Ed. 856.

Thus, the Supreme Court of Louisiana determined the Gas Gathering Tax to be unconstitutional. To the same effect see *Southern Natural Gas Company* v. *Robert L. Roland, Collector of Revenue for the State of Louisiana,* (1960) 240 La. 471, 123 So. 2d 891.

Following the approval on June 16, 1958 of Act No. 8 of the Louisiana Legislature the Federal Power Commission on July 11, 1958, in the *Louisiana State Gas Gathering Tax*, etc., 20 FPC 28 issued its Order No. 206 "Modifying Rules and Regulations with Respect to Supplements Reflecting the Addition to the Louisiana State Gas Gathering Tax" in which it was recognized that "The incidence of such tax may result in increases in the rates paid by the purchasers under all rate schedules governing sales of natural gas produced in Louisiana, subject to the jurisdiction of the Commission, which contain provisions whereby the buyer is to reimburse the seller for any portion of such additional tax. * * *"

The Commission then said "To simplify the proposed required changes in rates, the Commission deems it expedient and in the public interest to waive the 30-day notice requirement under Section 4(d) of the Act and Section 154.94 of the Commission's Regulations and to eliminate, to the extent feasible, the data and information thereby required to be submitted in support of any proposed changes in rate based upon said Act No. 8, to be effective August 1, 1958." and provided in its order that "Rate Schedule changes reflecting the incidence of the additional one cent (1¢) per Mcf gathering tax of the State of Louisiana as of August 1, 1958, if filed on or before August 1, 1958, may be filed on less than the 30 days' notice required by Section 4(d) of the Natural Gas Act and in accordance with the findings of this order."

[1] The facts necessary to a determination of the issues in these matters are not in controversy and were stipulated by the producers, L. E. Smith, *et al.*, Docket Nos. G-17679 and RI60-356 (Rate Schedule No. 1), Exhibit No. 2; David Crow, Trustee, *et al.*, Docket Nos. G-17714 and RI60-355 (Rate Schedule No. 2), Exhibit No. 3; H. T. Shalett and David Crow, Docket No. RI60-393 (Rate Schedule No. 1), Exhibit No. 4, and Southern Natural Gas Company, the purchaser.

Each of the foregoing producers' sales to Southern Natural involves basically the same factual situation, each producer, on different dates,[5] entered into contracts with Southern Natural providing for the sale of natural gas produced from fields in Louisiana. On the dates these contracts were executed the Louisiana severance tax was 0.3 cent per Mcf and the Louisiana gathering tax was 1.0 cent per Mcf.

Act No. 8 of the 1958 session of the Louisiana Legislature levied an additional gas gathering tax of 1.0 cent per Mcf effective August 1, 1958.

Then by Act No. 3 of the Extra Session of 1958 the Legislature suspended the 2.0 cents per Mcf gas gathering tax, effective December 1, 1958, until its constitutionality could be determined. At the same session, by Act No. 2, the gas severance tax was increased by 2.0 cents, effective December 1, 1958, to a total of 2.3 cents per Mcf. The suspended 2.0 cents per Mcf gas gathering tax was declared unconstitutional in *The Bel Oil* case, *supra*. The severance tax of 2.3 cents per Mcf has remained in effect since December 1, 1958.

The tax reimbursement provisions in the Smith (Exhibit No. 2), Crow (Exhibit No. 3) and Shalett and Crow (Exhibit No. 4) contracts with Southern Natural are identical.[6] Article 8 (Taxes) therefrom follows:

> Seller shall be obligated for the payment of all taxes now existing or hereafter levied while this agreement is in effect upon the production, severance or gathering or gas delivered hereunder. Buyer shall be obligated to reimburse Seller for all taxes now or hereafter levied while this agreement is in effect upon the gathering of gas delivered hereunder up to not exceeding the present rate of such tax, viz., one cent ($0.01) per Mcf, plus one-half of the amount per Mcf by which such gathering tax may hereafter exceed one cent ($0.01) per Mcf. * * *.

Smith, Crow, and Shalett and Crow, each entered into "Stipulation of Facts" which were received as the foregoing Exhibits. Paragraph 9 of each Stipulation states that each party:

> "* * * interprets said tax reimbursement provisions as providing that Southern will reimburse" Seller "for 1.5¢ of the increased 2.3¢ Louisiana severance tax which became effective December 1, 1958 * * *"

---

[5] See table below:

	Date executed	Exhibit No.
Southern Natural's contract with:		
Smith	Apr. 3, 1957	2
Crow	July 29, 1955	3
Shalett and Crow	July 20, 1955	4

[6] Each of the producers (Sellers) entered into "Stipulation of Facts," which were received as the above numbered Exhibits. Para. 8 of each of these "Stipulation of Facts" recites that Staff's Exhibit No. 1, pp. 23–24, correctly sets forth the tax reimbursement provisions in each of the foregoing contracts.

and that

> "* * * Southern interprets said tax reimbursement provisions as providing that Southern will reimburse" Seller "for no portion of said 2.3¢ Louisiana severance tax."

On December 29, 1958 and April 29, 1960, Smith filed a Section 4 rate increase reflecting the claimed 1.5 cents tax reimbursement. The filings in Docket Nos. G-17679 and RI60-356 were suspended but became effective, subject to refund (See Exhibit No. 2, p. 3).

On December 29, 1958 and April 25, 1960, Crow filed a Section 4 rate increase reflecting the claimed 1.5 cents tax reimbursement. The filings in Docket Nos. G-17714 and RI60-355 were suspended but became effective, subject to refund (See Exhibit No. 3, p. 3).

On May 13, 1960, Shalett and Crow filed a Section 4 rate increase reflecting the claimed 1.5 cents tax reimbursement. This filing in Docket No. RI60-393 was suspended but became effective, subject to refund (see Exhibit No. 4, p. 3).

Thus, each of the Sellers, *supra*, claims a tax reimbursement of 1.5 cents per Mcf of the 2.3 cents per Mcf severance tax under their contract with Southern Natural. Southern Natural claims it owes no part of said 2.3 cents per Mcf severance tax to the Sellers, *supra*.

The producers (Sellers) filed joint briefs in which they contend that the "prices" payable per Mcf of gas which the Buyer agreed to pay Sellers is clearly set out in the contracts (See Article 7, p. 23, Exhibit No. 1) at 9.90 cents and that, in addition, the Buyer agreed to reimburse Sellers the amount of the tax levied upon "gathering of gas * * * up to but not exceeding the present rate of such tax, *viz.*, one cent per Mcf, plus one-half of the amount per Mcf by which such gathering tax may hereafter exceed one cent per Mcf." (See Article 8, pp. 23-24, Exhibit No. 1). With this contention there is no disagreement.

Next the producers contend they are entitled to, what they term, a "realizable price" of 9.60 cents per Mcf. Their contention is that at the time the contracts were executed they were required to pay a Louisiana severance tax of 0.3 cent per Mcf and a gathering tax of one cent per Mcf. Therefore, they contend, for example, at p. 3 of their brief, that the buyer was obligated to pay:

> 9.90¢+1.0¢ or 10.90¢ per Mcf
> (Articles 7 and 8, pp. 23-24, Exhibit No. 1)

and, Sellers further contend, of this 10.90 cents per Mcf, they should "realize":

> 10.90¢ −1.3¢ or 9.60¢ per Mcf.

Their argument is that the 9.60 cents per Mcf was the "cause of the contracts" (consideration) and that, if they are required to pay additional taxes then the contracts are void for want of consideration. This contention fails to follow the terms of the contracts which they executed for the reason that Article 8 (Taxes) unequivocally modifies Article 7 (Price) in the event there is any increase in the production or severance taxes. Any such increase is unmistakably the obligation of the producer (Seller) and diminishes his original "realizable price" by the amount of the tax increase. Here the increase is 2.0 cents per Mcf in the severance tax.

It is therefore concluded the 2.0 cents per Mcf increase in the severance tax is the obligation of and must be paid by the producers (Sellers).

[2] The Hunter Company, Inc. (Hunter), in Docket No. G-17543 (Rate Schedule No. 1) Exhibit No. 5, sells gas to Southern Natural under a contract

dated January 8, 1954.[7] The tax reimbursement provisions of its contract (See pp. 26–27, Exhibit No. 1) differs from the three contracts for sales to Southern Natural which have been considered in [1] above, hence it requires separate consideration.

The applicable tax reimbursement provisions in Hunter's gas sales contract with Southern Natural are as follows:

> Seller shall be obligated for the payment of all taxes levied while this agreement is in effect upon the production or severance of gas delivered hereunder up to an amount equal to the aggregate of all such taxes as in effect on the date of this agreement. Seller shall also be obligated for the payment of five-eighths (⅝) and Buyer shall be obligated for the payment of three-eighths (⅜) of all taxes levied on the gathering of gas delivered hereunder up to an amount equal to the aggregate of all such taxes as in effect on the date of this agreement. In the event, at any time while this agreement shall be in effect, the total amount of all taxes payable by either Seller or Buyer imposed upon or in respect of the production, severance or gathering of gas delivered hereunder shall be increased above the total amount of such taxes as the same are in effect on the date of this agreement, then three-fourths (¾) of such increase shall be payable by Buyer and one-fourth (¼) of such increase shall be payable by Seller, and the party who shall pay such increase shall be entitled to reimbursement from the other party in the proportions set forth above.

Hunter and Southern Natural stipulated as to the pertinent facts and the contentions of each party (Exhibit No. 5). Hunter contends it, as Seller, is entitled to reimbursement of 1.5 cents (which is ¾ths of the 2.0 cents increase in the severance tax) effective December 1, 1958. Southern Natural, as Buyer, interprets the contract as requiring it to reimburse Seller for 0.75 cent (which is ¾ of one cent, this being its portion of one-half of the 2.0 cents increase in the severance tax) of the 2.3 cents per Mcf severance tax.

On December 17, 1958, Hunter filed a Section 4 rate increase reflecting the claimed 1.5 cents tax reimbursement. This filing was suspended but became effective, subject to refund (Exhibit No. 5, p. 3).

By its interpretation of the Hunter contract, Southern Natural would avoid any reimbursement on 1.0 cent of the 2.0 cents per Mcf increase in the Louisiana severance tax. Southern Natural is either obligated to reimburse Hunter for ⅜ths of the first 1.0 cent (0.375¢) and ¾ths of the second 1.0 cent (0.75¢) of the increase in the severance tax of 2.0 cents per Mcf which became effective on December 1, 1958, for a total of 1.125 cents; or it is obligated to reimburse Hunter for the full ¾ths (1.5¢) of the total 2.0 cents increase.

The initially levied 1.0 cent per Mcf gathering tax was "suspect" *ab initio* and it was paid under protest. *Bel Oil Corp.* v. *Fontenot, supra*, p. 572, see n. 6, regarding the order of the trial court directing refunds of the payments made under protest during the period from November 10, 1954 to August 1, 1958; see also *Southern Natural Gas Company* v. *Roland, supra*, p. 892, where the court said, "[1] Having paid under protest taxes assessed against it by the State of Louisiana under the authority of L.R.S. 47:671, *et seq.* (generally referred to as the gas gathering tax statute) the plaintiff, Southern Natural Gas Company, instituted this action * * * to compel the Collector of Revenue to refund the taxes so paid * * *" Southern Natural was awarded a judgment by the trial court for its taxes paid under protest.

---

[7] By an agreement dated January 8, 1954, Hunter agreed to sell and Southern Natural agreed to purchase natural gas produced by Hunter from Spider Field, Louisiana, pursuant to the terms and provisions of a contract dated February 13, 1953 between C. H. Lyons, Sr., *et al.* and Southern Natural.

It must be assumed all parties to the contract were aware of the provisions of Section 21 of Article 10 of the Louisiana Constitution of 1921, as amended, expressly prohibiting the levying of any tax on the gathering of natural gas. The trial court in the *Bel Oil* case, *supra*, quite emphatically held any tax on the gathering of natural gas to be "* * * void under the language * * *" of the constitutional provision. Hence, the provision was, at least, "suspect" when written into the contract. Therefore, when the Louisiana Collector of Revenue was directed in the *Southern Natural* case, *supra*, to make refunds to Southern Natural of the tax on the gathering of gas—⅜th of 1.0 cent, or 0.375 cent per Mcf—this order of the Louisiana Supreme Court eliminated the tax base of 1.3 cents per Mcf as being the total amount of taxes in effect on the date of the contract; thus, there remained but 0.3 cent per Mcf tax in effect on that date.

It is therefore concluded that Southern Natural is obligated to and must reimburse Hunter for ¾ths, or 1.5 cents per Mcf of the 2.0 cents per Mcf increase in the severance tax.

[3] The Mississippi River Fuel Corporation (Mississippi), in Docket No. G-17715 (Rate Schedule No. 11) Exhibit No. 6, sells natural gas to Southern Natural under its Rate Schedule No. 11. The tax reimbursement provisions of its contract (see pp. 28-31, Exhibit No. 1) differs from the four preceding contracts for sales to Southern Natural which have been considered in [1] and [2], *supra*. Therefore it requires separate consideration.

The applicable tax reimbursement provisions in Mississippi's gas sales contract with Southern Natural are as follows:

> ### ARTICLE 7
>
> (Payment and Reimbursement of Taxes)
>
> Seller shall pay the Louisiana severance tax imposed by Act 449 of 1950, RS 47:633 and the Louisiana gas gathering tax imposed by Act 11 of 1948, as amended by Act 45 of 1954, RS 47:671-677, upon gas delivered hereunder. Buyer shall reimburse Seller for said gathering tax, which reimbursement is included in the prices provided in Section 1 of Article 6.
>
> With respect to taxes upon or with respect to the production, severance, handling, gatherings, sale or delivery (up to and including the point of delivery of gas to Buyer hereunder) of gas delivered hereunder and any other taxes of a similar nature or equivalent effect which are measured by the volume, value or sales price of such gas (all of which are herein called "taxes"), Seller shall be and remain obligated for taxes up to 1.3¢ per Mcf. With respect to any amount of taxes which may hereafter be in effect in excess of an aggregate of 1.3¢ per Mcf, Buyer shall be liable for ¾ and Seller shall be liable for ¼ of such excess.

Mississippi and Southern Natural stipulated as to the pertinent facts and the contentions of each party (Exhibit No. 6). Mississippi contends it, the Seller, is entitled to reimbursement of 1.75 cents of the 2.3 cents severance tax which became effective on December 1, 1958, (Exhibit No. 6, p. 3) while Southern Natural, the Buyer, interprets the contract as requiring it to reimburse Seller for 0.75 cents of the 2.3 cents severance tax (Exhibit No. 6, p. 3).

Mississippi, on January 2, 1959, filed a Section 4 rate increase reflecting the claimed 1.75 cents tax reimbursement. This filing was suspended but became effective, subject to refund (Exhibit No. 6).

In Article 6 (Price) of the contract executed by Seller and Buyer (Exhibit No. 1, pp. 29–30) "* * * Buyer agrees to pay Seller for each Mcf of gas delivered * * * prices which will include reimbursement of Seller in the amount of 1.0 cent per Mcf for the payment of gathering taxes provided for in Article 7 * * *" Then it was further agreed in Article 7 (Payment and Reimbursement of Taxes) that "Seller shall pay the Louisiana severance tax * * * and the Louisiana gathering tax * * *" and that "* * * Buyer shall reimburse Seller for said gathering tax, which reimbursement is included in the prices provided in Section 1 of Article 6." Then it was further provided in Article 7 (Payment and Reimbursement of Taxes) that "With respect to * * * any other taxes * * * Seller shall be and remain obligated for taxes up to 1.3 cents per Mcf. With respect to any amount of taxes which may hereafter be in effect in excess of an aggregate of 1.3 cents per Mcf, Buyer shall be liable for ¾ and Seller shall be liable for ¼ of such excess." (Exhibit No. 1, p. 7).

The 1.0 cent gathering tax was determined to be unconstitutional; Buyer is therefore not obligated to reimburse Seller for the amount of this tax. Seller and Buyer agreed that Seller shall be and remain obligated for taxes up to 1.3 cents per Mcf. The total of all taxes levied against the gas amounts to 2.3 cents per Mcf.

Therefore, it is concluded that Mississippi is obligated for and must pay the first 1.3 cents per Mcf tax and that Southern Natural is obligated to and must reimburse Mississippi for ¾th of the remaining 1.0 cent per Mcf tax, or 0.75 cent per Mcf.

[4] The Crescent Drilling Company, Inc. (Crescent), in Docket Nos. G–17688, G–18410 and RI61–287 (Rate Schedule No. 2), Exhibit No. 1, p. 1, and the T. L. James & Company, Inc. (James), in Docket Nos. G–18409 and RI66–173 (Rate Schedule No. 6), Exhibit No. 1, p. 1, make sales of natural gas from their Louisiana production to the Arkansas Louisiana Gas Company (Ark-La). The tax reimbursement provisions in these contracts are set out in Exhibit No. 1, pp. 2 and 3. When the 2.0 cents per Mcf Louisiana gathering tax was suspended and the severance tax of 0.3 cent was increased by 2.0 cents per Mcf, each effective December 1, 1958, Crescent and James each filed a Section 4 rate increase reflecting their claimed 1.667 cents per Mcf tax reimbursement. Each filing was suspended but became effective after the statutory suspension period, subject to refund.

Under the terms of Section 7 (Taxes) (B)(1) of the contracts:

> Seller shall bear any and all severance and production taxes, and taxes of a similar nature or equivalent effect, up to the total amount of all such taxes levied under the statutes of the State of Louisiana as of January 1, 1956. If from time to time the total amount of such tax or taxes exceeds the amount thus to be borne by Seller, the amount of the excess shall be borne by Buyer and by Seller in the respective proportions stipulated in the Contract Tax Ratio defined in Section 1.

The tax reimbursement provision, *supra*, of the contracts state "Seller shall bear any and all severance * * * taxes * * * up to the total amount * * * levied * * * as of January 1, 1956." The severance tax levied to January 1, 1956, was 0.3 cent per Mcf. The Sellers, Crescent and James, were obligated under the terms of the contracts to pay the severance tax. Then, to permit a determination of its constitutionality, the Legislature suspended the 2.0 cents per Mcf gathering tax and levied an additional 2.0 cents per Mcf severance tax. This brought the total severance tax to 2.3 cents per Mcf. The tax reimbursement provision of the contracts, *supra*, provides "If from time to time the total amount of such tax or taxes exceeds the amount" of 0.3 cent "to be borne by

Seller,"—Crescent and James—"the amount of such excess"—all in excess of the 0.3 cent per Mcf—"shall be borne by Buyer"—Ark-La—"and by Seller"—Crescent and James—"in the respective proportions stipulated in the Contract Tax Ratio defined in Section 1." The Contract Tax Ratio refers to the apportionment of certain taxes in the proportion of two-thirds (⅔) to be paid by the Buyer and one-third (⅓) by the Seller (Exhibit No. 1, p. 1, n. 1).

Since the gathering tax was determined to be unconstitutional and void *ab initio* in the *Bel Oil* case, *supra*, it no longer can be considered an obligation of either party under the contract. The Court, in the *Bel Oil* case, *supra*, as well as the *Southern Natural* case, *supra*, ordered refunds of the gathering taxes which had been paid under protest. Since the gathering tax was void *ab initio*, there existed only the 0.3 cent severance tax on January 1, 1956. This was the base upon which the additional 2.0 cents per Mcf severance tax was to be added when it became effective on December 1, 1958.

The tax reimbursement provisions of the Crescent and the James contracts with Ark-La, *supra*, are therefore construed as requiring the Sellers, Crescent and James, to pay one-third (⅓), or 0.667 cents and the Buyer, Ark-La, to pay two-thirds (⅔), or 1.333 cents per Mcf of the 2.0 cents per Mcf increase in the severance tax.

[5] James and other producers entered into additional contracts to sell other Louisiana production to Ark-La. These contracts contain different tax reimbursement provisions from those considered above. (Exhibit No. 1, pp. 6, 7 and 8). The James contract in Docket No. G–16492 (Rate Schedule No. 1); the Crescent Production Company, Inc., *et al.*, in Docket No. G–17685 (Rate Schedule Nos. 1[8] and 8); the Harway Producers, Inc., in Docket No. G–17694 (Rate Schedule No. 8), J. S. Rushing in Docket No. G–17696 (Rate Schedule No. 1) and Sam Sklar in Docket No. G–17697 (Rate Schedule No. 2) contain identical tax reimbursement provision as set forth in Exhibit No. 1, pp. 6, 7 and 8.

The Crescent Production Company (Crescent) in Docket Nos. G–17678 and G–20514 (Rate Schedule Nos. 10 and 11), Exhibit No. 1, pp. 4 and 5; the Harway Producers, Inc. (Harway) in Docket Nos. G–17676 and G–20515 (Rate Schedule No. 1), Exhibit No. 1, p. 5; and T. L. James & Company, Inc. (James) in Docket Nos. G–18408 and RI62–193 (Rate Schedule No. 4), Exhibit No. 1, p. 5 make sales of natural gas from their Louisiana production to the Mississippi River Fuel Corporation (Mississippi) under contracts which contain the same tax reimbursement provisions as the above sales to Ark-La.

Each of the foregoing producers making sales to Ark-La and Mississippi filed Section 4 rate increases reflecting their claimed tax reimbursement. These filings were suspended but, after the statutory suspension period, became effective subject to refund.

The tax reimbursement provisions of the foregoing contracts provide, as shown on pages 6 and 7 of Exhibit No. 1, the "Seller shall pay * * * all existing severance * * * taxes * * * and Buyer shall pay all existing gathering * * * taxes." The existing 0.3 cent severance tax was paid by the Sellers, and the existing 1.0 cent gathering tax was paid by the Buyers, Ark-La and Mississippi. On August 1, 1958, an additional 1.0 cent gathering tax was levied. However, the total 2.0 cents gathering tax was suspended and the severance tax was increased by a levy of 2.0 cents per Mcf, each effective on December 1, 1958.

---

[8] Under this rate schedule, Crescent filed for a tax reimbursement of one (1.0) cent per Mcf. (Exhibit No. 8, ln. 3). Under this rate schedule the severance tax increase was but one (1.0) cent per Mcf instead of 2.0 cents per Mcf. This one (1.0) cent per Mcf increase in the severance tax was applicable to wells classified as "incapable" by the Louisiana Department of Revenue. Crescent claims full reimbursement. Under the terms of the contract, Crescent, the Seller, is obligated to pay one-third (⅓), or 0.333 cent per Mcf and Ark-La is obligated to pay two-thirds (⅔), or 0.667 cent per Mcf, effective December 1, 1958.

The tax reimbursement provisions further provide that "any increase in * * * severance, gathering * * * taxes * * * in addition to or greater than those being levied * * * on the date" of the execution of the contract "* * * are hereafter * * * referred to as an additional tax" and "such additional tax * * * shall be paid and borne one-third by Seller and two-thirds by Buyer." The Sellers contend that the only "additional" tax levied was the 1.0 cent gathering tax levied by Act No. 2 of the Louisiana Legislature of 1958. The Buyers contend, since there was in existence on December 1, 1958 a 0.3 cent severance tax, the 2.0 cents per Mcf increase in the severance tax levied by Act No. 2 and effective December 1, 1958, is an "additional tax" under the terms of the contract.

The gathering tax of 2.0 cents was determined to be void *ab initio* and unconstitutional in *Bel Oil* and *Southern Natural*, *supra*, and refunds ordered for those gathering taxes which had been paid under protest. Thus, the only existing tax was on the severance of the gas and the tax provisions of the contracts provide that "any increase," which is interpreted to mean "any addition to," must, therefore, be added to the existing 0.3 cent severance tax. This was the base upon which the 2.0 cents additional severance tax was added when it became effective on December 1, 1958.

Therefore, the tax reimbursement provisions in the foregoing contracts, *supra*, are construed as requiring the Sellers to pay one-third (⅓), or 0.667 cents per Mcf and the Buyers, Ark-La and Mississippi, to pay two-thirds (⅔), or 1.333 cents per Mcf of the 2.0 cents per Mcf increase in the severance tax effective December 1, 1958.

[6] The Crescent Production Company, Inc., *et al.* (Crescent) in Docket Nos. G–17685 and RI61–414 (Rate Schedule Nos. 3, 4, 5 and 7) Exhibit No. 1, pp. 9–11; Harway Producers, Inc. (Harway) in Docket Nos. G–17694 and RI61–415 (Rate Schedule Nos. 2, 3, 4, 6 and 7) Exhibit No. 1, pp. 9–11; and T. L. James & Company, Inc., *et al.* (James) in Docket Nos. G–18361 and RI66–172 (Rate Schedule No. 5) and in Docket Nos. G–18362 and RI66–173 (Rate Schedule No. 7) Exhibit No. 1, pp. 9–11, make sales of natural gas from their Louisiana production to the Arkansas Louisiana Gas Company (Ark-La). The tax reimbursement provisions in these contracts are set forth in Exhibit No. 1, pp. 10 and 11. When the 2.0 cents per Mcf Louisiana gathering tax was suspended and the severance tax of 0.3 cent was increased by 2.0 cents, each effective on December 1, 1958, each producer filed Section 4 rate increases reflecting their claimed 0.5 cent per Mcf tax reimbursement. Each filing was suspended but became effective after the statutory suspension period, subject to refund.

The tax reimbursement provisions in these contracts provide, as set out in Exhibit No. 1, pp. 10 and 11:

> (A) The price which Buyer shall pay hereunder to Seller for each one thousand (1,000) cubic feet of gas on the basis of measurement and calculations hereinbefore provided shall be:
>
> (1) During the first two years next following the effective date hereof $0.11021;
>
> (2) During the next two years of the term hereof, $0.11471;
>
> (3) During the next two years of the term hereof, $0.11921;
>
> (4) During the next two years of the term hereof, $0.12370;

> (5) During the next three years of the term hereof, $0.12820;
> (6) During the next three years of the term hereof, $0.13270;
> (7) During the next three years of the term hereof, $0.13720;
> (8) During the remainder of the time this agreement remains in effect, $0.14170;
>
> in each case, however, *less* the amount per thousand cubic feet (one ($0.01) cent) now levied on Buyer in respect to the tax for gathering said gas; * * *. And provided further that in the event the statutes of the State of Louisiana, under which gas gathering tax is presently levied, shall be amended so as to levy said tax, or similar tax, at a rate greater than one ($0.01) cent per thousand cubic feet, then the price of gas thereafter received hereunder shall be reduced in an additional amount per thousand cubic feet, which shall be one-half the amount by which such tax shall exceed one ($0.01) cent per thousand cubic feet, so that the economic burden of such increased tax shall be borne one-half by Seller and one-half by Buyer. * * *

As set out in the contract provisions above, the Buyer agrees to pay the Seller an escalating price for the gas purchased less 1.0 cent per Mcf for the gathering tax levied on the Buyer. Thus, under (A)(1) above, the Buyer during the first two years of the contract was obligated to pay the Seller 11.021 cents, less 1.0 cent for the gathering tax, or 10.021 cents per Mcf net. Then the contract goes on to provide that should the State of Louisiana amend the law, under which the gathering tax is presently levied, so as to increase the amount of the gathering tax, or a similar tax, at a rate greater than the present 1.0 cent, then the price being paid for the gas by the Buyer to the Seller shall be further reduced so that Buyer and Seller will each pay one-half of the increase so as to share the economic burden of such increased tax. Sellers rely heavily upon the words "or similar tax" contending that the 2.0 cents increase in severance tax, effective simultaneously with the discontinuance of the 2.0 cents gathering tax, is a "similar tax." Sellers further contend the contract provisions "that the economic burden of such increased tax shall be borne one-half by Seller and one-half by Buyer" applies to the second 1.0 cent of the 2.0 cents severance tax.

The gathering tax was, by statute, imposed upon the purchaser of the gas, not upon the Seller. The 0.3 cent severance tax was, by statute, levied upon the Seller of the gas, not upon the Buyer. No reference is found in the contract as to the payment of the 0.3 cent severance tax, or any increases thereto, so it must be assumed the severance tax would be paid by the Seller. The term "or similar tax" obviously refers to gathering taxes or such additional taxes as might be levied upon the gathering function in the collection and treatment of the gas for delivery into the interstate pipeline. Nothing is found in the contracts which requires the Buyer to reimburse the Sellers for any part of the increased severance tax which became effective on December 1, 1958.

Ark-La, the Buyer, orally moved on the record (Tr. 128) to dismiss the foregoing Section 4 rate filings upon the grounds that the contracts do not require Ark-La to reimburse the Sellers for any taxes. The motion to dismiss was taken under advisement to be ruled upon in the initial decision. (Section 1.12(d) of the Commission's Rules of Practice and Procedure.) The motion to dismiss was renewed in Ark-La's initial brief (P. 14). It was supported in the brief of the Commission Staff at P. 13 thereof.

Since it has been determined, *supra*, there is no contractual requirement for Ark-La to reimburse Sellers for any part of the severance tax the motion to dismiss is sustained, *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332, 343–344, and the filings for 0.5 cent per Mcf increase in tax reimbursement by the Sellers are disallowed.

[7] James Muslow, *et al.* (Muslow) in Docket No. G–17602 (Rate Schedule No. 1), Exhibit No. 1, p. 12, makes a sale of natural gas from their Louisiana production to Arkansas Louisiana Gas Company (Ark-La). The tax reimbursement provisions in the Muslow contracts are set forth in Exhibit No. 1, pp. 13 and 14. When the 2.0 cents per Mcf Louisiana gathering tax was suspended and the severance tax of 0.3 cent was increased by 2.0 cents, each effective on December 1, 1958, Muslow filed a Section 4 rate increase reflecting their claimed 1.667 cents per Mcf tax reimbursement. The filing was suspended but became effective, after the statutory suspension period, subject to refund.

The tax reimbursement provisions in the Muslow contract are as follows:

> (B) Irrespective of statutory liability for a given tax, it is agreed that, as between the parties, the economic burden of the certain types of taxes hereinafter identified which are now or hereafter imposed in respect of any and all production delivered hereunder for which either party may be liable, either directly or indirectly through an obligation to reimburse others, shall be borne as follows:
>
> > (1) Seller shall bear all taxes presently imposed on Seller and taxes of a similar nature or equivalent effect up to the total amount of such taxes imposed as of the date of this contract, subject to the paragraph next following.
> >
> > (2) Buyer shall bear any gathering tax now or hereafter imposed on either Buyer or Seller up to the amount of the gathering tax presently imposed on Seller.
> >
> > (3) If from time to time during the term hereof the taxes covered by Subsections (B)(1) and (B)(2) above be imposed at a higher tax rate or rates than the rate or rates therein contemplated to be borne respectively by the parties, then to the extent that such rate increase results in increasing the total amount of tax over the amount to be borne by a particular party as aforesaid, such increase shall be borne by Buyer and by Seller in the respective proportions stipulated in the Contract Tax Ratio defined in Section 1 hereof.
> >
> > (4) Any and all new and additional taxes such as sales, delivery, receipt, transactions, occupation, service, transmission, transportation, export or excise taxes, or taxes of similar nature or equivalent in effect (but not including such taxes as income, excess profits, capital stock, franchise, or general property taxes) shall be borne by Buyer and by Seller in the respective proportions stipulated in the Contract Tax Ratio.

Ark-La alleges it is obligated to reimburse Muslow 1.333 cents per Mcf tax under the provisions of the above contract.

According to (B)(1), *supra*, Muslow, the Seller, was obligated to pay the 0.3 cent per Mcf severance tax, it being the "presently imposed" tax "on Seller," and according to (B)(2), *supra*, Ark-La, the Buyer, was obligated to pay "any gathering tax now or hereafter" levied on either the Buyer or the Seller up to the amount of the gathering tax of 1.0 cent per Mcf presently imposed on the Seller. Then (B)(3), *supra*, states that if during the term of the contract the taxes covered by (B) (1) and (2), *supra*, are increased then such increase shall be paid by Buyer and Seller according to the terms of the Contract Tax Ratio as defined in Section 1 of the contract. Finally in (B)(4), *supra*, it was agreed that "any and all new and additional taxes * * * shall be borne by Buyer and by Seller in the respective proportions stipulated in the Contract Tax Ratio" which provides that two-thirds (⅔) will be paid by the Buyer and one-third (⅓) by the Seller.

Since there was a 0.3 cent per Mcf severance tax in effect on December 1, 1958, the 2.0 cents per Mcf increase in the severance tax on that date is construed, under the terms of the tax reimbursement provisions of the contract, *supra*, to be an additional tax within the provisions of (B)(4), *supra*. Therefore, under the terms of the Contract Tax Ratio of the contract Ark-La is obligated to reimburse Muslow two-thirds of the additional severance tax of 2.0 cents per Mcf, or 1.333 cents per Mcf, not the 1.667 cents per Mcf as claimed by Muslow in its Section 4 filing.

[8] Austin E. Stewart, *et al.*, (Stewart), in Docket No. G–17699 (Rate Schedule No. 2), Exhibit No. 1, p. 15, makes sales of natural gas from their Louisiana production to Ark-La. The tax reimbursement provisions in their contracts are set forth in Exhibit No. 1, pp. 16, 17 and 18. When the 2.0 cents per Mcf Louisiana gathering tax was suspended and the severance tax of 0.3 cent was increased by 2.0 cents per Mcf, each effective on December 1, 1958, Stewart filed a Section 4 rate increase reflecting their claimed 1.75 cents per Mcf tax reimbursement. This filing was suspended but became effective, after the statutory suspension period, subject to refund.

The tax reimbursement provisions of the contract between Stewart and Ark-La provide that "Seller shall pay * * * all existing severance" taxes "* * * and Buyer shall pay all existing gathering * * * taxes." At the date of the contract there existed the 0.3 cent severance tax which, according to the foregoing, was the obligation of Stewart, and there existed the 1.0 cent gathering tax which, according to the foregoing, was the obligation of Ark-La. The contract goes on to provide that "any increase * * * in severance * * * taxes * * * in addition to or greater than those being levied" on the date of the contract "* * * * then Buyer shall, so long as such additional tax shall be in effect, pay to Seller each month * * * three-fourths of such additional tax * * *" for which the Seller is liable and, further, "* * * in the event any" additional tax "* * * is levied for which the Buyer is liable" then the Seller shall, so long as the tax is in effect, "* * * pay to Buyer * * * one-fourth of such additional tax."

The 2.0 cents per Mcf additional severance tax which became effective December 1, 1958, is construed, under the terms of the foregoing tax reimbursement provisions of the contract, to be an additional severance tax. Accordingly, it is concluded, under the terms of the contract that, Ark-La, the Buyer, is obligated to reimburse Stewart, the Seller, for three-fourths (¾) of the additional 2.0 cents per Mcf severance tax, or 1.5 cents per Mcf, and not the 1.75 cents per Mcf as claimed by Stewart in their Section 4 filing.

[9] J. C. Trahan (Operator), *et al.*, (Trahan) in Docket Nos. G–17698, G–18323 and G–18274 (Rate Schedule Nos. 3 and 8), Exhibit No. 1, p. 19, makes sales of natural gas from their Louisiana production to Ark-La. The tax reimbursement provisions in their contracts are set forth in Exhibit No. 1, pp. 20–21. These provisions are similar to, yet not identical with, other contracts hereinabove considered. The 2.0 cents per Mcf Louisiana gathering tax was suspended and the severance tax of 0.3 cent was increased by 2.0 cents per Mcf to 2.3 cents per Mcf, each effective on December 1, 1958. Trahan filed a Section 4 rate increase in Rate Schedule No. 3 reflecting their claimed 1.667 cents per Mcf and in Rate Schedule No. 8 the filing reflected their claimed 1.75 cents per Mcf tax reimbursement. These filings were suspended but became effective, after the statutory suspension period, subject to refund.

The tax reimbursement provisions in the Trahan contracts are fully set forth in Exhibit No. 1, pp. 20–21. They provide that Trahan, the Seller, shall pay all severance and production taxes in effect on the date of the contract and that Ark-La will pay all gathering taxes in effect on that date. The severance tax was 0.3 cent and the gathering tax was 1.0 cent on the date of the contract. If the severance and/or gathering taxes are increased from the rates effective on the date of the contract then such increase is to be paid in the respective provisions stipulated in the Contract Tax Ratio and any new and additional taxes were to be paid in the portions stipulated in the Contract Tax Ratio.

As shown in Exhibit No. 1, p. 19, n. 1, the Contract Tax Ratio applicable to Rate Schedule No. 3 provided that the Seller, Trahan, would be liable for one-third (⅓) of any additional taxes and the Buyer, Ark-La, would be liable for two-thirds (⅔) of any additional taxes. Also as shown in Exhibit No. 1, p. 19, n. 2, the Contract Tax Ratio applicable to Rate Schedule No. 8, provided that the Seller, Trahan, would be liable for one-fourth (¼) of any additional taxes and the Buyer, Ark-La, would be liable for three-fourths (¾) of any additional taxes.

Therefore, under the provisions of the Contract Tax Ratio applicable to Rate Schedule No. 3 it is found that Ark-La is liable to Trahan for 1.333 cents per Mcf of the additional 2.0 cents severance tax from December 1, 1958, and it is further found that Ark-La is liable to Trahan, under the provisions of the Contract Tax Ratio applicable to Rate Schedule No. 8, for 1.5 cents per Mcf of the additional 2.0 cents per Mcf severance tax from December 1, 1958.

[10] David Crow, Trustee, (Crow) in Docket No. G–17669 (Rate Schedule No. 3), Exhibit No. 1, p. 44; Cyprus Oil Company (Operator), *et al.*, (Cyprus) in Docket No. G–17533 (Rate Schedule No. 2), Exhibit No. 1, p. 44; Tidewater Oil Company, (Tidewater) in Docket No. G–17668 (Rate Schedule No. 54), Exhibit No. 1, p. 44; Tidewater Oil Company (Operator), *et al.*, (Tidewater, Operator) in Docket No. G–17599 (Rate Schedule No. 62), Exhibit No. 1, p. 44; Willard E. Walker (Walker) in Docket No. G–17662 (Rate Schedule No. 1), Exhibit No. 1, p. 44; and Ted Weiner, *et al.*, (Weiner) in Docket No. G–17670 (Rate Schedule No. 3), Exhibit No. 1, p. 44, each make sales of natural gas from their Louisiana production to the Transcontinental Gas Pipe Line Corporation (Transco). The 2.0 cents per Mcf Louisiana gathering tax was suspended and the severance tax of 0.3 cent was increased by 2.0 cents per Mcf to 2.3 cents per Mcf, each effective on December 1, 1958. The foregoing Sellers filed Section 4 rate increases reflecting their claimed 1.75 cents per Mcf tax reimbursement. These filings were suspended but became effective, after the statutory suspension period, subject to refund. The tax reimbursement provisions of these contracts are set forth in Exhibit No. 1, pp. 45–46.

The position of David Crow, Trustee, in Docket No. G–17669 (Rate Schedule No. 3) was set forth in a telegram from John M. Shuey, his attorney, in which it was stated "* * * It would not appear that the tax reimbursement provisions is disputed as between the sellers and the purchaser." (Tr. p. 40, lns. 5–12.) The position of Transco, the Buyer, was stated upon the record (Tr. p. 41, lns. 18–24) "* * * with respect to the sales to Transcontinental Gas Pipeline Corporation * * * Transco's position is 1.75 cents with respect to all of their dockets * * *." Having thus stated their positions regarding the tax reimbursement provisions of their contracts neither the Sellers nor the Buyer filed briefs herein.

The Commission Staff, in its brief (P. 19), contend that Transco is only obligated to reimburse the Sellers 1.5 cents per Mcf and not 1.75 cents per Mcf as they have agreed.

Crow filed a "Brief in Reply to Commission Staff" stating "* * * no controversy exists in connection with tax reimbursements" between Transco and Crow. At page one of the Crow reply brief there is a quotation from "Stipulation 11 * * *" as follows:

> That both Crow and Transco interpret the tax reimbursement provisions of the contract as providing that Transco will reimburse Crow a total of 1.75¢ of the total Louisiana severance taxes which became effective December 1, 1958, and although the order issued by the Commission herein on January 28, 1959, states that this "interpretation appears to be questionable," there is no difference of interpretation as between Crow and Transco.

Since the foregoing "Stipulation 11" does not appear in this record it is quoted only to give further emphasis to the statements made for Sellers and Buyer upon the record, *supra*.

Since the Sellers and Transco have agreed that the Buyer (Transco) will reimburse the Sellers 1.75 cents per Mcf of the increased 2.0 cents per Mcf severance tax the same is hereby approved.

[11] Several of the parties herein contended upon the record, and in their briefs, that the legislative history which culminated in the enactment of Act No. 3 of the Extra Session of 1958, which suspended the 2.0 cents gathering tax and the enactment of Act No. 2 of the Extra Session of 1958, which increased the severance tax from 0.3 cent to 2.3 cents per Mcf, each Act effective December 1, 1958, should be considered by the Examiner to determine the intent of the Louisiana Legislature, in suspending the gathering tax and levying the additional severance tax. From this record there appears to be no ambiguity between Act No. 3, suspending the gathering tax for the determination of its constitutionality, and Act No. 2 increasing the severance tax. Obviously from the language of Act No. 3 the Louisiana Legislature had some doubts as to its constitutionality, therefore, the Legislature prudently suspended the gathering tax until its constitutionality could be determined by the Courts. As is the function of all legislatures, the Louisiana Legislature has the responsibility for providing revenues to meet its own appropriations and the State's expenses. Since the Legislature had no doubts as to its constitutional authority to levy gas severance taxes, it simply increased this tax levy by an amount sufficient to meet the State's estimated revenue requirements.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) Each producer-seller of Louisiana produced natural gas whose filings for increased rates were consolidated herein, and are the subject of this Order, will make appropriate refunds, with applicable interest to the date of payment, of all tax reimbursements collected by them in excess of the amount hereinabove found and determined to be the contractual amount in each rate schedule to be reimbursable to them by the purchaser of the natural gas.

(B) Each producer-seller of Louisiana produced natural gas whose rate schedules are subject to the order issued in (A), *supra*, will within sixty (60) days following the issuance date of this Order file amended rate schedules, where appropriate, reflecting the amount of tax reimbursement herein found and determined to be the contractual amount reimbursable to them by the purchaser of the natural gas.

HARRY W. FRAZEE,
Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

OTTER TAIL POWER COMPANY, DOCKET NO. E-7254

AMENDMENT OF ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued August 18, 1966)

By our order issued January 17, 1966, 35 FPC 89, in this docket, Applicant was authorized to issue Promissory Notes in the aggregate principal amount of $10,000,000 outstanding at any one time, upon the terms and conditions set forth in the application. The application provided among other things, that the notes would be issued at the current Minneapolis prime rate which was currently 5% but the rate was not to exceed 5½%.

Applicant on August 3, 1966, filed a Supplemental Application requesting a modification of the Commission's authorization by providing that the notes will be issued at the current Minneapolis prime rate which is currently 5¾% but not to exceed 6½%.

Applicant points out that since filing the original application on November 17, 1965 the Minneapolis prime rate for short term unsecured Promissory Notes has increased and loans of this nature can no longer be obtained at the rates then specified.

The Commission orders:

The order issued January 17, 1966 is hereby modified to the extent that Applicant is authorized to continue to issue Promissory Notes under that order at the Minneapolis prime rate, which is currently 5¾% but that the interest rate shall not exceed 6½%, subject to all other provisions of the order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., and David S. Black.

COMMONWEALTH EDISON COMPANY AND CENTRAL ILLINOIS ELECTRIC AND GAS COMPANY, DOCKET NO. E-7275

ORDER WAIVING INTERMEDIATE DECISION PROCEDURE

(Issued August 19, 1966)

At the close of the evidentiary hearing in this proceeding on July 20, 1966, joint applicants Commonwealth Edison Company (Edison), and Central Illinois Electric and Gas Company (Central), requested waiver of the intermediate decision procedure and omission of the initial decision of the Presiding Examiner pursuant to Section 1.30 of the Commission's Rules of Practice and Procedure (Tr. 854–860). On July 22, 1966, their motion was referred to the Commission by the Presiding Examiner, William L. Ellis. No objections thereto have been filed by any party. The time for answers to the motion as provided by the Commission's Rules of Practice and Procedure (Section 1.12), has expired. By telegram received August 4, 1966, Intervenor City of Rockford, Illinois, advised that it concurred in the motion for waiver of the intermediate decision procedure.

The instant proceeding was initiated on March 2, 1966, through the filing of a joint application of Edison and Central requesting authority under Section 203 of the Federal Power Act to merge and consolidate their respective facilities. By order of June 3, 1966, 35 FPC 877, the Commission set the proposed merger application for hearing. Hearing sessions were held on July 11, 14, 15, 19 and 20, 1966. The briefing schedule as fixed by the Presiding Examiner specifies the filing of simultaneous main and reply briefs by all parties; main briefs to be filed on or before August 24, 1966 and reply briefs on or before September 8, 1966.

Under the briefing schedule fixed by the Presiding Examiner, waiver of the intermediate decision procedure will facilitate Commission consideration of this matter upon the merits at an early date. The public interest will be served by waiver of the intermediate decision procedure.

Edison and Central in support of their request for waiver of the intermediate decision procedure point out that the merger proposal and the basis of the underlying exchange of stock between the Companies relate to, among other things, market values prevailing at the time the subject application was filed with this Commission, March 2, 1966. Although passed upon by Edison's stockholders, the proposed merger must be submitted to the vote of Central's stockholders. In that regard, Central's counsel advised that (Tr. 857):

> * * * the stockholders of Central have not yet voted. Proxies have been obtained. The annual meeting has been successively postponed, awaiting action of the Commission. There is a serious question of how long we can continue to hold those proxies without going back to the stockholders again. We wish very much to avoid that problem, as well as the effect upon the transaction, itself.

Additionally, it should be noted that our order setting this matter for oral hearing directed the parties in this case to address themselves to a number of factors raising broad and unique policy considerations relating to the appropriate standards for passing upon mergers under Section 203 of the Act. In the absence of any indication that their resolution will be complicated by disputes as to the underlying facts, they are particularly susceptible to Commission resolution in the first instance without initial decision of the Presiding Examiner.

We do not intend by our decision in this case to suggest a Commission policy favoring requests for waiver of the intermediate decision procedure in proceedings involving the exercise of the Commission's regulatory authority pursuant to Section 203 of the Federal Power Act. This action is occasioned by the inability of applicant parties to foresee that Commission policy considerations would require an oral hearing prior to disposition of the merger application upon the merits,* and therefore more time has elapsed than was anticipated.

The Commission finds:

Waiver of the intermediate decision procedure in the above-entitled matter is necessary and appropriate for the purposes of the Federal Power Act, the Commission's rules and regulations thereunder and due and timely execution of the Commission's functions imperatively and unavoidably so requires.

The Commission orders:

(A) The motion for waiver and omission of the intermediate decision procedure is granted. The Examiner is directed to certify the record in this proceeding to the Commission for its decision.

(B) Briefs of all parties to this proceeding shall be filed with the Commission in the manner provided by Sections 1.14–1.17 of the Commission's Rules of

---

As we noted in our order setting this matter for hearing, we intend hereafter to set formal oral hearings on " * * all applications requesting approval of the merger and consolidation of two or more Class A electric utilities * * *."

Practice and Procedure and within the time periods as heretofore fixed by the Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GRAND RIVER DAM AUTHORITY, PROJECT NO. 2524

ORDER MODIFYING PROJECT LICENSE (MAJOR)

(Issued August 19, 1966)*

Application was filed on May 26, 1966, by Grand River Dam Authority, licensee for Project No. 2524, for modification of the license for the project, known as the Salina Pumped Storage Project (Salina Project), presently under construction on the Chimney Hollow and Little Saline Creek, tributaries of the Grand River, in Mayes and Wagoner Counties, Oklahoma.

The licensee seeks the deletion from the license of: (a) Article 12, providing for Commission determination of the actual legitimate original cost of the project pursuant to Section 4(b) of the Federal Power Act; and (b) Articles 7 through 11 which were included in the license in the interests of navigation.

The Federal Power Act was amended to make certain of its provisions relating principally to recapture, original cost and other accounting requirements inapplicable to municipal licenses (16 U.S.C. 828). In our license order issued January 3, 1966, for Project No. 2524, 35 FPC 3, we found (finding (1)) that Grand River Dam Authority is a "public corporation and an instrumentality of the State of Oklahoma"; and "is a municipality within the meaning of Section 3(7) of the Federal Power Act * * * " Accordingly, Article 12 of the license providing for the determination of the actual legitimate original cost is inapplicable to Project No. 2524 and the article should be eliminated from the license.

The licensee requests that the license conditions relating to navigation be eliminated from the license since Project No. 2524 is not to be constructed across navigable waters of the United States. Proposed Project No. 2524 is a pumped storage project and the reservoir for the Markham Ferry Project will serve as the lower pool for the proposed pumped storage project. In the order issued June 22, 1955, issuing license for the Markham Ferry Project (Project No. 2183) the Commission found that the Markham Ferry Project is part of a multiple-purpose plan, "including aids to navigation" (14 FPC 815, 816). See also, *U.S.* v. *Grand River Dam Authority*, 363 U.S. 229, 230.

The license conditions relating to navigation are essentially a restatement of certain provisions of the Federal Power Act which we are not authorized to waive. These conditions are customarily included in licenses for projects affecting navigation and we find no justification for their elimination from this license.

The Commission finds:

It is appropriate and consistent with the public interest that our order issuing license for Project No. 2524 be modified to delete therefrom Article 12.

The Commission orders:

(A) Our license order, issued January 3, 1966, for Project No. 2524 is hereby modified by deleting therefrom Article 12.

---

*See order issued October 11, 1966 granting rehearing for further consideration. See order issued March 8, 1968 further modifying license on rehearing, 39 FPC 241.

(B) The aforementioned application for modification is hereby denied in all other respects.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IOWA SOUTHERN UTILITIES COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-279

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 19, 1966)

On February 28, 1966, Iowa Southern Utilities Company (Applicant) filed in Docket No. CP66-279 an application as amended by letters of April 8 and May 13, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the Applicant and to sell natural gas to Applicant for distribution in Oakville, Iowa, all as more fully set forth in the application.

Applicant proposes to construct and operate a gas distribution system in the community of Oakville. Applicant also proposes that Respondent construct a lateral pipeline of less than 300 feet (pursuant to Respondent's 10-cent formula), a gas measuring station and related facilities. The application states that Oakville is located in southeast Louisa County, Iowa, on State Highway 407 and has a population of 346 and 8 commercial establishments.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	12,766	19,801	21,566
Peak day (Mcf)	100	158	176

The total estimated cost of Applicant's proposed distribution system is $42,443, which cost will be financed with internally generated funds and short term bank loans.

Respondent filed its answer on April 4, 1966, stating that it had no objection to the granting of the order requesting service and the construction of lateral facilities and measuring station.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 16, 1966 (31 F.R. 4482). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) Applicant, Iowa Southern Utilities Company, a Delaware corporation having its principal place of business in Centerville, Iowa, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant and to sell and deliver to Applicant, under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 176 Mcf of natural gas on a maximum day for distribution and resale as hereinbefore described.

(4) The requirement that Michigan Wisconsin serve Applicant, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in Oakville, Iowa, within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 176 Mcf of natural gas on a maximum day to Applicant under a service agreement to be executed by Applicant with, and filed by, Michigan Wisconsin in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall (1) obtain appropriate authorization from the Iowa Commerce Commission for those facilities to be located outside Oakville, Iowa, and (2) be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

C. H. LYONS, SR., ET AL., DOCKET NO. CI66-539;
COASTAL STATES GAS PRODUCING COMPANY, DOCKET NO. CI66-1171

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FPC GAS RATE SCHEDULES FOR FILING

(Issued August 19, 1966)

On December 27, 1965, C. H. Lyons, Sr., *et al.* (Lyons), filed in Docket No. CI66-539 an application, as supplemented on January 25, 1966, and May 13, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale of natural gas to South Texas Natural Gas Gathering Company (South Texas) and delivery of said gas to Trunkline Gas Company (Trunkline) from the Gueydan Field, Acadia and Vermilion Parishes, Louisiana, all as more fully set forth in the application.

On May 26, 1966, Coastal States Gas Producing Company (Coastal States) filed in Docket No. CI66–1171 an application, as supplemented on July 8, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale of natural gas to South Texas and the delivery of said gas to Trunkline from the Manchester Field, Calcasieu Parish, Louisiana, all as more fully set forth in the application.

Applicants will deliver natural gas to Trunkline for the account of South Texas. Concurrently herewith an order is being issued in Docket No. CP66–346, *infra*, p. 489, authorizing South Texas and Trunkline to exchange natural gas and construct and operate the necessary facilities therefor.

Applicant in Docket No. CI66–1171 requests that its certificate be limited to a term of one year because negotiations are presently under way for the long-term dedication of gas from the Manchester Field to another pipeline at a higher rate. Under the circumstances presented by the instant application and in view of the reserve situation in the South Louisiana area, it appears reasonable to limit Coastal States' certificate to a term of one year. Within one year from the date of initial delivery, Coastal States shall file either an application pursuant to Section 7(b) of the Natural Gas Act to abandon the sale of gas to South Texas or a petition to amend this order by authorizing the continuation of the sale to South Texas beyond the one-year limit. The issuance of a limited certificate should not be construed as a waiver of the Commission's responsibility or jurisdiction under Section 7(b) of the Natural Gas Act nor should it be construed as establishing a precedent for the issuance of limited certificates for sales from this or any other area. Any future requests for limited certificates will be considered on an *ad hoc* basis.

Concurrently with their applications Applicants submitted FPC gas rate schedules for the subject sales. By letter-order issued July 22, 1966, Coastal States' contract was accepted for filing for temporary service only and was designated as its FPC Gas Rate Schedule No. 63. The rate schedules submitted by both Applicants will be accepted for filing for sales made pursuant to the certificates issued herein. The sales authorized herein will be at rates below the ceiling rates established by the Commission's Statement of General Policy No. 61–1, as amended.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been received.

At a hearing held on August 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, as supplemented, and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Each Applicant herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission; and such sales by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the FPC gas rate schedules submitted by Applicants should be accepted for filing as hereinafter ordered.

The Commission orders:

(A) Certificates of public convenience and necessity are issued upon the terms and conditions of this order authorizing the sales for resale and delivery of natural gas in interstate commerce by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as hereinbefore described and as more fully described in the applications in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customer involved imply approval of all of the terms of the contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(D) No increase in rate shall be filed by either Applicant prior to July 1, 1967, at any price which would exceed the ceiling prescribed for the given area by paragraph (d) of the Commission's Statement of General Policy No. 61-1, as amended.

(E) The certificate issued in Docket No. CI66-1171 shall be for a term of one year from the date of initial delivery. Within one year from the date of initial delivery Applicant in Docket No. CI66-1171 shall file an application pursuant to Section 7(b) of the Natural Gas Act to abandon the sale of gas to South Texas or a petition to amend the instant order by authorizing the continuation of the subject sale beyond the one-year limit.

(F) The contract of May 15, 1966, submitted by Applicant in Docket No. CI66-1171, heretofore accepted for filing for temporary service and designated as Applicant's FPC Gas Rate Schedule No. 63, is accepted for filing for sales made pursuant to the permanent certificate issued in this order.

(G) The contract of October 15, 1965, submitted by Applicant in CI66-539 is accepted for filing to be effective on the date of initial delivery and is designated as C. H. Lyons, Sr., *et al.*, FPC Gas Rate Schedule No. 25.

Before Commissioners: Lee C. White, Chairman: L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY AND TRUNKLINE GAS COMPANY, DOCKET NO. CP66-346

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 19, 1966)

On April 29, 1966, South Texas Natural Gas Gathering Company (South Texas) and Trunkline Gas Company (Trunkline), collectively referred to as Applicants, filed in Docket No. CP66-346 a joint application, as amended on June 10, and July 8, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the exchange of natural gas in volumes up to 15,000 Mcf per day and for the construction and operation of facilities necessary to effectuate the proposed exchange, all as more fully set forth in the application, as amended.

Applicants seek authority to construct and operate certain facilities and through the use of such facilities to exchange natural gas pursuant to an agreement dated March 11, 1966, as amended. Under the terms of said agreement Trunkline will deliver to South Texas quantities of gas up to 15,000 Mcf per day at a meter station to be constructed, owned and operated by Trunkline at a point on Trunkline's 16-inch pipeline in Brooks County, Texas. The agreement between the parties further provides for the delivery by South Texas of equivalent quantities of gas to Trunkline at Trunkline's existing measuring facilities at the tail-gate of the San Jacinto Gas Processing Corporation Eagan Plant, Acadia Parish, Louisiana, and at a point in Section 24, Township 10 South, Range 6 West, Jefferson Davis Parish, Louisiana. The agreement also provides for the establishment, by mutual agreement between the parties, of additional delivery points on Applicants' respective pipeline systems. The establishment of such additional delivery points will necessitate further authorization by the Commission.

Applicants further propose, in addition to the meter station to be constructed by Trunkline at the Brooks County, Texas, delivery point, that South Texas construct approximately 1,500 feet of 6⅝-inch O.D. interconnecting pipeline, a 250-BHP field compressor to receive gas at such delivery point and 7 miles of 10¾-inch pipeline to connect the Jefferson Davis Parish delivery point with its gas supply in the South Manchester Field, Calcasieu Parish, Louisiana.

Concurrently herewith an order is being issued in Docket Nos. CI66-539 and CI66-1171, *supra*, p. 486, authorizing C. H. Lyons, Sr., *et al.*, and Coastal States Gas Producing Company, respectively, to sell natural gas to South Texas and deliver it to Trunkline in order to effectuate the subject exchange.

On July 22, 1966, a temporary certificate of public convenience and necessity was issued to Applicants in the instant proceeding authorizing the construction and operation of facilities and the exchange of natural gas as hereinbefore described and as more fully described in the application, as amended.

The total estimated cost of Applicants' proposed construction is $316,800, which will be financed from funds on hand.

After due notice, no protest, petition to intervene or notice of intervention has been filed herein.

At a hearing held on August 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as amended, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Delaware corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its Opinion and order issued August 30, 1962, in Docket No. G–18907 (28 FPC 401).

(2) Applicant, Trunkline Gas Company, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued May 4, 1950, in Docket No. G–882 (9 FPC 721).

(3) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the transportation of natural gas by Applicants are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to South Texas Natural Gas Gathering Company and Trunkline Gas Company authorizing the construction and operation of the facilities and the exchange and delivery of up to 15,000 Mcf of natural gas per day as hereinbefore described and as more fully set forth in the application, as amended, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) Applicants shall complete and place in actual operation the facilities authorized herein within 6 months from the date of this order pursuant to paragraph (b) of Section 157.20 of the Commission's Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NOS. CP63-204 AND CP64-91; GULF PACIFIC PIPELINE COMPANY, CP63-223; EL PASO NATURAL GAS COMPANY, CP64-76

ORDER CORRECTING ORDERING CLAUSES IN OPINION NO. 500

(Issued August 19, 1966)

On August 5, 1966, El Paso Natural Gas Company (El Paso), filed a petition requesting that ordering clauses (F) and (G) of Opinion No. 500, issued July 26, 1966, 36 FPC 176, in the above dockets be revised in order to properly reflect the Commission's purposes as set forth in the text of that opinion. Specifically, El Paso noted that in ordering paragraph (F)(3), we directed that all prepayments be excluded from its rate base, whereas in the text of the opinion, we indicated that it would be required to file rates based upon the cost of service "submitted in the proceeding", adjusted to reflect a 6⅛% rate of return. Further, El Paso states that the requirement in ordering paragraph (G)(1) that its pass through of net producer rate decreases be based on reductions in "present rates" of its suppliers could have the unintended effect of requiring a rate reduction with respect to a supplier rate now in effect but not included in the cost of service upon which its rates are based.

Upon consideration of the petition, we conclude that it is appropriate that ordering paragraphs (F)(3), (G)(1) and (G)(2) be revised as hereinafter indicated.

The Commission orders:

(A) Paragraphs (F)(3), (G)(1) and (G)(2) of Opinion No. 500 issued July 26, 1966, hereby are revised to read as follows:

(F)(3) El Paso shall file tariff sheets applicable to its Southern Division acceptable to the Commission reflecting as follows: Upon attaining an increase in its pipeline capacity and sales to Pacific Lighting of 200 M^{2}cfd (14.9 psia), rates and charges which, in addition to the reduction of its commodity rates by ¾ cent on its Southern Division as proposed in these proceedings, shall reflect such further reduction as results after use of (1) 6⅛ percent rate of return; and (2) exclusion of any prepayments for gas from its rate base in excess of those prepayments reflected in the cost of service submitted in this proceeding.

(G) The certificates herein issued to the pipelines, Transwestern and El Paso, are further conditioned to provide that the rates and charges computed as provided in (E)(2) (i) and (ii) and (F)(3) respectively above shall be further modified to reflect the following:

(1) If during the period commencing with the date the rates computed under (E)(2)(i) or (F)(3) above, as the case may be, become effective and ending on the first date on which rates other than those herein provided become effective any reductions in the rates reflected in the cost of service submitted in the proceeding, of any gas supplied to the pipelines become final and no longer subject to court review, the pipeline shall file with the Commission appropriate reductions in their rates schedules to reflect the effect of

such reductions in their costs of purchased gas; provided, however, that such reductions may be offset by them to the extent of any increases in the rates reflected in the cost of service submitted in this proceeding which have become effective, and provided that the pipelines need not make rate reductions until the net reductions in the cost of purchased gas amount to at least 0.1 cents per Mcf.

(2) Any refunds resulting from reductions in producer rates below those reflected in the cost of service submitted in this proceeding received by the pipelines relating to the period commencing with the dates the rates computed under (E)(2)(i) or (F)(3) above, as the case may be, become effective, shall be refunded to their customers within 30 days after receipt of such refund, provided that no refund need be made unless the amount to be refunded in the case of Transwestern shall be at least $250,000, except for the final refund which shall be at least $12,500, and in the case of El Paso shall be at least $1,000,000, except for the final refund which shall be at least $50,000. The pipelines within 15 days after making any such refunds shall submit reports to the Commission setting forth the amounts refunded to each customers and the billing determinants used in the computation of such refunds.

(B) In all other respects, that opinion and order remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CHANDELEUR PIPE LINE COMPANY, DOCKET NO. CP64-37

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1966)

On June 6, 1966, Chandeleur Pipe Line Company (Petitioner) filed in Docket No. CP64-37, a petition to amend the Commission's order issued December 16, 1963, 30 FPC 1515, in said docket by authorizing an increase in the volumes of gas transported from the Main Pass Block 41 gas field located off-shore Louisiana in the Gulf of Mexico to a point on shore at a refinery and related facilities near Pascagoula, Mississippi, for Petitioner's sole customer and 100 percent owner, Standard Oil Company, incorporated in Kentucky, (Kyso), all as more fully set forth in the petition to amend in this proceeding.

The order of December 16, 1963, authorized Petitioner to construct and operate a pipeline and to transport natural gas for Kyso which gas is purchased by the latter from The California Company (Calco). (Calco and Kyso are wholly-owned subsidiaries of the Standard Oil Company of California). Petitioner states that the facilities heretofore authorized in this docket have been used to transport approximately 50,000 Mcf of natural gas on a maximum day and approximately 30,000 Mcf of natural gas on an average day.

Petitioner states that Kyso has begun construction of an ammonia fertilizer plant and a paraxylene plant at its Pascagoula refinery; the ammonia plant will be completed in early 1967 and the paraxylene plant in mid 1967. Kyso will utilize natural gas as feedstock and fuel for the two new plants. Petitioner states that on or about April 1, 1967, Kyso will commence to increase its purchases and, in the latter part of 1967 when both new additions are operating at design capacity, will purchase a total average day volume of 85,000 Mcf and that on the same date, the maximum daily quantity will be approximately 112,000 Mcf.

Petitioner states that it will not require any new facilities to increase deliveries as proposed.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 23, 1966 (31 F.R. 8701). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued December 16, 1963, in Docket No. CP64-37 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 16, 1963, in Docket No. CP64-37 is amended by authorizing Petitioner to increase the volumes of gas transported from the Main Pass Block 41 gas field for the account of Kyso as hereinbefore described and as set forth in the petition to amend.

(B) Petitioner shall commence the increased transportation of natural gas authorized by paragraph (A) above by June 1, 1967.

(C) Petitioner shall file in accordance with the Commission's Regulations under the Natural Gas Act, as amendments to its FPC Gas Rate Schedule T-1, the revision providing for the proposed increase in volumes of gas transported as set forth in Exhibit P of the subject petition to amend.

(D) In all other respects the order of December 16, 1963, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-357

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1966)

On May 9, 1966, El Paso Natural Gas Company filed in Docket No. CP66-357 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of natural gas to Cascade Natural Gas Corporation (Cascade), an existing resale customer, for transportation to and resale and distribution in the community of Prineville, Oregon, and environs, all as more fully set forth in the application in this proceeding.

The proposed sale and delivery will be made out of gas transported by Pacific Gas Transmission Company (Pacific Gas) for the account of Applicant. To implement deliveries to Applicant, Pacific Gas will construct, at Applicant's cost, own and operate measuring and regulating facilities on Pacific Gas' existing 36-inch pipeline in Jefferson County, Oregon.*

Applicant proposes to construct and operate 4.3 miles of 6-inch pipeline, and necessary appurtenances, from a point of connection with the 36-inch line of Pacific Gas in Jefferson County to a point of connection with Cascade's proposed facilities in Crook County, Oregon. Applicant states that Cascade will construct 8.2 miles of 6-inch line and the necessary distribution facilities to serve Prineville and environs.

The application shows estimated deliveries to Cascade in the third year to be 497 Mcf on a peak day and 55,820 Mcf annually, increasing to 87,404 Mcf annually in the fifth year. The proposed sale will be made in accordance with Applicant's FPC Gas Rate Schedule DI-3, FPC Gas Tariff, Original Volume No. 3.

The total estimated cost of facilities to be constructed by Applicant is $128,180. The estimated cost of facilities to be constructed by Pacific Gas and paid for by Applicant is $6,400. Applicant will finance these estimated costs from currently available working funds.

On June 6, 1966, the Public Utility Commissioner of Oregon filed a notice of intervention in support of the subject application.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding, all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs

---

*By Commission order issued August 5, 1960, in Docket No. G-17350 (24 FPC 134), Pacific Gas was authorized to transport for the account of Applicant and deliver natural gas, at delivery points specified by Applicant, along Pacific Gas' system in Idaho, Washington and Oregon. Said gas is purchased by Applicant from Westcoast Transmission Company at Kingsgate, British Columbia. In Docket No. CP63-59 (27 FPC 671) Pacific Gas was authorized to construct and operate the facilities necessary to make deliveries of said gas transported for Applicant.

(a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE JUPITER CORPORATION, DOCKET NO. RI63-212, ET AL.

ORDER CLARIFYING PRIOR ORDER AND DENYING REHEARING

(Issued August 22, 1966)

On July 26, 1966, Phillips Petroleum Company and Kerr-McGee Corporation (Phillips-Kerr-McGee), jointly filed an application for rehearing of our order issued June 28, 1966, 35 FPC 1091, in these proceedings. By that order we approved a rate settlement, prescribed refunds and issued a certificate of public convenience and necessity to Jupiter.

Phillips-Kerr-McGee request that the referenced order be modified on two points. Paragraph (7) of the settlement notes, in part, that it "is made with the express understanding that Jupiter does not waive its rights with respect to the collection * * * of compensation for the services Jupiter performs * * * in transporting, separating, or storing those producers' condensates and liquifiable hydrocarbons * * *." In commenting on that paragraph we stated that it did not present any issue to be determined at this time. We further noted:

> Any contractual arrangements Jupiter makes with the producers for those services will be acted upon if and when they are appropriately submitted to this Commission.

Phillips-Kerr-McGee state that the quoted sentence seems to imply that there are contractual "arrangements" between Jupiter and the producers (Phillips-Kerr-McGee and Union Oil Company of California) which remain open for negotiation. They contend that if that is implied, the Commission has erred because the firm contractual arrangement entered into by the parties with respect to such transportation is still in force.

The quoted sentence neither implies that further contractual arrangements are open for negotiation nor requires that further negotiations be held. That sentence merely indicates that we are not now determining the claimed rights of any party on this matter. Accordingly, it is our view that the Phillips-Kerr-McGee request that we strike the quoted sentence from our order should be denied.

Phillips-Kerr-McGee also make reference to paragraph (5) of the settlement which refers to proposed future action by Jupiter to transfer certain of its properties to a new company which will file appropriate application pursuant to Section 7(c) of the Natural Gas Act. Phillips-Kerr-McGee appear to seek assurance that the order issued June 28, 1966 did not approve the proposed transfer of Jupiter's properties. We believe that both the order and the settlement are clear that the reference to transfer of properties relates to a future intent on the part of Jupiter. All aspects of such transfer will be the subject of appropriate proceedings before the Commission. Our order issued June 28 in no way constitutes an approval of any proposal that was not specifically before us at the time of issuance of that order.

The Commission orders:

Except to the extent herein clarified, the application for rehearing of the order issued June 28, 1966, filed by Phillips-Kerr-McGee hereby is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LAKE SHORE PIPE LINE CO., DOCKET NO. CP66-402

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 22, 1966)

On June 7, 1966, Lake Shore Pipe Line Co. (Applicant) filed in Docket No. CP66-402 an application pursuant to Section 7(b) of the Natural Gas Act requesting permission and approval to abandon by sale to its sole jurisdictional customer, The East Ohio Gas Company (East Ohio), approximately 31.8 miles of transmission pipeline located in the state of Ohio and to discontinue the operation of said facilities as well as the service now performed with them, all as more fully set forth in the application.

Specifically, Applicant proposes to abandon by sale to East Ohio 28.51 miles of 10 and 16-inch pipeline between Ashtabula and Fairport, Ohio, and 3.30 miles of 10-inch pipeline, a part of the intersecting Ashtabula, Ohio, to Cochranton, Pennsylvania pipeline, together with all of the related land, structures, materials and supplies.

The transfer of facilities proposed by the instant application constitutes a step toward the realignment of the operating companies in the Consolidated Natural Gas System following Commission approval on February 2, 1965, of the merger of the facilities, operations and services of the former New York State Natural Gas Corporation into Hope Natural Gas Company, now known as Consolidated Gas Supply Corporation (Opinion No. 448, 33 FPC 150). Consequently, the proposed transfer of facilities does not involve any cessation, curtailment, or interruption of service to ultimate customers.

After due notice, no protest, petition to intervene or notice of intervention has been filed herein.

At a hearing held on August 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lake Shore Pipe Line Co., an Ohio corporation having its principal place of business in Cleveland, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in the order accompanying Opinion No. 205 issued February 15, 1951, in Docket No. G–1210, *et al.* (10 FPC 22).

(2) The facilities to be abandoned, as hereinbefore described, and more fully described in the application in this proceeding, are used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, are granted.

(B) The time within which the abandonment of the facilities hereinbefore described, as authorized in paragraph (A) above, shall be accomplished is fixed at six months from the date of this order.

(C) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

OPINION NO. 505

LONE STAR GAS COMPANY, LONE STAR GATHERING COMPANY AND UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65–118; LONE STAR GATHERING COMPANY, DOCKET NO. CP62–179; UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62–193

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, AND GRANTING APPLICATIONS FOR ABANDONMENT

(Issued August 22, 1966)*

Syllabus

1. In light of United's growth rate and advantageous location of Gathering's reserves, Commission *finds* United has satisfactorily established need for gas in question. PP. 501; 513, 514.
2. United's purchase of gas in South Texas, together with construction of certificated storage facilities, will enable it to make more effective utilization of the Texas to North Louisiana line, thus aiding in meeting requirements of North Louisiana customers and solving prepay situation. PP. 502; 514.
3. Upon certification here, United will take over Gathering's facilities and operations and make field purchases direct, thus question of reasonableness of contract price for Gathering's gas no longer has same relevance as when first advanced. PP. 502; 516.

---

*Initial decision appears on p. 509. Rehearing granted, etc. by order issued October 14, 1966, 36 FPC 754.

4. There is no merit to argument that transportation costs from fields to pipeline must be added to United's average gas purchase price resulting in an excess over prescribed in-line price; United's assumption of such costs is no different from that of any other pipeline company which assumes cost of extending its transmission line to a producer field to receive purchased gas at an in-line price. P. 503.
5. United's acquisition of Gathering's facilities will benefit its customers by affording the advantage of a significant decrease in its gas purchase costs without an offsetting increase in other elements of its cost of service. PP. 503; 517.
6. While minimum take provision in gas purchase contracts calling for 1 Mcf for each 6,200 Mcf of reserves may be onerous in some areas, provision in Gathering's contract poses no problem in South Texas fields which have a high deliverability rate in relation to quantity of reserves. P. 504.
7. Where pipeline proposed to be sold is no longer used for primary purpose for which it was constructed and could be economically and advantageously integrated into purchaser's system, abandonment by sale is permitted by public convenience and necessity. P. 504.
8. Assertion that Gathering misrepresented facts in another proceeding by claiming it functioned more as a pipeline than gatherer is *rejected;* evidence here shows greater portion of Gathering's investment is in field lines and that its primary function is to move gas as a pipeline from various producing fields through its lines, both field and transmission, into United's pipeline system. P. 504.
9. In a proceeding arising under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity and *authorizes* abandonment of facilities.

Commissioner Ross *concurring*

John W. Scott, *Louis L. DaPra*, *Manuel J. Edling, Jr.* and *Richard B. Williams* for Lone Star Gas Company and Lone Star Gathering Company

Carl J. Babin for United Gas Pipe Line Company

Morton L. Simons and *Kent H. Brown* for Public Service Commission of the State of New York

Richard C. Steffey for the Staff of the Federal Power Commission

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

O'CONNOR, *Commissioner:*

This is a consolidated proceeding under Section 7 of the Natural Gas Act involving interrelated applications in which (1) Lone Star Gas Company (Lone Star) seeks authority to acquire certain facilities owned and operated by United Gas Pipe Line Company (United); (2) United seeks authority to acquire certain facilities owned and operated by Lone Star Gathering Company (Gathering), a wholly owned subsidiary of Lone Star; (3) United and Lone Star request certificates authorizing the sales of gas to each other; and (4) Gathering and United request permission to abandon the facilities which are to be acquired by United and Lone Star, respectively.

The Public Service Commission of the State of New York (New York Commission) intervened to oppose the above applications stating that United does not need the gas it proposes to obtain.

After a hearing on a consolidated record, the Presiding Examiner, Howell Purdue, issued an initial decision on February 16, 1966, granting all the authorizations sought by the applicants, subject to appropriate conditions covering the flow-through of refunds by reason of the reduction in cost of purchased gas resulting from the order in *Sinclair Oil & Gas Company, et al.*, Opinion No. 476 (1965), 34 FPC 930.[1]

The proceeding is before the Commission on the examiner's decision, exceptions filed by the New York Commission, and opposition to such exceptions filed by staff and the applicants. The basic issue is whether the examiner was correct in finding that United has a need, at its contracted price, for approximately 40,000 Mcf of natural gas per day which it agreed to purchase from Gathering.

The New York Commission filed a motion for oral argument which was opposed by the applicants. We find that the issues in this proceeding have been adequately covered in the briefs and exceptions. The motion for oral argument will accordingly be denied.

Factual and Procedural Background

On February 5, 1962, Gathering applied in Docket No. CP62–179 for authorization under Section 7(c) of the Natural Gas Act to construct and operate a 24.4-mile transmission pipeline in south Texas, extending southeast from a point near the De Witt-Victoria Counties line to connect with United's "West 30-inch Line", which runs from Refugio, Texas, to Monroe, Louisiana. Gathering asked authorization to sell United an annual volume of gas equal to a daily average of 40,000 Mcf. On February 15, 1962, United applied in Docket No. CP62–193 for authorization to construct and operate a purchase meter station and related facilities to receive gas from Gathering. The applicants constructed and are now operating their requested facilities under temporary certificates issued in 1962 and 1963. During 1964 Gathering sold United an annual volume of 15,263,119 Mcf of natural gas at a contract price of 21.5 cents per Mcf.

Gathering obtains its gas from independent producers in Texas Railroad Commission District No. 2 under contracts negotiated after September 28, 1960, for terms of 20 years or longer, at a price of 18 cents per Mcf, except for two contracts involving the purchase of sour gas at 12 cents per Mcf. Under these contracts 305 billion cubic feet of reserves are committed to Gathering. The producers received temporary authorization for these sales on September 7, 1962, and most of them were issued permanent certificates in *Sinclair Oil & Gas Company, et al., supra.*

In 1964 United negotiated to sell 93 miles of pipeline serving Dallas and Fort Worth, Texas, to Lone Star for $3,254,415, and to purchase Gathering's facilities and purchase contracts for $3,426,355. On October 30, 1964, United, Gathering, and Lone Star jointly applied in Docket No. CP65–118 for certificates of public convenience and necessity authorizing the necessary abandonments and acquisitions to accomplish this transaction. United also asked for authorization to purchase up to 32,500 Mcf of gas per day from Lone Star so as to enable it to continue service to its customers on the Dallas-Fort Worth line.[2]

---

[1] The order in the *Sinclair* case, *supra*, provided for an in-line price of 16 cents per Mcf for sales of gas (and 12 cents per Mcf for sales of sour gas) by independent producers in Texas Railroad Commission District No. 2 under contracts negotiated after September 28, 1960. The effectiveness of this 16 cents price has been stayed by the Commission pending consideration by the United States Court of Appeals of an appeal from the *Sinclair* order.

The applications in Docket No. CP65-118 were consolidated with those in Docket Nos. CP62-179 and CP62-193 on March 16, 1965. The New York Commission filed notice of intervention on April 2, 1965. Prior to the hearing the parties stipulated that the sole issue in dispute was whether the evidence submitted by the applicants constituted adequate proof establishing United's need for Gathering's gas. The New York Commission interpreted this issue as involving two questions: (1) Does United need Gathering's gas in order to meet its customers' present and future requirements? (2) Does United need to obtain the gas at the proposed price?

At the hearing United submitted testimony showing that its annual deliveries of gas had increased by more than 200 billion cubic feet from 1962 to 1964 and that its recoverable reserves had declined by almost 775 billion cubic feet between December 31, 1962 and December 31, 1963. United also stated that it had been unsuccessful in its attempts to locate and obtain under contract large sources of supply other than Gathering's. The participants filed briefs after the conclusion of the hearing. The New York Commission asserted that the applications should be denied, stating that United had not shown a need for the gas, and that its contract price for Gathering's gas was excessively high.

The Examiner's Initial Decision

The examiner approved of all of the authorizations requested, subject to appropriate conditions covering the flow-through of refunds resulting from *Sinclair Oil & Gas Company, et al., supra.* He found that United had established its need for Gathering's gas, and that there was no evidence in the record which justified a conclusion that United did not need this gas because the in-line field price would be 16 cents per Mcf.

The examiner held that United's acquisition of Gatherings' facilities would be advantageous to United and would benefit its consumers by eliminating the gathering and transportation charges in United's cost of purchased gas without an offsetting increase in other elements of United's cost of service. He pointed out that there was virtually an exchange of Gathering's facilities valued at $3,426,355 for United's 93 miles of pipeline valued at $3,254,415, and he found that United's acquisition of Gathering's facilities accordingly would entail only a minuscule increase in United's plant investment.

The New York Commission's Exceptions To The Examiner's Initial Decision

The New York Commission, in its exceptions to the examiner's decision, disputes United's physical need for additional gas and the propriety of the purchase price and costs for this gas. It may be noted that the New York Commission similarly raised this issue in excepting to the examiner's decision in *Sinclair Oil & Gas Company, et al.*, Docket No. G-16760, *et al.*, involving the certificate applications of producers in Texas Railroad Commission District No. 2, many of whom had contracted to sell their gas to Gathering. We there pointed out in Opinion No. 476 (1965), 34 FPC 930, that the New York Commission had not raised this issue at the pre-hearing conference, nor had brought it up at the hearings, and further that its assertions as to lack of need were not persuasive. Accordingly, we held in *Sinclair* that the exceptions of the New York Commission on this point were not appropriate. In the present proceeding, on the other hand, the New York Commission has from a procedural standpoint made a proper and timely intervention. Nevertheless, for the reasons set forth below we find that intervener's exceptions are not persuasive and do not warrant our reversal of the examiner's decision.

---

[2] United and Lone Star further applied for certificates of convenience and necessity under Section 7(c) of the Natural Gas Act authorizing the construction of facilities in Wood County, Texas, to enable United to sell to Lone Star, and Lone Star to receive, up to 22,500 Mcf of natural gas per day. These applications are not involved in the disputed question here in issue.

United's Growth Rate

Intervener asserts that United has no need for additional gas because its growth rate is far below the industry average. This argument, however, involves a *non sequitur*, for the New York Commission has ignored the fact that United's current deliveries are so large that even a modest rate of growth will necessitate its acquisition of substantial new supplies and new reserves. The evidence of record shows that United's annual deliveries to its customers rose from slightly in excess of 1000 billion cubic feet in 1952 to 1250 billion cubic feet in 1962, and to 1451 billion cubic feet in 1964. Its peak-day deliveries increased from 3.6 billion cubic feet in 1952–53, to 5.6 billion cubic feet in 1962–63, and to 5.8 billion cubic feet in 1963–64. According to staff computations, United's average growth from 1959 to 1964 was 3.22 percent per year, as compared with the natural gas industry growth rate from 1959 to 1963 of 3.73 percent per year. Applying United's growth rate to its 1964 deliveries of 1451 billion cubic feet, it is plain that United will need a progressively increasing amount of gas starting with an additional 46 billion cubic feet per year each year to keep pace with its own growth rate. This additional volume is three times greater than the 15 billion cubic feet it proposes to obtain from Gathering. Yet, even this calculation is conservative in view of the showing in the record that United's annual deliveries of gas increased by more than 200 billion cubic feet from 1962 to 1964, and that its recoverable reserves declined from 25,814,740 MMcf on December 31, 1962, to 25,039,825 MMcf on December 31, 1963, a decrease of almost 775 billion cubic feet.

Further, the location of Gathering's gas in Texas Railroad Commission District No. 2 specifically meets the need of United for a source of supply which can be connected to United's "West 30-inch Line". United stated that as of January 10, 1962, this line had unused capacity amounting to 119,533 Mcf per day, and that by interconnecting with Gathering's transmission line near Victoria, Texas, such line could be utilized to United's advantage by carrying an additional 40,000 Mcf per day. United also pointed out that it had contracted in 1962 to deliver 75,000 Mcf of gas per day to the Natural Gas Pipeline Company of America, with delivery to be made on United's "West 30-inch Line", and that Gathering's reserves would be needed to help supply Natural Gas Pipeline Company.

In light of the above showing, we find that the examiner was warranted in concluding that United had satisfactorily established its need for the gas in question.

United's Prepayment Situation

The New York Commission states that United is in a serious oversupply situation and has been required to pay more than $22,000,000 for gas which it cannot take. United has explained that it had to make this prepayment to its South Louisiana suppliers because of certain physical difficulties, arising from pipeline limitations, in meeting the demands of its markets in the North Louisiana area, and that it expects to reduce or eliminate its existing prepayments upon construction of storage facilities at Lake Bistineau, Louisiana. Authorization for the construction of these facilities was approved by our order of April 29, 1966 in Docket No. CP66-136, 35 FPC 658. Moreover, as stated above, our approval of United's applications in this proceeding will enable United to make more efficient utilization of its "West 30-inch Line", thus aiding it in meeting the requirements of its North Louisiana customers and in solving its prepayment situation.[3]

United's Purchase Price and Gathering Costs

The New York Commission asserted that the examiner erred in not giving adequate consideration to the high price which United contracted to pay for Gathering's gas and to United's alleged failure to show that it will be able to operate the gathering system more efficiently than Gathering. However, the question of the reasonableness of United's contract price of 21.5 cents per Mcf for Gathering's gas no longer has the same relevance it possessed when the intervener first advanced this issue.

Upon the grant of the applications in Docket No. CP65-118, United will take over Gathering's facilities and operations, and will purchase its gas, not at 21.5 cents per Mcf from Gathering, but instead directly from producers in Texas Railroad Commission District No. 2. Assuming that the Commission's order in *Sinclair* will be sustained upon appeal, United's price to the producers will be 16 cents per Mcf, except for its purchases of sour gas at 12 cents per Mcf. In the event that United's purchases of sour gas will be made in the same ratio to total purchases as those made by Gathering in 1963 and 1964,[4] United's average purchase price should approximate 15.6 cents per Mcf, an amount appreciably lower than the average cost of 17.4 cents which was used as the basis for United's PL-C Rate Schedule. Furthermore, should United's purchase price to the producers remain at Gathering's contract rates of 18 cents per Mcf for gas and 12 cents per Mcf for sour gas, United's average costs should approximate 17.4 cents per Mcf, a figure no higher than the average cost used in its PL-C Rate Schedule.

The fields of the producers under contract to Gathering are located at distances varying from 20 to 60 miles removed from United's "West 30-inch Line". The gas from these fields now flows into United's line by means of a 123-mile pipeline and gathering system which Gathering constructed at a cost of $3,583,860,[5] and which United proposes to purchase for $3,426,355, representing Gathering's depreciated original cost as of June 30, 1964. The reasonableness of this purchase price has not been questioned. United has estimated that its annual costs in operating Gathering's facilities will total $572,762, or approximately $100,000 less than the estimate for this operation previously submitted by Gathering. These operating costs will be rolled into United's overall system cost of service, and according to United's financial data will be so nominal in relation to United's total costs[6] as to afford no basis for any increase in rates to United's jurisdictional customers.

---

[3] United's markets in North Louisiana are served by two main lines, its "West 30-inch Line" extending from Refugio, Texas, and its "South-North 30-inch Line", extending up from South Louisiana. United has been operating its "South-North" line at full capacity, but, as noted above, its "West" line had unused capacity amounting to 119,533 Mcf per day as of January 10, 1962. United's proposal to take an average daily rate of 40,000 Mcf through its "West" line from producers under contract to Gathering should afford it greater flexibility in meeting the demands of its North Louisiana markets.

[4] The applicants stated that Gathering's average actual cost of purchased gas was 17.6 cents per Mcf in 1963, and 17.4 cents per Mcf in 1964. On the basis of purchase prices of 18 cents per Mcf for gas and 12 cents per Mcf for sour gas, these averages indicate that Gathering's sour gas purchases constituted about 10 percent of its total purchases.

[5] Gathering's pipeline system consists of a central series of lines which stretch west for approximately 60 miles from a point of connection with United's 30-inch line in Victoria County, Texas, to the Speary Field in Karnes County, Texas. Major branch lines extend north and south from the central lines, and more than 70 supplementary and feeder lines connect into the system.

The New York Commission has argued that United's cost in transporting the purchased gas from the producers' fields to its 30-inch line, an amount calculated at about 3.5 cents per Mcf, must be added to United's average purchase price to such producers, and that the resulting total will clearly exceed the prescribed in-line price for Texas Railroad Commission District No. 2. We find no persuasive merit in this argument. United's assumption of the cost of transporting gas from producer fields to its transmission line is no different from the action of any other pipeline company which assumes the cost of extending its transmission line to a producer field in order to receive into its system gas which it has purchased at an in-line price. The Commission has approved such extensions in the following cases: *Michigan Wisconsin Pipe Line Company*, Docket No. CP65-367; *Northern Natural Gas Company*, Docket No. CP66-320; and *Panhandle Eastern Pipe Line Company*, Docket No. CP66-228.

There is a further specific aspect to this proceeding which merits Commission recognition. The transactions between the applicants as proposed in Docket No. CP65-118 call for the sale by United to Lone Star of United's Dallas-Fort Worth pipeline at the price of $3,254,415. Although this price is stated to represent United's depreciated original cost as of June 30, 1964, United will realize an approximate taxable gain of $1,354,000 on this sale because it has depreciated this pipeline under the Internal Revenue laws to a net value of $1,900,404. The Dallas-Fort Worth line has, in fact, lost much of its former value to United as the result of the expiration of United's contracts to serve the Dallas Power and Light Company and the Texas Electric Service Company. Thus, United's volume of deliveries over this line in 1963 were little more than 8 percent of the volume it had enjoyed prior to such expiration.[7] Under these circumstances, it is plain that United is utilizing to its advantage the opportunity to sell its Dallas-Fort Worth line for an amount equal to 95 percent of the price it agreed to pay for Gathering's pipeline system. The applicants are thus exchanging properties to which they have given substantially similar valuations, and it appears that this exchange is not to United's detriment. The record affords valid basis for the finding of the staff and of the examiner that the price of $3,426,355 to be paid by United for Gathering's facilities will be largely offset by United's receipt of $3,254,415 for its Dallas-Fort Worth line, and that United's assumption of the expenses necessarily involved in operating the gathering facilities will to a great degree be offset by the elimination of the expenses involved in operating the Dallas-Fort Worth line. We accordingly agree with the examiner that United's acquisition of Gathering's facilities will benefit United's consumers by affording them the advantage of a significant decrease in United's cost of purchased gas without an offsetting increase in other elements of United's cost of service.[8]

---

[6] United's total cost of service for the year ending March 31, 1962, was $325,731,603. See *United Gas Pipe Line Company*, Docket No. RP63-1, Opinion No. 428, 31 FPC 1180, 1186 (1964).

[7] During the calendar year 1960, the last year in which United made sales to the Dallas Power and Light Company and the Texas Electric Service Company, it delivered a total of 52,754,816 Mcf of natural gas through its Dallas-Fort Worth line. This volume dropped to 4,396,442 Mcf in 1963.

The Minimum-Take Provisions

The minimum-take provisions in Gathering's purchase contracts call for the take of 1 Mcf for each 6,200 Mcf of reserves. Intervener claims that this is an onerous requirement. United's witness at the hearing testified that although this provision would be onerous in some areas of the country, the fields in South Texas have so high a deliverability rate in relation to the quantity of reserves as to pose no problem. Since United has never been forced to pay for gas it could not use in South Texas, as distinguished from its record in South Louisiana, we conclude that this exception does not warrant modification of the examiner's decision.

The Abandonment of United's Dallas-Fort Worth Line

The question of United's transfer of its Dallas-Fort Worth line to Lone Star was not raised as an issue in this proceeding, and no pleading or evidence in opposition to this proposal was submitted. United showed in support of its application for abandonment that the primary purpose for the construction and operation of its Dallas-Fort Worth line was to deliver natural gas to the Dallas Power and Light Company and the Texas Electric Service Company in the Dallas-Fort Worth, Texas area; that United's contracts with these companies expired in 1960 and United no longer serves these customers; and that United will be able to continue service to its remaining customers in this area by an arrangement under which it will purchase gas from Lone Star. Lone Star supplemented United's showing by stating that the Dallas-Fort Worth line can economically and advantageously be integrated into Lone Star's existing pipeline system, and that this integration will result in a greater utilization of such facilities. On the basis of the above showing we agree with the examiner that the proposed abandonment of facilities and service by United is permitted by the public convenience and necessity and should be approved.

The Misrepresentation Issue

Intervener has asserted that Gathering misrepresented certain facts to the Commission in the *Sinclair* proceeding, where it claimed that it was functioning more as a pipeline than as a gatherer, and that this misrepresentation has been disclosed by the showing in this proceeding that only 25 percent of Gathering's investment was expended for its 14-inch transmission line. We do not agree with intervener that Gathering's description of its function in *Sinclair* constituted a misrepresentation. While the evidence in this case shows that the greater portion of Gathering's investment is in field lines rather than in 14-inch transmission mains, the record also shows that Gathering's primary function is to move gas as a pipeline from various producing fields through its lines, both field and transmission, into United's pipeline system. See *Ben Bolt Gathering Company* v. *Federal Power Commission*, 323 F. 2d 610 (CA5–1963).

---

[8] It may be noted that prior to the filing of the applications in Docket No. CP65-118, a notice of intervention was filed in Docket Nos. CP62-179 and CP62-193 by the Philadelphia Gas Works Division of The United Gas Improvement Company which raised the question as to whether the terms under which United proposed to purchase gas from Gathering comported with the public convenience and necessity. After the filing of the joint applications in Docket No. CP65-118, Philadelphia Gas withdrew its petition to intervene, stating that the proposals in Docket No. CP65-118 appeared to offer substantial advantages to United, and that Philadelphia Gas did not wish to stand in the way of that transaction, since it assumed that these advantages would inure to the benefit of its customers.

We accordingly approve and adopt the examiner's findings and conclusions with respect to the applications of United, Gathering, and Lone Star, to the extent not inconsistent with the foregoing discussion.

The Commission further finds:

(1) Lone Star Gathering Company, a Texas Corporation having its principal place of business in Dallas, Texas, is engaged in the transportation and sale for resale of natural gas in interstate commerce and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, and Lone Star Gas Company, a Texas Corporation having its principal place of business in Dallas, Texas, are "natural-gas companies" within the meaning of the Natural Gas Act.

(3) The facilities constructed and to be constructed by Gathering, United, and Lone Star, and to be acquired by United from Gathering, all as described in the applications in these proceedings, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by the applicants are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The facilities to be abandoned by Gathering and United, all as described in the application in Docket No. CP65–118, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of subsection (b) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the facilities and proposed facilities by Gathering, Lone Star, and United (including the operation by United of the meter station and related facilities as a check meter station), the proposed sale of gas by United to Lone Star, and the acquisition and operation by United of Gathering's facilities are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) The proposed abandonments of facilities and service by Gathering and United are permitted by the public convenience and necessity, and approval thereof should be granted as hereinafter ordered.

(8) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(9) The exceptions to the examiner's decision should be denied.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Lone Star Gathering Company to construct and operate the facilities heretofore authorized by temporary certificates issued September 7, 1962, and February 6, 1963, in Docket No. CP62–179, all as more fully described in the application in such proceeding, as supplemented.

(B) A certificate of public convenience and necessity is issued authorizing United Gas Pipe Line Company to construct, acquire, and operate the facilities and proposed facilities which it seeks authorization to construct, acquire, and operate; and to sell, transport, and deliver natural gas as hereinbefore described; all as more fully described in the applications, as supplemented and amended in Docket Nos. CP62–193 and CP65–118, as supplemented, upon the terms and conditions of this order.

(C) A certificate of public convenience and necessity is issued authorizing Lone Star Gas Company to construct and operate the proposed facilities which it seeks authorization to construct and operate; and to transport and deliver natural gas as hereinbefore described; all as more fully described in the application in Docket No. CP65–118, as supplemented, upon the terms and conditions of this order.

(D) Permission for and approval of the abandonment by Gathering of the facilities heretofore constructed and now being operated by Gathering, and of the service rendered by it, pursuant to temporary certificates issued September 7, 1962, and February 6, 1963, in Docket No. CP62–179, all as hereinbefore described and as more fully described in the application in Docket No. CP62–179, are granted subject to the agreement contained in Gathering's letter filed September 19, 1963, in Docket No. CP62–179, providing that Gathering will pass on to United any reduction in its weighted average cost of purchased gas which may result from the Commission's order accompanying Opinion No. 476 issued September 22, 1965, in *Sinclair Oil & Gas Co., et al.*, Docket No. G–16760, *et al.*, or other pertinent Commission action.

(E) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3), and (e) of Section 157.20 of such Regulations.

(F) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Lone Star's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(G) Permission for and approval of the abandonment by United of the facilities hereinbefore described, all as more fully described in the application in Docket No. CP65–118, as supplemented, are hereby granted.

(H) United and Gathering shall advise the Commission of the date of abandonment of facilities authorized in paragraphs (D) and (G) above within ten days of such abandonment.

(I) The facilities hereby authorized shall be constructed and placed in actual operation, and the sales, transportations, and deliveries of natural gas authorized in paragraphs (B) and (C) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(J) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned to require that United flow through to its customers any refunds which it may receive from Gathering or from producers selling directly to United as provided for in the Commission's "Order Approving Rate Settlement and Requiring Retention of Certain Refunds," issued December 23, 1964, in *United Gas Pipe Line Co.*, Docket No. RP61–18, *et al.*, 32 FPC 1515.

(K) After Gathering has abandoned the facilities for which authorization is granted herein, Gathering shall file with the Commission a notice of cancellation of its service agreement with United and of its FPC Gas Tariff Original Volume No. 1.

(L) The examiner's decision, to the extent not inconsistent herewith, is adopted as part of this Opinion and order.

(M) The exceptions to the examiner's decision are denied.

(N) The motion for opportunity to present oral argument before the Commission is denied.

Commissioner Ross *concurring*.

Ross, *Commissioner, concurring:*

I concur generally with the result reached by the majority. However, my principal concern is with the failure of the majority to repudiate its decision not to consider the issue of the public's need for gas in producer certificate cases, which decision, I believe, is contrary to the responsibilities of the Commission under the Natural Gas Act.[1] The majority's attempt to duck this issue here, while possibly indicating some retreat from its earlier position, will cause unnecessary confusion in the future.

The reason the majority happened to announce this rather surprising "policy" is quite simple, if indefensible. In the predecessor *Sinclair* case and in two other contemporaneous proceedings, the New York Public Service Commission advanced the contention that the public did not need the gas at the prices sought by the producers.[2] This presented a fairly awkward situation since there was virtually no evidence in the record in any of the cases demonstrating a need for additional gas, much less a need at the prices requested. The majority in those proceedings recognized this inadequacy in the records of these cases, and rather than denying the applications or remanding the proceedings, forthrightly resolved the matter by foisting the issue to pipeline certificate proceedings. The majority stated in *Hawkins & Hawkins:* "The issue of public need should be confined to pipeline certificate proceedings, not producer applications."

This proceeding is nothing more than the unhappy product of the majority's failure to consider public need in passing on producer certificate applications in *Sinclair*. Actually, the applications consolidated here are routine in nature, involving the construction, acquisition and abandonment of pipeline facilities. Under normal circumstances these applications would be granted under the abbreviated hearing procedure. The only litigated issue in this case is the public's need for the gas, which has already been certificated in *Sinclair* based on the finding that such sales "* * * are required by the public convenience and necessity."

There are obvious difficulties with the majority's determination in *Hawkins* which the majority may or may not follow in the future. One is that the approach is illegal. In quite simple English, the Natural Gas Act plainly requires this Commission to consider the public's need for additional gas in considering applications to sell gas in interstate commerce and not at some later time. Excluding language irrelevant here, Section 7(e) of that Act provides:

> A certificate shall be granted authorizing the sale covered by an application if it is found that the proposed sale is or will be required by the public convenience and necessity; otherwise, such application shall be denied.

Indeed the Commission orders granting certificates authorizing the sale of gas in interstate commerce uniformly contain these findings:

---

[1] *Hawkins & Hawkins, et al.*, Docket No. G–18077, *et al.*, Opinion No. 475, September 22, 1965, 34 FPC 897.

[2] *Sinclair Oil & Gas Co., et al.*, Docket No. G–16760, *et al.*, decided September 22, 1965, Opinion No. 476, 34 FPC 930; *Hawkins & Hawkins, supra; Turnbull & Zoch, et al.*, Docket No. G–17960, *et al.*, Opinion No. 478, September 30, 1965, 34 FPC 1001.

1. Such sales are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

2. The sale of natural gas as proposed by the applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity.

In a previous case, the Supreme Court emphasized the importance of the Commission's responsibilities in considering, in the initial certification proceeding, producer applications to sell gas in interstate commerce.[3] After reviewing the relationship of certain sections of the Act, the Court observed:

> In view of this framework in which the Commission is authorized and directed to act, the initial certificating of a proposal under §7(e) of the Act as being required by the public convenience and necessity becomes crucial. (360 U.S. 389)

Moreover, the Supreme Court declared:

> Their proposals must be supported by evidence showing their necessity to 'the present or future public convenience and necessity' before permanent certificates are issued. This is not to say that rates are the only factor bearing on the public convenience and necessity, for §7(e) requires the Commission to evaluate all factors bearing on the public interest. (360 U.S. 391)

Interestingly, that case also involved the claim that the public's need for the gas would be adequately considered in a related pipeline certification proceeding, which was pending at that time. This did not satisfy the Supreme Court:

> Nor do we find any support whatever in the record for the conclusory finding on which the order was based that "the public served through the Tennessee Gas system is greatly in need of increased supplies of natural gas." (360 U.S. 393)

While the Court recognized that the issue of the public's need for the gas was present in the pipeline case, the Court observed that:

> * * * the two dockets were not consolidated and the Presiding Examiner conditioned his approval here on the granting of the application in Docket G–11107, no part of which record is here. (360 U.S. 393)

The concurring statements of Justices Harlan and Frankfurter would have reversed the Commission's decision on the sole ground that there was no evidence in the record to support the conclusion that the public convenience and necessity required the issuance of unconditioned certificates.

I find it a little surprising that the majority would so quickly forget the *CATCO* case.

Another difficulty with the majority's approach is that the important question of the public's need for gas will never be considered in some cases. This unfortunate, if not unforeseeable situation will occur in those situations where pipelines purchase additional volumes of gas under budget-type certificates. Under such certificates, pipelines have authority to attach new supplies of gas, normally for successive one year periods. Other than in connection with the producer application, the public interest aspects of the additional supplies purchased under budget-type certificates never come before the Commission. Thus, it is conceivable that the Commission might be able to determine whether the public generally needs more gas in such budget-type proceedings; but the Commission clearly could not consider whether such additional volumes of gas, in consideration of the terms under which the sale would be made, are required by the public interest. In these circumstances, unless the Commission considers the question of public need in connection with a producer application, it will never consider the question.

---

[3] *Atlantic Refining Co.* v. *P.S.C. of N.Y.*, 360 U.S. 378.

While one can understand why the Commission would adopt a pragmatic approach when faced with a perplexing situation in those earlier cases,[4] one could hope that the Commission would call a halt to such nonsense after fussing with this case. But no. The majority bravely refuses either to affirm or to reject the illogical, illegal and impractical determination made in *Hawkins*.

There is one further point. On pages 503–504 of the opinion, the majority justifies United's application to acquire a supply lateral from Lone Star Gathering partially on the basis that the cost of such facilities are offset by the costs of other facilities Lone Star Gas seeks to acquire from United. In my opinion, this finding is clearly unnecessary and erroneous. I cannot accept the proposition that a pipeline's disposition of facilities no longer used or useful in its operations has any relevance to the merits of its proposed acquisition of a completely unrelated supply lateral. In any event, the cost of United's line is not eliminated as the majority seems to believe. Rather the cost, and then some, is merely transferred from United's customers to those of Lone Star Gas. I suppose this kind of reasoning is what some would call the irrational dimension of regulation.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND APPLICATIONS FOR ORDERS PERMITTING ABANDONMENT OF FACILITIES AND SERVICE

(Issued February 16, 1966)

PURDUE, *Presiding Examiner:* These interrelated certificate and abandonment proceedings, heard on a consolidated record, necessitate a complicated statement of what the applicants seek. However, by stipulation of the parties, the issues have been narrowed to the question whether United Gas Pipe Line Co. (United) has need for certain gas involved in one of the applications. More particularly, this disputed question is: Does United have a need, at the price it is required to pay, for approximately 40,000 Mcf per day which that company agreed to purchase from Lone Star Gathering Co. (Gathering), over the period of long-term gas purchase contracts committing 305 billion cubic feet of reserves to Gathering, to be produced from certain properties in Texas Railroad District No. 2, which contracts Gathering has now agreed to assign to United? In addition, the Examiner called for an explanation of a tax profit by United resulting from one of the transactions involved.

Docket No. CP62–179. By an application filed in 1962, in Docket No. CP62–179, Gathering seeks a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act authorizing it to construct and operate a 24.4-mile, 14-inch transmission pipeline in south Texas, extending in a southeasterly direction from a point near the De Witt-Victoria Counties line to a point about 7 miles southeast of Victoria, Texas, and interconnecting with United's "West 30-inch Line" extending from Refugio, Texas, to Monroe, Louisiana. Gathering further seeks authorization to sell to United for resale an annual contract volume, transported in its pipeline, equal to a daily average of 40,000 Mcf. Gathering's transmission facilities were constructed and are operated under temporary certificates issued September 7, 1962 and February 6, 1963.

---

[4] See footnote 2, *supra*.

Docket No. CP62-193. By an application in Docket No. CP62-193, filed in 1962, United seeks a certificate of public convenience and necessity under Section 7(c) authorizing it to construct and operate a purchase meter station and related facilities in order to receive into its existing system the gas it purchases from Gathering. Such facilities have been constructed and are now being operated under temporary certificates issued September 7, 1962 and November 15, 1963. In addition, if United is authorized to acquire and operate Gathering's facilities, United seeks, as an amendment to its application, a certificate authorizing it to utilize the meter station and related facilities as a check meter station.

Docket No. CP65-118. By a joint application in Docket No. CP65-118, filed in October 1964, Gathering seeks permission and approval under Section 7(b) of the Act (upon its receipt of the certificate requested in Docket No. CP62-179) to abandon, by sale to United, the facilities, and service rendered thereby, constructed and operated under the temporary authorizations in Docket No. CP62-179. United seeks a certificate of public convenience and necessity under Section 7(c) authorizing it to acquire from Gathering and to operate the transmission pipeline facilities constructed by Gathering.

Furthermore, United seeks permission and approval under Section 7(b) to abandon, by sale to Lone Star Gas Co. (Lone Star), that portion of United's Dallas-Fort Worth main line and appurtenant facilities from a point near Wills Point, Van Zandt County, Texas, to its terminus 93 miles to the west in the area of Fort Worth, Tarrant County, Texas.

Two other requests in the application in Docket No. CP65-118, immaterial to the disputed question here presented, involve proposed facilities in north Texas. United seeks a certificate of convenience and necessity under Section 7(c), (a) to construct and operate dehydration, measuring, and related facilities near the discharge side of its Mineola compressor station, Wood County, Texas, for the purpose of transporting and selling up to 22,500 Mcf of natural gas per day in interstate commerce to Lone Star pursuant to United's Rate Schedule PL-C; and (b) to sell such gas to Lone Star. Lone Star seeks a certificate of convenience and necessity under Section 7(c) authorizing it to construct and operate approximately 12 miles of 8-inch pipeline and appurtenant facilities, extending from a point on its "Line 0" in a southwesterly direction to a point near the discharge side of United's Mineola compressor station, to enable Lone Star to receive quantities of natural gas to be purchased from United.

The participants, Lone Star, Gathering, United, intervenor Public Service Commission of the State of New York, and the Staff of the Federal Power Commission, stipulated in writing that the applications as supplemented should be incorporated in the record by reference as evidence "in proof of all issues inherent in these proceedings," except that "the New York Commission does not agree that such evidence constitutes adequate proof in establishing United's need for this gas. On this sole issue remaining in dispute, * * * further relevant evidence may be offered. * * *"

The proceedings came on for hearing before the Examiner on November 16, 1965, and concluded the same day. The stipulation and applications were received in evidence, and oral evidence was introduced through a witness on behalf of United. This witness was cross-examined by the New York Commission and the Federal Power Commission Staff; and documentary evidence was introduced by the New York Commission. The participants filed briefs after the conclusion of the hearing, applicants' reply brief being filed on January 14, 1966. On February 3, 1966, the hearing was reopened for the receipt of evidence upon questions raised by the Examiner. A witness on behalf of United testified, being cross-examined by the Federal Power Commission Staff; and documentary evidence was introduced by United and Lone Star. The reopened hearing was concluded the same day, and the proceedings were submitted for consideration and decision without the filing of additional briefs. The Staff takes the position that the certificates should issue; the New York Commission, that they should be denied.

PRELIMINARY FINDINGS

The evidence establishes the following facts:

United is a large transporter and wholesaler of natural gas, operating an integrated pipeline system serving markets in Texas, Louisiana, Mississippi, Alabama, and Florida. It supplies part of the requirements of transmission pipelines serving the Appalachian area, the Atlantic seaboard, and portions of the Midcontinent area. Lone Star owns and operates a natural-gas transmission and distribution system in Texas and Oklahoma, through which it transports natural gas in interstate and intrastate commerce. It has a separate system in Texas through which it transports and sells gas only in intrastate commerce.

Gathering, a wholly owned subsidiary of Lone Star, is engaged in purchasing from producers, gathering, transporting, and selling natural gas produced in De Witt, Goliad, Karnes, and Victoria Counties, Texas, in Texas Railroad Commission District No. 2. Said applicant purchased the gas under numerous contracts, entered into after September 28, 1960, and having a term of 20 years or longer. The contract price is 18¢ per Mcf, except for two contracts involving the sale of sour gas, where the price is 12¢ per Mcf. Said applicant gathers the gas through about 101 miles of 2½- to 12-inch pipeline and transports it to United by means of its 14-inch main transmission line. These facilities are isolated from the system of Lone Star.

Under a service agreement entered into on December 14, 1962, between Gathering and United, United agreed to purchase from Gathering a minimum average of 40,000 Mcf of gas per day, or approximately 14.6 billion cubic feet per year, to be transported in the 14-inch line. The stipulated place of delivery is a point on United's "West 30-inch" Refugio-Monroe line, approximately 7 miles southeast of Victoria, Texas; and the contract price is 21.5¢ per Mcf delivered.

The primary purpose of United's West 30-inch Line is to move available gas reserves from the south Texas area to United's north Louisiana area. The total cost of the facilities which Gathering constructed is $3,583,860, of which approximately $900,000 was expended for the 14-inch transmission line. The design and cost of Gathering's facilities are reasonable and proper. Gathering's facilities have been, or are to be, financed by the sale to Lone Star of 37,000 shares of common stock at the par value of $100 per share.

Gathering commenced deliveries of gas to United, its sole customer, on June 19, 1963. During 1964 United's average purchases from Gathering amounted to 41,817 Mcf per day, or an annual volume of 15,263,119 Mcf.

In September 1963, Gathering filed a letter in Docket No. CP62-179 whereby it agreed, in the event a final certificate were issued to it, to pass on to United any reduction accruing to Gathering in its weighted average costs of purchased gas as a result of the final disposition of the suppliers' certificate applications. At the hearing, Gathering reiterated this commitment. On September 22, 1965, the Federal Power Commission issued its Opinion No. 476 in *Sinclair Oil & Gas Co., et al.*, Docket No. G-16760, *et al.*, 34 FPC 930, wherein it held that the in-line price in Texas Railroad Commission District No. 2 for gas sold under contracts executed after September 28, 1960, is 16¢ per Mcf. An appeal was taken to the United States Court of Appeals from such order, which is now pending.

On September 2, 1964, Lone Star, Gathering, and United entered into a contract whereby, *inter alia*, Gathering agreed to sell, and United to buy, Gathering's gathering lines and transmission line above described, and all of its contracts for the purchase of gas to supply the requirements of such pipelines. The purchase price is $3,426,355, representing Gathering's depreciated original cost thereof as of June 30, 1964 as reported by said parties; and is subject to adjustment at the time of closing for additions, retirements, and depreciation made or accrued during the interim. Three hundred and five billion cubic feet of reserves would be committed to United under the reserve determination provisions of the producer contracts. This gas supply is reasonably adequate to support the proposed acquisition. The total daily volume of gas which United would be obligated to take or pay for, when all the producer contracts have been assigned to United, would be the same as United's present obligation to take gas deliveries from Gathering, 40,000 Mcf daily. United would finance the acquisition from current working funds.

United has indicated to the Federal Power Commission Staff that it would accept an order issuing a certificate to it authorizing its acquisition of the facilities of Gathering, subject to a condition requiring it to flow through to its customers any refunds it may receive from Gathering, or from producers selling gas directly to United which moves in such facilities.

Relative to United's application in Docket No. CP62–193, United estimated that the construction of the purchase meter station and related facilities would cost $38,772. The construction of the station and related facilities was financed out of current working funds. Upon the acquisition of the facilities of Gathering by United, it would be necessary that the meter station and related facilities be utilized as a check meter station so as to enable United to determine the volumes of gas coming from the producing area traversed by the facilities acquired.

Relative to Docket No. CP65–118, in the contract of September 2, 1964, United agreed to sell, and Lone Star to purchase, the portion of United's Dallas-Fort Worth main line and appurtenant facilities which United seeks permission to abandon by sale to Lone Star. United formerly operated this line and the appurtenances primarily for selling natural gas to two power companies in the Dallas-Fort Worth area. United no longer serves these customers. Utilization of such line declined from 52.7 MMMcf in 1960 to 4.4 MMMcf in 1963. Thus, United has capacity in that portion of its main line over and above its present or future needs in the area. Lone Star can economically and advantageously integrate the facilities into its existing intrastate pipeline system. Such facilities will enable Lone Star to transport natural gas produced in East Texas to the Dallas-Fort Worth metropolitan complex, where it engages in the natural-gas distribution business, thereby resulting in greater utilization and more effective operation of the facilities. Hence, the proposed abandonment of these facilities in the manner sought by United will be compatible with the public interest and beneficial to the customers of both United and Lone Star.

United will not discontinue any service now rendered by it in the area served by the portion of its Dallas-Fort Worth line which it seeks to abandon. In order to continue such service and to provide service to any new customers, United will purchase natural gas from Lone Star, delivered from Lone Star's intrastate system.

The price to be paid by Lone Star to United for the Dallas-Fort Worth facilities is $3,254,415. The Examiner reopened the hearing because of a finding proposed by applicants concerning this transaction and because of questions growing out of proposed book accounting for the transaction. The proposed finding recited that the cost of acquisition represented United's "depreciated book cost" as of June 30, 1964. From the application, however, it appeared that Lone Star proposed to record the $3,254,415 on its books as being original cost depreciated. Hence, it was not clear whether by the term "depreciated book cost" applicants meant "depreciated original cost." Furthermore, an exhibit to the application, after setting out the purchase price states, "The proposed sale will result in a taxable gain to applicant [United] and the resulting federal income tax will be approximately $423,000." In its proposed accounting treatment for the income tax liability, United debits this amount to Account No. 435, "Miscellaneous Debits to Surplus," and credits it to Account No. 236, "Taxes Accrued." The tax liability of $423,000 indicates a large tax profit on a $3,254,415 transaction, and the record was silent as to how the profit was determined. In the circumstances, questions were raised in the Examiner's mind whether there was a similar book profit that had not been properly set forth in the proposed accounting; and if so, what should be the accounting treatment, and whether the book profit considerations were a sufficient ground for rejecting the application, or if the application were granted, for conditioning the authorization upon a proper accounting treatment.

At the reopened hearing, applicants represented that the cost of acquisition, $3,254,415, was the amount of the original cost, less accrued depreciation as of June 30, 1964. United adduced evidence that the taxable gain resulted from varying tax depreciation rates applied by United (in its tax returns) on the property in question, over the years since the transmission mains were installed in 1927, being substantially in excess of corresponding (and varying) book rates of depreciation over the same period. The Examiner accepts the explanation of United that it is selling the properties at original cost depreciated, that no book profit is involved, and that the proposed accounting entries are proper and entirely in accordance with prescribed accounting under the Commission's Uniform System of Accounts.

The $3,254,415 is subject to adjustment at the time of closing for additions and retirements, and for depreciation made or accrued during the interim. Lone Star would finance the acquisition from current working funds.

Concerning the authorizations requested by applicants in Docket No. CP65-118 on the proposed facilities and operations in Wood County, Texas, United and Lone Star have entered into an agreement for United to sell and Lone Star to purchase up to 22,500 Mcf of natural gas per day to supplement Lone Star's general system supply for northeastern Texas and southwestern Oklahoma customers. The total construction cost of the facilities United proposes to install is estimated to be $207,494; those of Lone Star, $208,700. The design and estimated costs of such facilities are reasonable and proper. Each applicant has the ability to finance its proposal. A market now exists for the volumes of gas which United proposes to sell to Lone Star.

DISCUSSION

United's Need for the Daily Volume of 40,000 Mcf. The New York Commission contends that United does not need the gas involved in its transactions with Gathering. That Commission points out that at the end of 1963 (the latest date for which United's gas reserves are shown), United's reserve-to-production ratio was 18.2 years; and avers that United is a company of "exceedingly limited growth." This position is without merit. The evidence establishes that United needs the approximately 300 billion cubic feet of reserves in order to meet constantly increasing annual and peak-day demands placed on it by its customers, to replace the gas being delivered to its customers, and to assist it in assuring a dependable natural-gas service for its markets. United's reserve-to-production ratio has declined; at the end of 1962 the ratio was 20 years. The evidence shows that United's annual deliveries to its customers rose from slightly in excess of 1000 billion cubic feet in 1953 to 1250 billion cubic feet in 1962, and to 1451 billion cubic feet in 1964. Its peak-day deliveries increased from 3.6 billion cubic feet in 1952–53 to 5.6 billion cubic feet in 1962–63, and to 5.8 billion cubic feet in 1963–64.

The evidence shows that United's growth is sufficient to justify the addition of the increment to its reserves. On an annual basis, United delivered 110 billion cubic feet more gas in 1963 than in 1962; and 90 billion cubic feet more in 1964 than in 1963. Translated into Mcf per day, these volumes represent an increase of 300,000 Mcf on an average day in 1963; and an average day increase of 250,000 Mcf in 1964. From the heating season 1960–61 through that of 1963–64, United's peak-day deliveries increased by 800 million cubic feet, or an average of 200,000 Mcf during the period.

Furthermore, the gas reserves in question are particularly attractive to United because their location permits United to utilize unused capacity in its West 30-inch Line. During the three years prior to the peak day January 10, 1962, the reserves supplying this line diminished; so that on such date there was unused capacity of 119,533 Mcf in such line—a problem alleviated by the gas delivered into the line from Gathering's system.

The evidence shows that in providing service to United's customers in the north Louisiana area, there is need during peak and near-peak periods for all of the capacity available in the West 30-inch Line, as well as the entire capacity of a line of United from south Louisiana known as the "North-South 30-inch Line." Also, United utilizes the gas purchased from Gathering in making deliveries of 75,000 Mcf per day to Natural Gas Pipeline Co. of America, at a point on the West 30-inch Line, pursuant to an agreement with Natural consummated in 1962.

The New York Commission points to "a major take-or-pay problem" of United. United has paid over $22,000,000 for gas in south Louisiana which it has been unable to take into its system. But the south Texas purchase in question does not adversely affect the take-or-pay situation.

The evidence shows that although United has some take-or-pay contracts in south Texas, none of the take-or-pay provisions was triggered by the purchase of Gathering's gas. Despite the take-or-pay provisions in the south Texas contracts, it is the opinion of United's witness that United will not have to pay for any gas in that area which it does not take. The witness testified that the deliverability characteristics of the south Texas gas are such that the producers will deliver more gas to United on the peak day than United is contractually obligated to take. Inasmuch as the south Texas gas can be produced at rates considerably in excess of the contractual take-or-pay obligations, United estimates that it can so average the annual takes as to avoid take-or-pay-for payments. The Examiner finds that United does not stand to have to make prepayments for gas to its south Texas suppliers.

The record shows that United's purchase from Gathering has tended to prevent the take-or-pay problem from worsening. To the extent that United has to increase the amount of gas from south Louisiana in order to supply the peak demands in the north Louisiana area, it increases the volumes of gas it must annually take or pay for in south Louisiana by virtue of its contract provisions. Conversely, to the extent that the peak demands of the north Louisiana customers can be served from south Texas, the necessity for purchasing gas in south Louisiana and having to take or pay for the corresponding annual quantity is reduced.

United's witness is further of the opinion that the Bistineau gas storage field in north Louisiana, for the development of which United has recently filed an application, will "reduce, if not entirely eliminate," the take-or-pay-for problem in south Louisiana.

The Examiner finds and concludes that there is a market, and a need on the part of United, for the gas in Texas Railroad Commission District No. 2 here involved, delivered at the daily average of 40,000 Mcf.

United's Need for the Gas at the Prices Involved. The New York Commission contends that in any event, United does not need the gas at the prices in question. Gathering's rate to United is comprised of two elements: (1) the field prices which Gathering pays, and (2) Gathering's charge for gathering and transporting the gas to United's pipeline. Insofar as the New York Commission's argument is directed to the in-line field price of the gas, the question arises whether said intervenor is barred from raising the issue by *Sinclair Oil & Gas Co., et al., supra.* Those proceedings involved 41 applications for permanent certificates for sales of gas in Texas Railroad Commission District No. 2 to certain buyers, including "Lone Star Gathering Company (for resale to United Gas Pipe Line Co.)." Many of Gathering's suppliers were applicants in such proceedings. The Commission held that the sale of natural gas as proposed was required by the public convenience and necessity at prices (as to contracts executed after September 28, 1960) not greater than 16¢ per Mcf, fixed by the Commission as "the correct post-policy in-line price."

The New York Commission, a party intervenor in those proceedings, in exceptions to the Examiner's decision, asserted that the applications should be denied because of an absence of evidence of a public need for the gas. In response, the Commission said:

> This issue was not raised at the pre-hearing conference * * *, nor was it brought up at the hearings. * * * The New York Commission's evidence as to lack of need is not, in our judgment, persuasive. We find the exceptions of the New York Commission not appropriate in the present posture of this proceeding, particularly so, since such exceptions were raised after the certification of the pipeline purchasers had been authorized, and on the basis of a record which discloses no question as to need for the gas supply involved.

Applicants and the Staff argue that the New York Commission is precluded from retrying the price issue, and cannot collaterally attack the opinion and order in *Sinclair.* However, upon the authority of two other Commission opinions, the New York Commission, in raising the question of United's need for the gas at the in-line field price, is not retrying an issue involved in *Sinclair* or collaterally attacking that decision. In *H. L. Hawkins & H. L. Hawkins, Jr., et al.*, Opinion No. 475, 34 FPC 897, a producer in-line price case issued the same day as *Sinclair*, the Commission held that the producer sales there involved were "required by the public convenience and necessity." But in so holding, the Commission ruled that the question of public need for the gas was without the purview of "public convenience and necessity" as employed in producer in-line price cases, stating, "The issue of public need should be confined to pipeline certificate proceedings, not producer applications." The Commission followed this ruling in the producer in-line price case *Turnbull & Zoch Drilling Co., et al.*, Opinion No. 478, 34 FPC 1001, where distributors contended that the producers' presentations were deficient in failing to show that there was a public need for the gas there involved at 15¢ per Mcf.

There is no evidence which justifies a conclusion that United does not need the gas here in question because the in-line field price is 16¢. The record discloses that within the period of about a year prior to the hearing. United entered into four contracts for the purchase of gas from producers, in the Gulf Coast of Texas and south Louisiana, at a lesser price than 16¢. However, these contracts only concerned small volumes from a few wells having a short remaining life. The Examiner finds and concludes that United has a need for the gas in question, taking into account the in-line price of 16¢.

The New York Commission also objects to the element in Gathering's rate consisting of the charge for gathering and delivering the gas to United's pipeline. It has been seen that this service consists in Gathering's collecting the gas in its 101 miles of gathering lines and transporting it a distance of 24.4 miles. In 1963, the component of Gathering's rate for such service was 3.9¢; and in 1964, 4.1¢.[1] After the Federal Power Commission, on September 22, 1965, fixed the producer in-line price in Texas Railroad Commission District No. 2, this component of Gathering's rate continued to be on the order of 4.1¢.[2]

The charge for the gathering and transportation would seem to be high. It raises a question whether a full hearing should be had to determine if a condition attached to the certificate issued Gathering effecting a reduction in this element in Gathering's rate would be reasonable and required by the public interest. An offsetting consideration is the fact that Gathering has agreed to flow through to United the reductions in its weighted average cost of purchased gas. Upon the final disposition of the appeal in *Sinclair*, which the Examiner necessarily assumes to be a valid opinion and order (*Northern Natural Gas Co.*, 11 FPC 278, 281–82), the 18¢ wellhead purchases will be reduced to 16¢. The reduction which will flow through to United should be on the order of $216,000 per annum.[3]

It is unnecessary, however, to go into the question of conditioning the authorization which Gathering seeks by a reduction in its rate to United. For this question becomes moot if, as the Examiner believes should be done, the authorization sought by United in Docket No. CP65-118 is granted. Since United will acquire the facilities of Gathering and will itself make the field purchases, there will no longer be a gathering and transportation charge by Gathering. Hence, there is no need or occasion to condition the authorization which Gath-

---

[1] In their reply brief, applicants concede that in 1963, Gathering paid an average price for the gas of 17.6¢ per Mcf; and in 1964, an average price of 17.4¢ per Mcf. Hence, in 1963 there was a spread of 3.9¢ between the price Gathering paid and Gathering's price to United of 21.5¢ per Mcf delivered; and in 1964 the spread was 4.1¢.

[2] The record does not show the actual volume of purchases affected by the in-line price. However, an approximation can be made from an estimate in the record of Gathering's annual field purchases, filed by it with the Commission on June 12, 1963. According to the estimate, Gathering would purchase 10,818,965 Mcf @ 18¢, and 4,249,695 Mcf @ 12¢, for a combined total of 15,068,660 Mcf at an average weighted unit cost of 16.31¢. Gathering's experience since operations commenced differs somewhat from this estimate (see note 1, *supra*), but the estimate will suffice for the purpose of an approximation. A reduction of 2¢ per Mcf related to the 10,818,965 Mcf purchase cost and a flow-through of this reduction in the selling price to United, gives a spread to Gathering of 4.10¢.

[3] See itemization below:

10,818,965 Mcf at 18 cents (Note 2, supra)	$1,947,414
4,249,695 Mcf at 12 cents (Note 2, supra)	509,963
15,068,660 Mcf, total cost	2,457.377
10,818,965 Mcf at 16 cents	1,731,034
4,249,695 Mcf at 12 cents	509,963
15,068,660 Mcf, total cost	2,240,997
Reduction in weighted average costs	216,380

ering seeks in the manner above stated. "The law forces no one to do vain or useless things." "Equity will not require that to be done which if done would be useless."

Acquisition by United of Gathering's Facilities. The record discloses that the acquisition by United of Gathering's facilities is advantageous to United and its customers. United will have pipeline facilities in a gas producing area not now traversed by its facilities, and direct control of the existing gas purchase contracts and the gas dedicated thereunder to the service of such facilities, as well as the opportunity in the future to purchase additional gas to satisfy the demands of its customers. Also, the facilities can be integrated into United's system, and United will have greater flexibility in the operation of its pipeline system and the receipt of gas deliveries in the area.

Furthermore, as the Staff points out, United's acquisition of Gathering's facilities will benefit United's consumers by affording them the advantage of the significant decrease in United's cost of purchased gas resulting from the elimination of the gathering and transportation charge, without an offsetting increase in other elements of United's cost of service. By the contract of September 2, 1964, between Lone Star, Gathering, and United, there is a virtual exchange of Gathering's facilities for the segment of United's Dallas-Fort Worth line. It has been seen that Gathering is selling its facilities to United for $3,426,355 and that United is selling the portion of the Dallas-Fort Worth line to Lone Star for $3,254,415, each price, according to applicants' representations, being at depreciated original cost. Hence, the acquisition by United of Gathering's facilities will entail only a minuscule increase in United's plant investment.

The Examiner concludes that all of the authorizations sought should be granted, subject to appropriate conditions covering the flow-through of refunds by reason of the reduction in cost of purchased gas resulting from the Commission's order in *Sinclair*.

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence adduced and the briefs of counsel, it is further found and concluded that:

(1) Applicant Lone Star Gathering Company, a Texas Corporation having its principal place of business in Dallas, Texas, is engaged in the transportation and sale for resale of natural gas in interstate commerce and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Applicants United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, and Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, are "natural-gas companies" within the meaning of the Natural Gas Act as heretofore found by the Commission in its orders of January 20, 1942, in Docket No. G-216, 3 FPC 3, and of April 11, 1944, in Docket No. G-442, 4 FPC 565, respectively.

(3) The facilities constructed and to be constructed by Gathering and United, and to be acquired by United from Gathering, as hereinbefore described, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission; and the facilities to be constructed by Lone Star, as hereinbefore described, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission—all as more fully described in the applications in these proceedings—and the construction and operation thereof by said applicants are

subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The facilities to be abandoned by Gathering and United as hereinbefore described, all as more fully described in the application in Docket No. CP65-118, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of subsection (b) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the facilities and proposed facilities by Gathering, Lone Star, and United (including the operation by United of the meter station and related facilities as a check meter station), the proposed sale of gas by United to Lone Star, and the acquisition and operation by United of Gathering's facilities are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) The proposed abandonments of facilities and service by Gathering and United are permitted by the public convenience and necessity, and approval thereof should be granted as hereinafter ordered.

(8) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity is hereby issued authorizing applicant Gathering to construct and operate the facilities heretofore authorized by temporary certificates issued September 7, 1962, and February 6, 1963, in Docket No. CP62-179, all as more fully described in the application in such proceeding, as supplemented.

(B) A certificate of public convenience and necessity is hereby issued authorizing applicant United to construct, acquire, and operate the facilities and proposed facilities which it seeks authorization to construct, acquire, and operate; and to sell, transport, and deliver natural gas as hereinbefore described; all as more fully described in the applications, as supplemented and amended, in Docket Nos. CP62-193 and CP65-118, as supplemented, upon the terms and conditions of this order.

(C) A certificate of public convenience and necessity is hereby issued authorizing applicant Lone Star to construct and operate the proposed facilities which it seeks authorization to construct and operate; and to transport and deliver natural gas as hereinbefore described; all as more fully described in the application in Docket No. CP65-118, as supplemented, upon the terms and conditions of this order.

(D) Permission for and approval of the abandonment by Gathering of the facilities heretofore constructed and now being operated by Gathering, and of the service rendered by it, pursuant to temporary certificates issued September 7, 1962, and February 6, 1963, in Docket No. CP62-179, all as hereinbefore described and as more fully described in the application in Docket No. CP62-179, are hereby granted subject to the agreement contained in Gathering's letter filed September 19, 1963, in Docket No. CP62-179, providing that Gathering will pass on to United any reduction in its weighted average cost of purchased gas which may result from the Commission's order accompanying Opinion No. 476 issued September 22, 1965, in *Sinclair Oil & Gas Co., et al.*, Docket No. G-16760, *et al.*, or other pertinent Commission action.

(E) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), (d) (2), (d) (3) and (e) of Section 157.20 of such Regulations.

(F) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Lone Star's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(G) Permission for and approval of the abandonment by United of the facilities hereinbefore described, all as more fully described in the application in Docket No. CP65-118, as supplemented, are hereby granted.

(H) United and Gathering shall advise the Commission of the date of abandonment of facilities authorized in paragraphs (D) and (G) above within ten days of such abandonment.

(I) The facilities hereby authorized shall be constructed and placed in actual operation, and the sales, transportation, and deliveries of natural gas authorized in paragraphs (B) and (C) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(J) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned to require that United flow through to its customers any refunds which it may receive from Gathering or from producers selling directly to United as provided for in the Commission's "Order Approving Rate Settlement and Requiring Retention of Certain Refunds," issued December 23, 1964, in *United Gas Pipe Line Co.*, Docket No. RP61-18, *et al.*, 32 FPC 1515.

(K) After Gathering has abandoned the facilities for which authorization is granted herein, Gathering shall file with the Commission a notice of cancellation of its service agreement with United and of its FPC Gas Tariff, Original Volume No. 1.

HOWELL PURDUE,
Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PIPELINE PRODUCTION AREA RATE PROCEEDING, DOCKET NO. RP66-24

ORDER DELETING RESPONDENT

(Issued August 22, 1966)

Texas Gas Pipe Line Corporation (Texas Gas) on August 5, 1966, filed a motion requesting that it be deleted as a respondent in the above-designated proceeding.

In support of its motion, Texas Gas states, *inter alia*, that (1) it has no natural gas production at the present time and does not contemplate acquiring any production; (2) it currently owns and operates only 15 miles of 12-inch pipeline from which it makes a single jurisdictional sale to Transcontinental Gas Pipe Line Corporation; (3) it is seeking authorization to make one additional jurisdictional sale to Texas Eastern Transmission Corporation, which if granted would then increase Texas Gas' system to 50 miles of 10 and 12-inch pipeline; (4) currently it makes all of its gas purchases from unaffiliated independent producers; (5) if the authorization referred to above is granted it will purchase less than 1% of its total annual purchases from Union Texas Petroleum which is, as is Texas Gas, a subsidiary of Allied Chemical Corporation; and (6) it is doubtful that its continued participation in these proceedings, at considerable burden and expense, will contribute substantially toward the Commission's consideration and resolution of the issues involved.

On basis of the facts recited by Texas Gas and in view of the *de minimis* extent of Texas Gas' interstate pipeline operations, it appears that its continued participation as a respondent herein would not be of such a nature to contribute significantly to the record or to resolution of the issues involved in this proceeding. Accordingly, Texas Gas should be deleted as a respondent to this proceeding.

The Commission orders:

Texas Gas Pipe Line Corporation hereby is deleted from the list of Parties-Respondent specified in Appendix A to the order issued April 13, 1966, 35 FPC 497, in this proceeding.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63-228

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1966)

On July 19, 1966, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63-228 a letter request to amend the order issued July 3, 1963, 30 FPC 38, in said docket, which, among other things, required the Applicant to submit the actual cost of construction of its liquefied natural gas facility which was authorized by said order, within six months from the date of completion of such facility. Applicant requests extension of the time within which to make said report to April 30, 1967, all as more fully set forth in the letter request.

Applicant states that the facility was completed on January 10, 1966. The construction cost report is due as of July 10, 1966. It is requested that an extension of time until April 30, 1967, be granted within which to comply with the foregoing requirement.

By ordering paragraph (E) of the same order, Transco is precluded from transferring on its books from construction work in progress to gas plant in service the cost of the said LNG facility "Until the liquefied natural gas facility * * * has operated for one full injection and withdrawal cycle." It is estimated that this full cycle will not be completed until March 31, 1967. In the meantime, additional capital costs are being incurred as interest during construction, etc., and revenues which may be derived from the plant this coming winter will be credited to the cost of the project. As a result, total capital costs of the facility cannot be finally determined until the LNG facility is transferred to gas plant in service. Although the actual construction of the facility has been technically completed, a construction report at this time would reflect only an estimate of the total capital cost to be incurred prior to the completion of the full injection and withdrawal cycle. For this reason, an extension of time until April 30, 1967, is requested in order that a complete and meaningful report may be filed at that time.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued in Docket No. CP63–228 on July 3, 1963, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued July 3, 1963, in Docket No. CP63–228 is amended so as to extend the time in which to make the construction cost report from July 10, 1966, to April 30, 1967.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP66–131

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1966)

On June 1, 1966, Trunkline Gas Company (Petitioner), filed in Docket No. CP66–131 a petition to amend the certificate of public convenience and necessity issued in said docket on February 11, 1966, 35 FPC 224, so as to authorize increases in the contract demands of eleven of its resale customers all as more fully set forth in the petition to amend.

Petitioner states that subsequent to the issuance of the order in the instant docket eleven of its existing resale customers requested increased contract demands commencing during 1966 so as to meet their requirements for the 1966–1967 heating season. Petitioner further states that such requests for increased contract quantities are as follows:

	Present authorization, Mcf	Proposed increase, Mcf	Proposed contract demand, Mcf
Flora, Ill.	3,800	200	4,000
Hickman, Ky.	1,600	1,300	2,900
Louisville, Ill.	630	320	950
McLeansboro, Ill.	2,350	250	2,600
Newbern, Tenn.	1,025	275	1,300
Troy, Tenn.	425	75	500
United Cities Gas Co.	3,800	200	4,000
Vienna, Ill.	1,000	300	1,300
Wickliffe, Ky.	644	156	800
Central Illinois Electric & Gas Co., Sidney, Ill.	1,200	550	1,750
St. Joseph, Ill.	675	175	850
Illinois Power Co., Ogden, Ill.	700	300	1,000
Total	17,849	4,101	21,950

Petitioner states that no additional facilities will be needed to provide such increased contract quantities and that no change in rates nor in the terms upon which service is rendered is proposed in conjunction with the requested amendment.

The total increase in contract demands for the eleven customers listed above will aggregate 4,101 Mcf. Upon completion of the facilities authorized by the Commission order of February 11, 1966, in this proceeding, Trunkline will have adequate capacity to provide these increased contract quantities.

Due notice of the filing of the petition to amend and opportunity for hearing thereon have been given by publication in the Federal Register on June 17, 1966 (31 F.R. 8508). No protest or petition to intervene has been filed in this proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity requires (1) that the Commission's order issued February 11, 1966, in Docket No. CP66-131 be amended as hereinafter ordered, and (2) executed superseding service agreements be filed with the Commission reflecting the proposed increases.

The Commission orders:

(A) The Commission's order, issued February 11, 1966, in Docket No. CP66-131 is amended by authorizing Petitioner to change maximum daily quantities to conform with volumes designated and set forth hereinabove, all as hereinbefore described and as set forth in the subject petition to amend.

(B) Superseding service agreements be filed with the Commission within 30 days after the issuance of this order.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-426

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1966)

On June 24, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-426 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation and delivery of natural gas to Henderson Clay Products, Inc. (Henderson) for use by the latter in its brick manufacturing plant, Rusk County, Texas, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate approximately 0.95 mile of 4-inch pipeline from a point on its Henderson Lateral to the brick plant in Rusk County. Applicant will also construct related metering and regulating facilities and other appurtenant facilities. The application indicates that Henderson's third year maximum day and annual requirements from Applicant are 2,000 Mcf and 600,000 Mcf, respectively. Henderson will utilize natural gas in the operation of its brick kilns.

Applicant and Henderson have entered into a contract, dated May 25, 1966, providing for the proposed sale. Henderson has agreed to a "take-or-pay" quantity of 1,500 Mcf per day. The average rate for the estimated 600,000 Mcf of annual delivery is estimated to be 23.22 cents per Mcf.

Total estimated cost of the proposed facilities is $27,176, which cost will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G–216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

ORDER DENYING MOTIONS FOR CLARIFICATION AND OMISSION OF INTERMEDIATE DECISION PROCEDURE

(Issued August 23, 1966)

On June 13, 1966,* the presiding examiner's initial decision was issued upon certain applications for certificates of public convenience and necessity in this proceeding. By this decision the construction and operation of certain facilities and the transportation and sale of natural gas in interstate commerce pursuant to certain applications were specifically authorized. The examiner provided, however, that certain other issues should be resolved in a separate subsequent decision. The examiner further provided[1] that the time for filing exceptions to the initial decision of June 13, 1966, would run from the date of issuance of the examiner's subsequent decision disposing of the reserved issues.

Notwithstanding the apparent extension of time for filing exceptions, Consolidated Edison Company of New York, Inc. (Con Ed) on June 15, 1966, filed exceptions to the initial decision of June 13, 1966, and moved for clarification of the Commission's order of April 29, 1966, 35 FPC 642 (amended May 13, 1966), for postponement of the date of hearing fixed in that order, and for omission of the intermediate decision procedure. No other exceptions have been filed.

We are concerned here with only one phase of this consolidated proceeding which involved 5 applications for pipeline expansion programs and the development of a storage field in Pennsylvania. Among the matters on which decision was reserved was a proposed sale by Transcontinental Gas Pipe Line Corporation (Transco) of gas to be used by Con Ed as boiler fuel in New York City. The order of April 29 provided in part for severance of this matter and for a hearing. We allowed intervention to the United States Department of Health, Education, and Welfare (HEW) so that it might present evidence with respect to the possible effect of this proposal, and its variations, on air pollution in the City of New York.

The initial decision of June 13 did not purport to determine any of the questions involved in this connection. It contained some 15 pages in which the examiner indicated various questions which he thought should be dealt with by the participants in the later hearing. The exceptions of Con Ed are directed solely to these 15 pages in the initial decision. Con Ed does not object to anything contained in the ordering paragraphs accompanying the initial decision of June 13, but it asks the Commission "to eliminate from its consideration in any final decision it may render based upon this initial decision, all of the conclusions and material contained in mimeo. pages 21–35 thereof."**

---

*Editor's note: Decision printed at 37 FPC 137.

[1] Ordering Paragraph (H).

Con Ed also contends that the questions raised by the examiner at said mimeo. pages 21–35 **would broaden the scope of the future hearing beyond that contemplated in the Commission order of April 29, and asks that that order be clarified and that the Commission "reaffirm the clear and unambiguous direction in its order of April 29, that the sole issue upon which evidence is to be presented * * * is the issue of the most productive use of the * * * gas to alleviate air pollution in New York City." Alternatively, if the Commission concludes the hearing is to be concerned with other issues as well, Con Ed requests the date for filing and serving testimony be postponed until September to permit preparation of a case on the additional issues.

Lastly, Con Ed contends that the presiding examiner has revealed by his language at mimeo, pages 21–35 of the initial decision** that he has so prejudged the issues that the intermediate procedure should be omitted and the determination of these issues should be made in the first instance by the Commission.

The Commission staff in its answer to Con Ed's exceptions argues that the intermediate decision procedure will be of assistance to the Commission in reaching its ultimate decision. Staff further contends that the examiner has revealed no bias or prejudgment which would render it improper for him to continue in this case, and that if he had, Con Ed's proper remedy would be to ask for another examiner rather than for the omission of the intermediate decision procedure. It is also staff's position that the examiner has not extended the scope of the future hearing beyond that set forth in the Commission order of April 29, and that the questions raised by the examiner should be the subject of evidence and argument by the various participants so that the Commission may have a complete record to assist it in its ultimate decision.

The Exceptions to the Language of the Initial Decision

Con Ed asks us to disregard the language of mimeo. pages 21–35 of the initial decision.** This language was directed to issues not yet decided by the examiner. It is dicta only. It does not contain a determination and is not implemented by any of the ordering paragraphs. In these circumstances there is no determination upon which the Commission should now act. When the initial decision is made upon these matters Con Ed may file exceptions thereto, if it wishes to do so, and at that time the Commission will determine whether the order to be proposed by the presiding examiner should be upheld.

The Scope of the Future Hearing

It was not the intention of the Commission in its order of April 29 to limit the scope of the future hearing so as to preclude the development of a full and complete record. The proper scope of the proceeding should be left to the examiner in the first instance, and will usually be reviewed by the Commission only upon consideration of the entire case. Accordingly, the request of Con Ed that the Commission declare that the sole issue upon which evidence is to be presented is the issue of the most productive use of gas to alleviate air pollution is denied.

The Extension of Time to File and Serve Evidence

By order of June 24, 1966, the Commission extended the time for all parties to file and service evidence to September 20, 1966. This relief requested by Con Ed having already been granted, there is no further action necessary here.

**Printed at 37 FPC 146–154.

The Motion to Omit the Intermediate Decision Procedure

We agree with the staff that the intermediate decision procedure should not be omitted in a complex and contested case of this nature, where no impelling need for speed has been shown. Although Con Ed has not requested the institution of another examiner, we have carefully considered the language of the initial decision of which Con Ed complains to determine whether any bias has been revealed which would render it improper for the present examiner to continue to preside over this proceeding.

We note at the outset that the remarks of the examiner were stated by him to be in lieu of a prehearing conference or other notice to parties. The examiner chose this method of putting his views before the participants because of the shortness of time, which apparently ruled out a prehearing conference or other preliminary procedure to define the issues. There is no suggestion on the part of Con Ed that the examiner is personally biased for or against any party to the proceeding. Con Ed does contend that the dicta of the examiner with respect to the air pollution issues reveal that he has already formed opinions contrary to the position of Con Ed and for this reason should be replaced.

In the administration of justice by courts or administrative agencies it is of the first importance that the parties should receive a full and fair hearing and that those concerned with the adjudication of issues should maintain a judicial attitude and an open mind with respect to all reasonable contentions which are not foreclosed by prior ruling or established precedent. If we found in the examiner's language any indication that he could not afford the parties full and fair hearing we would not hesitate to replace him. We think that the statements made by him, although not of the type usually included in an initial decision, do not go beyond the permissible range of comment by judges or examiners in pre-trial or prehearing proceedings. We agree with the staff that the examiner's language indicates that he expects to consider the evidence and arguments upon the various points which he has set forth, as well as others which the participants may bring to his attention, and that his decision will be made on the basis of the evidence presented and not upon the basis of a preconceived opinion.

Con Ed's motion to omit the intermediate decision proceeding is denied.

The Extension of Time for Filing Exceptions

Ordering Paragraph (H) of the initial decision of June 13, 1966, extended the time for filing exceptions to that initial decision until 30 days after the issuance "of the examiner's subsequent decision disposing of the competitive issue." The Commission hereby confirms the examiner's order in this respect.

The Commission finds:

It does not appear to be in the public interest to grant the motion of Consolidated Edison Company of New York, Inc., to omit the intermediate decision procedure.

The Commission orders:

(A) The motions of Consolidated Edison Company of New York, Inc., for clarification of Commission order and for omission of intermediate decision procedure are denied.

(B) The time for filing exceptions to the examiner's initial decision of June 13, 1966, in this proceeding shall begin to run from the date of issuance of the examiner's subsequent decision disposing of the competitive issue.

[Ed. Note. Examiner's decisions issued June 13, 1966, and subsequent one issued September 28, 1966, are printed with Commission's Opinion No. 512, issued January 24, 1967, 37 FPC 118 at 137 and 161.]

PACIFIC GAS AND ELECTRIC COMPANY, PROJECT NO. 619

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR AMENDMENT OF LICENSE (MAJOR)

(Issued August 23, 1966)

On June 27, 1966, Pacific Gas and Electric Company, licensee for major Project No. 619, filed notice of withdrawal of an application for amendment to extend the term of the license for the constructed Bucks Creek Project No. 619 located on Bucks Creek and other streams, in Plumas County, California, and affecting lands of the United States within the Plumas National Forest.

The application for amendment, filed August 20, 1965, sought an 8-year extension of the license period to the full 50-year period from its effective date and ending April 13, 1976. The original license for the project was issued on April 14, 1926 for a period ending December 31, 1968. The project was constructed between the issuance date of the license and October, 1928.

In its notice of withdrawal, the licensee states, among other things, that it intends to apply to the Commission for a new license for the project, pursuant to Section 2.6(d) of the Commission's Rules and Regulations.

The Commission finds:

It is consistent with the provisions of the Federal Power Act and the Commission's rules and regulations thereunder to permit withdrawal of the application for extension of the term of the license for Project No. 619.

The Commission orders:

Pacific Gas and Electric Company is hereby permitted to withdraw its application for an extension of the term of its license for Project No. 619, and the proceeding initiated by the filing of the application is terminated.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-413

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, TERMINATING CERTIFICATE, CANCELING RATE SCHEDULE AND ACCEPTING RATE FILING

(Issued August 23, 1966)

On June 13, 1966, Southern Natural Gas Company (Applicant) filed in Docket No. CP66-413 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Trunkline Gas Company (Trunkline) from acreage in the Lou Ella Field, Jim Wells, Sam Patricio and Live Oak Counties, Texas, pursuant to a gas purchase contract, dated March 22, 1955, between Trunkline and A. W. Gregg (Gregg), all as more fully set forth in the application in this proceeding.

Applicant states that it has acquired its interest in the acreage covered by the contract of March 22, 1955, through an assignment by Gregg to Lower Nueces River Water Supply District (District), dated April 14, 1958, and a subsequent assignment by District to Applicant, dated March 21, 1966.

The application shows that all gas to be sold under the requested authorization will be delivered to Trunkline at the existing delivery point in the field, as specified under the contract of March 22, 1955. Applicant does not propose to construct any new facilities with respect to the subject proposal.

The Commission in Docket Nos. G–8993 and G–15135 has previously authorized Gregg and District, respectively, to sell natural gas to Trunkline under the Contract of March 22, 1955.

Concurrently with the filing of the subject application, Applicant tendered for filing its Revised Sheet No. 1 and Original Sheet Nos. 121 through 145 to its FPC Gas Tariff, Original Volume No. 3, covering the proposed sale to Trunkline.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale of natural gas by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) Applicant's proposed Revised Sheet No. 1 and Original Sheet Nos. 121 through 145 to its FPC Gas Tariff, Original Volume No. 3 should be accepted for filing to become effective on the date this order issues.

(7) The certificate of public convenience and necessity issued to District in Docket No. G–15135 should be terminated and District's related FPC Gas Rate Schedule No. 1 should be canceled.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Southern Natural Gas Company, to sell natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) Applicant's proposed Revised Sheet No. 1 and Original Sheet Nos. 121 through 145 to its FPC Gas Tariff, Original Volume No. 3 are accepted for filing to become effective on the date this order issues.

(E) The certificate of public convenience and necessity issued to District in Docket No. G-15135 is terminated and District's related FPC Gas Rate Schedule No. 1 is canceled.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

W. E. BAKKE OIL COMPANY (OPERATOR), ET AL., DOCKET NO. RI64-574

ORDER GRANTING REQUEST TO SUBSTITUTE FROZEN SAVINGS ACCOUNT IN LIEU OF SURETY BOND TO ASSURE REFUND OF EXCESS CHARGES AND TERMINATING LIABILITY UNDER BOND

(Issued August 23, 1966)

On July 6, 1966, W. E. Bakke Oil Company (Operator), *et al.*, (Bakke) filed a letter requesting that it be permitted to substitute a frozen savings account in the amount of not less than $46,400.00, in lieu of continuing a surety bond in said amount, to assure refund of excess charges in Docket No. RI64-574. The proceeding in Docket No. RI64-574 relates to a rate increase, from 10.7195¢ to 14.5¢ per Mcf, filed by Bakke on January 13, 1964, and designated Supplement No. 6 to Bakke's FPC Gas Rate Schedule No. 1, for sales of natural gas to Cities Service Gas Company from the Hugoton Field, Haskell, Morton, Kearney, Finney and Stanton Counties, Kansas. The estimated amount of annual increase under the proposed increased rate is approximately $46,400.00. By the Commission's order issued January 24, 1964, in said docket, the proposed increased rate was suspended until July 13, 1964. Subsequently, the suspended rate was permitted to become effective subject to refund under a surety bond in the amount of $46,400.00 filed by Bakke on January 27, 1965.

The unusual aspect underlying Bakke's request is that in obtaining a surety bond in this proceeding it was required by the bonding company to place the increased portion of the rate in a savings account until the total amount of the bond was accumulated.[1] Consequently, Bakke now has over $46,400.00 committed to a frozen savings account in the Southern Natural Bank of Houston, Texas, and, in addition, is required to pay the annual premium on the bond. Bakke pledges to maintain the frozen savings account in an amount of not less than $46,400.00 pending final Commission action on the increased rate if the surety bond is discharged.

---

[1] There was no indication in the surety bond filed by Bakke that it was required by the surety also to maintain a frozen escrow account. This condition did not come to light until Bakke made the subject request.

We conclude from the facts presented here that Bakke's request to substitute the frozen savings account in lieu of the surety bond should be granted. The refund protection will in no way be diminished by such action, and Bakke will be relieved of the payment of premiums which afford no additional refund assurance. No changes, however, in existing refund assurances will be permitted in other cases if the effect is to lessen such refund assurance. We also desire to preclude arrangements such as the one involved here and will therefore require natural gas companies in the future when filing a surety bond to accompany such bond with a certificate stating that no obligation in connection therewith has been assumed except payment of the bond premium.

The Commission orders:

(A) For the reasons set forth above, Bakke is permitted to substitute a savings account in lieu of the surety bond filed herein on January 27, 1965, to assure refund of any excess charges determined in Docket No. RI64–574.

(B) Bakke is authorized to terminate the surety bond filed on January 27, 1965, in Docket No. RI64–574 as of the date of the issuance of this order.

(C) Bakke shall comply with the refunding and reporting procedure required by the Natural Gas Act and Section 154.102 of the Regulations thereunder. Bakke's savings account shall be maintained in an amount of not less than $46,400.00 until Bakke is discharged by the Commission from its refunding obligation in Docket No. RI64–574.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Charles R. Ross.

DEPARTMENT OF WATER RESOURCES OF THE STATE OF CALIFORNIA, PROJECT NO. 2100

ORDER APPROVING REVISED PROJECT EXHIBIT L DRAWINGS

(Issued August 24, 1966)

On June 9, 1964, and June 13, 1966, the Department of Water Resources of the State of California, licensee for Project No. 2100, filed application for Commission approval of revised Exhibit L drawings showing proposed changes and modifications in the project, located on the Feather River, in the State of California.

The proposed changes and modifications shown on the revised drawings, which are the results of continued engineering studies and license requirements, are as follows: *Oroville Dam:* (1) substitution of 1,730 feet of ungated spillway for a gated spillway containing four 95-foot wide by 34-foot high automatically operated radial gates; (2) substitution of seven 20-foot wide by 33-foot high submerged flood control outlets with center at El. 830 feet for seven 26.67-foot wide by 26-foot high submerged flood control outlets with center at El. 834.5 feet; (3) raising of the top of Oroville dam and rim dikes from El. 915 feet to El. 922 feet required by the change in spillway design and to accommodate the handling of the design flood; (4) changing the intake to the

Oroville plant to provide for drawing water from the reservoir at various elevations for temperature regulation; and *Thermalito Diversion Dam:* changing the Thermalito dam by substituting fourteen 40-foot wide by 23-foot high radial gates with sill at El. 205 feet for seven 90-foot wide by 21-foot high radial gates with sill at El. 205 feet, and changing the top of the dam from concrete at El. 251 feet to fill at El. 246 feet, surmounted by a concrete wave wall with crest at El. 250 feet and providing a fuseplug spillway on the canal adjacent to the Thermalito intake structure.

With respect to the Oroville dam, the design of the Oroville spillway was changed as a result of hydraulic model studies which indicated that the original design could be improved. The use of an ungated spillway adds to the reliability of the dam, but causes a higher reservoir water surcharge when passing the project design flood. To accommodate this higher surcharge the top of the Oroville dam and rim dikes have been raised by seven feet. The flood control outlets have been modified in dimensions but have retained their water carrying capacity of about 280,000 cfs for reservoir water surface at elevation 900 feet. Hence, for flood somewhat in excess of the maximum flood of record (about 245,000 cfs) these outlets could prevent any water surcharge above the maximum normal water surface elevation of 900 feet from occurring, thus eliminating the need of gates at the Oroville spillway which would normally be used for controlling the water surface elevation. The intake to the penstocks of the Oroville power plant was to have been a low level gated structure with trashracks placed at about 300 feet below normal water surface elevation of 900 feet with two gates which could be hoisted up a slope for maintenance purposes. The newly proposed intake to the penstocks would be a similar structure but would be provided with trashracks and shutters for controlling the level from which water could be selectively drawn from the reservoir from elevation 613 to 900 feet for discharge water temperature control pursuant to Article 48 of the license.

The Department of the Interior has advised that the proposed design of the penstock intake structures at the Oroville power plant is adequate and would permit the selection of impounded water of suitable temperature for the downstream fishery resources, and the California Department of Fish and Game has advised that it finds that the intake structure will operate in a manner to satisfy the needs of the downstream fisheries.

With respect to the Thermalito Diversion Dam, the dam has been modified by changing the axis of the dam at the Thermalito canal intake, by providing bucket type energy dissipators at the toe of the spillway ogee, changing the radial gates by decreasing their width but increasing their number, all to improve the hydraulic operation of the spillway as found through model studies. A bridge across the spillway has been added and the low discharge outlet has been moved to the left abutment. The Thermalito spillway, together with the fuseplug spillway on the canal and with the concrete wave wall on the right abutment, are considered satisfactory for the passage of the Oroville dam discharge resulting from the possible maximum flood.

The aforementioned changes and modifications are improvements which result in a reduction in project costs, except for the Oroville power plant intake structure the cost estimate of which was increased from about $5 million to $12 million in order to provide means for releasing water from the reservoir at various levels for temperature control in the interest of fish preservation.

The Office of the Chief of Engineers has approved the plans of the project structures affecting navigation in accordance with Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned.

The Commission finds:

(1) The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project; subject to the following condition with respect to Exhibit L–1–b (FPC No. 2100–88):

Exhibit	FPC No.	Title: State Water Facilities, Oroville Division
L–1–b.......	2100–88	Oroville Dam: *Provided*, that if tests during construction prove that the fill material for the dam does not meet the design requirements assumed in Exhibit L–18–b, entitled "Oroville Dam—Design Data," [1] which is a part of the application for amendment of license filed April 17, 1962, then, subject to the requirement of Article 2 of the license, the slopes of the dam as shown in Exhibit L–1–b (FPC No. 2100–88) shall be modified to provide essentially the same factors of safety as now provided in Exhibit L–18–b.
L–4–b.......	2100–89	Oroville Power Plant, Penstocks and Intake.
L–10–b......	2100–90	Oroville Spillway.
L–11–b......	2100–91	Thermalito Diversion Dam.
L–15–b......	2100–92	Auxiliary Dams and Sections.

[1] Not required to be approved by the Commission.

(2) The following described license Exhibit L drawings which have been superseded should be eliminated from the license for the project:

Exhibits L–1–b, L–4–b, L–10–b, L–11–b, and L–15–b (FPC Nos. 2100–69, 72, 78, 79, and 83 respectively).

The Commission orders:

The revised Exhibit L drawings described in finding (1) above are hereby approved as part of the license for Project No. 2100, subject to the condition with respect to Exhibit L–1–b (FPC No. 2100–88), and the license Exhibit L drawings described in finding (2) above as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GARDNER GAS, FUEL AND LIGHT COMPANY AND GARDNER PIPELINE, INC., DOCKET NO. CP66–245; TENNESSEE GAS PIPELINE COMPANY, A DIVISION OF TENNECO INC., DOCKET NOS. CP65–120, CP65–352; FITCHBURG GAS AND ELECTRIC LIGHT COMPANY, DOCKET NO. CP66–380

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, ACCEPTING TARIFF FOR FILING AND ISSUING DECLARATION OF EXEMPTION

(Issued August 25, 1966)

The amended application in these proceedings filed by Gardner Gas, Fuel and Light Company[1] and Gardner Pipeline, Inc.[2] (hereinafter sometimes collectively referred to as Applicant) on May 4, 1966, as further amended on May 16, 1966, seeks a certificate of public convenience and necessity pursuant to Section 7 of the Natural Gas Act (Act) authorizing Gardner Pipeline to construct and operate in the State of Massachusetts approximately 8.3 miles of 6-inch pipeline and to transport natural gas for the account of Gardner Gas for consumption in Gardner, Massachusetts. Gardner Gas will purchase gas from Fitchburg Gas and Electric Company.[3]

---

[1] Sometimes referred to as Gardner Gas.

[2] Sometimes referred to as Gardner Pipeline.

Fitchburg Gas and Electric Light Company (Fitchburg), a gas distribution company operating in and around Fitchburg, Massachusetts, on May 19, 1966, filed an application for exemption of its facilities and proposed service to Gardner Gas from the provisions of the Act pursuant to Section 1(c) thereof.

Tennessee Gas Pipeline Company (TGP) filed on June 27, 1966, a petition seeking amendment of the Commission's orders issued March 30, 1965, 33 FPC 657, and July 26, 1965, 34 FPC 115, in Docket Nos. CP65–120 and CP65–352, respectively, so as to provide that part of the gas sold by Fitchburg could be resold to Gardner Gas, Fuel and Light Company for consumption in Gardner, Massachusetts.

The orders issued March 30, 1965, in Docket No. CP65–120 and on July 26, 1965, in Docket No. CP65–352, authorized TGP to sell and deliver up to a peak day maximum of 7226 Mcf to Fitchburg for resale in and about the area of Fitchburg, Massachusetts. TGP by the petition to amend filed on June 17, 1966, seeks to have the amended authorizations heretofore granted so that approximately 1,100 Mcf of the gas sold to Fitchburg may be resold to Gardner Gas for resale in Gardner, Massachusetts.

The total estimated peak day requirements of Gardner Gas are stated to be:

	Mcf
1966	550
1967	850
1968	950
1969	1, 100
1970	1, 300

The total estimated cost of Gardner Pipeline's proposed construction is $285,500, which will be financed by sale of common stock and first mortgage bonds.

Gardner Gas presently engages in the distribution of propane-air gas in Gardner, Massachusetts. It is expected that the introduction of natural gas will enable the Company to reduce rates to consumers and halt the decline in number of customers. Gardner Gas proposes to resell natural gas at a rate averaging $1.98 per Mcf. This rate contrasts with the Company's average rate of $2.84 per Mcf for propane-air gas.

Gardner Gas will pay Fitchburg at a rate of 82 cents per Mcf for the first 6,250 delivered during the month and 65 cents per Mcf for all gas in excess of that amount. Fitchburg's rates are subject to the jurisdiction of the Massachusetts Department of Public Utilities.

The Massachusetts Department of Public Utilities has no objection to the sale of gas by Fitchburg or the transportation thereof by Gardner Pipeline, Inc.

Concurrently with the filing of the amended application on May 4, 1966, Gardner Pipeline filed Rate Schedule T–1 of FPC Gas Tariff, Original Volume No. 1, reflecting the proposed transportation service of natural gas from Fitchburg to Gardner on a cost of service basis, and requested an effective date therefor of June 1, 1966. The appropriate effective date will be the date of initiation of service and Gardner Pipeline's Rate Schedule will be permitted to become effective as of that date.

---

[3] The joint application originally filed by Applicant on February 1, 1966, sought an order of the Commission pursuant to Section 7 of the Act directing Tennessee Gas Pipeline Company (TGP) to supply natural gas to Gardner Gas. The gas was to be transported by Gardner Pipeline from the point of connection with Tennessee Gas Pipeline Company to Gardner, Massachusetts.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Gardner Pipeline, Inc., a Massachusetts corporation having its principal place of business in Gardner, Massachusetts, will be a "natural-gas company" within the meaning of the Natural Gas Act, upon the commencement of operations.

(2) The proposed construction and operation of facilities and the transportation of natural gas by Gardner Pipeline, Inc., as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Gardner Pipeline, Inc. is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that Gardner Pipeline's Rate Schedule T-1 of its FPC Gas Tariff, Original Volume No. 1 be accepted for filing effective upon the initiation of service to Gardner.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 30, 1965, in Docket No. CP65-120, and the Commission's order issued July 26, 1965, in Docket No. CP65-352, be amended as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Gardner Pipeline, Inc. authorizing the construction and operation of facilities, and the transportation of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder is conditioned upon Gardner Pipeline's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, by January 1, 1967.

(D) Gardner Pipeline's proposed Rate Schedule T-1 of its FPC Gas Tariff Original Volume No. 1 is accepted for filing effective on the date of initiation of service.

(E) By reason of the foregoing the facilities of Fitchburg Gas and Electric Light Company and the service to be rendered thereby to Gardner Gas, Fuel and Light Company are exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of the Commission issued thereunder.

(F) The Commission's order issued March 30, 1965, in Docket No. CP65–120, and the Commission's order issued July 26, 1965, in Docket No. CP65–352 are amended so as to provide that a part of the gas sold by Tennessee Gas Pipeline Company (natural gas in Docket No. CP65–120 and liquefied natural gas in Docket No. CP65–352) may be resold by Fitchburg to Gardner Gas, Fuel and Light Company for resale in Gardner, Massachusetts.

(G) Tennessee Gas Pipeline Company shall file within 30 days after the issuance of this order a revised service agreement with Fitchburg Gas and Electric Light Company covering the G–6 deliveries provided for in paragraph (F) above.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61–1, ET AL.

ORDER ACCEPTING QUALITY STATEMENTS

(Issued August 26, 1966)

The producers listed in the Appendices have submitted revised quality statements reflecting the quality of gas under rate schedules pertaining to sales of gas in the Permian Basin Area as required or permitted by Commission orders issued June 13 and June 27, 1966, 35 FPC 960, 1083, in the above-entitled proceedings. The producers and their pipeline purchasers have also agreed to the price adjustments set forth in such revised quality statements for the sale of less than pipeline quality gas.

The quality statements listed in Appendices A and B, which relate to sales to El Paso Natural Gas Company (El Paso) and West Texas Gathering Company (West Texas), respectively, have been revised to eliminate proposed upward adjustments for gas delivered at pressures in excess of 500 psig or for Btu content between 1,000 and 1,050. These upward adjustments were rejected in our order issued June 13.

The revised quality statement submitted by Mobil Oil Company (Mobil) for sales to West Texas is also included in Appendix B. Such quality statement reflects the necessary price adjustment for the quality deficiencies in gas sold by Mobil to West Texas. The original quality statement was rejected in our order issued June 27 because it did not reflect any downward price adjustment for quality deficiencies. Mobil had contended erroneously that the buyer should bear the treating cost.

The quality statements in Appendix C relate to sales to Northern Natural Gas Company (Northern). The price adjustments contained therein reflect the use of a 100% capacity factor by Northern in computing its treating, dehydration and compression costs as authorized in our June 13 order.

The quality statements listed in the Appendices conform with the requirements set forth in our June 13 and June 27 orders. We shall therefore accept them.

The Commission orders:

The quality statements listed in Appendices A, B and C are accepted.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NOS. CP65–255 AND CP66–244

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 26, 1966)

On June 20, 1966, Panhandle Eastern Pipe Line Company (Petitioner), filed in Docket No. CP66–244 a petition to amend the order of the Commission issued June 6, 1966, in Docket No. CP66-244, 35 FPC 896, and the order issued June 28, 1965, in Docket No. CP65-255, 33 FPC 1295, so as to enable Petitioner to effect the increases in contract demands requested by Petitioner's existing utility customers and which require the installation of certain additional facilities, all as more fully set forth in the petition to amend.

On June 6, 1966, in Docket No. CP66-244 the Commission issued a certificate of public convenience and necessity authorizing Petitioner to increase its system capacity by approximately 150,000 Mcf of gas per day. Petitioner states that subsequent to the filing of its application for certificate authorization in Docket No. CP66-244, requests for additional contract quantities were received from its following existing utility customers, some of which were included in the original application at contract demand levels lower than those which they are now requesting:

Battle Creek Gas Company
Central Indiana Gas Company
Citizens Gas Company of Hannibal, Missouri
Citizens Gas and Fuel Company
Indiana Gas Distribution Corporation
City of Macon, Missouri
Missouri Utilities Company
The Ohio Fuel Gas Company
Ohio Valley Gas Corporation
Town Gas Company of Illinois

The requested increases in contract demands for the above ten customers include increases in both summer and winter contract demands. The aggregate increase in winter contract demands involved in the proposed amendment is 29,270 Mcf, part of which is to be supplied from a portion of the unallocated capacity for which provision was made in the original application, and the balance is proposed to be supplied from the capacity for which authorization is being sought in the instant filing.

Increased deliveries to The Ohio Fuel Gas Company are dependent upon authorization of Ohio Fuel's proposals in Docket No. CP66-311, issued August 30, 1966, *infra*, p. 554.

Petitioner proposes in Docket No. CP66-244 to construct and operate approximately 34 miles of 30-inch diameter main line loop representing a continuation of its fourth main pipeline. In addition, Petitioner proposes to increase the cushion gas in its existing Howell Field and increase the maximum volumes stored in the field to 25,000,000 Mcf. To accomplish the latter, Petitioner requests the Commission to amend Paragraph (F) of the Commission's order issued June 28, 1965, in Docket No. CP65-255 which limited volumes stored to 23,500,000 Mcf.

The total estimated cost of Applicant's proposed construction is $4,565,000, which is proposed to be financed initially through the use of short-term bank loans.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on July 7, 1966 (31 F.R. 9322). No protest, petition to intervene, or notice of intervention has been filed in this proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's orders issued June 6, 1966, in Docket No. CP66-244 and June 28, 1965, in Docket No. CP65-255 be amended as hereinafter ordered and conditioned.

The Commission orders:

(A) The Commission's order issued June 6, 1966, in Docket No. CP66-244 is amended so as to modify Ordering Paragraph (A) thereof and authorize the proposed construction, operation of facilities and additional delivery of up to 29,270 Mcf per day of winter contract demands; and the order issued June 28, 1965, in Docket No. CP65-255 is amended so as to modify Ordering Paragraph (F) thereof and raise the volumetric limitation of the maximum reservoir gas content of Howell Storage Field from 23,500,000 Mcf to 25,000,000 Mcf at 14.73 psia, all as described herein and as more fully described in the application for amendment.

(B) The amendments authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in paragraph (f) of Section 157.20 of such Regulations.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE GAS PIPELINE COMPANY, A DIVISION OF TENNECO INC.

DOCKET NO. CP66-394

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF SERVICE AND FACILITIES

(Issued August 26, 1966)

On May 31, 1966, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Applicant) filed in Docket No. CP66-394 an application, as supplemented on July 25, 1966, pursuant to Section 7(b) of the Natural Gas Act requesting permission and approval to abandon a metering station on its main transmission line in Marion County, Kentucky, and to abandon natural gas service to Louisville Gas and Electric Company (Louisville) effective September 1, 1967, all as more fully set forth in the application.

Louisville is presently being served both by Applicant and Texas Gas Transmission Corporation (Texas Gas). Applicant's gas sales contract with Louisville dated January 1, 1955, provides for a contract demand of 26,520 Mcf per day under Rate Schedule CD-2. The contract also provides for its termination by written notice of either party, and by letter dated March 23, 1965, Louisville notified Applicant of its intention to terminate the contract as of September 1, 1967, in accordance with said provision. Louisville intends to obtain its entire natural gas supply from Texas Gas.[1]

After due notice, no protest, petition to intervene or notice of intervention has been filed herein.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, sought herein, and upon consideration of the record,

---

[1] Texas Gas has proposed to render the additional service to Louisville in its pending application in Docket No. CP66-149 (Phase II).

The Commission finds:

(1) Applicant, Tennessee Gas Pipeline Company, a Division of Tenneco Inc., a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) The facilities to be abandoned, as hereinbefore described, and more fully described in the application in this proceeding, are used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and abandonment of such facilities and the abandonment of the sale of natural gas in interstate commerce are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities and service hereinbefore described, all as more fully described in the application in this proceeding, are granted upon the terms and conditions of this order.

(B) The permission and approval granted by paragraph (A) above and the rights granted thereunder are conditioned upon receipt by Texas Gas of authorization to serve Louisville as proposed in its pending application in Docket No. CP66-149 (Phase II).

(C) The permission and approval granted by paragraph (A) above should not be construed as a commitment on the part of the Commission of favorable action in Docket No. CP66-149 (Phase II).

(D) Applicant shall advise the Commission of the date of the subject abandonment within ten days thereof.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE GAS PIPELINE COMPANY, A DIVISION OF TENNECO INC., DOCKET NO. CP66-398

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 26, 1966)

On June 6, 1966, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Applicant) filed in Docket No. CP66-398 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery north of Compressor Station No. 87 of an additional 25,500 Mcf per day (14.73 psia) of contract demand gas to an existing customer, United Fuel Gas Company (United Fuel), all as more fully set forth in the application in this proceeding.

Applicant proposes to render the additional service to United Fuel by utilizing surplus storage gas and, when appropriate, by displacement through the utilization of a transportation service provided by Texas Gas Transmission Corporation (Texas Gas) which service was authorized by Commission order issued July 12, 1966, in Docket No. CP66–364, 36 FPC 56. Applicant will use a portion of its anticipated 8,300,000 Mcf of surplus storage gas during the 1966–67 withdrawal season and, if available, during the 1967 storage injection season until September 1, 1967. Against the eventuality that such surplus volumes may not materialize as expected, Applicant will utilize the Texas Gas transportation service ending September 1, 1967, at which date the transportation service is to terminate. After September 1, 1967, Applicant will have available additional unallocated capacity north of its Station No. 87 by reason of the abandonment of the sale of gas to Louisville Gas and Electric Company. Such abandonment in Docket No. CP66–394 is being authorized concurrently with the subject order, *supra*, p. 540. Accordingly, after September 1, 1967, Applicant will have sufficient unallocated capacity north of Station No. 87 to serve the proposed increased requirements of United Fuel on a long term basis.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Pipeline Company, a Division of Tenneco Inc., a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed sale and delivery of natural gas by Applicant will be in interstate commerce, subject to the jurisdiction of the Commission and such proposed sale and delivery of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale and transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Tennessee Gas Pipeline Company, a Division of Tenneco Inc., to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The proposed sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 3 months from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IOWA ELECTRIC LIGHT AND POWER COMPANY, DOCKET NO. E-7305

ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued August 29, 1966)

Iowa Electric Light and Power Company (Applicant) filed an application on August 3, 1966, seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue $15,000,000 First Mortgage Bonds and 100,000 shares of its Cumulative Preferred Stock, par value of $50 per share. This order relates to Applicant's request to issue First Mortgage Bonds.

Applicant is incorporated under the laws of the State of Iowa and is authorized to do business in the States of Iowa, Minnesota, Colorado and Nebraska with its principal place of business office at Cedar Rapids, Iowa. Applicant is engaged primarily in the generation, transmission and sale at retail of electric energy in 51 counties in the State of Iowa.

The Bonds which are to mature September 1, 1996, will be issued as of September 1, 1966, under the Applicant's Indenture of Mortgage and Deed of Trust, dated August 1, 1940, as heretofore amended and supplemented by thirty-one supplemental indentures and as to be further supplemented by a thirty-second supplemental indenture to be dated September 1, 1966, between the Applicant and the First National Bank of Chicago, as Trustee. The rate of interest to be paid by the Applicant will be determined by competitive bidding in accordance with the Commission's regulations under the Federal Power Act.

The Applicant proposes to publish a Public Invitation for Bids for the purchase of Bonds, on or about August 31, 1966, in the New York and Midwest editions of the Wall Street Journal. The Statement of Terms and Conditions Relating to Bids will contain the following principal provisions:

> Each bid must be for the purchase of all the Bonds and may be made by a single bidder or by a group of bidders. No bidder may submit or participate in more than one bid. Each bid must be delivered to the Applicant at the office of the First National Bank of Chicago, The Whitehall Room, 4th Floor, 38 South Dearborn Street, Chicago, Illinois, at or before 9:30 A.M., Chicago Time, on September 13, 1966, and be accompanied by a deposit of $450,000.
>
> Each bid shall specify the annual interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1%; and shall also specify the price to be paid to the Applicant for the Bonds, which price shall not be less than the principal amount and not more than 102¾% of the principal amount.
>
> Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Statement of Terms and Conditions, it will accept the bid which provides the lowest annual cost of money.

According to the Applicant the proceeds from the sale of the Bonds will be used to finance the construction, completion, extension and improvement of facilities and the replacement of short-term borrowings from commercial banks aggregating $9.9 million as of June 30, 1966. The construction program includes the expenditure of $11.9 million in 1966 for work on Applicant's 140 megawatt unit being installed at the Prairie Creek site in Cedar Rapids, $2 million for transmission line facilities and $8.3 million for substations.

Written notice of the application has been given to the Iowa State Commerce Commission, Minnesota Railroad and Warehouse Commission, the Colorado Public Utilities Commission, the Nebraska State Railway Commission, and to the Governors of these states. Notice of the application was also published in the Federal Register on August 13, 1966 (31 F.R. 10864), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before August 26, 1966, file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No protest or petition has been filed.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the States of Illinois, South Dakota and Wisconsin and consumed in the State of Iowa, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy consumed wholly by the transmitter. Applicant, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(1) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations or cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH CAROLINA PUBLIC SERVICE AUTHORITY, PROJECT NO. 199

ORDER AUTHORIZING SALE OF PARCEL OF PROJECT LAND AND APPROVING REVISED PROJECT EXHIBIT

(Issued August 29, 1966)

On August 8, 1966, South Carolina Public Service Authority, licensee for Project No. 199, located on the Santee and Cooper Rivers, South Carolina, filed application for Commission authorization to sell a 41.8 acre parcel of project land to Aerovox Corporation, of New Bedford, Massachusetts, for the construction thereon of an electrolytic capacitor manufacturing plant. Exhibit K, Sheet 34, Revised (FPC No. 199–172), which was filed as part of the application and which we are asked to approve as part of the license for the project reflects a change in project area and boundary as a result of this sale.

The land was used as a "borrow pit" during construction of the project dam and dikes; has since lain idle and become overgrown; is not required for recreational development in connection with the project; and is not required for other project purposes.

The land is located alongside the Atlantic Coast Line Railroad tracks in Berkeley County which has been classified as a depressed area. The Licensee advises that the use of the land for the purpose proposed will be advantageous in several respects in that the plant is to cost initially some two and one-half million dollars; will bring employment to some 500 workers on an "equal employment opportunity" basis; and will not significantly contribute to either air or water pollution.

The Commission finds:

(1) It is in the public interest to authorize the sale of the project parcel as hereinafter provided.

(2) Exhibit K, Sheet 34, Revised (FPC No. 199–172), conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit K, Sheet 34 (FPC No. 199–97), which has been superseded should be eliminated from the license for the project.

The Commission orders:

(A) South Carolina Public Service Authority is hereby authorized to effect the sale of the parcel of project land herein involved: *Provided, however,* That the licensee incorporate in any agreement or instrument effectuating such disposal a covenant or condition insuring that the use of such land will not endanger health, create a nuisance, or otherwise be incompatible with overall project recreational use in accordance with paragraph (C) of the Commission's Order No. 313, issued December 27, 1965, 34 FPC 1546.

(B) The revised Exhibit K described in finding (2) above is hereby approved as part of the license for Project No. 199, and the superseded license Exhibit K mentioned in the same finding is hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP67-11

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 30, 1966)

On July 18, 1966, Atlantic Seaboard Corporation (Applicant) filed in Docket No. CP67-11 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a mainline tap and appurtenant metering facilities on its 20-inch pipeline in Harford County, Maryland, in order to establish an additional delivery point for the sale of natural gas to Baltimore Gas and Electric Company (Baltimore), an existing wholesale customer, for resale to two residential communities near the Town of Rutledge, Harford County, Maryland, all as more fully set forth in the application.

Natural gas service to Baltimore at the proposed new delivery point will be made by Applicant pursuant to its FPC Rate Schedule CDS-1 and WS of its effective FPC Gas Tariff Eighth Revised Volume No. 1. The estimated third year peak day and annual natural gas requirements of the proposed service area are 75.6 Mcf and 13,068 Mcf, respectively. No increase in total authorized deliveries to Baltimore is requested.

The total estimated cost of Applicant's proposed facilities is $3,050, which cost will be financed from funds generated from operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Atlantic Seaboard Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 16, 1943, in Docket No. G-284 (3 FPC 941).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued should be conditioned upon the filing by Applicant of a revised service agreement with Baltimore Gas and Electric Company in accordance with the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Atlantic Seaboard Corporation, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, by September 15, 1966.

(D) The certificate issued by paragraph (A) above is conditioned upon the filing by Applicant of a revised service agreement with Baltimore Gas and Electric Company in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONCORD ELECTRIC COMPANY, PROJECT NO. 1903

ORDER ACCEPTING SURRENDER OF LICENSE (MAJOR)

(Issued August 30, 1966)

On November 13, 1964, Concord Electric Company, licensee for major Project No. 1903, filed under Section 6 of the Federal Power Act, an application for surrender of its license for the Sewalls Falls project located on the Merrimack River in the City of Concord, Merrimack County, New Hampshire. The licensee's copy of the license instrument was returned with the application.

The licensee has advised that the continued operation of the project is not economically justified and that the project should be retired. The dam was constructed in 1894 and the total installed capacity of the project is 2,200 kilowatts. We stated in our June 6, 1966 order (35 FPC 884) issuing a license for minor Project No. 2488, which began operating in 1908 that: "It may be that the operation of projects of this nature may well become uneconomic before the license expires as its operating costs increase and alternative sources of power become less expensive", and we added "we are confident that the licensee will file an application to surrender the license for the project at such time as this situation occurs, thereby permitting its removal or converting its use to other purposes." Although the installed capacity of Project No. 1903 exceeds that of a minor project as defined in Section 10(i) of the Act we believe that surrender should be accepted for this uneconomic development subject to appropriate conditions.

The U.S. Corps of Engineers has reported that it has no objection to Commission acceptance of surrender of the license.

The Department of the Interior recommended in its first report on the application that surrender of the license not be accepted until either or both the licensee and the succeeding project sponsor agree to construct, operate and maintain such fish passage facilities as may be recommended by the Bureau of Sport Fisheries and Wildlife and the New Hampshire Fish and Game Department.

The Department of Health, Education, and Welfare has advised that it has no objection to surrender of the license provided that the main dam is removed and the canal and penstock system is shut off and the total flow of the river is assured.

The Fish and Game Department of the State of New Hampshire has recommended that surrender of the license be accepted on the condition that the licensee remove the dam to allow free passage of fish.

The City of Concord, New Hampshire, has reported that the dam should remain in the river in the interest of recreation.

The comments and recommendations of those reporting on the application were transmitted to the licensee for its information, and we are advised by the latter that following consultations with most of the reporting agencies, both State and Federal, proposals were made by the licensee to resolve the differences in views. Essentially, the licensee proposes that: (1) the licensee will dismantle the powerhouse and appurtenant facilities and leave the dam in the river and be responsible for its maintenance until December 31, 1969, during which period it will attempt to dispose of the dam and appropriate amount of land to the State or the City of Concord; and (2) if neither the State of New Hampshire nor the City acquires the dam by December 31, 1969, the licensee will be free to dispose of the dam to any other public agency. The licensee also proposes that in any conveyance of the dam, the grantee will be required to maintain the dam and build a fishway if requested by the Department of the Interior, or in the alternative that the grantee shall remove enough of the dam to permit free passage of water and fish as the licensee would do if the dam were not conveyed. We are now advised by the Department of the Interior, in a further report, that the licensee's proposals would be an appropriate solution to the immediate problem, and the Department recommended that any order accepting surrender of the license provide that the responsibility for maintenance of the dam remain with the licensee until December 31, 1969, unless sold to the State of New Hampshire, and that in the event the dam is to be breached, it be completely removed from the river. The licensee's proposals and the Department of the Interior's recommendation with respect thereto are substantially provided for in the conditions attending our acceptance of surrender of the license.

Annual charges under the license for the project have been paid through December 31, 1965.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) Acceptance of surrender of the license for the project is appropriate as hereinafter provided.

The Commission orders:

(A) Surrender of the license for Project No. 1903 is hereby accepted effective as of September 1, 1966, subject to: (1) restoration of the site of the power canal and powerhouse to a condition satisfactory to the Commission; (2) possible conveyance of the dam, forebay, and headgate structures to the State of New Hampshire or a political subdivision thereof by December 31, 1969, or in the event that there is no such conveyance, the licensee shall remove the dam and headgate structure and restore the site to a condition satisfactory to the Commission by July 1, 1970; (3) prior to such disposal or removal, the licensee shall maintain the dam, forebay and headgate structure in a condition satisfactory to the Commission; and (4) any conveyance of the dam shall be subject to the conditions that the grantee shall construct, operate and maintain such fish passage facilities as may be requested by the Secretary of the Interior or that the grantee shall remove the dam to permit the full passage of water and fish.

(B) The licensee shall submit to the Commission, within 30 days of the effective date of surrender, a report under oath of the power generated by the project to such effective date, and shall pay the annual charges under the license to such effective date within 45 days from the rendition of a bill therefor by the Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-424

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 30, 1966)

On June 24, 1966, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-424 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of natural gas to The Washington Water Power Company (Water Power) for transportation to and resale and distribution in the communities of Kettle Falls, Colville, Chewelah, Colton, Uniontown and Spangle, Washington, and their respective environs, and to California-Pacific Utilities Company (Cal-Pac) for transportation to and resale and distribution in the community of Union, Oregon, and environs, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate four measuring and regulating stations, one of which is to provide service for Kettle Falls, Colville and Chewelah, Washington, and the remaining three of which are to provide service to Colton and Uniontown, Washington, and Union, Oregon. Service to Spangle, Washington, will be provided by means of an existing measuring and regulating station owned and operated by Pacific Gas Transmission Company and with gas transported by Pacific Gas Transmission Company for the account of Applicant. Applicant also proposes to construct and operate approximately 4,700 feet of 4½-inch O.D. branch transmission pipeline, and necessary appurtenances, in conjunction with the measuring and regulating station proposed to provide service for Union, Oregon.

Water Power will transport the gas received by it, through facilities which it proposes to construct, to points of resale and distribution in the communities of Kettle Falls, Colville, Chewelah, Colton, Uniontown and Spangle, Washington. Cal-Pac will transport the gas received by it, through facilities which it proposes to construct, to points of resale and distribution in the community of Union, Oregon, and environs.

The estimated maximum daily and annual gas requirements of Water Power during the third full year of proposed natural gas service are 5,095 Mcf and 1,223,005 Mcf, respectively, and the requirements of Cal-Pac during the same period of time are 404 Mcf and 55,970 Mcf, respectively. The sales and deliveries which are the subject of the instant application are proposed to be made in accordance with the rates contained in Applicant's Rate Schedules DS-1, DS-4 and DL-1, FPC Gas Tariff Original Volume No. 3.

If the instant application is approved prior to the grant of authorizations sought by Applicant in its application filed in Docket No. CP66-27 the facilities and services embraced by the instant application will be divested by Applicant to Northwest Pipeline Corporation in accordance with said authorizations.[1]

The total estimated cost of Applicant's proposed facilities is $87,800, which cost will be financed by means of working funds.

Due notice of the filing of the instant application was published in the Federal Register on July 14, 1966 (31 F.R. 9563). On July 18, 1966, the Public Utility Commissioner of Oregon filed a notice of intervention and waiver of hearing in support of the instant application. No other notice of intervention, petition to intervene or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware Corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

[1] See Notice of Applications, Consolidation of Proceedings and Requirement to File Testimony, 30 F.R. 11003, August 25, 1965, regarding application of Applicant and applications of Northwest Pipeline Corporation in Docket Nos. CP66-28, CP66-29 and CP66-30, relating to the divestiture by Applicant of its Northwest Division System.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

(6) The certificate hereinafter issued should be conditioned upon Applicant's filing with the Commission appropriate revised service agreements with The Washington Water Power Company and California-Pacific Utilities Company in accordance with the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to El Paso Natural Gas Company authorizing the construction and operation of the facilities and the transportation and sale of natural gas as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within one year from the date of this order.

(D) The certificate issued by paragraph (A) above is conditioned upon Applicant's filing with the Commission appropriate revised service agreements with The Washington Water Power Company and California-Pacific Utilities Company in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE MANUFACTURERS LIGHT AND HEAT COMPANY,
DOCKET NO. CP66–427

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 30, 1966)

On June 28, 1966, The Manufacturers Light and Heat Company (Applicant), filed in Docket No. CP66–427 an application pursuant to Sections 7(c) and 7(b) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and permission and approval to abandon certain other facilities, all in Beaver County, Pennsylvania, as more fully set forth in the application.

Applicant seeks authorization to construct and operate approximately 5.5 miles of 20-inch transmission pipeline looping its existing 16-inch Line 500 from a point in Daugherty Township, Beaver County, Pennsylvania, northerly to a point in Franklin Township, Beaver County, Pennsylvania, and to abandon 3.1 miles of its Line No. 65 from a point in Center Township, Beaver County, Pennsylvania, to its terminus in the Borough of Monaca, Beaver County, Pennsylvania.

Applicant states that due to the age and condition of Line 500 between Monaca and Ellwood City Compressor Station it is limiting the operating pressure to 300 psig. This reduction in the operating pressure reduces the capacity of the transmission system serving this area to 117,212 Mcf per day which is 42,000 Mcf less than the estimated requirements on said maximum day. The proposed 5.5 mile loop of the section of Line 500 between Line 1649 and Ellwood City Compressor Station will provide Applicant with sufficient capacity to serve this Market Area during the 1966–67 winter period.

Applicant states that upon completion of the proposed construction, it will be able to abandon a 3.1 mile section of existing Line 65 between Aliquippa and Monaca, Pennsylvania. The section of Line 65 proposed to be abandoned was installed in 1911 and its age and condition is such that replacement would be necessary in the very near future in any event.

The total estimated cost of Applicant's proposed construction is $525,000, which cost will be financed through the issuance and sale of promissory notes or common stock to Applicant's parent company, The Columbia Gas System, Inc.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593, *et al.* (4 FPC 821).

(2) The facilities proposed to be abandoned by Applicant as hereinbefore described and as more fully described in the application are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by Applicant is permitted by the public convenience and necessity and permission and approval thereof should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities by Applicant as hereinbefore described and as more fully described in the application are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application are granted.

(B) A certificate of public convenience and necessity is issued to Applicant, authorizing the construction and operation of facilities as hereinbefore described, all as more fully described in the application.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations by January 1, 1967.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP67-3

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 30, 1966)

On July 11, 1966, Northern Natural Gas Company (Applicant) filed in Docket No. CP67-3 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring and regulating station and appurtenant facilities near Tama, Iowa, for the sale and delivery of natural gas to Iowa Electric Light and Power Company (Iowa Electric), an existing resale customer, for resale to two new industrial customers, all as more fully set forth in the application.

The total annual sales of natural gas involved in the instant proposal are estimated to be 125,750 Mcf of which 3,400 Mcf will be on a firm basis. Such sales of natural gas will be made under Applicant's FPC Gas Rate Schedules CD-3 and R-3. No increase in Iowa Electric's contract demand is proposed.

The total estimated cost of Applicant's proposed construction is $11,320, which cost will be financed from cash on hand. Under the general terms and conditions of Applicant's tariff, Iowa Electric will reimburse Applicant for the total actual cost of the proposed facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware Corporation with its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued on April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Northern Natural Gas Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP66–311

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 30, 1966)

On April 1, 1966, The Ohio Fuel Gas Company (Applicant), filed in Docket No. CP66–311 an application as supplemented June 28, 1966, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain replacements on its existing transmission system in the State of Ohio to enable Applicant to provide increased capacity to serve growing requirements of existing markets, and to assure adequate market service, all as more fully set forth in the application.

Construct and operate:

(1) 2.0 miles of 10¾-inch O.D. pipeline in Athens County, Ohio, replacing a section of its Line E–61 serving the Athens market area,

(2) 2.8 miles of 16-inch O.D. pipeline in Medina County, Ohio, replacing sections of its 12¾-inch O.E. Line L serving the Medina-Lodi market area and also transporting gas to York Compressor Station,

(3) 5.2 miles of 20-inch O.D. pipeline in Hardin and Marion Counties, Ohio, extending its Line D–500, looping an additional section of its Lines D–322 and D–357 serving the Lima market area,

(4) 5.2 miles of 6⅝-inch O.D. pipeline in Holmes and Wayne Counties, Ohio, extending its Line L–2975 from Line FL–376 to Line V for improved service to the Holmesville-Millersburg market area,

(5) 3.0 miles of 8⅝-inch O.D. pipeline in Guernsey County, Ohio, extending Line O–880 to Applicant's interconnection with Tennessee Gas Transmission Company for improved service to the Barnesville-St. Clairsville market area,

(6) 4.3 miles of 8⅝-inch O.D. pipeline in Fayette County, Ohio, replacing a section of its Line A–127 serving the Greenfield market area and

(7) valves, fittings and incidental facilities necessary for practical operation.

Abandon and remove:

9.1 miles of existing 5-inch to 12-inch transmission pipeline covering six widely scattered projects in Ohio.

Applicant further proposes that the present limitations on the maximum daily deliveries under firm rate schedules to the following listed customers be adjusted for the 1966–67 winter as follows:

Customer	Maximum daily delivery (Mcf @ 14.73 psia)	
	Present	Proposed
Cincinnati Gas & Electric Co	80,000	90,000
Columbia Gas of Ohio, Inc	1,878,200	1,917,400
Dayton Power & Light Co	390,000	413,400
Delaware Gas Co	11,300	11,576
City of Lancaster, Ohio	20,400	21,362
Syracuse Home Utilities Co	300	310
Waterville Gas & Oil Co	2,870	3,290
West Ohio Gas Co	82,600	85,000
Albany Oil & Gas Co., Inc	445	800
Forest Gas & Oil Co	450	460
Vanlue Gas Co	300	370

The City of Hamilton, Ohio, presently supplied by Cincinnati Gas & Electric Company (Cincinnati) which in turn obtains a portion of its peak day requirements from Applicant, filed a petition to intervene in the instant matter. Hamilton contends that any authorization granted Applicant for the herein proposed additional firm deliveries of 10,000 Mcf per day for Cincinnati should not prejudice its proposal in the consolidated proceedings in Docket No. CP65–402, *et al.* In these proceedings Hamilton is seeking a direct pipeline supply of gas from Texas Gas Transmission Corporation (Texas Gas) beginning with the 1967–68 winter in lieu of present service by Cincinnati. Hamilton does not oppose the requested authorization provided it does not prejudice Hamilton's rights in Docket No. CP65–402.

The total estimated cost of Applicant's proposed facilities is $967,000, which cost will be financed through Applicant's parent, The Columbia Gas System, Inc.

Applicant's ability to render increased service is dependent upon the purchase of increased volumes of natural gas from Panhandle Eastern Pipe Line Company. Panhandle Eastern, on June 20, 1966, filed for amendment of the Commission's order in Docket No. CP66–244 authorizing the necessary increase in deliveries to Applicant. Our amending order in Docket No. CP66–244 was issued August 26, 1966, *supra*, p. 538.

After due notice, no petition to intervene other than that of the City of Hamilton, Ohio, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities proposed to be abandoned by Applicant as hereinbefore described and as more fully described in the application are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by Applicant is permitted by the public convenience and necessity and permission and approval thereof should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities by Applicant as hereinbefore described and as more fully described in the application are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application are granted.

(B) A certificate of public convenience and necessity is issued to Applicant authorizing the construction and operation of facilities as hereinbefore described, and the increase of firm deliveries as hereinbefore described and as more fully described in the application and revised Exhibit Z–1 thereto.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are without prejudice to the City of Hamilton's position in Docket No. CP65–402, *et al.*, and are conditioned upon compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP66–430

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued August 30, 1966)

On June 30, 1966, South Georgia Natural Gas Company (Applicant), filed in Docket No. CP66–430 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon approximately 16,000 feet of its 6⅝-inch transmission pipeline which is now serving the City of Tallahassee, Florida, and for authority to move its existing metering and regulating station in a northerly direction approximately 16,000 feet, all as more fully set forth in the application.

Applicant proposes to sell to the City of Tallahassee approximately 16,000 feet of its 6⅝-inch O.D. Line No. 18 and to move its metering and regulating station in a northerly direction so that the City of Tallahassee will own the right of way and the approximately 16,000 feet of gas transmission pipeline which will become a part of that City's distribution system.

The City of Tallahassee has advised Applicant of its plans to develop the potential gas load of its residential area which would require duplication of facilities presently owned and operated by Applicant. The proposed transfer to the City of Tallahassee of the aforementioned portion of Applicant's Line No. 18 will eliminate the need for construction of such duplicate facilities.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on August 25, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, South Georgia Natural Gas Company, a Georgia corporation having its principal place of business in Thomasville, Georgia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found

by the Commission in its order issued August 3, 1954, in Docket No. G–1915 (13 FPC 666).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and such abandonment is subject to the requirements of subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by sale to the City of Tallahassee, Florida, is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant, South Georgia Natural Gas Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. RP67–8 AND EL PASO NATURAL GAS COMPANY, DOCKET NO. RP67–9

ORDER TO SHOW CAUSE INSTITUTING PROCEEDING ON FLOW THROUGH OF LIBERALIZED DEPRECIATION TAX DEDUCTIONS

(August 30, 1966)*

The Commission in its Opinion No. 500, issued July 26, 1966, 36 FPC 176 (Transwestern Pipeline Company, *et al.*, Docket No. CP63–204, *et al.*) granted certificates of public convenience and necessity to Transwestern Pipeline Company (Transwestern) and El Paso Natural Gas Company (El Paso), subject to the conditions therein set forth. Among other things, the Commission there stated that although there appeared to be a *prima facie* case for applying the policy of *Alabama-Tennessee Natural Gas Company*, Opinion No. 417, 31 FPC 208, affirmed 359 F. 2d 318 (CA5), to both of the successful applicants, it would nevertheless be more appropriate to accord the companies an opportunity to present a more complete record showing cause, if any there be, why their rates should not be further reduced to flow through the benefits of utilizing liberalized depreciation for tax purposes and to deduct the accumulated reserves in Account No. 282 from the rate base upon which their return is calculated.

These proceedings[1] are being instituted for purposes of implementing that prior determination.

We noted in Opinion No. 500 that the annual reports (Form No. 2) filed by Transwestern and El Paso indicate that each of those companies have growing plants, even without consideration of the effect of the expansions authorized by that opinion. The reports filed for calendar year 1965 show that Transwestern and El Paso had accumulated reserve balances in Account No. 282 as of December 31, 1965, of $12,516,000 and $62,331,000,[2] respectively. Deduction of those amounts from the applicable rate base would result in annual reduction of rates in the amount of approximately $1,504,000 for Transwestern and $7,341,900[2] for El Paso. Those annual reports further indicate that in addition flow through of the benefits of liberalized depreciation utilized by those companies for tax purposes would have generated annual reductions in rates of about $3,100,000 for Transwestern and $5,100,000[2] for El Paso.

---

*Reconsideration denied by order issued October 24, 1966, 36 FPC 777.

[1] This order shall not be construed as a consolidation of the proceedings hereby initiated either for hearing or decision.

Admittedly, the foregoing data present only a *prima facie* basis for determining the rates of Transwestern and El Paso were we to apply the principles of *Alabama-Tennessee* to them. It does appear, however, that the rates and charges of Transwestern and El Paso may be excessive.

Therefore, it is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that we institute these proceedings pursuant to the procedures hereinafter provided.

The Commission orders:

(A) Pursuant to the provisions of Sections 4, 5, 10, 14, 15 and 16 of the Natural Gas Act and the Rules and Regulations thereunder, Transwestern and El Paso shall show cause, if any there be, in writing and under oath, within 45 days from the date of issuance of this order, why the Commission shall not find and determine:

(i) that each is a growth company which will have an expanding gross plant for the foreseeable future, based upon their historic experience and the expansions authorized in Opinion No. 500, and that there are no exceptional circumstances in their operations which make the principles enunciated in the *Alabama-Tennessee* decision (Opinion No. 417), inapplicable to either of them;

(ii) that each will earn a fair and reasonable return on its jurisdictional operations for the reasonably foreseeable future even if they are not permitted to retain the annual tax reductions from utilization of liberalized depreciation and to earn a return on a rate base which has not been reduced by the accumulated reserves in Account 282; and

(iii) that each should be directed to file revised tariffs, acceptable to the Commission, which reduce the rates prescribed for each of them in Opinion No. 500, to that level which results from flow-through of the actual liberalized depreciation tax reductions in 1965 and the reduction of rate base by the accumulated reserve balance in Account No. 282 as of December 31, 1965; provided, however, that Transwestern and El Paso are not precluded hereby from making a proper showing that in lieu of flow through of actual liberalized depreciation tax reductions in 1965, such flow through should be on the basis of average annual tax reductions of some appropriate period comprised of 3 or 5 years.

(B) Each answer filed pursuant to this order shall specifically admit or deny each individual factual allegation contained herein and any matter not specifically controverted shall be deemed admitted and may form the basis for the entry of a final order based thereon.

(C) Without limitation of the rights of Transwestern and El Paso to submit such data and responses to paragraph (A) above, as each may deem appropriate, Transwestern and El Paso shall, within 45 days from the date of issuance of this order, file with the Commission a cost and revenue study conforming with subsection (f) of Section 154.63 of the Commission's Regulations under the Natural Gas Act (except Statements N and P). That study shall also include for each company its tax depreciation base and tax rate of depreciation segregated by the classes of properties shown on their respective tax returns for the calendar year 1965. That study shall utilize calendar year 1965, adjusted for changes in costs and revenues which are known and are measurable with reasonable accuracy at the time of filing and which will become effective within nine months after the base period. Working papers prepared in conjunction with the cost and revenue study shall be included with such study and all statements, supporting data, schedules, and working papers shall be prepared in accordance with the classifications provided in the Uniform System of Accounts. Ten sets of the cost and revenue study and seven sets of the working papers shall be served upon the Commission, and Transwestern and El Paso shall simultaneously serve copies of the cost and revenue study upon each of their respective jurisdictional customers and the State commission of each state in which it does business. The study and supporting data hereby required to be filed by El Paso shall set forth separately the costs, revenues, and operations relating to its Southern Division and its Northwest Division.

---

[2] For El Paso's Southern Division alone the comparable figures are $41,643,000, $4,905,000, and $2,960,000, respectively.

(D) Notices of intervention and petitions to intervene in either of these proceedings may be filed with the Federal Power Commission, Washington, D.C. 20426, on or before September 20, 1966, in accordance with Sections 1.8 and 1.37(f) of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37(f)).

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. RP67-5

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND PROVIDING FOR REFUNDS

(Issued August 31, 1966)

On August 1, 1966, Colorado Interstate Gas Company (CIG), filed revised tariff sheets[1] and a new service agreement dated June 15, 1966, relating to the sale of gas to Natural Gas Pipeline Company of America. The revised tariff sheets, which CIG requests be made effective as of September 1, 1966, contain rates which the company estimates will generate approximately $650,000 per year of additional revenue based upon operations for the twelve month period ending December 31, 1965.

The proposed tariff revisions reflect the operational changes recently authorized by the Commission in Docket No. CP66-316. Among these are: (1) CIG's delivery of gas from its Mocane line directly into Natural's main line transmission system at a point 39 miles east of Natural's Hooker Compressor Station where the gas had heretofore been delivered; (2) delivery of the gas at a pressure sufficiently great "to enter Buyer's lines but not greater than 680 psig" rather than at "not less than 260 psig" which was the provision for deliveries when made at Hooker Station.

The proposed service agreement extends the contract termination date from February 14, 1967, to September 1, 1986, and thus provides Natural with a long term supply delivered at high pressure into its pipeline system. By diverting this supply to the new delivery point, Natural will avoid the need for additional compression facilities at its Hooker Station. Additionally, it is proposed that the sale to Natural will be made pursuant to demand-commodity rates which are the same as those for other pipeline customers, in lieu of the existing monthly transportation charge and commodity rate.

---

[1] Second Revised Sheet Nos. 19 and 20 to CIG's FPC Gas Tariff, First Revised Volume No. 1.

Upon due notice given, no protests or objections to the rate filing have been received.

Our analysis of the proposed revisions and the data submitted therewith indicates that such changes are appropriate and should be accepted for filing as hereinafter provided.

The Commission finds:

The proposed revised tariff sheets and the rates provided therein and the aforementioned Service Agreement dated June 15, 1966, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be permitted to be effective subject to the provisions of this order.

The Commission orders:

(A) Second Revised Sheet Nos. 19 and 20 to CIG's FPC Gas Tariff, First Revised Volume No. 1, and the Service Agreement with Natural dated June 15, 1966, are accepted for filing to be effective as of September 1, 1966.

(B) In the event CIG receives refunds from its suppliers related to gas purchases made on and after August 31, 1966, it shall flow through the appropriate share of such refunds (and any interest thereon paid by the supplier) to its jurisdictional customers. The appropriate share of such refunds attributable to jurisdictional customers shall be determined by the ratio of jurisdictional sales to total system sales, exclusive of short-term and Amarillo "B" sales, for the most recent 12-month period. The pro rata share of individual jurisdictional customers shall be based on actual sales to such customers during the refund period. The refunds, as determined above, shall be flowed through by CIG at least once a year by October 31 of each year or as soon as the jurisdictional portion of such refunds aggregates $250,000.

(C) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, the Commission staff, CIG, or any other person affected by this order in any proceeding now pending, or in any proceeding hereafter instituted by or against CIG or any other persons or parties affected by this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP67-1

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued August 31, 1966)

On July 1, 1966, Lone Star Gas Company (Applicant), filed in Docket No. CP67-1 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the operation of certain natural gas facilities for the transportation of natural gas in interstate commerce, all as more fully set forth in the application.

Applicant states that the facilities proposed for abandonment are various lateral supply pipelines and related facilities extending from its existing pipeline system to a single well or to a single point in the area of production and are no longer needed or required to transport gas into Applicant's system because the available supplies of natural gas in these areas have become depleted to the extent that the continuation of service therefrom is unwarranted and uneconomical.

Applicant seeks permission and approval to abandon the operation of the following pipelines and appurtenant facilities:

(1) 3,337 feet of 4-inch Line FX–397–T by removal and salvage;

(2) 81 feet of 3-inch Line FX–399–T by removal and salvage;

(3) 1,490 feet of 4-inch Line FX–422–T by lease to Twin Gas Company for use as a gathering facility;

(4) 343 feet of 4-inch Line FX–431–T by removal and salvage;

(5) 8,842 feet of 6-inch Line GM, 7,400 feet of which by removal and salvage and 1,422 feet of which by lease to Twin Gas Company for use as a gathering facility;

(6) 6,683 feet of 6-inch Line FX–424–T by removal and salvage;

(7) 319 feet of 3-inch Line FX–483–T by removal and salvage;

(8) 3,014 feet of 4-inch Line FX–471–T by removal and salvage;

(9) 22 feet of 2-inch Line FX–498–T by removal and salvage;

(10) 433 feet of 2-inch Line CT–858–T by removal and salvage;

(11) 7,669 feet of 6-inch Line TG by removal and salvage, and

(12) 5,975 feet of 6-inch Line TJ by removal and salvage.

The proposed abandonments will not result in the abandonment or any diminution of natural gas service to any city, town, community or customer or lessen the service presently being rendered by Applicant.
